# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., FEBRUARY 15, 1936 No. 1.

## Dixie Regaining Dominant Position As Cotton Source of Lancashire

(This is the second of a series of three articles on the economic recovery and problems of the famous Lancashire cotton industry in Britain, one of the important markets for American cotton.)

Manchester, England, March 16.—(AP)—American cotton is finding its way back to Lancashire, after three lean years.

Whether Dixie's former dominance over this country's cotton industry will be restored is problematical, but the comeback thus far has been a much-discussed topic on the busy floors of the Manchester and Liverpool exchanges.

Imports of cotton from Southern states are nearly double those of last season, while the increase in shipments of competing growths has been less than 20 per cent.

Another encouraging sign for the Southern states is seen in the deliveries of American cotton to Lancashire spinners, with an increase of 32 per cent over last season. Deliveries of other growths have shown only negligible gains.

Stocks of American cotton in Lancashire are 28 per cent greater than last season, while the stocks of all other grades are 20 per cent less.

Yet dealers in American cotton are guarding against premature enthusiasm, as the trade is still far below its normal level.

American agricultural policies meanwhile stir up the same arguments here as in the United States, and nothing is debated more on the exchanges than the program of the administration to replace the AAA.

Meanwhile invalidation of the AAA was welcomed here as the possible forerunner of a more plentiful supply of low-priced American cotton. Brokers are sharply divided over predictions of the 1936 crop in the United States.

A large number are emphatic in asserting that the present price level of cotton cannot be maintained.

The objection most frequently heard in Lancashire to Roosevelt's agricultural policies is that they have hampered trade in American cotton by increasing the risk and uncertainty of handling it.

Some Lancashire dealers retort, however, that the supply of American cotton at a fair price has always been adequate to meet the needs of legitimate business and that only speculative operations have been restrained by the New Deal program.

One of the outstanding developments in the Lancashire cotton trade has been the increased use of Indian growths.

During the past two years organized efforts to induce spinners to substitute Indian for American cotton wherever feasible have been made through the influential Lancashire Indian Cotton committee.

Offsetting the obstacles against American cotton consumption in Lancashire is the force of habit.

For 150 years Lancashire mills have regarded the Southern states as their principal source of raw cotton, and while abnormal trade conditions at various times in history have forced them to use other growths, they have always returned to the original source of supply.

## RRA EXTENDS AID TO 2,000 IN TENNESSEE

During 1936, 2,000 Tennessee farmers have been given opportunities for farm rehabilitation. L. H. Haltom, state director of the Rural Resettlement administration, announced yesterday.

By May 1, an additional 100 farm families will be accepted by the RRA, he predicted. The quota for Tennessee set by Washington officials was 6,000 families.

Reduction in a limited personnel, after Washington RRA officials had set the quota, was the reason Haltom said for failure to attain the full number.

The government is advancing approximately $300 to these workers "with intention it ultimately be paid back," Haltom said. Every farmer has been given a budget and a farm plan which he must follow and, which if followed should put him on the road to rehabilitation," he declared.

About 50 per cent of the families being cared for this year were also wards of the RRA's predecessor, the Rural Rehabilitation Corporation, last year. Between five and 10 per cent of those aided by the government last year are in such condition as to require little or no help this year.

"Many of this group have paid back in full all they owed the government," Haltom declared. He pointed out the . RRA's program should be permanent.

"We are trying to train these families so they can care for themselves within a year or two," Haltom said. "We are especially concerned with the young persons in these families, and are encouraging them to join 4-H clubs and take Smith-Hughes vocational agricultural training in high schools wherever it is available.

Haltom estimated the program of the RRA should be extended to include aid for 20,000 of the state's 250,000 farmers. "Practically all those we are caring for this year are living on farms," he said.—Nashville Tennessean.

## Houston Aroused Over Attack On Relief Worker

Houston, March 12—(By Albert White for ANP)—Citizens here are aroused over the beating administered Robert Incas, 47-year-old WPA worker by George Bell special white officer at the WPA headquarters and Tuesday morning filed a petition with the State Administration urging that Bell be removed from duty.

Incas was beaten over the head with a black-jack when he went to the WPA headquarters to receive his check. He declares that the attack was unprovoked on his part and that he could only attribute it to Bell being prejudiced. Bell on the other hand stated that when he told Incas to "move on" as the building was crowded Incas cursed him and attempted to strike him. Little credence is put in his statement and a thorough investigation is being urged.

## FARM AID PROGRAM SOON TO BE KNOWN

From Nashville Tennessean

C. E. Brehm, director of the University of Tennessee agricultural extension service, announced yesterday that the new farm plan to replace the invalidated AAA would probably be ready for submission to the farmers of Tennessee before the end of the month. Considerable progress has been made in drafting of the plan since the regional conference of farmers and extension leaders was held in Memphis at the call of the secretary of agriculture.

Pending announcement of the full plan Director Brehm suggests that farmers intending to participate assemble information on the normal acreage of soil-depleting crops grown on their farms and, wherever practical, the normal acreage of soil-improving crops also. They should also prepare figures on the normal yield of the major soil-depleting crop grown, and the acreage to be devoted to soil-conserving and soil-depleting crops in 1936.

Conservation and improvement of national soil resources re-establishment and maintenance of the farmer's purchasing power and assurance of adequate supplies of foods and fibers for consumers are the principal objectives of the new federal act, which is known as the "Soil Conservation and Domestic Allotment Act."

The act provides for temporary aid to participating farmers in the form of direct payments until 1938. Commencing then, grants will be made only to states upon approval of state programs by the secretary of agriculture. The act authorizes an annual appropriation of not more than $500,000,000.

Under the temporary plan, payments will be made to farmers upon the basis of their treatment or use of land for soil restoration, conservation or erosion prevention, changes in the use of their land, and the domestic allotment of one or more designated commodities. Productivity of the land affected will be taken into consideration.

To qualify for grants or payments, a farmer must have an increase of soil conserving crops in 1936 equal to 20 per cent of the total acreage of soil depleting crops, or must have an acreage of soil depleting crops not in excess of the normal acreage of such crops on his farm.

Soil conserving and soil depleting crops for Tennessee are being classified and will be announced at an early date. Rates of payment for diverting land from soil-depleting crops such as corn, cotton and tobacco to soil-conserving crops such as lespedeza, clover, alfalfa and grasses are now being worked out and will also be announced when details of the new program are completed in Washington, Director Brehm said.

## VITAMINES NEEDED FOR BABY CHICKS

By E. F. Broden

Vice-President, Hermitage Feed Mills

Cornell Agriculture Station, poultry department says: "Vitamins are absolutely essential for growth, reproduction and maintenance of health. No poultry ration is right without them. Baby chicks in particular must have not only an abundance of vitamins but their feed must have a proper balance of them."

Most poultry raisers know this but have found it difficult to determine where and how to accomplish it. Before starting baby chicks Tennesse poultry raisers will do well to investigate Hervita, a new and important ingredient that is now included in Hermitage and Sunshine Starting Mashes. You will find that Hervita solves this important problem for you and that you can start your chicks with full confidence of furnishing them a most complete ration that will insure low mortality and rapid thorough growth.

The Hermitage Feed Mills will be glad to mail you a bulletin free explaining Hervita in detail. It will pay you to either write or phone 6-5678 before you start your chicks this year.

## May Employ Convicts on Arkansas WPA Projects

Little Rock, March 12—(ANP) Despite the statement by R. E. Ewell of Washington, general counsel of the Federal Prison Industries Reorganization Administration, that the federal government has no intention of setting up industries manned with prison labor, the belief was expressed here this week that convict labor would be used on a number of WPA projects throughout the State of Arkansas.

This announcement followed closely in the wake of a conference held with Ewell and Attorney General Bailey and former Attorney General Pope, here Tuesday morning, at which it was pointed out to the federal officers that there are numerous projects where convict labor could be used in progress. A survey will be made of the projects and upon this will the final answer be made, according to the conferees.

## Scotland Orders Campbell's Book On Movable Schools

Tuskegee, March 12—(ANP)—Formal announcements of the publication of the book entitled: "THE MOVABLE SCHOOL GOES TO THE NEGRO" by T. M. Campbell, have been recently released. The first cash-in-advance-order came from a reader who resides in Scotland.

This book is the first to be produced in the new bookbinding section which was installed last year in the Tuskegee Institute Printing Division.

## Cooking and Serving

By MRS. GORDON PARMAN

Nashville Tennessean Nutritionist

Gelatin is a necessary ingredient in salads that are to be molded. Lemon and lime flavored prepared gelatin may be used. However, it may be too sweet for some vegetables or fruits. Plain gelatin is preferred and 1 tablespoon is equal to one package of ready prepared. Salt must be used sparingly in congealed salads or they will be watery.

### Easy Vegetable Salad.

Prepare 1 pint of lemon gelatin, put in refrigerator while preparing vegetables; 1 1-2 cups finely shaved or minced cabbage, very slightly salted; 1-2 green and red pepper or (pimento may be used for red), chopped; 1-2 cup chopped celery. Mix with thickened gelatin. Pack into molds and finish congealing. Serve on lettuce with favorite dressing.

### Stuffed Tomato Salad.

Peel tomatoes, remove pulp and seeds, put 1 teaspoon French dressing in each; set in refrigerator until ready to serve, then fill with equal parts of finely chopped celery, pineapple and nuts. Serve on lettuce and mayonnaise. For variation stuff the tomatoes with shredded cabbage, pepper and pickle.

### Mock Crab Salad.

Cook until tender three large parsnips, run through food chopper or shred with fork, mince 1 small onion, add salt and onion to parsnips, mix with mayonnaise and serve on lettuce.

### Edive Salad

Discard the green tip ends, using the bleached portion near the root. Cut the stalks crosswise in inch lengths. Wash thoroughly and drain. Cut into thin slices of hot, boiled potatoes and hard-cooked eggs. Make a dressing of 1 tablespoon sausage drippings, add to this 1-2 cup vinegar, tablespoon sugar. When boiling toss over and blend with the endive. Bits of celery and onion may be added if liked. Ham drippings may be used instead of sausage.

### Substantial Lunch Salad

Three hard-cooked eggs, 1 cup cooked carrots, 2 cups diced cooked potatoes, 3 small pickles, 1 cup celery cubes, 3 cups chopped cold meat with enough mayonnaise to mold. Pack and chill. Mix potatoes and carrots with salad dressing. Unmold the meat on lettuce, arrange the potatoes and carrots around the meat in a circle, follow with a row of celery. Rice the whole egg, sprinkle over the salad and serve with mayonnaise, garnish with sliced pickle.

# WHITE AND COLORED WORKERS JOIN IN DEMAND FOR FAIR CONTRACTS AT OPENING OF COTTON PLANTING SEASON

## Planters May Resort To Methods Of Terror As Means Of Continuing Exploitation Racket

Memphis, March 19 (ANP)—On the eve of cotton planting in the rich Mississippi delta area, the Southern Tenant Farmers' union through Executive Secretary H. L. Mitchell has announced a strike of its approximately 10,000 members unless plantation owners will agree to fair contracts, the right of sharecroppers to organize peacefully and no more evictions for union membership.

This statement was made shortly after negotiations between 108 evicted Negro tennant farmers living in a tent colony near Parkin and land owners in the controversy over rental contracts had been sidetracked, and as federal representatives from Washington met with big and little landowners here to get details of the new conservation program.

Although Brooks Hayes, special assistant to Reg Tugwell, RRA chief, had attempted to have a meeting between landowners and union representatives to iron out differences, the landlords refused to comply, the union declared.

"A strike on every plantation for fair contracts for sharecroppers and day laborers is apparently the only way out for members of the union," Mitchell asserted. "Our people are being locked out. Our only answer can be to refuse to plant cotton or help plantation owners."

The union is asking that sharecroppers be given a full settlement at the end of each harvesting year and that legal rates of interest be charged them instead of the prevailing 25 to 100 perecent. Wages of $1 each 10 hour day with 15 cents an hour overtime for day laborers are also asked.

Reports reaching the union indicate plantation owners are planning to resort to violence to wipe out the union which is growing steadily in power and another "Elain Massacre" similar to that perpetrated among Negroes in 1924, is rumored in the making for both white and Negro sharecroppers.

These new developments have nullified the tentative settlement of the Parking case where 108 evicted sharecroppers are living in a tent following their eviction from the C. H. Dibble plantation in January through union activities, according to Mitchell, who said failure of the landlords to meet union men at a conference left matters up in the air.

Meanwhile more evictions are going on and threats of violence are made against evicted tenants, apparently with state sanction, for relief administrators at Arkansis refuse to carry out orders from Washington ordering aid for those evicted because of the power weilded by plantation owners in all official circles in Arkansas, Mitchell declared.

## Dett in Concert At Arkansas State College

Pine Bluff, March 12—(ANP) R. Nathaniel Dett, famous composer and pianist, appeared here at the Arkansas State College in a recital last Saturday night and for almost two hours thrilled a vast audience with his interpretaion of his own compositions and those of such masters as Grieg, Brahms and Beethoven.

Among the selections which elicited the most applause were Dr. Dett's own "Enchantment" and "Cinnamon Grove." The recital marked the close of a week's visit at the insitution by the composer, and was attended by members of both races.

## Borah Record Brands Him Unfit, N. A. A. C. P. Tells Fish

New York, March 12—In reply to Representative Hamilton Fish's defense of Senator William E. Borah as a presidential candidate, the Idaho Senator's record is cited by the N. A. A. C. P. as being such as to brand him as unfit for the high office of President in the eyes of American Negro voters.

The reply to Representative Fish was called forth by his recent speech defending Mr. Borah's opposition to federal anti-lynching legislation and viciously attacking the integrity of the Negro press. The N. A. A. C. P's statement also was a reply to a letter written by Mr. Fish to Walter White, the Association's secretary, in which Mr. Fish characterized an article in the March **Crisis** by Louis L. Redding as a collection of "odds and ends" from Senator Borah's record.

Borah and Representative Fish are charged by the N. A. A. C. P. as trying to "change the issue and divert attention from Senator Borah's record by trying to place the other candidates on the spot." In his letter Mr. Fish said: "Just why Senator Borah should be expected to lead the fight for an unconstitutional anti-lynching bill I am unable to figure out." The N. A. A. C. P. points out that Mr. Borah was never asked to lead the fight for any anti-lynching bill, and that the resentment of colored people toward him is because he has never proposed any plan to stop lynching in his twenty-eight years in the Senate, while at the same time he has fought every attempt to get the federal government to curb the crime.

The N. A. A. C. P. also points out that Mr. Borah has voted for and "actively supported numerous other bills which invade states' rights more than an anti-lynching bill would."

The association's letter cites the fact that Congressman Fish introduced in the House on February 15, 1935 an anti-lynching bill which is an exact duplicate of the Costigan-Wagner bill. Since Mr. Fish now declares that he believes the Costigan-Wagner bill is unconstitutional and that Senator Borah is correct, the N. A. A. C. P. asks him why he introduced this bill exactly a year ago, saying "did you introduce it simply as a political gesture?"

The N. A. A. C. P. declares that the article in the March **Crisis** "demonstrates that Senator Borah is not as free from racial bias nor as courageous and unequivocally committed to enforcement of all parts of the Federal Constitution as you and he maintain."

"You will realize and respect the circumstance," says the letter in closing, "that the American Negro has suffered so grievously during his three centuries in the United States, and the power belonging to the President of the United States is so great that we cannot but view with grave doubts the fitness of a man for the high office of President whose record towards Negro Americans has been such as that of Senator Borah."

## Virginia Union University Organizes Branch School

Richmond, March 12—(ANP)—The results of establishing a unit of Va. Union University in Norolk are shown in a report issued by the University here this week which shows that at the present time there are eighty-two full time students enrolled and fifty-five teachers in the schools of the city taking advantages of the evening classes.

The Norfolk unit was established upon the request of citizens of Norfolk who pointed out that since the removal of the Norfolk Mission College to Tennessee many high school graduates who desired to enter college were unable to do so because of the lack of sufficient funds to leave the city and to defray expenses of dormitory life. The project is unique among Negro colleges representing perhaps the only such unit operated by the group.

A full four-year college course is offered and among the members of the faculty are: Samuel F. Scott, A. M., Miss Dorothy Houston, A. M., David Houston, Mus. B., Frank Burleson, A. M., Booker T. Holmes, Recently through the NYA M. S., and Mrs. Helen F. Holmes. $1400 was appropriated for the aid of needy students.

## Veteran President Of Boston N. A. A. C. P. Gives Up Position

Boston, March 12—(By E. W. Clark for ANP)—After serving 15 years as secretary and 10 years as president of the local branch of the N. A. A. C. P. which he founded 25 years ago, Butler Wilson, for 52 years a lawyer, relinquished his position last week. He was succeeded by Irwin T. Dorch, also an attorney.

Mr. Wilson, after graduating from Atlanta University in 1881, set up offices here in 1884 and with the exception of three years has not moved from that location. He numbers among his fights for the race his successful effort along with Attorney William H. Lewis to prevent the Bar Association from removing the names of Negro members from their list. During the World War the lawyer helped organize the state's resources and was appointed by Governor McCall to act as a connecting link between other governors and himself.

Although he has never been a candidate for public office, Mr. Wilson has received numerous honorary appointments and has been a delegate to many conventions. He is a Republican by political faith.

## Tells How Unions Doublecrossed Negroes

New York, March 12, (ANP)—Robert C. Francis, student of labor conditions, writes in the March Opportunity on the history of the New Orleans waterfront, in which he charges that the history of black labor is the history of a persistent attempt on the part of white union labor to drive Negro longshoremen off the riverfront or to confine them to so-called "nigger" ships. These "nigger" ships are those which carry the heaviest and most unpleasant cargoes which white men refuse to handle.

## Rhode Island Girl Elected To Phi Beta Kappa

Providence, R. I., March 12 (By E. W. Clark for ANP)—Miss Margaret E. Carter of East Providence, junior at Pembroke college, was awarded the Phi Beta Kappa and the Sigma Xi keys at the college assembly recently. She was also awarded one of the Lida Shaw King prize books in recognition of her work as an Elisha Benjamon Andrews scholar.

At this same assembly, Brown University paid its deepest respects and gave splendid tributes to the memory of Dr. John Hope, late president of Atlanta university. Dr. Hope was one of Brown's outstanding alumni.

# EMBARRASSING TRUTHS!

## N. A. A. C. P. Poster Cause Arrest of Dr. E. W. Taggart in Alabama

Birmingham, Ala., March 12—Dr. E. W. Taggart, president of the Birmingham branch of the National Association for the Advancement of Colored People, was arrested here this week under a Birmingham city ordinance regulating posters.

Dr. Taggart was arrested because the Birmingham branch issued a poster and distributed it about the city protesting against lynching and appealing for members to join the branch. The poster read as follows:

**You Can't Win By Yourself**
**Join the N. A. A. C. P. Now**
**Annual Membership Campaign**
**February 28th—March 16th**
**Annual Membership Fee—$1.00 per year**
**Lynching—America's Shame**

**It can and may happen to you any day—Climaxes all the evils perpetrated upon the Negro—over 6,000 lynched since 1880—Fifteen (15) in 1935. The N. A. A. C. P. has led the fight 27 years against these evils and for the Negro's right to be FREE and to LIVE. You can help this fight by joining the N. A. A. C. P. Over 400 branches in U. S. A. Support your Birmingham Branch; it serves your community.**

As illustrations on the poster there was a picture of the lynching of Rubin Stacy at Fort Lauderdale, Fla., July 19, 1935, and also a picture of the lynching of Bert Moore and Martin Dooley, who were killed July 15, 1935 at Columbus, Miss.

Dr. Taggart was arrested under Section 5474 of the city code prohibiting the pasting of advertising matter on fences, buildings, and telephone and telegraph poles. He was released on $50 bond.

Immediately upon receipt of a telegram telling of Dr. Taggart's arrest, the national office in New York wired him suggesting lawyers and pledging backing to the limit. A hearing was held Wednesday, March 4, and Dr. Taggart's case was dismissed.

## Harlem Socialites Give Gala Fag Ball

New York, March 12—(By Davis Lee for ANP) Ever heard of a "Fag Ball?" Then you should have visited the Rockland Palace at 158th Street and 8th Avenue in Hot Harlem Saturday night.

They turned out in gala fashion, gowns of every style, color and description. I was told that they were men dressed in feminine attire—wolves in sheeps clothing. But whatever they were they certainly looked charming.

At two o'clock A. M. Sunday morning the terpsichoreans of dubious sex clambered into high priced automobiles and taxis and hied to the Yeah Man night club on 7th Avenue. There they proceeded to make whoopie in grand fashion while their male escorts and admirers stood off appraisingly and smiled. (3)

## San Francisco Club Observes Birthday

San Francisco, March 12—(ANP) Eighteen years ago the famous Cosmos Social Club was organized here and last Saturday night citizens from various sections of the State of California joined with the members of the organization celebrating its birthday.

The celebration took the form of a musicale at the Scottish Rite Auditorium featuring such artists as Guiltero Bartilini, Baritone, Helen Barthe, lyric soprano, Phyolene Pohlson, violinist, the Southern Harmony Quartet and Ruth O'Neal dramatic reader, Dr. S. L. Katzoff, medical director and consulting Psychologist of the San Francisco Institute of Human Relations was the guest of honor.

Officers of the organization are: W. Henry Lashley, president, Mrs. David D. Paul, recording secretary, Mrs. Sterling Armelin, corresponding secretary, Mrs. Frank McAdoo, assistant secretary and Roxber Chambers, treasurer.

## Church And CCC Rap 'Bama Persecution of Scottsboro Boys

Bar Harbor, Me., March 6—Three hundred members of the Holy Redeemer Church of this city, including the Rev. Edward F. Fitzpatrick, have issued a statement protesting any further persecution of the Scottsboro defendants. In addition, 100 CCC boys in the Bar Harbor Camp, over which Rev. Fitzpatrick is attendant, have voiced "keenest resentment to the wicked tactics and travesty of justice, meted out to the poor innocent Negro boys."

## *Dillard University Singers To Make Tour*

New Orleans, La.—The unusual aggregation of soloists ad choruses developed at Dillard University under the direction of Prof. Frederick D. Hall will make its first tour this May. This tour comes as a climax in the series of Brilliant programs rendered by Dillard Singers at Thanksgiving, Christmas, and the Mardi Gras. Prior to this trip the troupe will appear in concert at Jackson, Miss. ,March 30. The extended travels, beginning about May 1, will include appearances at Meridian, Miss.; Birmingham, Ala.; Atlanta, Ga., Knoxville and Chattaooga Tenn.; Louisville, Ky.; Cincinnati and Columbus, Ohio. At Columbus the Singers will appear before the General Conference of the Methodist Episcopal Church. The concert at the General Conference is sponsored by the Board of Education of the Methodist Church and the special production, "Heritage," which the group will render has been chosen by the board for representation in all of the schools under its auspices. The advance interest indicated by subscriptions has made it impossible for the group to accept all invitations.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.
No supplies sent free. Remittance requested with each order.

Please send all orders to the

**NATIONAL BAPTIST PUBLISHING BOARD**
**523 2nd Avenue, North**
**Henry Allen Boyd, Sec.**
**Nashville, Tenn.**

# INVENTORS OF COTTON PICKING MACHINE SEEK FOREIGN MARKET

Memphis, March 19 (ANP)—Special efforts are being made to place the newly invented mechanical cotton picker on the foreign market in order that "it may be a blessing not a curse to mankind" according to John and Mack Rust, white, who invented the machine.

Speaking of the machine, which they now claim has been perfected, the inventors pointed out that they were endeavoring not to cause any labor distress through their invention, averring:

"We got down on our knees and picked cotton when we were boys and we decided then that we would try to invent a machine to do this back-breaking labor. We have that machine. It will do the work of from 50 to 100 men. We are convinced that our invention if exploited would create untold disaster. Thrown on the market in the manner of past inventions, it would mean that 70 per cent of the labor population would be thrown out of employment and that is what we do not want to see happen."

Negroes constitute the majority of the cotton pickers of the South and if this invention proves a success will be the group more largely affected unless the inventors carry out their determination to exploit foreign fields where cotton picking is yet a novice.

## Chicago Legion Post Has Program For Young Men

Chicago, March 19 (ANP)—Under the leadership of Attorney Oscar C. Brown, of the Law firm of Brown, Brown and Cyrus, the Geo. L. Giles Post No. 87, of the American Legion has launched a campaign to interest youths between the ages of 17 and 24, to take advantage of the training offered by the Citizens Military Training Camp movement.

According to an announcement made by Thomas B. Mayo, post commander, a large number of youths have already signified their intention of enlisting in one of the camps where they will receive military training at the expense of the government for thirty days during the summer months.

Other activities on the 1936 program of the Giles Post No. 87 are the organization of the rifle team, an increase in the number of members of the Drum and Bugle Corps and a city-wide campaign for members. The membership at the present is 316 paid up members.

# BOY, 16, SENTENCED FOR LIFE; KILLED FARMER AND WIFE

## Youth's Father Wanted Him Put in Electric Chair

Buckingham Court House, Va., March 19 (ANP)—When he pleaded guilty to the charge of murdering a white farmer and his wife, Hazel Rose, a 16 year old youth, was sentenced to life imprisonment here Tuesday by Judge R. F. Hucheson.

According to the youth's confession, he went to the farm of Edgar C. Kellenger for the purpose of robbing the house, as he understood that the farmer kept a large sum of money in the house. Upon his arrival he found the couple sleeping and in his attempt to knock them unconscious he killed both of them.

Only the plea of guilty saved the youthful slayer from the electric chair to which his father Roy Rose averred he would send him if it were in his power. He will begin his sentence immediately.

# CAROLINA SENATOR BLOCKS WAY; HAS WHITE HOUSE FAVOR

## Foes of Mob Murder Undaunted By Latest Rebuff; Push Bill In Lower House

Washington, March 13—The resolution of the Senate judiciary committee authorizing a Senate investigation of lynchings of last year is being buried in the committee on audit and control by Senator James F. Byrnes of South Carolina, chairman of the committee. Senator Byrnes is adamant in his refusal to consider appropriating $7500 for this investigation, and even refuses to call a meeting of the committee.

There is considerable speculation in Washington over Senator Byrnes's action, because he is known to be the spokesman for the White House in the Senate. Whether he is acting because he is a South Carolinian or upon instructions is not known.

Senator Frederick Van Nuys of Indiana, author of the resolution for a Senate investigation, plans next week to bring additional pressure on the audit committee for action on the appropriation. The appropriation is regarded by all informed persons as being far too small for an adequate investigation of lynchings, but apparently Chairman Byrnes does not want even the small amount of $7500 appropriated.

The lynching issue has assumed growing importance as both parties prepare for their national conventions and the campaign to follow. Brought out in front by the rash declaration of Senator William E. Borah that he would veto an anti-lynching law if he were President, the lynching issue is said to be causing Democrats some secret headaches. Democratic observers here are watching closely the strong fight which is being made by colored people against Senator Borah. They knew colored people were interested in lynching, but they have been amazed at the intensity of their resentment against candidates who do not take a clear stand. The Democrats fear that if colored people arise in organized resentment against enemies or pussyfooters on lynching, that their party's chances may suffer considerably unless a decisive step is taken by the Administration before the adjournment of Congress.

Meanwhile, Walter White, N. A A. C. P. secretary, spent the entire week here conferring on strategy to bring the duplicate of the Costigan-Wagner anti-lynching bill up in the House All supporters of the bill are urged to write their congressmen in the House of Representatives urging them to support any move which may be proposed to have the House act on the anti-lynching bill.

## 'Hope Magazine'

"Where There's Hope There's Life"

Organ of the Fireside School

A monthly religious journal for the Christian Worker

REMEMBER—when you order "Hope" you are ordering a magazine which carries not only daily Bible lessons, based on the Uniform series of Sunday school lessons, but also stories, children's lessons, mission helps, and seasonal messages to help you plan the right kind of program for all special days of the year.

In single subscriptions, fifty cents per year. Send 10c for sample copy. Write for details to

**"HOPE" Magazine**

NASHVILLE, TENNESSEE

# LAUNCH MOVEMENT TO PUT COLORED MEN ON WPA JOBS

## Florida Project Has Only Two Laborers and No Mechanics

Jacksonville, Fla., March 19 (By Page M. Beverly for ANP)—A movement was launched here Thursday to have Negro mechanics and artisans employed on the WPA project in the Durkeeville community, which when completed will house three hundred Negro families.

When the ground was broken for the project Negro leaders were given important places on the platform, along with Mayor Alsop, who explained the benefits the group would receive from this project under the "New Deal." The following day, however, when actual work began all mechanics employed were white, with two Negroes as laborers.

This fact was called to the attention of Bishop E. Y. Tookes, and he immediately assembled a committee composed of Rev. John E. Ford, of the A. M. E. church, Rev. E. J. Gregg of the Presbyterian church, Rev. A. C. L. Arbouin, of the Central Baptist church, A. L. Lewis of the Afro-American Insurance Company, and W. H. Lee, and a petition was drawn up and mailed to the State Director of the WPA, urging the employment of Negroes.

## Indict 3 For Mail Thefts In N. C.

Smithfield, N. C., March (ANP)—Indictments against Eddie Thomas, Isaiah Hales and Thomas Williams were returned by the grand jury last week charging them with conspiracy to break into mail pouches in a railway baggage room and stealing the contents, tobacco valued at $700, since last June.

## FACTS FOR POTATO CONSUMERS

See-sawing potato supplies and prices alternate their punishment to consumers and farmers. How can consumers be assured of adequate supplies, and farmers of fair returns?

TWO hundred years ago, it is told, when the people in a European city were threatened with a food shortage, a potato enthusiast urged his townsman to use that vegetable for food. So great was the popular suspicion of potatoes that it was not until they were disguised in a kind of soup that the hungry of the town would accept them.

TODAY this once suspect vegetable has become a great national problem. Prized by rich and poor as the essential ingredient of at least one meal a day, potatoes have achieved the status of the most important vegetable crop commercially produced, and one upon which a large share of our farm population depends for their own food or for their major, if not sole, source of income. These farmers want to know why they cannot make a better living out of supplying a food that is in such great demand, and why they always receive lower prices for producing more. Consumers want to know why they cannot have all the potatoes they want at cheap prices when farmers are so ready to produce them.

POSING a problem such as this is far simpler than solving it. If people were concerned solely with getting all the food and other things they need, the solution might be easier. But in this country we produce according to the rule, not of what people need, but of what can be sold. So long as that is the prevailing business rule farmers must work by it, too. Consumers cannot well expect farmers to provide all the potatoes consumers would like to have when nobody is seeing that farmers are provided with all they would like to have. Solving our potato problem, then, is finding a way to protect farmers' income as well as providing an adequate supply of potatoes for consumers.

HOW much consumers spend for potatoes is a matter of concern to millions of farmers, but especially to those who count on their sale of potatoes to make up the bulk of the family income. About half of the farms of the country reported in 1934 that they had produced potatoes that year. A large number of these farms, however, produced for home consumption or to sell only small amounts to add a little supplementary cash to the family exchequer. The bulk of the potatoes which city consumers purchased in 1934 and 1935 were marketed by about one—tent of all the farms, or some 600,000.

CHAMPION in the quantity of potatoes produced in 1934 was Maine. Fourteen of every 100 bushels were grown in that State. Next in importance that year came New York, with 10 out of every 100. Michigan follwed with 9, Pennsylvania and Wisconsin each with 8 Idaho with 6, Minnesota with 5. These States produced about 60 percent of all the potatoes grown in 1934. This percentage varies from year to year, but it is to the farmers of these seven States that city consumers look for the most important part of their supply of potatoes.

NOT all the potatoes grown come to market. That is an important fact to bear in mind because prices which consumers pay and farmers receive for marketed potatoes are affected by the total production of potatoes. Some which do not reach markets are saved for seed. Some are kept on the farm for human food. The amounts used for these purposes vary from year to year. In 1934 about a quarter of all the potatoes produced were used on the farm for food or seed. In addition to these necessary deductions from the supply, many more bushels each year fail to find their way to city grocery stores because of one kind of waste or another. In years of big crops, millions of bushels may be left to rot in the ground or spoil in storage because the prices which farmers receive are too low to pay them to harvest their extra bushels or to ship them to market even when harvested. In the average year only 60 to 65 pounds out of every 100 pounds produced are sold or available for sale.

EIGHTEEN months is the usual marketing period of one crop, thanks to the medley of climates and the long distance marketing organization we have in this country. Starting in December when farms in southern Florida and Texas begin shipping small amounts the marketing season moves up and across the country with the warm weather. Other southern States join the procession to market along in March. Peak shipments of the "early crop" from some 12 southern areas come in May and June. "Intermediate crop" areas then come to the rescue of potato enthusiasts, sending heaviest supplies to market in July. Chief shippers in this period are the farmers on the eastern shore of Virginia. Major potato supplies come from the "late-crop" northern States which usually produce about four times as much as the early and intermediate crop areas. Heaviest shipments from the late crop reach consumer markets each month from September until May of the following year.

OLD CROPS of most vegetables are cleaned off the market before new crops arrive. This does not happen with potatoes. During the first half of 1936, for instance a new crop will be competing with potatoes harvested months before in 1935. This happens because potatoes properly matured do not have to be sold right away as do many vegetables, but can be stored for months before they are marketed. Those thin feathery-skinned "new" potatoes you find on spring markets are not mature when they are dug out of the ground. While they are coming to market, old ones—thicker skinned, less watery, more mealy—are making the trip, too, but from warehouses or farmers' bins. "Old" potatoes were mature when harvested and stored from the previous summer's crop, to be sent to market when needed.

EVER since this vegetable, a native of central South America, was first grown in northern countries, experimenters have been busy at work developing new varieties. Today there are hundreds, each one prospering best undr certain conditions. To consumers who count their food values one variety is interchangeable with another. Nor is it certain that there is much to distinguish the food value of "new" potatoes from "old" ones. Both old and new are good in the hundred and one ways we serve potatoes, but the old ones have the edge for baking and mashing because they are more mealy.

CHIEF constituent of potatoes is water. The average spud is close to four-fifths water. Substantial food values, nevertheless come in this relatively cheap food packet and one suggestion the nutrition experts give in a low-cost food guide is to book potatoes every day in the week. Rich in starch, they rate high as an energy and body-building food. While sweet potatoes are richer in vitamins in general, the white potato contains enough vitamin C to be important because of the quantities most of of us eat.

CONSUMERS' ultimate goal for all foods is a supply big enough so that everyone can have a liberal diet, and not just during one year but continuously year after year. Not even in prosperous days have we approached that goal. How fast we can build toward that ideal standard depends not alone on the cost of foods, or on the amount consumers have to spend for them, or on how intelligently we select our foods for a balanced diet on a liberal level, but also on whether farmers are receiving sufficient returns to keep on producing the quantities of food desired.

NUTRITIONISTS have drawn patterns for the liberal diet. They have measured the vitamins, minerals, carbohydrates, proteins, and other nutrients necessary to make up such a diet. They have suggested assortments of foods which will provide such nutrients. But when it comes to measuring the quantity of one particular food which should be available if all consumers were to have a liberal diet, they cannot set any rigid figure. How many potatoes we should have on any idealistic standard, therefore, may vary within wide limits.

WHAT we can measure, at least approximately, is the quantity of potatoes which is ordinarily available for market. Every year farmers report to the Department of Agriculture on January 1 how many bushels of the previous year's crop they have sold and how many are still on their hands unsold. The total of these two figures does not represent the amounts which consumers actually buy, since between the grower and the consumer there is an unknown amount of waste, but it is the nearest approach we can make to an estimate of consumption.

AVERAGE supply of potatoes available for market during the years 1925 through 1929—relatively flush years for consumers—came to about 145 pounds. In the years 1929 through 1933, when consumers' capacity to buy was on the toboggan, the average was about the same. Compared with 15 years ago, we are now consuming slightly fewer potatoes.

THESE averages cover up one of the most important facts about supplies—that there are wide variations between different years. In 1922, for instance, when production was greater than in any of the past 15 years, there were available for market close to 190 pounds per person. Only 3 years later, production was smaller than in any of these 15 years and supplies per person averaged only 130 pounds.

SUPPLIES of potatoes make these wide swings up and down, and so do prices which farmers receive and consumers pay. In reward for producing supplies far above average in 1922 farmers received about 69 cents a bushel for the potatoes they sold while in 1925 when supplies were below average, they got $1.66 per bushel, almost a dollar more.

SEE-SAWS of large supplies and low farm prices followed by small supplies and high farm prices raise serious problems for consumers who look toward the day when everyone will have a liberal diet. They raise problems too, for farmers, working within our system of earning a living by producing according to what will sell and not according to what people need.

BALANCING the see-saw so that consumers are assured an adequate and stable supply, and farmers a fair price, is easier imagined than put into practice. How many potatoes consumers get in a year and at what price are influenced by many different things, some or them controllable, some not.

WHEN farmers decide how many acres they are going to plant to potatoes, for instance, they are influenced by the prices which they received for their last year's crop. To some extent, prices received for their crop 2 years before also influence farmers' plans for new plantings. If those prices were good, the chances are that farmers will be disposed to plant more acres of potatoes—hoping that those good prices will continue and that the farm family exchequer will be swelled by returns from a larger crop. If potato prices were poor, farmers are apt to plant fewer acres.

WEATHER, farmers' capricious partner, sometimes comes in to disturb the best laid plans. How many potatoes we get depends about as much on the yield per acre as on the number of acres farmers plant. Weather has much to do with the yield. The kind and amount of fertilizer used is important, too. For instance, the same number of acres were planted in 1919 and 1920, but there was an increase of close to 22 bushels per acre in the latter year, with the result that in 1920 production was 72 million bushels greater.

IF IT were possible to stabilize the number of acres planted to potatoes, the highly variable yield per acre would remain uncontrollable. There can be no assurance therefore, that total production can be stabilized.

PRICES which consumers must pay for potatoes depend not only on how many potatoes are produced but also on consumers' purchasing power. Consumers' ability to buy a certain quantity of potatoes, in turn, depends on many things: the family income, the cost of other commodities, the family's liking for potatoes as compared with other foods, and so on. To standardize or stabilize all these important links clearly is impossible.

ALL SAUSAGE is not Government inspected. This is probably news to many consumers besides one in Wisconsin who writes us: "My dinner partner last evening happened to be a susage maker. He told me that of some 40 sausage—making plants in my city, only 3 were Government inspected; that even the local sausage plants of some of the large packers were not Government inspected. This certainly was a revelation to me, and afterwards I found that the rest of the people were as much astonished as I". Sausage made in an establishment operating under Federal meat inspection either bears the round purple inspection mark on the product of the inspection legend on the label. Some States and many cities have local meat inspection forces which conduct inspections in the State or city. Assure yourself that the sausage has been inspected.—Consumer's Guide.

## "Beat Borah" Campaign Started In Ohio

Cleveland, O., March 12—Under the leadership of Dr. George P. Craig of the Cleveland branch of the N. A. A. C. P., a state-wide campaign against Senator William E. Borah is going forward under the slogan "Beat Borah."

Dr. Craig has written letters not only to all N.A.A.C.P. branches in Ohio, but to all civic, social, fraternal and political clubs and groups, informing them that Senator Borah opposes legislation to stop lynching and that his record in the Senate shows that at one time he did not favor Negroes having the right to vote.

# GROUND BROKEN FOR NEW LIBRARY AT WILBERFORCE UNIV.

## Students and Faculty Pledge $5,000 to Building Fund

Wilberforce University, March 19 (ANP)—Wilberforce Universitv broke ground Friday for the new library addition planned by President R. R. Wright, Jr., to accommodate the large student body which Wilberforce now has.

The present library which was a gift of Andrew Carnegie was built in 1911 when Wilberforce had only about 300 students. It was amply able to take care of the university's needs at that time but now the university has more than 800 students. For sometime it has needed larger library facilities.

**Bishop Payne Inspiration**

On Founders' Day Feb. 24, after the Founders' Day address by President C. S. Long of Florida in which the great faith of Daniel A. Payne was emphasized, President Wright announced his intention of building the library addition immediately. Said he, "If Daniel A. Payne could buy Wilberforce University in 1863, we can build a library in 1936. We have no excuse. Our people are more intelligent than they were then. Ninety percent of the Negroes of the United States could neither read nor write when Daniel A. Payne purchased Wilberforce, now 90 per cent of the Negroes can read and write and only 10 per cent are illiterate; then there were less than half a million free Negroes in the United States, now there are 12 million; then it was a rare thing to encounter a Negro who made as high as a hundred dollars a month, $7 a week was considered good wages. The bishops of the church got only $100.00 a month, now there is hardly a teacher in this school or an employee in this university who gets as little as $100.00 a month. Depressions should not deter us from undertaking a great and noble task for Daniel A. Payne had more then depression. The country was in the midst of war; people had to stint and sacrifice and deny themselves as at no other time in the history of the nation, but Daniel A. Payne purchased Wilberforce and saved to the nation one of its finest institutions. Can we the grandchildren of that generation do less?"

**Students and Faculty Pledge $5,000**

To President Wright's address the student body and the faculty gave enthusiastic response. They had just raised $5,300.00 in the Founders' Day effort but courageously have they set about the task of building the library and they plan to raise $5,000.00 more before June 1.

At 10 o'clock the students and faculty assembled at the plot of ground chosen for the new addition in the rear of the present library. Bishop R. C. Ransom, president of the Board of Trustees turned the first spade of dirt. President R. R. Wright, Jr., turned the second, and Miss Mollie Dunlap and Supt. C. C. Jenkins and other followed. The address was given by Miss Geraldine Jackson on the need of an addition to the library and the college song Alma Mater was sung.

President Wright announced that this library will be complete and entirely paid for by the opening of the next session of school, Sept. 1936.

## Hampton Inst.

**SUMMER SCHOOL OFFERS IMPORTANT COURSES**

Hampton Institute, Va., March 14—Teachers who already hold a Bachelor's degree are eligible to register for graduate study. The graduate courses are planned for principals, supervisors, and heads of departments. They are in the field of education with a major in biology or in history, and a minor in social studies.

Courses wil lbe offered in secondary education, with some courses in the English and social-studies majors.

Courses will be offered in the home-economics curriculum and also for trade teachers.

The courses required in the junior and senior years of the curriculum leading to a degree in the elementary field will be given.

Teachers who are working to complete the two-year curriculum for elementary teachers will have an opportunity to continue their work, since all of the required courses will be given.

Jeanes and supervising teachers and teachers in the small rural communities will find a wide range of subjects to meet their particular needs. These special courses are listed at the top of the sheet listing the courses which will be offered in the six-week term.

The Summer School Bulletin will be mailed on or about May 15. Those who wish assistance in making up a Summer-School program should write to William Anthony Aery, Hampton Institute Virginia, at an early date.

# COLORED CITIZENS OF HOUSTON TO TAKE BIG PART IN TEXAS EVENT

Houston, March 19 (ANP)—A mammoth Texas Centennial songfest and triple choral club contest, under auspices of the Houston Negro Chamber of Commerce, J. E. Robinson, Sr., president, will be presented here at the City Auditorium, Sunday, March 29, 3:30 p. m. Participating musical organizations are: Prairie View State College chorus, O. Anderson Fuller, Jr., director: Nathaniel Dett Choral club of Galveston, J. W. Coleman, director, and Coleridge-Taylor Choral club of Houston, Mrs. P. O. Smith, directress.

Each choral group will sing a Negro spiritual, jubilee, semi-classic, classic and special number, with the massed chorus singing six numbers under the baton of the guest conductor, Mrs. E. C. Champ-McCabe of Beaumont, president of Texas Association of Negro Musicians, and head of the Negro music for the centennial celebration of 100 years of Texas independence and freedom.

Hon. James V. Allred, youthful governor of Texas, and Dr. W. R. Banks, principal of Prairie View State College and chairman of Texas Centennial Negro Commission, have been invited to deliver short messages at this observance, the first among Negroes of the state.

C. F. Richardson, editor of the Houston Defender and vice president of the Negro Chamber of Commerce, heads the committee in direct charge of this anniversary program. Other committeemen are: G. Duke Crawford, Rev. James L. Robinson, Dr. O. L. Lattimore, L. H. Spivey and Charles A. Shaw, chamber executive secretary.

# LANDON FORCES IN KANSAS MAKE BAD START—PICKENS

## Noted Leader Scores Failure To Pick Colored Man As Delegate

By William Pickens (for ANP)

Chicago. Ill.—A bad start, so far as the Negro race in America is concerned. Otherwise, the Landonites would call it a good start,—and perhaps most of them are even unconscious of the seriousness of their failure to name a single Kansas Negro to the Republican National Covention, which is to assemble in Cleveland, Ohio.

This action, or failure of action, by the Kansas Republican Convention in early March in Wichita was not an accidental overlooking of the Negro: It was a deliberate snub and rebuff to Kansas Negroes. The Negroes were there from Topeka, from Kansas City, as regular delegates, but the presiding officer refused even to recognize a Negro when he tried to get the floor. Well-known Negro Republicans were turned down, like Dr. Blount, of Kansas City, and Elisha Scott, of Topeka. When a Negro was on the floor demanding recognition, the chairman would look down on his table or desk, refuse to see the clamorous Negro, and would call the name of some other person,—actually "recognize" and give the floor to some white person on his list on the desk, but who was not even trying to get the floor. The thing was so ridiculous that once the chairman even "recognized' and gave the privileges of the floor to a delegate who was not even present in the building,—to keep from recognizing he Negro who was demanding the floor!

Did these suppress-the-Negro orders come from Landon? If so, then these are more than correct who say that he is grossly ignorant or totally lacking in respect for colored citizens, or both.

It looks to us like poor statesmanship on the part of the Landon forces: to have set even one Kansas Negro to the Republican Convention would not have offended anybody, would have been rather "expected" even by the most anti-Negro politicians,—but it would have done a lot of good for Landon.

This time, too, the whites cannot use their usual alibi in such cases: "That the colored representatives were divided and not pulling together,—that they could not agree on a man from their number,—and that all of them wanted to be delegates,—and that they were fighting each other,"—so that the poor bewildered "white brother" did not know what to do and simply left all the Negroes out. These Negro Kansans went in united. They had met and selected one delegate whom they ALL SUPPORTED for the National Convention,—a native-born, well-known lawyer and politician and a consistent Republican,—Attorney Elisha Scott, of Topeka. Scott is not a figure-head anywhere. As a lawyer he is one of the most successful in the country. Not a white attorney in Topeka has more work to do than he has, and most of his work is among white clients.

In this first move Landon or his lieutenants have deliberately ignored the Negro citizens. What will the next move show? In the name of Jacob's God, will the Negro voter have to choose between such Republicans and the New Deal? What a dilemna for the black citizen..—We shall see.

# WPA Workers Die In Dynamite Blast

Birmingham, Ala., (A.N.P.) — Charlie Sanders and John Tanner. workers on the WPA project on the Springdale-Gardendale highway died here at the local hospital from injuries received from a dynamite explosion, and Will Jones, another worker is in the hospital in a serious condition.

According to the report of the foreman, the men had been warned not to stand too near the spot that was being dynamited. The trio of workers disregarded this warning and as a result when the blast occurred were hurled into the air. Sanders and Tanner suffered broken necks and Jones a skull fracture.

WHEN IN CHICAGO STOP AT AMERICA'S LARGEST NEGRO HOTEL—VINCENNES

VINCENNES HOTEL—Chicago, Illinois, located at 36th Street and Vincennes Ave. The most modern and up-to-date Hotel owned and operated by Negroes in America. Mrs. E. Barnett-Lewis, is Proprietress. Write for Prices and Rates.

# RELIGIOUS AND POLITICAL GROUPS IN CHICAGO GIVE DEPRIEST STRONG BACKING

## Congressman Arthur Mitchell Faces Hard Fight for Congress, Has Two Opponents for Nomination

Chicago, March 19 (ANP)—With the primary election scheduled for April 14, the "political pot' is boiling throughout the wards on the Southside as the Republicans gird themselves to win back the jobs from the democrats and various candidates align their forces to defeat their rivals.

Perhaps one of the most hectic battles being waged is that of former Congressman Oscar De Priest, who is facing a double barrelled battle, with ex-Alderman Louis B. Anderson as his rival for the Republican nomination for the congressional post and Alderman R. R. Jackson pitted against him in his battle to retain the Republican Ward Committeemanship of the Third Ward.

In his congressional fight, the former Congressman boasts of the support of the Republiacn Committeemen of the First Congressional District and the support of the ministers in the District as well as the endorsement of the Bishops Council of the A. M. E. church, which met recently in Kansas City.

Former Alderman Louis B. Anderson is supported bv the Second Ward organization, headed by Alderman William L. Dawson, who at one time was a member of the De Priest camp and also claims the support of a large number of ministers in the First Congressional District as well as prominent Party leaders.

### Mitchell Has Two Opponents

Congressman Arthur W. Mitchell, the present incumbent who defeated De Priest in the last election at which time there was a Democratic landslide, is opposed by Attorney George C. Adams and Hugh G. Daly, white. The Congressman, according to reports, has the support of the Democratic Cook County Central Committee, while his opponents are being supported by independent organizations. It is rumored however, that Daly has the backing of "Hinky Dink" Kenny, 1st Ward democratic boss.

In other battles for honors, the battle between Captain Charles Udell Turpin as candidate for election and Edward M. Sneed for reelection as Democratic Committeeman of the Third Ward, looms as the most hectic. Sneed who has been in office for two terms has the support of the powerful Kelly-Nash combine that is controlling the destiny of the Democratic Party in Cook county and in certain sections of the entire State of Illinois and which is supporting the candidacy of Dr. Herman N. Bundensen of Governor.

Captain Turpin, a veteran of the World War and at present an officer in the Eighth Infantry Regiment of the Lllinois National Guard, is being supported by the organization fostering the re-election of Governor Henry Horner, who was "given the proverbial cold shoulder" by the forces headed by Mayor Edward J. Kelly and Patrick Nash. He is also being ardently supported by the Third Ward Democratic Veterans Association, composed of veterans of the World War and by fellow-members of the Eighth Infantry Regiment.

### Ministers in Battle

To influence members of the group in the various wards of the city to register, prominent ministers including Bishop W. J. Walls, Dr. L. K. Williams, Dr. J. H. Branham, Dr. J. C. Austin, Rev. A. Wayman Ward, Rev. A. J. Carey, Jr., Rev. Harold M. Kingsley, Rev. Martin and twenty-four others, held a meeting here last week, at which time a petition was issued urging the citizens to register and to vote.

The petition pointed out that, whether Democratic or Republican, the ballot was the most powerful weapon in the hands of any group and that it should be used to the full advantage.

## Ruined Cotton Crop Presents Problems To Russia

Moscow, March 19 (ANP)—The loss of so many tons of last year's bumper cotton crop in Russia, due to it having been picked before it was ripe, has presented a great problem to the Soviet government and the solution rests upon the shoulders of a committtee headed by the Vice Commissar for Light Industry, Mr. Yeremin, according to reports being circulated here.

These reports state that 50,000 tons of harvested cotton had been ruined due to having been picked while yet unripe and that 20,000 more tons had been picked so green that the fiber head had not been formed. This committtee, appointed last week, will make a thorough investigation of the case as Russia depends so largely on the cotton produced.

Another rumor going the rounds is that two mechanical cotton pickers had been ordered from John and Mack Rust, of Memphis, Tenn., inventors of the mechanical devise, and that if the experiment proves successful many others will be ordered.

# DR. W. E. B. DU BOIS TO VISIT GERMANY AND STUDY TRADES

## Educator and Writer Given Trip By Oberlaender Trust

Dr. W. E. B. Du Bois sails June 5, on the Steamship St. Louis of the Hamburg-American Lie to spend six months in study in Germany. He has been enabled to make this trip by a grant-in-aid from the Oberlaender Trust.

The Oberlaender Trust is an integral part of the Carl Schurz Memorial Foundation. Its object, according to its last published report, is "to enable American men and women who have attained national prominence, to become better acquainted with the achievements of the German-speaking peoples in their respective fields."

In accordance with this plan, a number of American scholars have from time to time been sent to Germany. Among these are Ralph Bryant, professor in forestry in Yale University, John F. Coar, professor of German in the University of Alberta, C. W. Hasek, head of the Department of Economics and Sociology, Pennsylvania State College, Howard P. Jones, Secretary of the National Municipal League, Rufus N. Jones, professor of philosophy, Haverford College, Clyde L. King, professor of political science, University of Pennsylvania, Dr. Alice Hamilton, professor of medicine, Harvard Medical School, Mr. and Mrs. Julian Harris, writer, formerly of the Atlanta Constitution.

February 7, 1935, Dr. Du Bois made a suggestion to the directors of the Oberlaender Trust outlining a plan "to make a study covering perhaps six months, more or less, into the way in which popular education for youth and adults in Germany has been made to minister to industrial organization and advance; and how the German experience can be applied so as to help in the re-organization of the American Negro industrial school, and the establishment of other social institutions."

This proposal was accepted and a grant-in-aid made. It is possible that Dr. Du Bois will return to the United States by way of Russia, China, Japan and Hawaii. He will resume his work as head of the Department of Sociology in Atlanta University at the beginning of the second semester, February, 1937.

## Alpha Phi Alpha Men Win Honors At Wilberforce

Wilberforce, March 19 (ANP)—Out of a total of 15 men receiving individual awards for scholarship 7 were members of Xi chapter of the Alpha Phi Alpha fraternity representing the second time that members of this fraternity have led in inter-fraternity scholarship competition. and as a symbol of victory the fraternity was awarded the oaken scholarship placque.

The Omega Psi Phi, won second place with the Kappa Alpha Psi third and the lis of those receiving individual awards was: Joseph Allen, Joseph Smith, Lewis Barnes, Theron Ames, Hendron Hargrove, Samuel Morris, James Perdue, Edward Richardson, Benj. Waugh, Robert Whatley, David Raines, Samuel Mickens, D. S. D. Belliny, Arthur Evans and Horace Raines.

# POEM OF THE WEEK

## "Why Boys Go Astray"

**Hazel Gustafson**

What can a boy do and where can a
boy stay
If he is always told to get out of the
way?
He cannot sit here and he must not
stand there, the cushions
That cover that fine rocking chair
were put there, of course,
To be seen and admired; a boy has
no business to ever be tired.

The beautiful roses and flowers that
bloom on the floor of the
Darkened and delicate room are
made not to walk on...at least,
Not by boys; the house is no place,
anyway, for their noise,
Yet boys must walk somewhere, and
what if their feet...sent
Out of the houses....sent into the
street should step round the
Corner, and pause at the door where
other boy's feet have
Paused often before;

Should pass the gateway of glittertering light where jokes are merry
And songs that are bright ring out
a warm welcome, with flattering
Voice, and temptingly say, "Here's a
place for the boys."
Ah! What if they should? What if
your boy or mine
Should cross o'er the threshold which
marks out the line
'Twixt virtue and vice, 'twixt pureness and sin
And leave all his innocent boyhood
within?
What if they should, because you and
I, while the days and the
Months and the years hurry by, are
too busy with cares
And with life's fleeting joys...to
make round our hearth stone
A place for the boys?

There's a place for the boys, they'll
find it somewhere and if
Our own homes are too daintily fair
for the touch of their
Fingers,...and the tread of their
feet...they'll find it, and
Find it...alas, in the street...'mid
the gilding of sin and the
Glitter of vice,.....and with heartaches and longings we pay a
Dear price for the getting of gain
that our lifetime employs
If we fail to provide a good place for
the boys.

## Tuskegee and Wiley Debaters To Meet

Tuskegee Institute, Ala., March 19 (ANP)—Announcement was made here Monday that the debating teams of Tuskegee Institute and Wiley college will engage in a series of debates. the first of which will be held here Friday night with the question being "Resolved that Congress should be allowed, by two-thirds majority vote, to over-ride decisions of the U. S. Supreme Court declaring acts passed by Congress as unconstitutional." The debates will be held in Montgomery, Birmingham, Selma, Anniston and Florence.

# GROUP FINDS TOO MANY HIGH SCHOOL GRADUATES CAN'T DO PRACTICAL WORK

## Unfair Division Of Funds Also Hit At Vocational Education Meeting

Houston, March 12—(By Albert White for ANP)—The declaration that too many high school students graduate without being equipped for practical work in life, and that if American education is to be a criterion of universal learning, the Negro must be exposed to opportunities equal to those given other races and a fair distribution of school funds, were important highlights of the two-day session on Negro vocational education held here last week.

L. W. Woods, state superintendent of education, was responsible for the statement on high school graduates and L. V. Williams, principal of Booker T. Washington High School of Dallas, lambasted educational opportunities afforded Negro youth.

The Texas law requires separate but equal accommodation in the matter of public education for the two races, Mr. Williams asserted, but the law is being violated and the Negro is denied equality in training.

R. O'Hara Lanier, dean of the Houston College for Negroes, advocated a distribution of jobs as a substitute for the distribution of wealth. This will curb the growth of radicalism and unrest, he observed.

Dean Lanier pictured the need of a single standard of civic and living conditions for the races if the objectives of schools are to be achieved.

"Why teach Negro children the principles of health practices," he inquired, "if we are to send them back to the slums, shacks and mudholes to live."

The dean said some Negroes are opposed to vocational education because it trained people to work. "Christ exemplified the ideal of vocational education," he explained, by studying to be a carpenter. After that he moved up into a higher professional realm.

"We started out from Emancipation with a false philosophy," Dean Lanier charged," and since many have been led to believe we are free from work."

The conference, which closed Monday afternoon, was promoted under the auspices of Ray L. Martin, state director of industrial education. Approximately 1,000 attended the opening session.

### ARGENTINA FRUIT OUTPUT SHOWS RECORD INCREASE

New York, March 16.—(AP)—A marked expansion in fruit production in Argentina is reflected in record shipments and greatly increased domestic consumption during recent months, a Buenos Aires cable to the Argentine Information bureau said today.

Two shipments of varied fruits totaling 137,789 cases have just left Buenos Aires, harking the height of a record fruit season for Argentine growers. Of this amount, 28,936 were destined for Brazil and 76,100 cases for the United States. The remaining 32,753 cases of fruit were shipped to France, Sweden, Finland and Norway.

### PORK PRODUCTS

PRICES of pork at retail continued to fall during the last half of January, although the decline was not as sharp as that occurring in the first half of the month following the invalidation of the processing taxes by the Supreme Court. Since the first of the year, retail prices of pork chops have dropped 3.2 cents per pound; lard, 1.8 cents; and smoked ham, 1.1 cents.

IMMEDIATELY after the removal of the processing taxes early in January the prices paid for hogs by packers advanced sharply. This rise attracted a marked increase in market shipments as producers sought to avail themselves of the higher prices. The supply situation as a whole was not changed by these heavy marketings, the effect having been only to hasten the shipment of hogs which otherwise would have been held on the farm a little longer.

MARKET PRICES for pork have probably not yet fully adjusted themselves to the new basis of operation without processing taxes. Until they do it is difficult to foretell the direction of price changes from week to week. Retail prices for fresh pork usually show a seasonal increase between February and April. This year this advance will probably be less than normal. After April prices of fresh pork products are expected to drop more than seasonally.

ELIMINATION of processing taxes will not affect supplies of pork available for consumption during 1936. Indications are that the spring crop of pigs will be substantially larger in 1936 than it was in 1935, but they will of course not be available for market before the winter of 1936-37. If the cycle of hog production should follow its normal course, pork supplies will increase for the next several years until, in response to lower prices, farmers will again curtail production and begin the cycle anew.

### SPRING FEVER HITS TRADERS IN COTTON

New Orleans, March 16.—The cotton futures market opened with a wide spring yawn, dozed through most of the day and closed with a slightfluster, unchanged to a point higher than Saturday.

The day struck a new low for dullness. The caller looked down upon an empty trading ring most of the day and quiet prevailed.

Port receipts today 8,964; this week 13,843: this season 6,382,720; last season 4,060,482. Exports today 21,036; this week 21,036; this season 4,584,454; last season 3,420,839. Port stocks today 2,239,853; same day last year 2,427,265.

Stocks on shipboard at New Orleans, Houston and Galveston today 60,689; same day last year 58,544. Sales at Southern spot markets today 5,289; same day last year 3,193.

Futures closed steady unchanged to one point p.

| December | 10.19 | ..... | ..... | 10.19 |
| January | 10.21 | 10.21 | 10.21 | 10.21 |

New York, March 16—The cotton market today was a repetition of the dull and narrow price swings shown in most recent sessions. The close was steady, net 5 points higher to 1 point lower.

Comparatively light offerings were absorbed on net declines of 4 to 6 points and closing quotations showed recoveries on covering and trade buying.

March ended at a new advance of 5 points, while May was 1 point higher and later months unchanged to 1 point lower.

Exports today 21,036, making a total of 4,810,299 for the season. Port receipts 12,052. U. S. port stocks 2,245,934.

Futures closed steady, 5 higher to 1 lower.

Spot steady: middling 11.45.

Liverpool, March 16—Cotton, 3,000 bales, including 500 American. Spot in fair demand; prices unchanged; quotations in pence: American strict good middling 6.98, good middling 6.68, strict middling 6.48, middling 6.28, strict low middling 6.11, low middling 5.86, strict good ordinary 5.66, good ordinary 5.36. Futures closed quiet and steady. March 5.98, May 5.85, July 5.74, October 5.50, December 5.45, January 5.45.

### TEN SPOT AVERAGE

New Orleans, March 16.—The average price of middling cotton today at ten southern spot markets was 11.36 cents a pound; government subsidy 0.64 of a cent a pound.

# RAILROAD CHANGES ARRANGEMENTS ON CAR AFTER PROTEST

## Crew Had Been Forcing Colored Women to Use Lavatory for Men

New York, March 13.—Jim crow cars on a Chicago, Rock Island and Pacific train running between Little Rock and Oklahoma City has been altered after vigorous complaint from N. A. A. C. P. that colored women and white and colored men were forced to use the same lavatory.

The arrangement became known when a colored woman traveling on the train last fall made complaint to the N. A. A. C. P. The journey is one of ten hours. On this particular day there was only one coach on the train. It was divided in half and in one end was a toilet for white women with that end occupied mostly by white women. The other half was a smoker for white men which had a curtain hung across several seats reserving a small section for colored people. In that end of the coach was a toilet which was for the use of white and colored men and colored women.

In its protest to the Rock Island railroad the N. A. A. C. P. wrote:

"Please be advised that we are instructing all of our branches that this is a violation of all principles of equal protection and accommodation and that the company is legally liable to any Negro woman who is forced to use a toilet in a smoker available to Negro men while a separate toilet is provided on the train for white women."

The N. A. A. C. P. advises colored women that they have a legal right to bring suit against railroads for such accommodations and that it will be glad to advise whenever specific instances are referred to it.

## State Supervisors Meet at Howard University

Washington, D. C., March 12—(ANP) State Supervisors of Negro Schools and Colleges and representatives of nine institutions assembled at Howard University last week to discuss the problems faced by State institutions and to seek a way out. The conference was called by Miss Susan Burson of the Home Economics Division of the U. S. Office of Education and the institutions represented were: Delaware State College, Kentucky State, Morgan College, Winston-Salem Teachers College, South Carolina State College, Virginia State College, West Virginia State College and Alcorn College.

## Nation-Wide Observance Day

March 24, 1936, has been set aside by the Young Women's Christian Associations of the world as the Nation-Wide Observance Day. In this city the program for the occasion will be sponsored by the Co-ops Club, which comprise young business and professional women of the local Y. W. C. A. The program includes a reception in the evening from eight to ten o'clock. During these hours Professor Eppse will deliver an address, and there will also be interesting musical and literary numbers rendered. The public is cordially invited. Remember the date—March 24th, from 8:00-10:00 P. M.

## Howard University

Washington, D. C.—For the next school year, 1936-37, Howard University will set aside funds for seventy (70) Tuition Scholarships for needy students of exceptional scholastic standing. About twenty-five per cent of these are to be awarded to high school graduates who wish to attend Howard University. These Tuition Scholarships will cover tuition fees amounting to one hundred and fifty ($150) dollars for the school year. Scholarships are awarded on the basis of relative need and scholastic standing.

In addition to Tuition Scholarships the University will provide employment on the campus to cover tuition, or board, for about one hundred and twenty-five (125) worthy students with good scholastic records.

Awards are made by the Scholarship Committee on the basis of competitive ranking of all applicants. Applications for Scholarship must be in the hands of the chairman of the Scholarship Committee, Howard University, on or before April 20, 1936, to be considered with the first awards are made.

Those interested should write for application blanks to Prof. Max Meenes, chairman of Committee on Scholarship and Student Aid, Howard University, Washington, D. C.

# ACCOMPLISHMENTS OF CHICAGO URBAN LEAGUE OUTLINED

## Group Has Played Big Part in Interracial Work, Say Leaders

Chicago, March 19 (ANP)—The growth and accomplishments of the Chicago branch of the National Urban League, were outlined in a twenty-eight page booklet issued by the organization here last week.

From the genesis of this organization, with A. Arnold Hill as executive secretary, to the present time under the administration of A. L. Foster, as executive seeretary, it has rceeived the wholehearted support of Chicagoans and has played an important part in the racial and interracial life of this city.

Under Mr. Foster, several braneh-es have been established in districts most densely populated by Negroes and new departments have been added to the general program, through which the needs of the groups are being served, the latest being that of Soeial and Civic Improvement, under the direction of Frazier T. Lane.

Among the accomplishments listed were; the opening of new avenues of employment for Negroes, through the industrial department, improvement in interracial relations through various activities and surveys eonducted by the organization and the important part played by the Urban League in relief work during the present erisis. The officers are: A. L. Foster, secretary, Howard D. Gould, direetor of the Industrial Department; Frazier T. Lane, director of the Soeial Improvement Department; Miss Odessa Cave, offiee manager, and the board of former ineorporators as well as the present board of directors with Dr. M. O. Bousfield as president includes the name of some of Chieago's most prominent citizens.

## White Collar Project Starts In Omaha, Neb.

Omaha. Nebr., March 19. (By R. C. Price for ANP)—With Mrs. Robert Turner Davis as state direetor, another fcderal project was begun here Monday for the training and employment of white eollar Negro workers. The project is being housed in the Urban League building, through the efforts of whose secretary, Bernard E. Squires, it was secured, and will employ 19.

Mrs. Davis is a graduate of Howard and was state supervisor of an employment survey here in 1935. Assisting her in the new project will be Gaines T. Bradford, former editor of the Birmingham World, and Charles F. Favis, loeal attorney.

## Defraud Widow of Funeral Expenses

Baltimore, Mareh 19 (ANP)--Mrs. Mary Jennings of this city will have to start another savings account to defray her own funreal expenses according to testimony in police court here this week.

Mrs. Jennings charged that some weeks ago Phillips White and his wife flimflammed her out of one hundred and three dollars; money she had been saving to defray her funeral expenses.

The Whites were given five years each in the House of Correction.

# "GNARLED LITTLE TURK" CREDITED WITH BEING BRAINS OF ETHIOPIAN ARMY FIGHTING ON SOUTHERN FRONT

## "Eagle Beak" Has Fanatical Hatred For Italians And Says African Soldiers Are Best In World

Addis Ababa, March 19 (ANP)—Somewhere in the southern front zone, about 225 miles behind the fighting line, a gnarled little Turk sits all day long, studying maps, talking with black soldiers, and drinking cup after cup of dark Turkish eoffee.

From this sunburned, leathery-skinned face perspiration rains down. A strange, dumpty woolen cap is on his head, and no matter what the temperature, the cap never leaves.

He is Wehib Pasha, known as "Eagle Beak," survivor of a score of battles, the brains behind the southern Ethiopian armies. The nominal commander-in-ehief, Ras Nasibu, does not g.ve a single order without first eonsulting him.

His hatred of the Italians is fanatieal. He fought them in Libya. Three months ago he said, "Zee Italians, zey are children. Zey eannot fight. My men are zee best in zee world. Zey will have zee Italians for breakfast."

Reverses suffered lately have not substantially altered his conviction. Today he says, "Zey are not so bad, but my men will beat zem if zey keep togezzer."

By "togezzer" Pasha does not mean that mass formations are necessary for Ethiopian victory. He would be the last one to advoeate such a method of fighting. He refers to loyalty following the break up of Ras Desta's army on the southern front. Eagle Beak has been pleading with his friend, Emperor Haile Selassie, to break up all the armies and place them under minor chiefs.

He really wants Ethiopia to revert to the old time fighting of the great Menelik's day, to guerrilla warfare in which small bands harass the invaders.

"I know zee Italians," he says, decrying facist courage. "When zey know where zee enemy is, zey are not so bad, but when black men come from zee left, zee right, and behind making noises like zee devils in hell, ah, zat ees different."

## Adult Education Campaign Launched By Missouri WPA

St. Louis, March 19, (ANP)—With the slogan of "Every adult person in the State of Missouri must be able to read and write" the two hundred teachers employed by the WPA on adult edueation projects, launched an intensive statewide drive against illiteracy following a conference held at the Gallaudet School for the Deaf Tuesday.

This action was taken following a statement made by John Walsh, supervisor of the group for illiteraey and Americanization that there were thousands of illiterates in the State of Missouri that were not enrolled in any of the classes offered by the WPA program.

"The average person" Walsh said, thinks illiteracy is confined to our foreign born. As a matter of fact the amount of illiteracy among our native born is appalling. Thousands of persons in Missouri can neither read nor write as our drivers license and old-age pension laws strikingly show."

Figures given out at the conference disclosed that there are now some ten thousand adults enrolled in the various classes that are held in churches, community centers and Y.M. and Y.W.C.A. buildings. It is the goal of the teachers to teach every adult to write his name and to read at least the headlines of the newspapers.

One of the most interesting reports made was that concerning a 33 year old man who had been taught to read and write. The commentator pointed out "I have never seen a happier individual in my life than this man when he reached the point in his training where he could sign his name."

Hundreds of Negroes are among the enrollees under the tutorship of Negro teachers employed under the WPA. Reports showed that these enrollees are taking an active interest in their elass work and many are doing "home work" to accelerate their training.

## John L. Spivak Returns To U. S.

Chicago, March 19 (ANP)—John L. Spivak, ace reporter, who covered the Scottsboro cases for the Associated Negro Press and who wrote the famous book, "Georgia Nigger" is back in America. He will lecture in Chicago at the Ashland Auditorium, March 22 on "Europe Faces The Barricades.' Spivak has just spent six months in Europe investigating political conditions affecting the masses. "The Negro problem is non-existent here" he wrote from Prague.

## Ethiopians Claim Victory In Daring Raid

### Men Under Ras Imru Kill 412 Fascists and Take Munitions

Addis Ababa, March 19 (ANP)—A daring raid behind the Italian lines on the Northern front, in which 412 white troops were killed and a munition dump destroyed, was officially revealed last week by the government here.

Troops under the leadership of Ras Imru, Governor of Gojam, made the raid a short distance west of Aksum, in the direetion of the Mareb river which forms the boundary between Ethiopia and Eritrea. Their objective was to attack the Italian roads and supply communications connecting Adowa with Eritrea.

Aecording to the soldiers, they destroyed 15 munitions dumps, two depots of 30 tanks and some lorries. They took no prisoners. Aecording to officials, this is the first time Ethiopians have penetrated behind the Adowa-Adigrat-Aksum line.

The Italians fought bravely for the first few minutes, and then turned tail and ran, officers declared. Most of the invaders were killed around their tanks which they made a rallying point. Swords, daggers and scimitars were freely used by the tribesmen. Some of them thrust lances through the loopholes in the armour of the tanks, only to find they were unoceupied.

## Emmett J. Scott Founder's Day Speaker at Tuskegee

Tuskegee, March 19 (ANP)—Dr. Frederick D. Patterson announced this week that Dr. Emmett J. Scott, seeretary of Howard University would be the Founder's Day Speaker at Tuskegee Institute, Sunday, April 5. Dr. Scott for many years was secretary to Dr. Booker T. Washington, Tuskegee's founder.

## N. A. A. C. P. Scores Fish For Attack On Negro Press

New York, March 12—The characterization of the Negro Press as "eowardly and unfair" by Representative Hamilton Fish, Jr., in a speech in the House of Representatives February 17 was rebuked this week by Walter hWite, secretary of the N. A. A. C. P., who wrote Senator Fish: "You do neither Senator Borah nor yourself a service when you impugn the integrity and motives of the more than 200 Negro newspapers of the country for their critieisms of Mr. Borah's attitude. They have been among the most valued fighters against lynching in all of its forms."

# HENRY J. RICHARDSON AND PARTY MENACED BY ALABAMA POLICE ON JOURNEY TO TUSKEGEE INSTITUTE

## Solon Was "Suspected of Being Counterfeiter" Because He Rode Into Birmingham In Fine Car

Indianapolis, Ind., March 12 (ANP)—How he and his party were searched at gun point by two policemen in Birmingham as 'counterfeiters" because they had money and a fine car, and the subsequent apology by Lt. Governor Thomas Knight, Jr., of Alabama, prosecutor in the famous Scottsboro trials and Knight's issuance of a "letter of protection" was revealed on the return here from Tuskegee last week of Henry J. Richardson, Jr., Negro democratic member of the Indiana State legislature.

Richardson—well dressed, and of an aggressive, commanding personality—was accommanied on his trip to Tuskegee by his brother William, an Evansville undertaker; and by John K. Medders, brother-in-law of Dr. Lewis, a war surgeon at the Veterans Hospital at Tuskegee.

**In Expensive Packard**

On the trip south the legislator himself drove their car, a rich looking and expensive 1935 Packard coach. The trio stopped in Decatur, Ala., scenes of the recent Scottsboro trials, for a fan belt adjustment but the small town garage, not being able to handle the job, Directed Richardson to the Packard service company in Birmingham.

Fifteen minutes after arriving at the service station in the Alabama metropolis, two detectives came into the garage with drawn guns and ordered the three Indianans to "put 'em up." While one officer held a gun, the other searched them.

"Headquarters here have got word that you are head of a gang passing bogus money," one detective told the legislator.

**Cops Surprised**

After questioning about ownership and purchase of the car, the three men were arrested and taken to the police station. At detective headquarters the Northern trio was searched more thoroughly where the discovery of a badge as deputy sheriff of Marion county, Indiana, pinned under Richardson's coat lapel, and papers of identification showing him to be a state representative brought forth incredulous exclamations of "just look-a-here" and "I'll be damned" from the Southern officers.

When one detective attempted to remove the badge, he was immediately cautioned by a brother-sleuth to "leave it alone." Richardson declared he was searched three times before officers finally found a small .25 caliber automatic inside his right hand overcoat pocket. Finally in an apologetic manner but without one word of apology they returned the party's money and the gun and let them go.

Arriving at Tuskegee where they were guests of P. H. Roney of the Veteran's hospital, Richardson told of his experiences, stating they were examples of the vicious and uncivilized methods and justice and hospitality accorded Negroes in Alabama.

Mr. Roney immediately contacted the capitol at Montgomery and arranged an appointment with Lt. Gov. Thomas Knight as Gov. Bibb Graves was ill. Knight asked them to come to his suite at Montgomer's big Exchange hotel.

**Met by Knight**

Met at the main entrance by the former Scottsboro prosecutor, the four men were personally escorted through the lobby, up the elevator and into Knight's suite of rooms on the third floor. After the lieutenant governor had heard their story and examined Richardson's credentials he expressed regret that an official of the state of Indiana should be so mistreated in Alabama and offered the three men a state police guard.

When Richardson declared he did not think such an extreme step was necessary, Knight personally wrote on official stationery, a letter stating an executive desire that the three visitors be extended every courtesy while in the state.

The three men planned originally to spend a week in Tuskegee but returned to Indianapolis following a wire by Gov. Paul McNutt of Indiana to Richardson asking his return for a special session of the state legislature convening March 5.

# MINISTERS OF 75 CHICAGO CHURCHES FORM CIVIC UNIT

Chicago, March 12—(ANP)—With a membership of seventy-five ministers representing 60,000 communicants, as the nucleus, the newly organized Illinois Progressive Civic League, headed by the Rev. Dr. J. H. Branham, assistant pastor of the Olivet Baptist Church, is mapping plans for the civic, social and economic development of the racial group in the State of Illinois, according to an announcement made here this week.

"The real purpose of the organization", said Dr. Branham, "is to promote the civic, social and economic development of our people and bring the Christian people of the State of Illinois into movements that will bring about these results. There are thousands of church people throughout our State who take no interest in the social, civic and economic advancement of our group and we intend to arouse their interest in such projects."

## Notable Puzzled Over Borah Stand On Lynching Bill

New York, March 6—The attitude of Senator William E. Borah on Federal anti-lynching legislation is a puzzle to Dr. Charles A. Beard, internationally known writer and historian, he declared in a recent letter to the National Association for the Advancement of Colored People. Dr. Beard authorized this statement for publication:

"How any member of Congress could support and vote for the recent acts thrusting federal intervention into the ordinary criminal processes of the states and then declare the anti-lynching bill unconstitutional passes my understanding of men and the Constitution."

# THE FINEST SPAN ACROSS

## Thirteen Million Dollar Bridge Over Father of Waters

The New Mississippi River Bridge at New Orleans, being formally opened with these ceremonies, is a striking symbol of co-operative achievement.

To a private enterprise, the Southern Pacific Company, one of the greatest and most powerful of American transportation systems, with its rail lines stretching from the Pacific Coast to the Gulf Coast at New Orleans, with steamship lines from the Gulf to the Atlantic Coast, is due no small part of the credit for the successful financing and actual building of the greatest span across the American Father of Waters.

With unbounded faith in the future of New Orleans, the Southern Pacific urged the building of the bridge and entered into agreement with the city, through its Public Belt Railroad, to pay train tolls, with a minimum guarantee, thereby furnishing a basis for the financing.

Next, credit must go to an agency of the State of Louisiana, the Louisiana Highway Commission, which, with equal faith in the future of the state and its greatest port, contracted for the payment of $7,000,000 of the bridge's cost in return for the toll-free highway privileges, making the bridge the most impressive link in the Old Spanish Trail, extending from San Diego, California, to St. Augustine, Florida.

Finally, toward the end of 1931, came the Reconstruction Finance Corporation of the United States with an agreement to finance the

# Supreme Liberty Stockholders Called

## Owners of Progressive Insurance Company To Hear Reports of Officers in Chicago

Chicago—(Special)—All stockholders of record of the Supreme Liberty Life Insurance Company of this city have been called in annual session for ten o'clock Tuesday morning, April 7th in the office of the company at 3511 South Parkway. President Pace in issuing this call, stated that the purpose of the meeting is to elect a board of directors to serve during the ensuing year, and to transact other business as may properly come before the meeting.

It is known here that this company has made phenomenal success since they merged the three into one, and it is expected that the financial report which will be released to the stockholders or directors, will reveal some rapid strides, even in the past twelve months.

It is said that the number of policies in force on the lives of the insured 13,000 in 1935, that the assets of the company will run over $160,000.00 increase for the past year, that the amount of insurance in force for 1935 over 1934 was over $2,600,000; the premium income increase of 1935 over 1934 was practically 75,000, and that the total income for 1935 from all sources over that of 1934 was a little more than $100,000.00.

The officials of the company together with the board of directors will submit all of this at the annual stockholders meeting. The financial statement as of Dec. 31, 1935 disclosed the fact that there was insurance in force amounting to $27,239,428.00, and that the amount paid the policyholders of this company since its organization was $2,752,320.53, and that the number of persons holding policies in the company was 103,552. The statement shows assets and liabilities of $1,743,230.63. The list of officers and directors who are serving at this time are:

(CONTINUED ON PAGE 8)

# CONGREGATION OF 20 HEARS GILLIAM FLAY NEWSPAPERS

Norfolk, Va., March 12—(ANP)—"Negro newspapers are jelly-fish. They have no backbone and their editors have weak knees. They call it conservatism, but I'm here to call it nothing but cowardice. Negro newspapermen are actually the worst people I ever saw in my life. If they can't lead in everything they don't want anything."

In these and similar words, shouted last week to an audience of less than 20 at the auditorium of the Norfolk unit of Virginia Union University, did Jerry O. Gilliam, obese and owlishly-bespectacled president of National Postal Alliance, deliver his "report" on the National Negro Congress held recently in Chicago. Gilliam represented the Norfolk N. A. A. C. P. and Postal Alliance at the conference.

"I can't understand the impression these papers gave you of that Congress. It looked like they were just standing back to see if they could find an error or mistake and pounced with glee on the least little thing that might have been questionable," Gilliam proclaimed.

"And these newspapers lied when they said the preachers were left out of the Congress. The whole trouble was they couldn't boss the whole business and got sore.

## Survey of Great Denomination Raps Scottsboro Persecution and Abuse of Sharecroppers

New York—Gross discrimination against Negroes in every community in this country exists both within and without the church, a survey by the Methodist Federation for Social Service, on "Methodism and the Negro", revealed today.

Carried on under the direction of Dr. Harry F. Ward of Union Theological Seminary and Miss Winifred L. Chappell, Secretaries of the Methodist Federation, with offices at 150 Fifth Avenue, the survey analyzed the proposed unification plan by which the three branches of Methodism—Methodist Episcopal, Methodist Episcopal South and Methodist Protestant—would join in one body.

The Unification Plan now before Methodist church members for discussion provides for six jurisdictional conferences equal in status—five geographical; one racial. The racial jurisdiction is to include all of the present Negro conferences of the northern Church.

**Scottsboro Case**

Current issues involving Negroes, such as the Scottsboro boys, Angelo Herndon, the sharecroppers union, and lynching are incidents which point to the type of discrimination the Negroes in this country are forced to undergo, the survey states. Stating that "Negroes are church folk," Dr. Ward and Miss Chappell report the use of Negro churches for meeting places for the discussion of these issues, and that in the case of sharecroppers' meetings, colored preachers and members of congregations have on some occasions been beaten or lynched.

"Negroes are proverbially docile, but now there is a great ferment going on in the Negro population both North and South," the survey declares. "News of each new lynching runs through many Negro communities like a flame. No one with Negro blood in his veins knows when it may happen to him or to those he cares about. Issues like the Herndon and Scottsboro cases are discussed with emotion wherever Negroes gather.

"Nowadays urban Negro groups initiate or join in delegations of protest against discrimination or inadequate relief. The spirit of revolt among the sharecroppers furnishes one of the powder kegs in the present economic scene. There are two strong and militant sharecroppers' union. One heads up in Alabama. It is composed almost entirely of Negroes. The other, the Southern Tenant Formers' Union, centers in Arkansas. It has Negro and white members, the Negroes often offering the more aggressive and intelligent leadership.

**Sharecroppers**

"Some of the stories of union organization work in the South read like those coming out of Hitler's Germany. A meeting: 'A small one-room shack....A. young Negro girl, secretary of the union, took down minutes with the stub of a pencil. She sat....close to the fire so that the notes could be thrown into the flames quicker than one could say Sharecropper Union ....' Getting out a shop paper (Tennessee Coal and Iron Company workers): 'The shade has been drawn down and tacked at bottom and sides.....We check supplies, smuggling in in small quantities. On a table, covered with heavy towels to muffle sound, Sam has assembled the mimeograph machine .....Tonight a Ford car will take the TCI Blast away.....There will small piles in the washrooms....At the commissaries there will be copies in the paper sacks with the bacon and meal."

Every community in which there are Negroes furnishes examples of many kinds of discrimination, the survey continues. In New York City the Mayor's Commission which investigated the Harlem disturbance of March 19th, according to the survey, laid "the sudden breach of the public order" to "a highly emotional situation....due in large part to the nervous strain of unemployment and insecurity." Dr. Ward and Miss Chappell add:

"In Champaign, Ill., the attention of the University population was called to the hardships of Negro students when the only eating place in the vicinity that had served them was closed. Now a group of Negro and white students has formed a cooperative restaurant.

"The attack of Fascist Italy on Ethiopia dramatizes before the whole world the exploitation of Negroes by whites. It is a late chapter in the story of imperialism, much of which has been aggression by white upon dark races.

"Twenty-four times during 1935 the American public has been treated to spectacles of which the following bits of description are fairly typical: 'He was placed on an automobile with a rope around his neck. The other end of the rope was suspended to the tree. The car was driven off, throwing him from the top.' 'He was taken from jail by a mob, hanged, and his body riddled with bullets.' 'The body was found shot to pieces in the woods by his house.' These were Negroes.

**Lynching**

"Over 3,300 Negroes have been lynched since 1885. The Costigan-Wagner anti-lynching bill putting the Federal Government behind the prosecution of lynchers when State officials fail to act is again before Congress. There is also before the Senate the Van Nuys resolution calling for the investigation of recent lynchings and of the action of public officials in regard to them.

Negroes are for the most part church folk, so all of the issues that affect them get aired in the churches, the survey asserts. Hence, church buildings are the natural meeting places for the discussion of the issues.

**Protest Meetings**

Prominent Negro preachers in some cases preside at protest meetings," the survey reports. "They serve on committees helping Ethiopia; describe the details of the Negroes' poverty in their pulpits. Humble Negro preachers are often sharecropper organizers. At Slayden. Miss., last year one such preacher-organizer was lynched. In Marked Tree, Ark., another one escaped in his night clothes when a mob visited his home and shot it full of bullets.

"Sometimes it is pressure from the pew that pushes the Negro preacher into action. Radicals raise the bread and butter issue, along with the demand to free Herndon or help Ethiopia. The people respond because they are hungry. They bring their demands to their preacher. Their emotional response when he voices their needs spurs him to more vigorous expression."

There is much opposition to the proposed Unification Plan, which would segregate the Negroes into a jurisdictional Conference of their own, on the part of the Negro youth leaders in this country and rank and file Negro preachers, Dr. Ward and Miss Chappell found. These deplore "segregations within the gates of Methodism." Outstanding Negro officials, on the other hand, endorse the Unification Plan.

## Hold Georgian On Murder Charge

Americus, Ga., March 26 (ANP) —Sidney Merritt, was held here Tuesday morning charged with the murder of Walter Hagerson, white farmer, following a hearing held before Justice of Peace W. McDonald.

Hagerson was killed two months ago and his body discovered three days later in a swamp near his home which is fifteen miles from this city. At the time of the slaying Merritt was suspected of the killing due to an argument that the two men were known to have engaged in a few days prior to the finding of the body.

Merritt, however, has maintained that he is innocent and that he was not in the "Friendship Section" where the Hagerson farm is located, on the day of the murder. Sheriff W. P. McArthur, on the other hand contends that he has an iron-clad case against Merritt and that he will ask the State to demand the death penalty.

## NATIONAL MEDICAL ASSOCIATION PLANS FOR BIG AUXILIARY

### Will Form Unit For the Women at Meeting in Philadelphia

Philadelphia, March 26 (ANP)—The Philadelphia meeting of the National Medical Association this August will see the formation of a Ladies Auxiliary. This will be composed of the wives, widows, sisters and daughters of the physicians, dentists and pharmacists and honorary members of the Association, according to President Harry Barnes.

"This is not a new departure in medical circles, as the American Medical Association and many of the white State and County Medical Societies have for many years had very active Ladies Auxiliaries, and their work in humantarian projects is well known," said Dr. Barnes.

"The colored doctor's female relatives are of the highest type in the race both mentally and socially, and like the doctors, are in the front rank of leaders of the race, he continued. "Their work will not aim to supplant that of groups like the Women's Federation, but will be of a humantarian nature in relation to the health of the colored people.

"In local communities, there have been Auxiliaries to the colored Medical Societies with many fine pieces of work to their credit such as, establishing day nurseries, supporting hospitals, working with National Negro Health Week, etc. This however is the first colored group which will take up health problems which are national in character."

Youth can contribute an energy, an enthusiasm, a courage, and an idealism which is characteristic of itself, and which is not found among older people in anything like such a degree.

—Jessie Burrell Eubank.

## "LILY WHITES" OF S. CAROLINA MEET, ELECT DELEGATES

### But "Tie-Less" Tolbert Will Hold His Confab At Later Date

Columbia, S. C. March 26 (ANP) —Ten delegates to the National Republican Convention to be held in Cleveland, were elected by the Hambright or lily white faction of the G. O. P. in South Carolina, here Tuesday, when members of the faction from all sections of the state gathered here.

While no Negroes were among those elected as delegates and took no part in the proceedings, five sat in the rear of the convention hall and "viewed the proceedings from afar." They were headed by James A. Brier, of Greenville, who declared that he was a delegate to the National Republican Convention four years ago and that he "simply wanted to look on."

Under the leadership of Joe "Tie-less" Tolbert, another State Convention will be held here this week, in which Negro Republicans are expected to participate and several elected as delegates to the National Republican Convention, at which a battle for recognition will be staged by the opposing factions.

## C. M. E. BISHOP STILL FOR GOV. LANDON FOR PRESIDENCY

### Says Colored People Would do well to Whoop It up for Kansan

San Antonio, Texas—(Continental Press)—While here a few hours Wednesday en route to the coast, Bishop J. A. Hamlette of Kansas City spoke in high praise of San Antonio and of Texas. When questioned by a representative of the Continental Press on several matters the Bishop begged to be excused for the present. He resisted every question until Governor Landon's name was mentioned. Then with a broad smile he said, "Well, it looks as if the Kansas governor has the edge on the entire field."

Speaking further, the Kansas City prelate said, "Landon is a wonderful man and will do a great service to the nation and to the world as president, and I really believe he will be nominated by the National Republican Convention and will be elected by the people.

"How do Negroes like him?" he was asked. "Why, they are lining up for him right along. I noticed in Chicago the other day our people were talking more for Landon than Knox right in Chicago. I am glad to find Landon so popular here in Jack Garner's state—you will not go wrong to whoop it for Landon."

The Bishop and Mr. Payne were en route west; how far and to what point would not say, but promised to give a lengthy interview within the next few days.

## Georgia Supervisor Outlines Program

Atlanta, March 12—(ANP) What has been termed as one of the most far-reaching programs prosecuted by the NYA has been devised by Chas. E. Boyer, State Supervisor of Negro work under the movement. Mr. Boyer's program includes projects that aid the unskilled and uneducated as well as those who have reached collegiate grade.

# LEADERS PRESS FOR HOUSE ACTION AFTER FINDING REACTIONARIES OF SENATE OBSTRUCTING LAW'S PASSAGE

## Congressman Arthur Mitchell Refuses to Join With White Colleagues in Call for Democratic Caucus

Washington, March 26—With all progress toward federal anti-lynching legislation blocked in the Senate, supporters of the Costigan-Wagner anti-lynching bill are now seeking action in the House, both as a means to having the House do something on the measure and as a means to breaking the deadlock in the Senate.

The Senate deadlock is in the audit and control committee, where the Van Nuys resolution providing for a senatorial investigation of lynchings in 1935 is being held up awaiting approval of an appropriation of $7500. Senator James F. Byrnes of South Carolina, chairman of the committee, stands like a stone wall against the resolution and has even refused to call a meeting of the committee to consider it.

Several senators from northern and border states have tried to reason with Senator Byrnes, pointing out to him the importance of the Negro vote to the Democratic party in their states, but this has had no effect on the South Carolinian. Senators Capper, McNary and LaFollette, together with Senators Van Nuys, Costigan and Wagner, and others on the Democratic side, have argued to no avail with Senator Byrnes.

### Caucus Is Asked

In view of the Senate situation, the N. A. A. C. P. is seeking action in the House. The duplicate of the Costigan-Wagner bill, which was introduced in the House by Congressman Thomas A. Ford of California, has been buried in the House judiciary committee for two years. Congressman Hatton W. Sumners of Texas is chairman of this committee, and he is reported to have stated in the past few days: "As long as I am chairman of the committee I will never permit an anti-lynching bill to be reported out."

In an effort to get around Chairman Sumners, a petition is being circulated among Democratic congressman in an attempt to get twenty-five signatures. This petition requests the chairman of the Democratic caucus to call a meeting of the caucus for the purpose of considering anti-lynching bills. This request applies to all anti-lynching bills introduced in the House which are identical with the Costigan-Wagner bill. If twenty-five signatures can be secured, it is mandatory upon the chairman of the caucus to call a meeting of the caucus. The signers of the petition up to March 19 were: Thomas A. Ford, California; Joseph A. Gavagan, New York; Louis Ludlow, Indiana; Herman P. Koppleman, Connecticut; Carolina O'Day, New York; William J. Granfield, Massachusetts; Edward A. Kenney, New Jersey; Byron N. Scott, California; Thomas C. Hennings, Jr., Missouri; Fred H. Hildebrandt, South Dakota; William P. Connery, Jr., Massachusetts; John H. Tolan, California.

**Congressman Arthur W. Mitchell of Illinois, the only Negro member in Congress, refused to sign the request for the caucus, giving various reasons, among them that he did not agree with the procedure and that his bill was not among those which the caucus was asked to consider. In answer to the second reason the N. A. A. C. P. has explained that since it is pressing for the Costigan-Wagner bill and since Mr. Mitchell's bill is not identical with the Costigan-Wagner bill, it is not asking consideration of his .bill. It is anticipated that the balance of the needed signatures will have been secured by the time this story is printed.**

Once the caucus is called, it can vote either to bring the bill out of the judiciary committee to the floor of the House, or let it stay in the committee. Nevertheless the supporters of anti-lynching legislation believe that no method should be left untried to get action upon a federal anti-lynching bill.

### Should Write Congressman

Friends of the bill are urged to write or telegraph the congressman who already have signed the call for a caucus, thanking them and urging them to be present at the caucus and fight for bringing the bill to the floor of the House. Individuals and organizations in northern and border states, if they are represented by Democratic congressmen, are urged to write their congressmen asking them to be present at the caucus and to work for a rule which will bring the bill to the floor of the House, and then to speak and vote for the bill after it does get to the floor. Communities represented by Republican congressmen should write them urging them to support the bill if and when it reachese the floor. Copies of messages to these congressmen should be sent to the N. A. A. C. P., 69 Fifth Avenue, New York, New York.

Supporters of the legislation are pointing to the outburst of 25 lynchings last year, and 102 narrowly averted lynchings. According to the Interracial Commission of Atlanta, the 1935 record proves that the mob spirit is wide-spread and that some more effective method than is now being taken will have to be used to stamp out lynching and the lynching spirit. Three or four southern congressmen have privately expressed their approval of a federal anti-lynching law, but they stated that they cannot vote for it because it would be political suicide.

The organizations which are carrying on the fight stress the need for funds and are appealing for contributions to be sent to the N. A. A. C. P., 69 Fifth Avenue, New York.

## Seeks Assailants of "Numbers Operator"

Tarboro, N. C., March 26 (ANP)—Police here are seeking the assailants of Eddie Allen, alleged "numbers operator," who is lying in the local hospital in a serious condition as the result of the attack made upon him Tuesday night when he was robbed of more than five hundred dollars.

Allen was arrested here two weeks ago, charged with operating a lottery game, but was acquitted of the charges Monday. Tuesday night he was brought into the hospital by police with his skull fractured from a blow over the head with a blunt instrument and his face beaten to a pulp. Before he lapsed into unconsciousness, he told the police that he was attacked by two men who after beating him robbed him.

John Nelson, a local cafe operator, who was charged with having been associated with Allen in the number racket was arrested and questioned concerning the attack and the robbery. Officers asserted that Nelson's vest bore stains believed to be blood. This will be determined later. In the meantime Nelson is being held in jail awaiting urther developments.

# HIGH SCHOOL GIRL SLAIN IN MEMPHIS TENN. NIGHT CLUB

## Place Is Closed by Police Following This Awful Tragedy

Memphis, March 26 (ANP)—Following the fatal cutting of Ellen Doxey, 17 year old high school girl, the Morocco Club was ordered closed by the Police Department, Tuesday morning.

The killing occurred Monday night during the regular Monday night dance staged at the club. An unidentified woman came into the club and attacked the young girl; who was dancing, with a butcher knife, slashing her several times across the breast and before anyone could interfere plunged the blade of the knife into the girl's heart.

After the attack the woman, flourishing the knife, made her escape and is still being sought by the police. No one, according to the police, knew the woman at the dance hall and no motive could be advanced for the killing.

This marks the second closing of amusement places because of homicides, the other being the Panama Cab Cafe, operated by James Mulcahy, which was closed last month following a shooting affray.

# GOV. LEHMAN AND MAYOR LAGUARDIA TO WELCOME A. M. E. GENERAL CONFERENCE

New York, March 26 (ANP)—Delegates and visitors to the Quadrennial General Conference of the A. M. E. church will be welcomed to this state and city by Governor Herbert Lehman and Mayor Fiorello H. LaGuardia, at the opening session of the night of May 6, the Rev. D. Ward Nichols, pastor of Emanuel A. M. E. church, 37-41 West 119th Street, and host to the conference, announced today.

The Conference, which meets every four years to elect officers and shape the policies of the connection, is expected to bring 15,000 delegates and visitors to this city from ninety-nine conferences throughout this country, Africa and West Indies and South America. In addition to the business meetings, the three weeks session provides a varied program for the delegates and friends.

Sessions of the conference will be held in Harlem's most spacious hall, the Rockland Palace, Eighth Ave., at 155th street, where delegates will gather twice daily, once in the afternoon and again in the evening.

In making the announcement of the scheduled conference, the Rev. Dr. Nichols expressed the opinion that the General Conference here this year will be one of the most important in the long history of the African Methodist Episcopal church.

"Because the social and economic conditions of these times present a challenge to organized religion," the pastor said, "it can be expected that our church will respond to that challenge and that the delegates assembled here will seriously consider the Christian role of our church in this crisis. Then too, the great City of New York is readily accessible not only to our churches in this country, but also to our foreign districts, all of which are eager to participate in this history-making conference."

Assisting the Rev. Dr. Nichols in formulating the plans for the conference is a local committee of A. M. E. Pastors. Serving on this committee are the Rev. M. E. Jackson, Bridge Street church, Brooklyn; the Rev. H. P. Anderson, Bethel church; the Rev. E. E. Tyler, Allen church, Jamaica, L. I.; and the Rev. L. H. Midgette, Bethel church, Brooklyn. The work of the committee has the support also of the presiding elders of the Manhattan, Brooklyn and Buffalo districts, the Reverends C. E. Walton, A. L. Wilson and L. C. Newby, respectively.

There was a crash in the kitchen. The mistress found the maid and little Margaret gazing at something on the floor.

Oh, Mother, exclaimed the child, just see the lovely jig-saw puzzle Nora has made out of one of the new plates!

6. Better rural churches, schools and homes.

## Atlanta University

Conference Held on Vocational Guidance

Atlanta, Ga., March 6.—(Special—A full picture of the Atlanta Conference on Vocational Guidance and Education for Negroes, which was held at Atlanta University December 9, 14, is presented in the March issue of the monthly "Occupations," published by the National Occupational Conference 551 Fifth Avenue, New York City. The issue of 120 pages is virtually given over to the proceedings of tht conference, which was attended by more than 200 educators, personnel workers, employers and government officials, and the the conclusion and recommendations adopted at the close of the six days gahering.

In a foreword by Dr. Franklin J. Keller, dierctor of the conference, the question of the necessiity of holding a conference on vocational guidance and education for Negroes is raised. The answer Dr. Keller says is simple, and he gives it thus: "The individual who must fit his interests, aptitudes, and capacities nto an impefect world, a world full of traditions, prejudices, and vested interests ,should be fully cognizant of all the factors that make up the relationships of life. It happens that one factor is common to 12,000,000 people in the United States. Color has effected the types and numbers of occupational opportunities open to the members of tnis group. It has it has effected the quality and the quality of education available to them. It has been a constant determinant of their economic status."

One of the oldest questions raised in the field of vocational education for Negroes according to Dr. Keller, is "Shall we train colored boys and girls for the jobs that are available for them, or in the hope they may be lucky, shall we train them for jobs that are now only held by whites?" To this, there can only be one answer, Dr. Keller says, and he gives it as follows:

"TTrain individuals for jobs which, in the light of their interests, aptitudes and capacities, they will be likely to fill acceptably. But at the same time, assist the young person in every possible way to understand what the chances of employment are, and insist that he also train for some job that, as a Negro, he is likely to obtain. He must be armed with skills and fortified with emotional resistance. He must know what he wants, but must realize what he can get. He must aim for the best, but be willing to take the next best rather than be idle or neurotic or both. He must be ready to fight ever to advance the frontier of Negro occupational life and to destroy that most undemocratic concept of all, "a Negro occupation."

## Hampton Institute

Choir to Bring Spirituals

Hampton Institute, Va., March 7, 1936,— Hampton Institute makes a specialty of singing the Negro Spirituals through its Choir, Trade School Singers, Folk Singers and its whole body of students. But it seeks to hear all types of interpretation so that its singers may study and know the best.

Accordingly, it is bringing to the campus a visiting choir of singers of Spirituals. On Sunday afternoon, March 15, at 4:15 o'clock in Ogden Hall, the Musical Art Society of Hampton Institute will sponsor a free concert of spirituals presenteb dy the Musical Arts Choir of Massies Mill, Va., directed by Othello K. Wilson, who did special work in the Hampton Institute School of Music during 1927-28, following his graduation from the Hampton Academy in the class of 1925.

Mr. Wilson speaks as follows of his choir of 35 boys and girls which he is planning to bring to Hampton: "My choir presents the Spirituals untarnished by modern handling. The program is unmeched but beautifully sung throughout its entirely by Negroes who in their struggle for the common things of life still have a sincere belief in God and prayer."

The visiting choir is made up of Virginia boys and girls, boys from Mr. Wilson own school in Nelson County. It was organized to perpetuate the Negro folk song by preserving its naturalness and sponteneity."

# British Military Expert Explains Italian "Strategy"

## Says They Are Boasting Of Big Victories Without Having Won Them; Selassie Stands Firm

(Crusader News Agency)

**London, March**—Italian claims that recent Fascist victories on the northern front in Ethiopia would compel Emperor Haile Selassie to sue for peace are scouted by British military experts. These experts point out that even the most optimistic Italian claims show only a relatively small advance on the Makale front, with the Fascist armies still having to negotiate the most difficult territory before they can reach the Ethiopian capital. They also point to the rapid approach of the "small rains," due within the next two weeks, and the opportunity the rains will afford the Ethiopians to reorganize their tactics.

Italian claims that the Ethiopian armies of the North have been shattered do not jibe with the slow advance of the Fascist armies, these experts hold. Assuming the truth of the Italian claims of important victories, these could only be attributed, in the opinion of the expert, to an unwise abandonment by the Ethiopian commanders of the guerrilla tactics which have served them so well in the past in harassing the Italians and threatening their lines of communications. The situation developing out of the Italian victories, if actual, would be threatening to the Ethiopian defenders but by no means hopeless, according to these experts who have been following the war closely and are in possession of military information not available to the general public.

### Admit Some Italian Gains

The Italians are believed to have made some gains, especially in the direction of the British sphere of influence around Lake Tsana, but that these gains may well prove an embarrassment rather than a help. is shown by the sudden stiffening of the attitude of the British Government on the question of applying oil sanctions against Mussolini.

News of this stiffening came with startling suddenness last week when Anthony Eden, British Foreign Minister, vigorously and unexpectedly raised the issue in the League of Nations. The League's Committee of Thirteen has given Italy and Ethiopia one week to reply to its proposals for a cessation of hostilities. The date was fixed specifically as March 10, at which time the committee will meet again.

According to the Italian claims, the invaders have now reached Mount Alaji, the furtherest point of an Italian advance forty years ago. At that time the Italians were hurled back with great loss of life and prestige.

Dispatches from Addis Ababa, Ethiopian capital, report that the Ethiopian Government is aroused over the refusal of French authorities at Jibuti to permit transport of arms and munitions over the Jibuti railway during the last two months to Ethiopia. The Ethiopian Government has made vigorous representations to the French Government, denouncing the ban on transports of munitions as a violation of existing treaties between France and Ethiopia on the status of the railway, which runs to Addis Ababa from Jibuti in French Somaliland.

Ethiopian reports of the desertion of 5,000 Eritrean soldiers from the Italian southern army have been confirmed by foreign correspondents in Ethiopia. On March 1, the Grazmatch Svaki, commander of 5,000 Eritrean soldiers, flew an Italian bombing plane to Addis Ababa after surrendering his men and all their guns, 100 field guns and 700 machine guns, to Ras Desta at Yergaalem.

Three of his Eritrean officers accompanied him. All said they would seek service in the Ethiopian army. Svaki, trained by Italians as a pilot, and with fifteen years flying experience, planned to fly to Dessye to offer allegiance to Emperor Haile Selassie this week.

The deserters reported that they killed fifteen white Italian officers in a revolt south of Muggeli. Svaki himself killed the Italian commander, he said.

# WILLIAM PICKENS DELIVERS STIRRING SPEECH IN DENVER

## Both White and Colored Hear Orator Talk on Scottsboro Case

Denver Col., March 26—(By David N. Howell for ANP)—Speaking before the largest crowd ever assembled for a Scottsboro Defense meeting here, Dean William Pickens, director of Branches for the N. A. A. C. P. brought the most stirring address yet delivered in Denver on the Scottsboro Case at the Central Baptist Church here on Sunday evening. The meeting held under the auspices of a joint committee of the N. A. A. C. P. and I. L. D. attracted more than 600 people to hear this brilliant orator. This was the first time an effort has been made in Denver to raise funds jointly for the case.

Mr. Pickens who was in Denver at the request of the local branch of the N. A. A. C. P. spoke also to a huge mass meeting on Friday evening at the Zion Baptist church. He challenged every person present to become an active member in the work of the N. A. A. C. P. More than 500 Negroes and whites listened to this arousing appeal.

On Thursday evening and on Friday morning he spoke to the assembly of the North Denver High School, one of Denver's largest schools. On Sunday morning he was guest speaker on the "Test of Americanism" at the Grace M. E. Church (white).

## Reprints Available of Borah Article In Crisis

New York, March 12—Reprints of the article in the March issue of **The Crisis** which reviews the record of Senator William E. Borah on the Negro may be secured at small cost by writing to **The Crisis**, 69 Fifth Avenue, New York, N. Y. The prices are: $4.00 per 1,000; $2.25 for 500; $.50 per hundred. All orders must be accompanied by money and should be placed without delay.

## Gets Three Years for Cashing Dead Mother's Checks

Fayetteville, N. C. March 26 (ANP)—Convicted of cashing pension checks issued to her mother who was dead, Mrs. Mary L. W. Campbell, was sentenced to three years in prison here Thursday morning.

Testimony at the trial disclosed that Mrs. Campbell is an evangelist and that her mother, who was receiving compensation from the government for the death of her son in the World War, had been dead for eight years. During this period, Mrs. Campbell has received and cashed the checks signing her mother's name. She will serve her term in the Federal Prison for Women at Anderson, W. Va.

# COLORED PHYSICIANS NAMED ON STAFF AT OHIO UNIVERSITY

## Drs. Howard D. Giles and H. S. Manuel First of Race to Get Places

Columbus, Ohio, March 26 (ANP)—Dr. Verne A. Dodd, surgeon-in-chief of the Starling-Love Hospital of Ohio State University, announced here this week that Dr. Howard D. Giles and Dr. H. Sherman Manuel had been appointed staff members at the hospital representing the first time in the history of Ohio State University and the hospital that such recognition had been accorded to colored physicians.

Dr. Giles and Dr. Manuel are graduates of Ohio State University and were classmates in the medical college, graduating in 1927. Dr. Giles received his internship at Freedmen's Hospital, Washington, D. C., and Dr. Manuel took his internship at Provident hospital, chicago. Both of these young medics have spent much time since graduation in post graduate and research work and have made enviable records in this city.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.

## ITALY'S MONEY LOW

The New York Times is not jubilant over Italy's announcement victories in Ethiopia. It says editorially: "Whether Italy will reap these fruits is a question whose answer is perhaps more likely to be found in Rome than on the hills of Ethiopia. The financial position of the Italian Government is by no means strong. Italy must have gold in order to buy essential war materials and her supply of gold has declined so sharply that several months ago the government discontinued publication of statements of the Bank of Italy. Sanctions particularly those on Italian exports have not helped the situation. For they deprive Italy of the opportunity to obtain foreign exchange badly needed for purchase of supplies, and in this respect Mr. Eden told the British House of Commons only a few days ago that the effect of sanctions already imposed is continuous and cumulative and must obviously have an important influence in achieving the cessation of hostillities."

Ethiopia's terrin is still a mighty factor in the country's defense. "Even if the Ethiopians are utterly shattered," writes Captain Diddell Hart, in The Times, "nature could still be counted on to offer resistance to the Italian, steamroller' that makes talk of victory sound extravagant. A battle becomes 'decisive' only when it can be followed up and its stratetic fruits reaped."

### VIRGINIA EDUCATION

Hon. Sidney B. Hall, Superintendent of Public Instruction of Virginia, in a special statement to Calvin's Newspaper Service, says: "During the past five years Virginia has made some very rapid strides in the cause of education for Negroes. When I came to this office, the length of school term varied throughout the State for both whites and Negroes. The schools were running in some sections three and four months, while others were running eight and nine months. Beginning in 1931 the State Board of Education and I worked out a plan whereby we would establish in the State a minimum educational program, providing for a uniform term of eight months for all schools. This program was enacted into law by the General Assembly of Virgina n 1934. Accordingly for the past two years Virginia has been maintaining a uniform eight months' school term for all children, regardless of race, colored or creed.

"In addition the State has maintained its program of improved instruction through curriculum revisions and supervision. These two phases of improved instruction have been carried in both white and Negro schools alike. The supervisory program which we have, always been maintained on the same level in both types of schools.

"One of the biggest problems facing us today is that of securing qualified individuals to carry on the supervisory program in the Negro schools of the State. We are employing such individuals as rapidly as they can be found."

Amplyfying this last paragraph, Mr. Hall says: "Referring to whether the individuals employed in connection with the supervisory program are colored or white, I wish to say both types of individuals are being employed throughout the State.'

### DR. HOPE'S WORK

The life-time of service to the cause of education, given by Dr. John Hope, is an extraordinary example of loyalty to a good cause, devotion to duty, creative ability in character building, and genuine achievement in improving racial relations. On the hills of Atlanta have blossomed some beautiful flowers the seeds of which carefully selected planted and tended by Dr. Hope. In many fields of endeavor are other flowers delighting those who live near them, and the casual passerby, which were nurtured and transplanted by Dr. Hope. His work will live long and grow and grow as the race lives and grows.

## University Offers Scholarship

Atlanta, Ga., March 15 (Special)—Atlanta University has anounced that a limited number of scholarships will be open during the next college year, 1936-37, to persons who are eligible to carry on graduate studies in the departments of biology, chemistry, economics and business administartion, educatino, English, French, history, mathematics, and sociology. Both men and women are eligible to make application. To be admitted to the University it is necessary for a student to have rompleted his work at college of approved standing and to have received his batchelor's degree.

Application forms and further information regarding scholarships may be obtained from the Registrar, Atlanta University, Atlanta, Georgia. All applications for scholarships should be in or before June 1, 1936, the announcement stated.

**CHURCH PEWS**

Do you need Church Pews, Pulpits or Pulpit Chairs? We manufacture and furnish churches with furniture at the lowest prices, and upon the most reasonable terms.

Send us the inside measurement of your church. Let us tell you what it will cost to seat it. Send for price list on Pulpit Furniture.

# HARLEM IS QUEER PLACE ON SUNDAY SAYS INVESTIGATOR

## Finds Serious-Minded People In Minority; Quack Leaders Abound

New York, March 12—(By Davis Lee for ANP)—Harlem on Sunday is hard to describe. Everybody is rushing helter-skelter here and there. Sunday morning the churches are crowded. In the afternoon the theatres seem to have the right of way.

There are some serious minded folk in this large city of gullibility galore, but they are in the minority. In basement-lodge rooms and similar places organizations of divers fraternal hues meet in small numbers and discuss everything from running Hubert Julian into the Hudson to electing Marcus Garvey president of Ethiopia.

This writer addressed no less than six such groups Sunday afternoon. One group had recently organized to relieve the suffering of the masses—a sort of charitable venture. Another was a woman's organization. In the audience were Chinese, Japanese, whites, West Indian and American Negroes. From the fiery harangues it was evident that the entire group was suffering from a chornic attack of communistic appoplexy.

The third group disclosed that a movement is afoot to run all folk of sable hue out of Harlem. The yarn as spun sounded as if the speaker had lifted it from the pages of a mystery novel.

Echoes of the National Negro Congress were heard on every hand. The founders, delegates and others interested were denounced in language that King George in Heaven wouldn't admit in the presence of St. Peter as being English.

After dark, Harlem takes on a different activity on Sundays. Birthday parties, rent parties, and every kind of party imaginable invades the city. Harlem is really a "wow" on Sunday.

## Knoxville College

### Deans and Registrars to Meet March 26

Deans and Registrars from approximately one hundred and eleven Negro schools will meet on Knoxville College campus for their tenth anual conference, March 26 and 27. Delegates to this annual meeting of the National Association of Dean and Registrars represent educational institutions which offer some form of collegiate instruction. The convention will formally open with Thursday morning's session.

Problems relative to education in Negro institutions of higher learning will form a basis for the discussion periods. The relationship between the college and community will also come in for its share in the discussion.

The music and dramatic department of Knoxville College are planning a special program by way of entertainment for the delegates.

Aside from the regular sessions on the campus, included in the conference program is a trip to the "new" town of Norris, and the Norris dam, which has just recently been completed in the TVA program, Mr. Chapman, chairman of the TVA is expected to address the Deans and Registrars.

Knoxville College has been a member of this association of Negro educators since it was organized eleven years ago. Under the direction of Dean Liston, general chairman of the local committee, the college is making extensive preparations for the entertainment of the convention.

## Atlanta University

### GRADUATES OF 32 COLLEGES SEEK DEGREES

Atlanta, Ga., March 13 (Special)—One hundred and thirty-two men and women have enrolled for graduate study this year at Atlanta University, the largest graduate enrollment in the University's history and an increase of forty per cent over 1934-1935, according to figures made public by Registrar John P. Whittaker. These 132 graduate students have come to Atlanta from 23 states and the District of Columbia, and are graduates of 32 colleges. They are enrolled for courses in fourteen departments of the University. Of the total enrollment, 75 are doing full time work for their advanced degrees, and 57 are registered for part time work, the registrar's report stated.

Of this year's enrollment 78 are registered from Georgia, 6 are registered from Alabama and North Carolina, and five from Texas and Mississippi. Kansas, South Carolina and Tennessee each account for three students, and two have registered from each of the following: Virginia, Arkansas, Kentucky, Louisiana, Michigan and Pennsylvania. One student has come from each of the following: California, Florida, Illinois, Maryland, Massachusetts, Minnesota, New York, Ohio and the District of Columbia.

Students are enrolled for full time graduate work in eleven academic departments this year, the report stated. These departments, in order of enrollment totals, are English 17, economics 14, education 10, mathematics 9, chemistry 8, biology 5, history 5, sociology 3, French 2, Latin 1, and dramatics 1. Largest part time enrollment is found in the department of education, history, sociology and English.

## Morehouse College

### STUDENT-ACTORS TO GIVE PLAY

Atlanta, Ga., March 14 (Special)—A large group of men from Morehouse College, assisted by several students of Spelman College, will take part in the production of the annual Morehouse Shakespearean play, "Much Ado About Nothing," which will be presented in Sale Hall Chapel on March 26 and 27. The play, one of the most amusing of the romantic comedies of Shakespeare, will be acted under the direction of Miss Anne M. Cooke of the Atlanta University department of fine arts. For the occasion the stage of Sale Hall Chapel will be rebuilt to resemble the stage of an Elizabethan theatre, and the play will be presented in the simple fashion of Shakespeare's time. Technical details of the staging are in the hands of John M. Ross, also a member of the fine arts department faculty.

The roles of Benedick and Beatrice, the young lovers around whose misunderstandings this roman tice comedy has been written, will be essayed by two students who are new to campus audiences. Benedick, the wild, witty, light-hearted Duke of Padua, will be played by Marshall S. Cabiness, of Gastonia, North Carolina, a freshman at Morehouse. The impulsive, lively and affectionate Beatrice, one of the most famous of all Shakespeare's heroines, will be acted by Frances Johnson, of Atlanta, a junior in Spelman College.

Two of Shakespeare's funniest characters, Dogberry and Verges, the ignorant and conceited constables, appear in this play. They will be played in this production by George Washington of Corsicana, Texas, and LeRoy Haynes of Chicago. Washington is well known as a Morehouse debator, and Haynes is captain-elect of the Morehouse football team and 1935 All-Southern end.

## Ninety Percent Of Tuskegee Graduates Of '35 Get Jobs

Tuskegee, March 12—(ANP)—Dr. F. D. Patterson, president of Tuskegee Institute, has just released a report of a survey of the present activities of the members of the class who were graduated last May.

Of the ninety-eight (98) members of the class, eighty-eight are at work along the special lines of training they received at Tuskegee Institute.

Five are enrolled in representative universities where they are doing advance work in the special fields studied at Tuskegee Institute.

Only five are not now steadily employed.

# NORTH CAROLINIANS LAUNCH DRIVE TO ENROLL COLORED VOTERS IN ALL PARTS OF STATE FOR JUNE ELECTION

## President of North Carolina College Sounds Call for Citizens to Register; Goal Set is 100,000 Electors

Durham, N. C., Mar. 26 (ANP)—Under the leadership of C. C. Spaulding, president of the North Carolina Mutual Life Insurance Company, a concerted effort to urge Negroes throughout the State of North Carolina to vote in large numbers in the forthcoming election in June, was launched here at a mass meeting held Sunday at the Algonquin Tennis Club house.

In opening the meeting, Mr. Spaulding, the presiding officer, outlined the necessity of Negroes exercising their right of franchise, pointing out that the ballot was the most effective weapon the racial group possessed in combatting the enemy. He further stressed the need of Negro citizens striving to hold the property which they have bought and are buying and of supporting movements for the benefit of the racial group.

**Dr. Shepard the Key-Noter**

Dr. J. E. Shepard, president of the North Carolina College for Negroes located in this city, was the key-noter. He sounded the call for "action" on the part of those who were already registered in seeing that those who were not registered did so before the election in June.

"It is your duty," said Dr. Shepard, "as citizens to see that your neighborhood is organized and that everyone eligible to vote is registered. There are hundreds of citizens right here in our city who are not registered and who do not realize the value of the ballot. Throughout the State of North Carolina, there are thousands in the same category. This condition is not due just to their own negligence or perhaps we might say ignorance, but to the fact that we who profess to know what the ballot means, have neglected to impress them with the power of the weapon which is theirs if they will only use it."

Present plans are to organize neighborhood clubs in the various cities and towns of the State with the goal of 100,000 additional voters as the objective. At the present time, according to figures made public at the meeting Sunday, despite the large Negro population in the State of North Carolina only 40,000 are on the registration books, with Raleigh leading with 4,000 qualified voters and Durham and Greensboro following with 3,000 each.

## Boy, 16, Sentenced For Life

Memphis, March 19, (ANP)—Jas. Turner, 19-year old youth, was sentenced to die in the electric chair here Tuesday morning when he confessed to the murder of Patrolman Roy Scott, who was shot to death here on the night of February 20.

Three ballots were taken by the jurors before a decision was reached, the first being eight to four for electrocution, the second nine to three for the death penalty and the third resulted in the verdict of guilty of first degree murder which carried with it the death sentence.

The youth, who at first contended that he did not shoot the officer, Monday changed his story and admitted that he shot Scott when the policeman came upon him robbing a house. He declared that he did not know that Scott was an officer and shot him because he feared for his own life.

Attorneys for the defense Grover N. McCormick and Robert Burton, public defenders, signified that they would immediately file a motion for a new trial, pointing out that while Turner had admitted the slaying, it was clear that it was committed through fright rather than with premeditated malice aforethought required for first degree murder convictions.

## Bury Washington Colored Detective In Arlington

Washington, March 26—(ANP)—Detective Sgt. Paul W. Jones, killed Saturday when his automobile collided with a tree near College Park, Md., was buried in Arlington National cemetery Wednesday. One of the best known investigators in the East and a World War army captain, Jones was on his way to Jessups, Md. to question a prisoner in the reform school there when his car ran off the road and struck the tree.

Police said the cause of the accident had not been determined. They stated there was no evidence of a collision with another car, and there were no skid marks on the road. Jones was a member of the Metropolitan police force robbery squad.

## Colored Councilman Of Cincinnati Heads "Beat Borah" Drive

Cincinnati, Ohio, March 26—(By J. T. Whitney for ANP)—Councilman R. P. McClain has been chosen by the local branch of the National Association for the Advancement of Colored People to supervise a committee which is to direct publicity and propaganda against Senator William E. Borah of Idaho to prevent him from receiving any delegates to the Republican National Convention from Ohio.

The Association is opposed to Senator Borah because of his unfavorable attitude towards the Costigan-Wagner Anti-Lynching Bill.

A series of meetings will be held to discuss Senator Borah. The first meeting is scheduled for Sunday, March 29, at the Ninth Street Y. M. C. A. Several prominent persons will speak and anti-Borah literature will be distributed.

A child who from earliest childhood is led to make social usefulness a normal part of everyday life grows naturally into the full rounded Christian citizen. The Christian home is the place where the religion of Jesus takes root and grows into full flower and fruitage.

—Rev. Julius Fishback.

Dictatorship is swifter, more certain of its objective, more rewarding of worth-while results. But it is also more crushing and devastating of human spiritual values. ....

—Dr. R. E. E. Harkness.

## N. A. A. C. P. of New Orleans in Annual Membership Drive

New Orleans, La.—(Special)—Mrs. Daisy F. Lampkin of New York, Field Secretary for the National Association for the Advancement of Colored People, is in this city to assist the New Orleans Branch of the Association in its annual membership campaign.

The campaign organization will consist of twenty captains heading teams of ten workers each. To date eight of these captains heading teams of which will last for ten days will open on Sunday, Mar. 15th with a Tea for members and workers at the Canal Street Y. W. C. A. from 5 to 7 P. M. The A. K. A. Sorority, the Delta Sorority and the Junior N. A. A. C. P. will serve as hostesses to the Tea. The queens and maids of honor of the 1936 Carnival will assist on this occasion.

The Local Branch of which Jas. E. Gayles is president, is one of more than four hundred branches of the Association which has as its objective the economic, political and civil rights of American Negroes.

## Business Women Report Progress in New York City

New York, March 26 (ANP)—The Sterring Committee of the National Business and Professional Women's Association held its quarterly meeting here on Saturday at the 137th Street Y. W. C. A. A luncheon preceded the meeting.

Mrs. Effie Diton, chairman of the committee, presided. Other members present were Mrs. Beatrice Francis of Washington, D. C.; Mrs. Adelade Harty and Mrs. Bertha P. Rhodes of Philadelphia, Mrs. Alice Randall of Atlantic City and Mrs. Clara Bruce, Mrs. Eunice H. Carter. Mrs. Ollie Porter, Dr. Julia C. Robinson, all of New York.

Clubs in Steelton, Pa., and Camden, N. J., have been organized since the last meeting of the committee. Mrs. Carrie Boulding is president of the Steelton Club. Letters are being received from business and professional women all over the country, who are interested in being affiliated with the national organization. A woman in the fur business in Alaska, has signfied her intention of joining.

The Steering Committee will meet again on Saturday morning, May 9, at 10 o'clock in Atlantic City, where an all day session will be held and plans completed for the convention to be held Thursday, Friday and Saturday, July 9, 10, and 11, in Atlantic City.

Much preaching today is simply a matter of tossing oratorical duds into spiritually deserted dug-outs.

—Dr. Gordon Palmer.

## Noted Stage Star Gives Masterful Portrayal Of Great West Indian

London, March 26 (ANP)—Finding time to sandwich in an appearance in the title role of "Toussaint L'Ouverture," a first play by a young West Indian Negro, Paul Robeson added to his laurels last Sunday night. The production was sponsored by the Stage Society of London.

A drama by C. L. R. James on the rebellion of San Domingo slaves at the end of the 18th century, the play held the attention of an appreciative audience despite a certain unevenness of writing and production and Robeson received a huge ovation after the final curtain. The famous singer and actor far outshone the large cast recruited from both races.

The play may be seen again if Robeson's anticipated Negro repertory theatre in London becomes a reality. He declared he wants particularly Negro plays by Negro playwrights as previously such drama has been written almost exclusively by whites.

Robeson managed to find a spot for "Toussaint L'Ouverture" with difficulty along toward the end of a very successful concert tour of the British Isles begun immediately following his return from Hollywood where he made "Showboat." He is soon to appear in a British film named "Song of Freedom."

God is calling upon us to share one another's burdens and so fulfil the law of Christ. The sorrows, the joys, the problems and the trials of life which belong to another, I am to talk to myself as a faithful member of an eternal partnership.

—Dr. R. S. Beal.

# More Doctors Are Needed

## So Says President Of National Medical Association With Figures

Philadelphia, Pa., March 12—(By W. Harry Barnes, President of National Medical Association, for ANP)—Frequently colored high school boys are told not to study medicine, because there are too many colored doctors now. Let us see if statistics bear this out. The 1930 census of figures are:

| | Male | Female | Total |
|---|---|---|---|
| Physicians | 3,713 | 92 | 3,805 |
| Dentists | 1,746 | 27 | 1,773 |
| Pharmacists | 1,314 | 168 | 1,482 |
| | | | 7,060 |

The National Medical Association in preparing its advertisement for its 42nd Annual Session in Philadelphia in August, stated that it represented 10,000 colored physicians, dentists, pharmacists and hospital executives. The difference between this figure and the 7,060 of the census is made up principally by the large number of colored doctors who are not classified as colored. Also their figure includes hospital executives.

The figures for the nation regardless of race, are 139,309 physicians, and 65,790 dentists for 120,000,000 population. That is about one physician for 857 people and one dentist for 1,818 people. Suppose for round numbers, we say there are 5,000 colored physicians, 3,000 dentists for 15,000,000 colored people in the country. The figures for the colored doctors would then be, one physician for every 3,000 and one dentist for every 5,000. In other words every Negro doctor has four times as many of his own people to practice on as every white doctor has.

Add this to the fact that the annual number of colored graduates is below the annual number of deaths of colored doctors, and we see that there are not enough colored doctors and the opportunities for success are increasing yearly.

# NEW "Y" SECRETARY TAKES UP DUTIES AT DENVER, COL. BRANCH

## Leon W. Steward Succeeds to Post Long Held By Fritz Cansler

Chicago, March 26 (ANP)—After four years of activity in civic and social affair, Leon W. Steward and his wife, made their departure Thursday for Denver, where Mr. Steward will assume the secretaryship of the Denver Y. M. C. A., the post left vacant by Fritz Cansler, who now holds a similar position in Dallas, Texas.

Mr. Steward, who attended Lincoln University, (Pa) has been active in Y. M. C. A. work since the World War, after having served with the A. E. F. For a number of years he was stationed at St. Louis coming to Chicago after his tenure of office there. Since coming to Chicago he has been active in fraternal circles as well as civic and social work, being superintendent of the Good Shepard Congregational Church School, where his wife was instructor in piano.

According to the itinerary outlined by Mr. Steward, before his departure, the couple will visit various points in Kansas, Mo., and Texas, where Mr. Steward will seek to promote interest in the "Guide Right Week" of the Kappa Alpha Psi fraternity, a movement of which he was one of the founders. According to his present schedule, the newly appointed secretary expects to arrive in Denver, on April 1.

# LIVING IN OTHERS

To a very large extent we live in the lives of others. Our lives are ordered to a very great degree by the acts of those in whose lives we hide away so much or all that we are.

Rarely do we realize the import of this existence in the lives of others. It comes home to us with great force, however, when one of these lives is taken from our midst, or is transferred to a far distance. Then we feel that something has gone from us—something is left vacant about us.

Day by day our very thoughts are influenced and nourished by the very life substance of those with whom we come in happy contact, and through whom we strive courageously.

Thoreau took nature as his mother. To her he looked. To her he went, and from her great spring of cool waters, he quenched his thirst for companionship and joy. The ponds, the streams, the forests, the winds, seemed to welcome him. And the birds and creatures of the wild, knew him as their friend. He satisfied his soul by a wandering life in their midst—and bequeathed to posterity a wealth of beauty as its share of the life which he chose to live.

When this body dies, that which lives forever, and which becomes immortal, is that part of us which we have generously lived in others.

And no man ever has known how many lives have profited by what he has sent out from himself. It would please George Gissing—if he had but lived to know—that he had so blessed the life of this writer. And how happy it would have made Michael Fairless had she but known that literally millions would someday grow richer and richer because of the beauty which she breathed from her sick-bed to a great world.

Living in others is the only satisfying life to live. This is why the motherhood of the world is its richest asset!

The boy, or girl, suddenly thrown upon his or her own resources, comes strangely to realize how greatly a father or mother lived within his or her own life.

We owe a deathless allegiance to those into whose lives we have entered, though none of these lives may be conscious that we are their silent visitors.

## Atlanta University

### UNIVERSITY OFFERS VARIETY OF SPECIAL COURSES FOR 1936

Atlanta, Georgia, March 21,—Special—A variety of opportunities for study in specialized fields will be opened to students enrolled in the Atlanta University Summer School, according to the preliminary announcement which was issued this week from the office of John P. Whittaker, its director. The school, which will be open from June 13 to July 24, will offer work on the college and graduate level exclusively.

Among the varied features of the 1936 Summer School will be an institute for teachers of French, a library school for teacher-librarians, a progressive edueation demonstration school consisting of a nursery school, primary intermediate and upper grades and a one-teacher rural school located in a typieal rural community, a state-wide curriculm study program, a short eourse in scoutmastership, a rural institute for teachers and other workers in rural eommunity, life, and a ministers institute which has been designed to meet the needs of pastors and religious workers irrespeetive of denomination.

Special attention will be paid to the offering of training for public school teachers and administrators and a wide range of courses in the field of education will be available. Opportunity will be offered for persons interested in social work to enter upon introduetory or advaneed eourses, which will be offered by the faculty of the Atlanta School of Social Work.

As in the past four years the summer school will be conduneted by Atlanta University with Morehouse College, Spelman College, The Atlanta School of Social Work, Clark University, Morris Brown College and Gammon Theological Seminary affiliating. The resources of the several affiliated institutions, including laboratories and gymnasium and the new Atlanta University Library with its volume collection of 55,000 will be available for the use of students enrolled in the school.

Teacher: Tommy, when was Rome built?

Tommy: In the night.

Teacher: Why do you make such an answer?

Tommy: You said yesterday that Rome wasn't built in a day.

# CAMPAIGN STARTED TO RAISE BIG SUM OF MONEY FOR ETHIOPIA IN U. S.

New York, March 26 (ANP)—Fully approved officially by Lij Tasiaye Zaphiro, Ethiopian representative now in America, and by John H. Shaw, Imperial Consulate General, of New York, the United Aid for Ethiopia has launched a nation-wide drive to raise $500,000 for the African empire.

The United Aid for Ethiopia is understood to be the only organization in the United States having Zaphiro's approval. It is composed of defense groups working in the interest of Abyssinia and an organization not a member of the United Aid is considered to have no official standing.

It is planned to establish units of this association in all cities. Both local units and individuals who pledge weekly or monthly contributions are asked to forward such funds to the office of the treasurer, Dr. P. M. H. Savory, 119 West 131st Street, New York City, who will within seven days forward an official rteeipt acknowledging the moneys received.

One of the provisions of the United Aid for Ethiopia calls for the turning over of all collected funds to the Ethiopian consulate after expenses for operating the organization have been deducted. These expenses may not exceed 15 percent.

Several groups apparently formed to help Ethiopia, have at various times raised funds but the "expenses" were practically the same as the income, it was pointed out.

## Lane College

### JACKSON, TENN

During the current year, Lane College has made considerable improvement in its program of work. The Faculty has been increased and the teaching facilities at the College have been greatly improved. The courses of study have been enriched and multiplied, the Library, Reading Room and the Laboratories have been brought up to the standard during the year. In addition to these improvements, the College has added to its physical plant. Two small eottages, one fine residenee, and large acreage for athletie park all adjoining the eampus have been purchased and brought into use by the College. These things have been done at a considerable expense to the Institution.

Upon the suggestion of some of the officials of the Tennessee State Department of Education, the photographs of noted colored edueators are being plaeed on the walls of all our colored public schools. It is quite singular that the printed photographs of President J. F Lane and his distinguished father—Bishop Lane—are to be found along with others on the walls of our public schools throughout the state of Tennessee. It is said that these photographs will inspire colored boys and girls as nothing else has done in many years.

## A BOY'S DECISION

I am a very little boy
But I can fill your heart with joy.
I go to school five times a week
And learn to read and write and speak.

I go to church on Sabbath Day
And listen to what the preachers say.
They tell me to be nice and kind
To visit the sick and help the blind.

Before I get to be a man
I will also take a stand
And try to be kind and good
And serve my Saviour as I should.

(Written by Mrs. Alberta E. Jordan, Nashville, Tenn.)

## Caught Trying to Burn out His Lady Friend, Arrested

Raleigh, March 26—(ANP) — Caught in the act of setting fire to a dwelling occupied by his "girl friend" Roosevelt Broom, was arrested here Tuesday morning and faces charges of arson in the forthcoming term of circuit court.

Broom, according to the report of the police was incensed with his sweetheart and as a source of vengeance sought to burn down the house in which she lived. As he was applying the torch to the building, Connie Perry, an occupant of the house discovered him and Broom in turn sought to leave the scene, only to be overtaken by Perry and several neighbors who joined the chase.

Police stated that Broom has a long police record and if found guilty will be sent up for a long term. Other incendiary charges have been placed against him prior to this charge they asserted.

## The Finest Span

(CONTINUED FROM PAGE 1)

$13,000,000 needed to complete the bridge, opening the way for actual construction.

STARTED IN JANUARY, 1932, the bridge is now complete. The dream of decades of New Orleans men of vision is a reality; an engineering as well as a financial achievement fully characteristic of the spirit of our people; a symbol of American economic recovery.

It is the longest railroad bridge in the world.

It is the finest of the 15 major bridges now spanning the Mississippi.

Designed by Ralph Modjeski, of the firm of Modjeski, Masters & Case, the bridge is 4.4 miles long, extends 3,524 feet across the waters of the river at a height of 135 feet above high water. Of the cantilever type, it has eight spans, the longest of which is 790 feet.

The height of the central pier from the top of the superstructure to the bottom of the foundation, 170 feet below the water, is 409 feet, the equivalent of a 36-story building.

The West Bank rail approach is 8,680 feet long and the East rail approach is 8,301 feet long, with 1.25 per cent grades. The West highway approach is 3,378 feet long and the East highway approach is 3,003 feet long; with 4 per cent grades.

An average of 200 workers a month have been employed on the job for three years, while at times as many as 1000 worked.

THE PUBLIC FELT RAILROAD COMMISSION, of the City of New Orleans, owns 117 miles of track and operating equipment which link into a compact unit all the rail and water facilities, public and private, of New Orleans, America's second most important port.

Supt. I. J. K. Wells is bringing a series of lectures on culture to the student body. The first speaker was Mr. Ramsey, manager of Madam C. J. Walker, products.

The week of February 10th was observed by the school as Negro History week with a series of programs consisting of orations on the Achievements and Progress of the Negro. The speakers contested and the first, second and third place speakers are to contest for prizes on March 12th, under the supervision of Prof. D. H. Kyle head of the History Department.

On February 24th a temperance play was given by the senior class under the supervision of Prof. R. L. Franklin, head of the English department. The proceeds went towards the upkeep of the Kelly Miller Journal a monthly school paper.

On March 6th the Kelly Miller basketball team won the annual sectional tournament defeating Dunbar of Fairmont in the finals. Three members of the team made all tournament team.

**Trinity Methodist Episcopal Church**
**Manson F. Hayling, Pastor**

The church is closing up a very successful year with a drive for $300 to meet accumulated obligations. There are twelve states in the competition, the effort takes place on Sunday the 15th, the closing services will be on the 22nd, with the closing banquet on the evening of the 23rd, March. The pastor goes to his annual conference held in Metropolitan M. E. church, Baltimore, during the week of the 23rd.

## Congregation of 20

(CONTINUED FROM PAGE 1)

"The papers said that the Communists were paying for the Congress. I don't blame the Communists for trying to underwrite it if the Negroes themselves couldn't even raise $100 a day to pay for the hall.

"The Communists were there willing to buy but Col. Warfield didn't have to sell out. Even Hamilton Fish stood patiently waiting outside to try to push Borah down our throats."

Gilliam, following his tirade against the press, admitted that he had not secured details of the resolutions passed at the Congress, but oddly enough told his hearers to watch the newspaper, as they were to be released for publication at an early date.

Newspapers, however, carried copies of the resolutions, both condensed and in full, immediately after the Congress closed February 16th.

## Tenn. Farmers Hold Conference At Lane College

Jackson, Tenn., March 12—(ANP) With farmers present from all sections of the State of Tennessee the Thirty-third Annual Session of the Lane College Farmer's Conference convened here Thursday and Friday, at which time Roscoe C. Dunjee, Oklahoma City editor of the Black Dispatch and Judge Camille Kelly of the Memphis Juvenile Court were the principal speakers.

The first day was devoted to discussions on farm problems and the task of making home life in the rural districts more attractive. Farmers told of the problems faced by them and their wives told of the problems in home-making in the farming districts. Farm and home demonstration agents discussed improved farming methods and of beautifying the home at nominal costs. For the men farming methods were demonstrated while for their wives a demonstration was staged showing how to use to an advantage many articles that were usually discarded.

Friday was given over to discussions of social, religious and educational needs. How these needs could be met were outlined by experts in these fields. Particular stress was laid on education. In discussing these needs it was pointed out that better school buildings were needed as well as better trained teachers.

## POLICE BRUTALITY CASE IN CHICAGO WON BY N. A. A. C. P.

Chicago, March 6—A victory against police brutality and intimidation of Negro citizens was won here last week by the Chicago branch of the N.A.A.C.P., when George A. Blakey, of its legal staff, secured the discharge of Cassie E. Jennings, a supervising foreman on a WPA project in Washington park here.

Jennings was arrested on January 15 by officer Lou Steinberg, after Jennings objected to the officer beating another worker on the job with a nightstick. The officer is alleged to have called Jennings "a nigger" and to have threatened to have him discharged from his job. After an exchange of words the officer charged Jennings with disorderly conduct, kept him in a police station for twenty-four hours without booking him, and had him photographed and finger-printed.

At the trial Attorney Blakley, acting for the N.A.A.C.P., produced white and colored witnesses in an attempt to show that Jennings was illegally arrested, was not guilty of the crime, but had been the victim of a growing tendency toward police brutality. Judge E. M. McGarry found Jennings guilty, however, and fined him $25, whereupon the N.A.A.C.P. immediately made a motion to vacate the court's findings, and this motion was heard on February 25. Following the argument of Mr. Blakley, the court sustained the motion to vacate the fine and Jennings was discharged. Jennings is considering civil action against officer Steinberg.

## Colored and White Women Wage Bitter Garment Strike

Boston, March 12—(ANP)—For probably the first time in the history of the trade here, Negro garment workers are picketing side by side with their white fellow workers in the bitter garment strike now raging in this industrial center. Approximately 4,500 union workers, almost wholly women, are on the lines.

One of the colored pickets was insulted by a police officer who arrested her for striking him. He had made several vague remarks as she passed by from time to time and finally called her "Mandy." This she resented and let him know by flying into him with both hands. Over 100 white and Negro women made a dash to rescue her when two officers grabbed her, and for a while there was bedlam.

In another section it was alleged that a colored woman "scab" stabbed a picket when she attempted to prevent the strikebreaker from going to work.

The entire industrial section of downtown Boston has been like a war. The strikers started to picket a week ago Thursday. Employers and strikers have thus far both been stubborn and although the governor has called several conferences between employers and union officials there has been no settlement. The entire police force is on duty in the area and the daily papers, usually quiet on union activities, are giving the strike plenty of space.

## MISSISSIPPI USES SCHOOL FUNDS TO BUILD FACTORIES

**Washington,** March—(CNA)—The Mississippi ruling class which taboos appropriations for Negro schools is more than eager to use State and Federal funds to construct "schools" for industrialists to convert into factories, it was revealed today when Harry L. Hopkins, WPA Administrator ordered immediate cessation of work on four vocational "schools" being built in Mississippi.

Mr. Hopkins' action followed confirmation of charges that the municipalities which constructed them already had made contracts with textile firms for the use of the buildings, and in one case for its sale at less than one-third its cost.

The charges were laid before the WPA by J. W. Edelman, head of the research department of the American Federation of Hosiery Workers. According to Mr. Edelman, the "schools" were applied for, and at the same time negotiations were opened with various textile manufacturing firms to occupy them. He said that these firms planned to hire workers under the guise of learners and produced saleable merchandise, discharging all but a few workers at the end of the "training period" and taking on new learners at novel salary. The foremen and supervisors for the companies were to be listed as instructors, and were to be paid by the State.

## PINE SHORTAGE FEAR IS SCOUTED

### System of Rotation in Growth to Keep Product Ample

NEW ORLEANS, March 30—(AP)—The pine industry is a permanent one and fears of its exhaustion are unfounded, A. G. T. Moore, manager of the Department of Conservation of the Southern Pine Association, declared Monday before committee meetings held in advance of Tuesday's annual meeting of the assocation here.

He declared that the system of rotation of new pine growth after cutting away of the virgin timber woud make the industry permanent and suggested legislation aimed at laws for encouraging continuous timber growth.

"Old fears of a 'timber famine,'" Mr. Moore said, have been found erroneous and at every opportunity we have pointed out that Southern

## READER OF BIBLE 35 TIMES VOWS HE BELIEVES IT

Mark J. Goodger, 36 years old, of 1251 North Dearborn street, employed as a display man for advertising coupons, who recently completed reading the Bible for the 35th time and immediately started on his 36th reading, has received a flood of letters since a story printed in The Tribune concerning his accomplishment.

"I want to make this clear, however," said Mr. Goodger. "The story quoted me as saying that I did not believe all the Bible literally, citing the story of Jonah and the whale. Many persons write protesting against this. Some have even said I cannot be a Christian.

"I do believe the story of Jonah and the whale as Jesus believed it, outlined in Matthew 12:40. Of course if Jesus believed it, you have to believe it to be a Christian. I do."

Mr. Goodger said it was true he had said he did not believe every word of the Bible literally, but that he wanted to add he did believe "in the sacredness and authority of the Bible." He continued: "I solemnly believe in the life eternal, and that its happiness and holiness are the gifts of Jesus Christ to the world."

## OUR BEST SOIL BUILDER

New land broken out shows what our soil is capable of producing before it washes away and is worn out. Terraces and a crop rotation which keeps the land in sod or pasture crops part of the time will help keep it at home. Sweet clover is the greatest legume soil builder where it will grow. In many places lime is necessary before clover can grow and place nitrogen in the soil, often doubling the grain yield following it. Manure will help add prosphorus, but if it doesn't prove enough, phosphate fertilizer will bring yields up to the top.

## GREAT DROUTH CAUSES CHANGES IN FARM METHODS

### Secretary Wallace Points Out Agricultural Results of Five-Year Dry Spell

(Special to The Times-Picayune)

Washington, D. C., March 30,—American agriculture has undergone experiences which constitute the precipitating cause of a definite evolution and it can confidently be stated that the face of the nation never, at least in the present century, will be cultivated again in just the same way as it has been for the past half century or more. This enforced evolution is the result of the great drouth. Continuing over a period of about five years in restricted regions of the country, it reached a climax in 1934 when three-quarters of the nation was affected. Even in 1935 there were sections still suffering, while other sections had too much moisture. In general, however, the death was considered by the experts to have broken.

These are the conclusions of Secretary of Agriculture Wallace and his corps of aids in every branch of activity affecting agriculture. It is pointed out, in addition, that as the entire nation, whether rural or urban, depends upon the production of food crops, the aftermath of the drouth will have an influence on the whole national life.

"Though the great drouth ended in 1935," says Secretary Wallace in a study of the situation, "its effects did not. These were chiefly of two kinds: (1) Effects on farm prices and current farm incomes, and (2) Effects on farm methods and types of farming."

#### Dry Weather Affects All

The layman is likely to think of dry weather as being the concern solely of the farmer, provided he thinks about it at all. Primarily, of course, it does concern the farmer, for weather is the basis of his livelihood. The matter goes far beyond that. The livelihood of the city dwellers also is affected. Farm shortage, due to drouth, inevitably will bring higher prices for food The wage earner living in a great city will be affected in his income, in that more of it will be taken to buy food. There is for him a compensation in that the increased purchasing power given the farmer through these higher prices will stimulate the buying of manufactured goods and this will serve to increase employment and, possibly, wages. So we have a situation where a period of dry weather touches every man in his purse no matter whether he lives in city or country.

The effect of the drouth on farm income has been profound. To be sure, the agricultural adjustment administration's campaign of crop curtailment and live stock slaughter had or was supposed to have some

(CONTINUED ON PAGE 8)

## SPIRITUALS, BASED ON NEGRO LORE OF SOUTH, INTEREST NATCHEZ VISITORS

(Special to The Times-Picayune)

Natchez, Miss., March 30.—Negro lore of the deep South in the days of "befo' de war" was featured in the Natchez pilgrimage program here today. through presentation of the spirituals "Heaven Bound." and "The Straight and Narrow Path." Much interest is being manifested in these events by visitors among whom will be Marc Connally, author of the play "Green Pastures."

The spirituals will be presented several times during the pilgrimage because the churches where they are given cannot accommodate the crowds.

"Heaven Bound" is presented at the Zion A. M. E. church a massive antebellum structure originally owned by the white Methodist congregation of Natchez. it is not only interesting from an architectural standpoint, but it is also the place where Jennie Lind sang when she appeared in concert at Natchez in 1851.

Sunday 1500 visitors from various places made the tour of antebellum estates of Natchez, according to registrations with the Natchez Garden Club, sponsors of the pilgrimage, and it is estimated that almost an equal number will make the tours today.

The arrival of a large party of socially prominent Chicago people is expected tonight, and among the notables expected tomorrow is Verne Chatelaine, chief historian of interior, with a group of other officials from Washington.

Mr. Chatelaine is director of the national park service and has visited Natchez a number of times in connection with the Natchez Trace Parkway project, which is under jurisdiction of the national park service. He has shown great interest in the movement to restore old Fort Rosalie.

The visit of Mr. Chatelaine is regarded as of special importance at this time, as a federal engineering party of 20 men has just arrived to begin the surveys for which the State Highway Commission was authorized and directed to acquire rights of way at the session of the

(CONTINUED ON PAGE 8)

## PWA USES LARGE CEMENT SUPPLY

### 78,000,000 Barrels Used On Works Projects

WASHINGTON, March 30—(AP)—The Public Works Administration has announced its projects were using, in addition to half a billion dollars' worth of iron and steel, 78,000,000 barrels of cement.

In cement purchases, totaling $143,000,000 over a three-year period, it said, were greater than entire domestic production in 1933, 1934, or 1935 and provided 98,500,000 man-hours of employment.

PWA-financed road and street paving accounted for 52,000,000 barrels of cement, the Tennessee Valley Authority, whose first $50,000,000 came from PWA), 6,900,000 and Boulder Dam 5,500,000, the report said. —Exchange

## WHEAT CLIMBS IN CHICAGO PIT

### Prospects of Freeze and Drouth Force Prices Upward

(From Age Herald)

CHICAGO, March 30—(AP)—Facing prospects of a severe freeze Monday night Southwest, with continued drouth there, and Wintry conditions Northwest causing delay to seeding, wheat prices tilted upward Monday.

Authoritative reports said that unless rain came soon for the relief of tthe hard Winter wheat belt, there would not be much of a crop in the dust bowl region, and that Central Kansas has already suffered from freezing temperatures and drouth. Despite spreading operations in which July wheat was sold against purchases of May, the market as a whole showed strength.

#### Closes Firm

Wheat closed firm, unchanged to 5-8 higher compared with Saturday's finish, May 97-87 1-8, July 87 3-4-7-8. corn 1-8-1-2 up May 60 1-4-3-8, oats 1-8 advanced and provisions varying from 2 cents decline to an equal gain.

Tending to promote bullish sentiment regarding wheat was the fact that Kansas City new crop deliveries displayed stubborn resistance to the effects of transient small dips in prices here. The Liverpool wheat market also slanted upward, closing 1-8-1-4 cents higher, with sterling advanced a point. Notice was taken, too, that with the Port of Albany, N. Y., open, clearances of Canadian wheat for European continental countries were under way.

#### Minneapolis Wheat Up

Renewed strength of the Minneapolis wheat market, contrasting with recent weakness, received particular attention. It was asserted some buying for millers was done at Minneapolis, apparently against sales at Winnipeg. At times, the Chicago wheat market was bullishly affected by independent strength of corn.

Shipping demand for corn showed continued improvement. It was pointed out the corn visible supply is the smallest in 60 years, and that at this time of year farmers do not market corn at all freely. Oats and rye gained with corn and wheat.,

Provisions averaged a little higher, responsive to upturns of hog values, cottonseed oil and grains.

Closing indemnities: Wheat—May, 96 1-2 to 5-8, 97 3-8 to 1-2; July, 87 3-8 to 88 1-8 to 1-4; September, 86 1-4 to 3-8, 86 7-8. Corn, May, 60 1-8, 60 1-2; July, 60 1-8, 60 1-4.

## LUMBER OUTPUT MARK ASCENDS

### Shipments, New Orders Not up to Last Week's Figures

WASHINGTON, March 30—(AP)—The National Lumber Manufacturers Association Monday reported lumber production for the week ended March 21 was the heaviest since early November.

Production on the basis of reports from 562 mills, totaled 218,043,000 feet. Shipments amounted to 224, 536,000 feet and booked orders 220,981,000 feet.

Shipments and new business were 4 and4 12 per cent, respectively, below revised figures for the preceding week.

The industry during the week stood at 61 per cent of the 1929 weekly average of production and 65 per cent of 1929 shipments.

## FEDERAL BUREAU DEVELOPS WAGON TONGUE FOR FARM

### Device Makes Handling Three Full Loads a One-Man Job

Washington, March 30,—A wagon tongue which telescopes makes it possible for the tractor farmer alone to hook together two, three, or more loaded wagons—like elephants tail to trunk—without the difficulty and danger encountered wiih a noncollapsible tongue. The device was developed by the bureau of agricultural engineering.

It makes corn harvesting with a husking machine a one-man job. The farmer who has filled, for example, three wagons can alone hitch them together in the soft soil of a cornfield. He drives his tractor in front of one wagon, extends the tongue just the right distance, hooks it to the tractor, and backs until the tongue is fully collapsed. There it latches itself. He repeats for each wagon.

Hooking a string of loaded wagons together, even with two men and on hard ground requires lengthy and expert maneuvering and often results in mashed fingers.

The telescoping tongue was demonstrated for the first time at an

(CONTINUED ON PAGE 8)

## ATTENTION FARMERS

The Board of Directors National Federation of Colored Farmers Inc., will soon select place and date for the annual convention.

St. Louis, Mo., Dunnsville, Va., Cairo, Ill., Nashville, Tenn., Atlanta, Ga., and Charleston, Mo., are making bids.

Officers and members are urged to write in to the home office in Chicago their preference. This is important.

# Farm Women Feel Program Must Get To Country's Tables

## TASK WILL BE GREAT ONE FOR DEMONSTRATION AGENTS OF AREA

Farmerettes—those members of the fairer sex who have chosen agriculture as their profession—believe that farm wives must play an important part in making the new AAA farm relief program a success.

"We've got to bring the new AAA farm program to the dinner table of the farm homes in the South," Mrs. Ola Powell, Malcolm, field representative for the 12 southern states, Department of Agriculture, said yesterday.

"It is going to be a large task for the home demonstration agents but I believe that we can do it," she said.

Mrs. Malcolm was one of the six farm women, who attended the opening session of the hearing yesterday. Four of the other five are in actual farming competition with men and the fifth is an agricultural editor.

Two women, Mrs. J. S. Millikin, and her daughter, Dr. Marie Millikin, of Millikin, La., operate a 7,500 acre cotton plantation—have been for eight years and with considerable success.

"We raise cotton and corn and believe in raising plenty of feed for our livestock," said Mrs. Mullikin, who is 75 years old and who attributes her longevity to activity on the farm.

"We encourage the more than 100 families on the plantation to live-at-home," said Dr. Mullikin. "Some of them do very well—they have their hogs for meat, and raise plenty of food for their table. We require them to do it.

"Some of the families have been on the plantation as long as 40 years, but we still have difficulties in teaching them not to strip the houses in winter and burn the fences for firewood," she said.

The plantation has been in the family for 50 years. Dr. Mullikin is a retired physician.

Mrs. J. H. Hawthorne, who runs a 1,200-acre plantation near Jonesboro, Ark., is attending the hearing to learn just how she can co-operate with the government in the soil conservation program this year. She has 20 white families on her plantation.

"All of the tenants practice living at home," she said. "Most of them have a cow, raise their chickens, hogs and garden."

Miss Frances Stanley, assistant agricultural editor, Little Rock, Ark.; Mrs. Julia W. Allen, farmer Parkin, Ark., and Mrs. Mary Brown Miles, Federal Building, were the other women attending the meeting.

## BRIEF OUTLINE OF PLAN FOR 1936

I. Determinations Required for Each Participating Farm.

A. As early in the season as possible two things would be determined for each farm.

1. The total acreage of all soil depleting crops grown on the farm.

2. The normal yield per acre of the principal soil depleting crop grown on the farm.

B. In measuring the performance on each farm three determinations would be required:

1. The total acreage of soil depleting crops grown on the farm in 1936.

2. The acreage devoted to soil conserving uses in 1936.

3. Whether production of food and feed crops was reduced below the needs of the farm for home consumption purposes.

II. Minimum Performance for Payment.

As a condition to receiving any payment a producer would need to:

1. Have an acreage of soil conserving crops in 1936 equal to not less than 20 percent of the total acreage devoted to soil depleting crops in 1936.

Alternative, in lieu of this minimum acreage requirement, could be the adoption of designated practices with respect to soil conservation or erosion control.

2. Have an acreage of soil depleting crops in 1936 not in excess of the normal acreage of such crops determined for the farm.

III. Basis for Payment.

Payment would be made on two basis, as follows:

1. On the acreage shifted from soil depleting to soil conserving crops up to a specified percentage of the normal acreage of soil depleting crops.

This percentage would be established for a region or state for the purpose of (a) budget control and (b) maintenance of an adequate supply of commodities grown principally in that region or state.

No payment would be made for shifting acreage from food and feed crops used for home consumption, unless these crops have been produced on the farm in excess of home consumption needs, and then payment would be made only for shifting the excess acreage to soil conserving crops.

2. On the acreage devoted to soil conserving crops in 1936 (including that diverted from soil depleting crops) up to a maximum acreage which may be given precent of the acreage devoted to soil depleting crops in 1936.

Alternative, prescribed in lieu of maintaining a specified acreage of soil conserving crops, would provide also for payments on the basis of the number of acres on which conservation practices are adopted, up to a maximum acreage which may be a given percent of the acreage of soil depleting crops.

Any producer could qualify for payments on this basis whether or not he also qualified for payments for shifting land from soil depleting to soil conserving uses.

IV. Rates of Payment.

1. The rate of the soil maintenance payment made on the second basis described above would average the same for each state. This average probably would be $1 per acre.

2. The average rate of the soil improvement payment to be made on the basis of land shifted to soil conserving uses would be determined for each state either: (a) by dividing the remaining funds available for payments in the state by the maximum acreage on which such payments would be made, or (b) by determining a rate of payment on the basis of average yields of soil depleting crops grown in the state using rates per bushel, pound, etc., which would give rates per acre in line with funds available for each state.

3. Any payment, whether on the acreage shifted or on acres devoted to soil conserving crops or practices, would be adjusted from farm to farm in accordance with the normal yield of the principal crop grown on the farm in relation to the state average yield for that crop.

V. Consideration to Individual Major Crops.

If desired by the growers in the region of its principal production, consideration would be given to treating separatel yand major soil depleting crop, or any group of such crops.

If this were done, the normal acreage and yield of each such crop, or group of crops, would be determined for each farm and separate rates of payment would be established for shifting land from each soil depleting crop to soil conserving uses. In effect, each producer would be paid on the basis of the particular crop or crops from which he transferred the land planted to soil conserving crops. Probably under a plan of this nature a system of deductions would need to be applied in cases where any soil depleting crop was increased above normal. These deductions could be at the same rate as the payments for making shifts out of the crop into soil conserving crops. In no case, however, could any payment be made for shifting acreage unless there was a net shift to soil conserving crops.

According to the recommendations of the committee, southern sharecroppers who raise cotton on the halves are to get about 17 1-2 per cent of the total payment. Thirty percent to the applicant; the man responsible for compliance, 25 per cent to the landlord, 10 per cent to the owner of the equipment or workstock and 35 per cent prorated as the crop is divided.

Mr. Davis, president National Federation Colored Farmers said, "If these terms are adopted the share tenant who furnishes his own equipment and works on the three-forths- one-fourth basis, will get three-fourths of the 35 per cent allowed for soil fertility compliances." For the year 1936 an appropriation of $440,000,000 dollars has been authorized to pay farmers subsidies for planting crops designed to conserve fertility of the soil.

It is estimated that fully $125,000,000 million dollars will be paid cotton farmers in the south from this allotment during 1936.

## LIST SOIL BUILDING CROPS

Dr. J. Phil Campbell gave the following information during his address at the regional meeting in Memphis, March 6th.

He says, soil building crops include: Soy beans, field peas and annual legumes.

Soil depleting crops are listed as cotton, corn, tobacco, potatoes, truck crops, rice, sugar cane small fruits and berries sugar beets, vineyards and cultivated nut crops. Wheat, oats, barley, rye, buckwheat are termed soil depleting if harvested and soil conserving when not harvested.

Broom corn, grain, sorghum and sweet sorghum are listed as soil depleting if harvested and soil conserving if plowed under or grazed off.

Cotton was recognized as the major soil-depleting crop of the south by the committee.

## SPINACH!

### You Can Drink It Now

Atlanta, Ga., Feb. 23 (U. S.)—If you have looked admiringly at "Popeye, the Sailor Man," but admitted you couldn't be like him because you can't eat spinach, cheer up!

You can drink spinach now, according to an announcement received today from the Georgia Vegetable Growers' Association.

At their second annual convention in Macon, Ga., this week, juices will be extracted from both spinach and turnip greens and served gratis to all aspiring "popeyes."

## J. H. HUTSON EXPLAINS NEW FARM PLAN AT REGIONAL MEETING IN MEMPHIS, TENN.

Dr. J. H. Hutson division director of the new farm act explained that a farmer with 100 acres of which 20 acres were already planted in soil conserving and soil-building crops would receive an average of $10 dollars per acre if he participated in the program.

He further stated that the farmer would receive $20 dollars in this case for 20 acres already in soil building crops. His maximum participation would take out an additional 16 acres of non-soil building crops.

Once this land was converted into building crops, he would receive an addition $16 dollars plus lve cents per pound for the cotton taken out. This, if the farm produced the average of 180 pounds to the acre would produce $9 dollars an acre.

Mr. Hutson pointed out that these figures were tentative and would await the report of the committee assigned to the task of fixing the rate and the subsequent approval of Secretary Wallace.

## SERVE CROW LIKE CHICKEN

Down in Tulsa, Okla., last week a hotel put a special dinner of roast crow on its menu. The supply was soon exhausted and there were more calls than could be filled. Other eating places have now begun to serve crow, some of them making it a weekly feature on their menu. Crow is one kind of fowl that has no appeal for us, no matter how served, and no matter how great our hunger. Those Oklahomans are welcome to all they want of it.

# Mississippi Old Age Pension

OLD AGE ASSISTANCE BILL PASSES HOUSE

Would Provide $15 Maximum Monthly For Indigents

Actual Payments Less

Mississippi Would Provide Half of Money; Legal Whiskey Measure Offered As One Way To Pay Cost

From Jackson, Miss., Bureau of The Commercial Appeal.

Jackson, Miss., March 5—An old age assistance program, with a maximum monthly benefit of $15 for the needy over 65 years, was voted by the House today, 115 to 5. The measure is now ready for the Senate.

Representative John Holloman of Lowndes, author of the state social security legislative program for co-operation in the federal plan, said benefits of only $5 per month were contemplated, as a companion appropriation measure carries funds for only that amount. The state is asked to put up $1,000,000 which will be matched dollar for dollar by the federal government.

"The $2,000,000 is just enough to permit the state to put up about $2.50 per person to be matched by the federal government," Hollomon said.

**Insurance Plan**

The first of the social security measures was approved by the House yesterday with passage of the unemployment insurance act, under which the state is not called on for any money. Assessments collected from employers will be used for this measure, including expenses for administration.

Voting against the so-called "old age pension" bill were:

Jackson Lee of Lauderdale, Jack McGrath of Madison, Philip T. Sandlin of Marshall, Fred Schelben of Washington and R. A. J. Sessions of Wilkinson.

With the state's budget "about" balanced on the basis of last biennial appropriations and no provision made for the social security program. Chairman Joe May, of the appropriations committee, was uncertain what action his group might take on the appropriation measures.

Representative W. O. Walker of Warren offered a legal whiskey sale bill, estimated to yield the state $1,500,000 annually, and said he will suggest passage of his bill as a means of securing funds for the social security program.

Before passage of the old age assistance measure, an amendment was tacked on making persons convicted of trafficking in intoxicating liquors ineligible for further aid under the act. The vote on the amendment offered by Representative C. C. Coats of Rankin, W. O. Lott of Covington and T. A. Waits of Webster, was 62 to 25.

## KEEPING PIGS HEALTHY

**T. A. Ewing**

Lack of sanitation in the farrowing pen and feedlot exposes pigs to parasites, such as the round worm. Infestation may occur within a few hours after the pigs are farrowed. Greatest damage usually is done to the pigs while they are small. Much of the injury is by irritation caused when worms pass thru the lungs, pneumonia resulting in many instances. As the pigs become infested early in life and no treatment can reach the worms in the lungs, the only practical measure is prevention.

Clean the farrowing pens thoroly, and scrub them out with scalding lye water. Use 1 pound of lye to 10 gallons of boiling water. The lye eats away the fatty film around worm eggs and permits the boiling water to kill them. Disinfectants have no effect on the worm eggs, but help in ridding the quarters of lice and mites. Wash the sides and udders of the sows with warm water and soap before placing them in clean houses.

When pigs are farrowed in a central farrowing house and then moved to a clean pasture, it is best to haul the sow and pigs. Keep the pigs on clean ground until sold, if possible, but by all means keep them there until they are 4 months old.

## URGES EATING MORE POTATOES AND LESS FLOUR

New York, Feb. 23 (ANP)—Health experts of the league of nations announced today after a four month survey of the eating habits of the world that in almost every country the average diet was deficient in essential factors.

Americans, for instance, do not appreciate properly the benefits of skimmed and separated milk, but they eat too much white flour and sugar. Prof. Mary Swartz of Columbia university, a member of the group, said. She made public the report of twelve experts on nutrition delegated last October by the health committee of the league.

The experts urged greater consumption of potatoes instead of white flour and sugar.

## Grace Lumpkin Tells How She Wrote Books On Negroes

New Orleans, Louisiana—How did it happen that a white author, born of yoeman parents in that state of Georgia, reared in the hills and mill-towns of South Carolina could write of Negroes in such a realistic and sympathetic manner? was the question the American reading public had been asking since the appearance last season of the sensational novel of Negroes and poor whites called Sign for Cain The answer came at Dillard University when Miss Grace Lumpkin revealed how she happened to write on the south's black and white "forgotten men" and how she came to her revolutionary interpretation of them.

Presented by Professor L. D. Reddick as the author of".....the significant first novel To Make My Bread" and of Sign for Cain—more influential than a thousand essays of the life," the young authoress told her story to the Dillard University students and faculty in such a simple and unaffected manner that the sincerity of it could not be questioned. She told how she had seen a Negro servant-girl beaten over the head with a broom by her master and mistress because she (the girl) asked for her wages. This, they said was impudence! Miss Lumpkin also was startled by the suffering of the poor white mill-workers who lived in shacks while the rich owners kept palatial mansions which were occupied only one season during the year. "It didn't seem fair."

As a girl, the budding author tried first to get a "Home Demonstration" job; accordingly, registered in Home Economics courses in a little college in Georgia. Economic pressure to help support her family plus the realization that "school life" was not quite "real life" caused her to give up this idea. She returned to South Carolina, thence to New York, where the intellectual ferment continued. There she has written two novels in which the Negroes are intelligent resourceful and brave. She is at present touring the South collecting material for a third which will say something significant on the direct problem of the section—the problem of the black and white share-cropper. Miss Lumpkin was accompanied by Tom Burke and Anne Miller, who were also presented by Professor Reddick.

## North Carolina College Receives WPA Awards

Durham, March 26 (ANP)—Dr. James E. Shepard, president of the North Carolina College for Negroes announced Wednesday that the final allocation of $34,617 for the construction of an athletic field has been approved by the WPA and that work on the project would begin immediately. Through this grant employment will be furnished to 144 men.

When complete the field will have bleachers, a track course, football gridiron and baseball diamond, according to the present plans. It is proposed that in the near future a gymnasium will be erected near the field, by funds raised among North Carolinians of both races.

## COLORED MAN WHO FOUND LINDBERGH BABY IS ANNOYED

### William Allen Loses Job As Houseman; Too Many Folks Called up

Trenton, N. J., April 2—(C)—As the day of execution for Bruno Richard Hauptmann, convicted Lindbergh baby slayer, drew near the past week, William Allen, "forgotten man" in the internationally famous murder drama and finder of the slain baby, was somewhat bored by the whole proceedings.

Having refused since shortly after the Flemington, N. J. trial to have anything to say on the case, Allen did break his silence briefly to express his disgust with the entire case. He is still bitter over treatment accorded him by Lindberghs, neither of whom ever thanked him for finding their murdered child.

To all questions if he thought the body he found was that of the Lindbergh baby, Allen has always answered: "How do I know? I never saw the Lindbergh baby except in pictures."

## UNITED STATES DEPT. OF AGRICULTURE

**Agricultural Adjustment Administration Washington, D. C.**
**Secretary Wallace's Statement**

The following is a statement by Secretary Henry A. Wallace concerning plans for putting into effect provisions of the new Soil Conservation and Domestic Allotment Act The Statement will be presented for Secretary Wallace by M. L. Wilson, Assistant Secretary of Agriculture. and H. R. Tolly, consultant of the Agricultural Adjustment Administration, at the opening session respectively, of the Chicago and Memphis regional conferences.

The regional conferences at Chicago, Memphis, New York and Salt Lake City have been called so that farmers, farmers' representatives and those who will be concerned in administration problems may give their advice and assistance in the development of a national program for 1936 under the new Soil Conservation and Domestic Allotment Act.

In order that a plan for this year may be offered to farmers with the least possible delay, I am submitting the broad outlines of the program the Department has been considering, and I am inviting your criticisms and suggestions for improvement in line with the farming needs of your region. To assure the closest cooperation of farmers in operating a program, it is best to begin by seeking their advice and help in working out that program.

The fundamental purposes of the new Act were defined by President Roosevelt when he signed it.

"The new law," the President said. "has three major objectives which are inseparably and of necessity linked with the national welfare. The first of these aims is conservation of the soil itself through wise and proper land use. The second purpose is the re-establishment and maintenance of farm income at fair levels so that the gains made by agriculture in the past three years can be preserved and national recovery can continue. The third major objective is the protection of consumers by assuring adequate supplies of food and fiber now and in the future."

The national goal of the tentative program for 1936 calls for an increase in the area of crop land in soil-conserving and soil-building crops such as grasses and legumes from the 1930 level of about 100 million acres to about 130 million acres.

This increase would result in a stoppage of much waste of soil and an increase in the permanent value of farm land. It would mean increased assurance of adequate production of food and fiber in years to come.

As compared to the 100 million acre average in soil-building crops, farmers of the nation until recently have been planting to soil-depleting crops of about 300 million acres, or an area three times as great. Use of 270 million acres in 1936 for crops which deplete the soil would be ample at average yield to provide the nation a supply of food and fiber equal to domestic consumption in the 1920-1929 period, taking into consideration the modifying provisions in the Act.

**Information needed by Farmers in Apply for Payments**

In order to accomplish the national goal of increased plantings of crops which protect and improve the soil, it is necessary first to classify crops into two main groups—one main group consisting of soil-building and soil-conserving crops, and the other group consisting of major soil-depleting crops. A plan of classification has been worked out and will be submitted to the group at this meeting for review and further suggestions.

Next, it is necessary to adopt a rule or measure by which each farmer can determine the part or acreage of his cultivated land which normally has been planted to soil-depleting crops, and, wherever practicable, the part which normally has been planted to soil-conserving and soil-building crops. For 1936, the objective would be to increase plantings of soil-building or soil-conserving crops by shifting or diverting acreage formerly in soil-depleting crops to the soil-building and soil-conserving crops. The aim would be to obtain the greatest percentage of increase in soil-building crops in those areas where soil exhaustion is most serious.

After careful study, a tentative plan for establishing bases has been worked out and is offered for further suggestion and improvement. The proposal is to use as the principal guides the acreages as they were in 1935. Consideration should also be given to adjustments to correct for unusual conditions and recent changes in the use of crop land. Farmers would estimate carefully their normal acreages of soil-depleting crops. These estimates would be checked for possible error under the direction of the county committees so as to establish qualifications to receive payments.

Information which farmers will find essential in preparing to participate in the program would include (1) the normal acreage of all soil-depleting crops grown on the farm, and wherever practicable the normal acreage devoted to soil-improving crops. (2) the normal yield per acre of the major soil-depleting crop grown on the farm and (3) the acreage to be devoted to soil-conserving and soil-depleting uses in 1936.

**Conservation Payments to Farmers**

As developed for discussion in these regional conferences, the plan proposes a system of conservation payments to farmers who wish to participate. This plan proposes that (1) a moderate soil-maintenance payment be made for each acre, up to a maximum, planted to soil-conserving or soil-building crops or devoted to approved soil conservation practice in 1936 and (2) a larger soil improvement payment per acre to be made for each acre shifted from soil-depleting crops to soil-conserving or soil-building crops, provided that this payment would be made only up to a specified maximum percentage. The maximum percentage of change in use of land on which payment would be made would be established for a region or a State for the purpose of assuring maintenance of an adequate supply of commodities grown principally in that region or State, and of keeping within budget limitations. The amount of the soil-improvement payment would vary according to productivity of the land. The soil-maintenance payment per acre on land already in soil-building crops would assist farmers who have been following good systems of farming to continue and improve their systems. This payment also would help farmers whose farming systems have been so far out of balance that in the first year they could qualify only for this type of grant.

The larger soil-improvement payments would allow these farmers who have been forced into intensive systems of farming in order to "make both ends meet' to change to a more extensive type of farming that would protect the future productivity of their farms as well as meet their present needs. The actual amount which could be paid farmers would vary from region to region and from farm to farm, according to the productivity of the soil, and in the South, according to the soil-depleting crop from which diversion was made to a soil-conserving crop.

In the case of farms occupied by share tenants or share croppers, it is proposed to divide the payments between landlords and those actually occupying the land. Farmers renting for cash would receive the entire payment.

**Budget Limitations and Requirements**

The new Act carries a specific limit of 500 million dollars on the total amount of obligations that may be incurred in any calendar year. It also limits the amount that may be appropriated for any fiscal year to 500 million dollars. To make possible a continuing program, annual appropriations by Congress will be required.

There is now pending before Congress a bill appropriating $440,000,000 for carrying out the 1936 soil conservation program. It is possible that other funds may become available, and that these may bring the total up to 470 millions. This is a definite top to expenditures in 1936. If soil-maintenance payments are made at the rate of 75 cents to $1 an acre, these payments would total from 75 to 100 million dollars. Allowance has to be made for administrative expenses in Washington and in the field. On this basis, there would be left for distribution as soil-improvement payment somewhere in the neighborhood of 350 million dollars. It will be seen that the financial limitations laid down in the Act are such that great care must be taken in the country as a whole and in each State to stay within the limitations.

In addition to the funds available for both kinds of soil conservation payments, Congress has made available, under various provisions of the Agricultural Adjustment Act and related legislation, funds for the removal of surpluses, including specific funds for the removal of surplus dairy products, for diversion of products from the normal channels of trade, expansion of domestic and export markets, and for payments in connection with the portion of commodities used for domestic consumption.

**Minimum Performance to Qualify for Payment**

To make sure that each farmer receiving a conservation payment carries out genuine soil conservation operations on his farm, it is proposed that minimum performance in certain respects be required before he can qualify. This minimum performance would include (1) having in 1936 an acreage of soil-conserving crops equal to not less than a given percent of the total acreage devoted to soil-depleting crops or a given per cent of the base acreage of soil-conserving crops, or as possible alternatives in lieu of this minimum acreage, the adoption of designated practices with respect to soil conservation or erosion control (2) having in 1936 an acreage of soil-depleting crops not in excess of the soil-depleting base acreage determined for the farm; and (3) maintaining in 1936 the acreage formerly devoted to food and feed crops for home consumption.

**Administrative Organization in the Field**

The proposed administrative organization in the field would be democratic in principle and procedure and would be built around county associations of farmers, represented by county and community committees. In those counties which specialize in one crop and which consequently had only one county committee or association under the Adjustment Act, this committee would continue to function pending permanent organization. In counties having committees or associations representing more than one commodity, a new committee would be set up to represent a combination of the former committees, including representatives of the county program planning committee. The new combination committee would serve pending permanent organization in the field. The organization would call for a single State board of committee. Cooperation of State land grant colleges and State Extension Services will be sought just as those agencies were asked to cooperate in working out the adjustment programs.

**Regionalization**

The conditions which farmers need to know in order to participate in the program have to be decided upon quickly since farmers are already planting or preparing to plant, and the limited time will prevent a high degree of regional refinements in the plan. However, at the meetings being held this week and next in the South, the Middle West, the Far West, and the Northeast, special attention will undoubtedly be given to the conditions and needs of these four great regions. The 1936 plan, it is expected will provide for regional differences in the kind and number of acres to be diverted from soil-depleting to soil-conserving crops. This differentiation, the proposed payments on acreages already devoted to soil-conserving or soil-building crops, and the fact that farmers will have a rather wide range within which to adjust their farming plan will combine to offer a flexible program to the individual farmers.

Meanwhile, research to provide a basis for a 1937 program needs to be begun as soon as the 1936 program is decided upon. During the remainder of this year, efforts will be made to bring together the results of the experimental and demonstrational work which is now being done. This includes comprehensive research of the Soil Conservation Service, results of the regional adjustment studies of last fall and summer, findings of the farm groups now engaged in county planning projects and information which the land grant college experiment stations are assembling. In this way, a more thoroughly scientific basis will be made available for the program of 1937 and later years.

By the next year it should be possible to make further allowance for differences between regions and States. Gradually a series of State programs each adapted to the needs of the farmers of that State and fitting into the needs of the nation as a whole, should be worked out. These plans will lay the basis for the State-Federal cooperative program which the law provides must be in effect no later than January 1, 1938.

## NEGRO FARMERS GIVEN DUE RECOGNITION

Regional Conference in Memphis last week. Farmers from every southern state and governmental officials in attendance. Four outstanding race leaders invited.

Secretary of Agriculture Henry A. Wallace held farmers conference at Peabody Hotel, Memphis, Tenn., March 5th, 6th and 7th for the purpose of explaining and discussing the new Soil Conservation and Domestic Allotment Act recently passed by Congress.

This new Act includes the preservation and improvement of soil fertility, promotion of the economic use and conservation of land, and dimunition of exploitation and waste ful and unscientific use of national soil resources.

James P. Davis, President National Federation of Colored Farmers, T. M. Campbell, Field Representative Extension Agent, Tuskegee, Ala.; Dr. J. B. Pierce, Director Extension Workers Virginia and Prof. C. H. Waller, Field representative for Dept. Agriculture and State Director Extension work in Texas were invited to attend the meeting, and were placed on important committees with the white leaders to work out plans for making the new program a success.

This is the first instance where any administration has given such recognition to the race to represent and speak for the 906,000 race farmers located in every state.

According to the recommendations of the committee, southern share croppers who raise cotton on the halves are to get about 17 1-2 cents percent of the total payments. Thirty percent to the applicant; the man responsible for compliance, 25 percent to the landlord, 10 percent to the owner of the equipment or workstock and 35 percent prorated as the crop is divided.

Mr. Davis, president National Federation Colored Farmers said: "If these terms are adopted the share tenant who furnishes his own equipment and works on the three fourths—one fourth basis will get three-fourths of the 35 percent, and in addition, he may get a portion of the 30 percent allowed for soil fertility compliance."

For the year 1936 an appropriation of 440,000,000 dollars has been authorized to pay farmers subsidies for planting crops designed to conserve fertility of the soil. It is estimated that fully 125,000,000 million dollars will be paid cotton farmers in the south from this allotment during 1936.

There are Negro farmers in every state. In 18 of the principal farming states there are 878,064 farms operated by Negroes of which 173,050 are owners of 10,161,125 acres.

## IF CATTLE HAVE FOOT-ROT

J. E. Comfort

Foot-rot, or foul foot, frequently is encountered with cattle being in dry lot, and occasionally with cattle on pasture. It is caused by a "filth organism" found in lots and dirty barns. Stones or dirt lodge between the toes of the foot and either bruise or crack the skin. These organisms gain entrance through the crack in the skin, and swelling and severe lameness result.

Treatment consists in cleaning out the foot, and applying a strong antiseptic. In mild cases, undiluted coal tar dip or tincture of iodine usually are satisfactory. If the infection is well advanced, a saturated solution of copper sulfate is prefered. After a few rather trying sessions, the animal will put its foot in a bucket of the solution without trouble. Every year there are a few cattle that have sore eyes. This trouble usually is caused by irritation from dust, chaff, weed seeds, or flies, but in some case is catching. Bathe the eyes at least twice daily with a strong solution of boric acid.

# • FARM NOTES •

Rev. H. H. Ingram of Holmes County, Miss., one of the oldest members of the N. F. C. F. and strongest supporters writes that many of the farmers in his section plan a drive for members this spring Rev. Ingram is not only a good farmer, but a man of keen judgment and a leader in his community.

Negro farmers in Texas have been recognized in the new Centennial program for that state. A building that is to cost over a hundred thousand dollars will be erected to hold farm exhibits. Prof. C. H. Waller, State Director of Extension work and one of the foremost leaders in the race will have charge of the entire program for our people.

The first Federal grant to the different states totals more than five million dollars. This is under the new social security act. The largest of the grants to the states so far approved is for Iowa—548,000 dollars. Alabama received $109,000.

Cappers Weekly says: Grady Orr an Alabama farmer, planted his corn last spring in one long row in spiral fashion. The row was twenty miles long. It took him three days to cultivate it one time. By leaving an open space through the field from circumference to center, he did not destroy any of the growing corn in going to and from his work.

Through news release, Governor Myers of the Federal Credit Administration announced that farmers were paying the money they owe the government much more rapidly than required, according to their contracts. During 1935 they repaid more than forty-five million dollars. Governor Myers further stated that 15 million dollars of loans were paid in full during the year.

Thomas Gillespie prominent southeast Missouri farmer and official of local unit of the N. F. C. F. has just returned from hospital in St. Louis where he has been for several weeks. Mr. Gillespie was threatened with pneumonia.

State Commissioner of Agriculture of Tennessee, Hon. O. E. Van Cleave in special article to the farmers of his state urges them to stick together. At the same time he urged them "not to go out and antagonize other groups by demanding too much, and that they should prosecute their cause on a live and let live basis.

Hon. C. E. Brehm, State Director of Extension work in Tennessee has appointed two outstanding leaders of the race in that state to head up activities among the rural citizens of our racial group. Mr. Brehm is noted for his fairness to all citizens regardless of their color, and our farmers are making some financial headway in that state.

Georgia's 1935 cotton crop showed the greatest per-acre yield since 1914. The crop for last year has been estimated at a little more than a million bales. The 1935 yield is expected to be 233 pounds per acre. The yield in 1932 averaged only 154 pounds per acre.

A farmer in Greene County Mo., says he recently sold a sow that was in good condition, and that all she had since weaning her pigs was lespedeza. Several farmers claim that hogs like lespedeza and they will fatten on it.

The Missouri Ruralist says more hogs are in prospect for 1936, and yet the total number of hogs available for market in 1936 will be below normal. Our race farmers should increase their sows and see that they have ample supply of meat for this winter's slaughter.

Former Governor Frank O. Lowden of Illinois is one of the largest land owning farmers in the United States. He was born on a farm, and today is the owner of five thousand acres. He has hundreds of colored farm families living on his land.

Production loans for the purpose of aiding farmers in the making of this year's crops will soon be available. This year not more than 200 dollars will be loaned to any one farmer for production purposes.

C. D. Stroud a Missouri dairy farmer has been feeding Osage oranges—hedge balls to his cows. The Missouri College of Agriculture made an analysis of the Osage orange which showed high protein content with an ether extract. The oranges are quartered and salted, then a little bran added when used as a feed for the cows.

At a recent corn shucking contest held in Atchison County Missouri, Ralph McLaughlin farmer, won first prize of 25 dollars. He shrucked 27 bushels of corn in 80 minutes. Harry Ackley won second prize, shucking 25 bushels.

Tearing down an old log cabin, Wilbur Akullums near Hall Sta. Louisiana found about six hundred dollars in gold coin hidden in one of the logs. The money was in an old fashion snuff box.

Farmers should be careful in selecting their seed corn for planting this year. Due to the excessive cold weather considerable of the corn for planting has been damaged. Test your corn before planting.

One million, seven hundred fifty thousand and two hundred sixty-six farms harvested sweet potatoes on their farms last year. This is an increase of more than six hundred thousand farms over 1929. North Carolina ranked first in production, with Mississippi second and Alabama ranking third.

1,237,117 acres were planted in tobacco during 1934. This was 35 percent less than the crop in 1929. Practically two fifths of the tobacco grown in this country is produced in North Carolina, with Kentucky ranking second.

## MAN BUILT HOUSE FOR ONLY $2 CASH

Beebe, Ark., March 4—Two dollars spent for nails has been the only cash paid so far on the nearly completed four-room house being built by Tommie Frazier, a Dallas County farmer. Pine trees on the farm provided lumber for the house. A sawmill nearby cut the lumber for one-half; a planing mill dressed it and made the drop siding for $4 per 1,000 feet. This bill was paid in logs. Mr. Frazier split boards for the roof, and ties were traded for brick with which to erect a chimney for the fire place.

## RUSSIA PINS MEDALS ON MILKMAIDS; RAISED MILK YIELD OF COWS

Moscow, Feb. 24.—(AP)—Hundreds of milkmaids assembled in Moscow tonight to receive decorations for increasing the average milk yield of cows.

Many were awarded Lenin's decoration, the highest honor the nation can confer. These had obtained 3,500 liters (925 gallons or more from a single cow in one year.

Poultrymen who obtained an average of 165 eggs from one hen, pig breeders who got more than six pigs from one sow, cattle raisers and horse breeders also were decorated, a total of 1,373 awards being made.

# FLOOD CONTROL BILL SWELLS AT CAPITOL

Washington, March 30—(AP)—A concerted rush by senators and representatives to include their own projects in the $300,000,000 flood control bill being drafted by the Senate commerce committee Monday brought a prediction from its chairman, Senator Copelaud (D. N. Y.) that it would be swollen into a $500,000,000 to $1,000,000,000 measure.

The prospect of a prolonged battle over legislation was heightened by a warning from Senator Robinson, of Arkansas, majority leader, that he would oppose it as now written because discriminated 'n favor of Eastern states.

Later he told reporters army engineers would submit another report to the commerce committee "greatly liberalizing" their original recommendations for projects particularly in Arkansas. He has asked the committee to restore the $300,000,000 bill to its $750,000,000, size as passed by the House last session. Then it contained many projects for the Mississippi Valley.

Other flood control developments during the day included:

The house of rules committee approved a rule giving right of way to a measure which would authorize the Reconstruction Corporation to make loans totaling $25,000,000 for rehabilitation and reconstruction in flood areas on security "to reasonably assure repayment" instead of "upon sufficient security" as at present.

The Tennessee Valley Authority asked Congress for authority to construct six additional dams costing $144,500,000 to aid in controllin floods on the Lower Mississippi River.

The TVA report said power-development would only be incidental to flood control and navigation purposes. In its TVA decision, the Supreme Court said it could sell surplus power generated at dams that were constructed for national defense, or navigation purposes.

### Disasters Have Brought Ruin

Senator Robinson told the commerce committee in executive sesson that "disaster, which from time to time during the last 50 years have brought ruin to large portions of the Mississippi Valley" are certain to occur again unless flood control work is pushed on the Mississippi River system.

"The president has views on the subject," she said. "He believes that flood control is inseparable from an economic standpoint with forms of land misuse, including erosion, reforestation, water storage, irrigation and drainage.

"All the necessary works cannot be planned and executel within a single year and it will not be necessary now to attempt to provide the funds which will be required beyond the fiscal year 1937.

Among others who urged inclusion of projects in their states, were Senators George (D., Ga.,) Russell, (D. Ga.), Capper, (R. Kan.) Walsh (D., Mass.) Davis (R., Pa.), and Bilbo (D., Miss.), and Representatives Beiter (D., N. Y.). Ferguson (D., Okla.), and Koppleman (D., Conn.)

Chairman Copeland said that only the Merrimac River projects in New Hampshire and Massachusetts, estimated to cost $7,725,000, was approved by the committee Monday.

"I fear, however," Copeland said, "that before we get through the bill may contain authorizations for from one-half to a billion dollars. The appropriations, of course, would be extended over a period of years, depending on the selection of projects for actual work by the army engineers."

He has called the projects sought to be included "pork barrel" projects.

Tuesday the committee will consider whether the federal government should pay the entire cost of each project, or only actual construction costs.

### Can Work Out Formula

Copeland said army engineers believe they can work out a formula under which the federal government would pay all construction coasts while the states and municipalities would pay for the land and damages.

The six new dams recommended by the TVA were:

Storage dam on the Little Tennessee River at Fontana, N. C., costing 29,000,000.

Three dams on the Tennessee River at Gilbertsville, Ky., $60,000,000.

Dam at Watts Bar (White Creek), Tenn., $31,000,000

Dam at Coulter Shoals. Tenn., $20,000,000.

The report emphasized that the Tennessee as the largest tributary of the Ohio, is an imporant factor in Mississppi floods and that control of the Tennessee's runoff would contribute substantially to flood relief on the Lower Mississippi.

## BENEFITS TO FARMERS EQUIVALENT TO TARIFF

**A New Measure Before Congress Seeks to Make up for Disparity Between Prices Paid and Prices Received**

Farmers must buy what they need in a tariff-protected market. When they sell their products it is on a world market without the protection accorded the products of other industries. There are approximately 200 articles bought by farmers on which they pay an estimated 25 per cent more by reason of tariff protection enjoyed by the producers of these articles.

This is an old, old story and many solutions have been offered in congress to correct this injustice. The latest was the AAA benefit-payment plan, now invalidated. In its place Representative Hope of Kansas has introduced a bill in the house providing for the payment of tariff-equivalent benefits to producers of surplus farm crops on that part of their production required for domestic consumption.

The same measure was introduced in the senate last week by Senator Capper of Kansas. This bill is not a substitute for the soil-conservation measure already passed by both houses and senate, but rather is supplementary to that act. The Hope bill applies to wheat, cotton, hogs and tabacco.

It proposes that the tariff commission find the average cost added by tariff protection to the prices paid to the growers of these major This added cost, which has been estimated at 25 per cent, is to be paid to the growers of thest major surplus-produced crops through a subsidy on the proportion of their total production required for domestic consumption.

Senator Capper gives the following as an example of how it would work out with wheat:

Suppose domestic wheat requirements are 600,000,000 bushels a year. Suppose the production in a given year is 800,000,000 bushels. Then three-fourths of an individual wheat grower's production would be presumed to be required for domestic consumption.

The grower who produced 1,600 bushels of wheat, if this bill were enacted, would then, under such a finding by the tariff commission as to tariff costs, be entitled to a subsidy from the U. S. treasury equal to 25 per cent of the market price on three-fourth of his crops. He would get a certificate entitling him to collect that subsidy at any time during the ensuing year from the treasury. These would be negotiable.

With the market price of wheat a dollar a bushel, this farmer would be entitled to a subsidy of 25 cents a bushel on three-fourths of his 1,600 bushel wheat crop, or 25 cents on 1,200 bushels. If the price was 80 cents a bushel, he would receive 20 cents a bushel on 1,200 bushels, and so on.

"The equalization fee and export debenture plans proposed to attain this result indirectly," Senator Capper said in support of the measure. "But both these plans depend upon a foreign market that will take our surpluses. Such foreign markets do not exist today. I believe the Hope bill is both constitutional and economically justifiable. It should get immediate and tangible results from the individual grower. I hope full hearings may be held upon it, to develop its good and bad points, and that it will receive earnest and fair consideration."—Cappers Weekly.

## A NEW SWEET CORN FOR DIXIE

The Texas Experiment Station has developed a new corn by crossing the Mexican June variety into a sugary seeded type, which has maintained the capacity to resist droughts so characteristic of the Mexican June parent, although more productive than the Mexican June. It is named Honey June Corn.

Dr. P. C. Magelsdorf, agronomist of the Texas A. and M. College, states that "We have had a number of reports in which this new variety has made a fair crop of roasting ears without any rain from planting until harvest."

J. H. Burkett, former Texas State Nut Specialist, conducted a number of experiments with corn this year, one variety being the Honey June, and he states that this new hybrid "excels all varieties tried in resisting long dry seasons and in yieding a heavy crop with little rainfall." Mr. Burkett is of the opinion that the Honey June will be extensively grown throughout the Southwest, as its beat-resistant qualities are known.

The Honey June yields from one to two large ears per stalk, and the stalk grows off vigorously and sends out a heavy root system over a large area of ground.—J. R. Masterson. (Mr. Masterson is a former Texas county agent.)—Country Gentleman.

# Sugar Refinery Price War Cited At Rate Hearing

## Testimony Presented at 11th Day Commerce Session

A price war among sugar refineries, in which they made use of applications for freight rate reductions, was the understanding cause of the 1933 rail and barge competition for sugar tonnage which carried rates so low that both rail and water carriers, came together to end it. M. W. Howe, general freight agent of the privately owned and operated Mississippi Valley Barge Line, Monday told Examiner J. H. Howell of the Interstate Commerce Commission.

The taking of testimony in the local hearing which has been conduced for 11 days in the St. Charles hotel, is scheduled to end at noon today, to be resumed later in Cincinnati, Ohio. A subsequent hearing in some other Mississippi valley city is expected for the purpose of receiving evidence in rebuttal, before the examiner makes his report to the commission in Washington.

### Howe Testifies

Mr. Howe testified that the first refinery group to use contract barge tranportation of sugar in the rate competition was Godchaux Sugars, Inc., of New Orleans and Reserve, operating to Missouri points.

In meeting the low sugar rate of contract carriers, the rails, he said, went through the common carrier barge line rates to such an extent that the rails and the barge lines had to agree to stop the rate cutting.

Mr. Howe stated he made sugar examples a large part of his testimony in the hearing because "sugar is our largest item of traffic, the backbone of our traffic."

### Losses Listed

The rails, he said, in 1934 carried much more sugar in 1933 and lost about $32,000,000 on it as compared with a loss of about $13,000,000 on it in the previous year.

The added traffic would have to be increased to 50 per cent more than the sugar consumption in the peak year of 1928 for the rails to equal their sugar revenue of that peak consumption year.

Mr. Howe said that if joint rail-barge differentials were to disappear, the rails in the Mississippi valley would not be certain to get the traffic which had been moved by barge, because Baltimore port some of the movement jointly with rails from the Atlantic seaboard.

### Objection Made

When Mr. Howe was sworn in to state the case of the Mississippi Valley Barge Line in regard to its original complaint respecting the joint barge-rate differentials, Harry C. Brown, commerce counsel of the Atchison, Topeka and Santa Fe railroad, objected to any testimony in regard to the effect of transcontinental rail rates from the Pacific coast and from the Atlantic seaboard into the territory within the angle east and north of the Mississippi and Ohio rivers.

Examiner Howell ruled first that only evidence should be received which concerns joint barge-rail rates and all-rail rates in the Mississippi valley, because otherwise every rate in the United States might be pertinent and also that such issues as the sugar freight rate case would have to be retired by the commission.

### To Withdraw Witness

Harry C. Ames, counsel of the Mississippi Valley Line, said then he would withdraw his witness until he could find where he could be heard on his complaint. He added that when the commission consolidate his complaint with the present investigation it became necessary for the commission to receive evidence as to all his complaint in this investigation.

"We can madamus the commission to receive our evidence as to our complaint, we cannot afford to denied the right to be heard somewhere and we do not know where we can be heard, except before the commission," he said. "We do not understand the validity of objections because of the magnitude of the case involved.

Fourteen commodities constitute 90 per cent of our tonnage and we have a right to a forum when we want to be heard. After a wait of nearly two years since the complaint was filed and after the commission chose to consolidate our complaint with this investigation, we do not wish to be told that we have no place in which to try more than a part of our case.

### Bill of Particulars

"In two years the railroads have never asked for a bill of particulars and now they say they do not know what it is about."

After a recess, following a statement of the examiner that if the wider scope is permitted, "the scope would be so gigantic that I doubt if we could handle it," Mr. Howell ruled that testimony could be heard "only as rail rates between points the barge lines wish to serve in connection with barge-rail rates, eliminating evidence as to western trunk line and Atlantic seaboard rates.

Mr. Ames took an exception on which he said he will appeal to the commission from the examiner, and then instructed Mr. Howe to testify, except where he encountered individual objections.

### Commodities

Mr. Howe asserted that the commodites which make up 90 per cent of the traffic of the Mississippi Valley Barge Line in competition with all rail routes in the Mississippi valley are canned goods soap and peas, cereal beverages, flavored soap powders, dried beans and beverages, empty returned beverage carriers, sugar, coffee, wood pulp, tobacco, rice and binder twine.

"We had a twofold purpose in filing the complaint," he said. "First, the commodites specially complained of represent a large proportion of the total tonnage moved by our line and by reason of drastic rail rate reductions we have been forced to reduce our revenue accordingly; and second, he impropriety and results which must follow a policy of rate cutting by one form of transport to deprive another of individual items of traffic."

## Texas Centennial Negro Advisory Committee Holds Initial Meeting

Washington, March 26 (ANP)—The first meeting of the Advisory Committee, appointed by the U. S. Texas Centennial Commission to advise on the participation of Negroes in the Texas Centennial Celebration to be held at Dallas June to November, 1936, was held in the conference room of the Department of Commerce, Monday, March 16. Eugene Kinckle Jones, Advisor on Negro Affairs, Department of Commerce, presided as Chairman of the Committee. Other members of the Committee are: Dr. Sadie T. M. Alexander, Attorney, Assistant Solicitor of the City of Philadelphia; W. R. Banks, President, Prairie View State College of Texas; Dr. M. O. Bousfield, Associate Director of Medical Services, Julius Rosenwald Fund, Chicago; Dr. Frederick D. Patterson, President, Tuskegee Institute; Robert L. Vann, Editor, Pittsburgh Courier, Pittsburgh; and Garnet C. Wilkinson, Assistant Superintendent of Public Schools, Washington, D. C.

The meeting opened with a welcome address by Secretary Roper, a member of the U S. Centennial Commission, who expressed profound interest in the general celebration as representing the century of progress of the people of Texas as well as his delight in the opportunity that comes to Negroes to participate under the able leadership of the personnel of the Advisory Committee." Following Secretary Roper's remarks, W. B. Yeager, Executive Secretary of the U. S. Texas Centennial Commission read a brief statement of greeting from Vice President Garner, Chairman of the U. S. Texas Centennial Commission and expressed felicitations from the other members of the Commission-Secretary Hull, Department of State and Secretary Wallace, Department of Agriculture. Mr. Yeager outlined in some details the physical outlay of the federal building that is to be devoted to the display of exhibits showing the progress of Negroes in America for the past one hundred years. Following the formalities Chairman Jones gave a brief digest of the matters to be considered by the Advisory Committee including methods to be employed in organizing exhibits. The committee agreed to college, assemble and catalogue exhibits under six major divisions: Health, Statistics of Progress, Aesthetics, which includes art, music, and drama, Mechanical Product, Agriculture and Education. One member of the Advisory Committee was appointed chairman of each division as follows: Health: Dr. M. O. Bousfield, Aesthetics, Dr. Sadie T. M. Alexander, Agriculture, Dr. Frederick D Patterson, Education—Garnet C Wilkinson, Mechanical Products—W. R. Banks, Statistics of Progress—Robert L. Vann. The committee held morning luncheon and afternoon sessions.

Other persons present on invitation at the meeting and who contributed to the discussion were: William H. Harris, Assistant Director of Exhibits, Dr. William J. Thompkins, Recorder of Deeds, District of Columbia; Dr. Robert C. Weaver, Advisor on the Economic Status of Negro, Department of Interior; Charles E. Hall, Specialist in Negro Statistics, Bureau of the Census; Jesse P. Thomas, Southern Field Director, National Urban League and A. Maceo Smith, Secretary, Dallas Negro Chamber of Commerce.

## Decide Crime Is More Destructive Than War

Jacksonville, Fla., March 26—(By Page M. Beverly for ANP)—That "Crime is more destructive than War" was the decision of the judges in a debate on the subject held here Thursday night with William Norris and H. S. Richardson representing the affirmative and Frank Donaldson and Leroy Washington, the negative.

The debate was held under the auspices of the St. Stephen's A. M. E. Church of which Rev. C. A. Gibbs is pastor and the judges were Joseph H. James, Attorney J. Menard Lewis and Arthur Payne.

## Colonel Robinson Asks Negroes To Aid Ethiopia

Mobilization of Red Cross units with five doctors, 10 nurses and 20 first aid men for service in Ethiopia was asked of American Negroes by Col. John C. Robinson, Chicago flyer now head of the Royal Ethiopian Flying Forces, in a letter received here this week.

Such mobilization, Robinson declared, would do more good in uniting the colored people of America and Ethiopia than anything undertaken in the next 50 years. There are at present few doctors to care for the many injured along the African front.

In pointing out the dire need of such units, the flyer said it required from two to three weeks to get the injured soldiers to hospitals because of the poor modes of transportation and for that reason medicine having a pain-killing effect is needed badly.

Ethiopia has an almost inexhaustible supply of manpower, Robinson asserted, but lack funds to equip its soldiers with machines of war. Nearly every male above 10 in the country's 15,000.000 population is a soldier.

## Youth Is Jailed As Imposter

Macon, Ga., March 26 (ANP)—Charged with soliciting funds under false pretenses, Richard Kelly, a 17 year old youth was held here in jail without bond following his arrest on Tuesday morning.

Police stated that young Kelly has been plying his "trade" for several weeks, soliciting funds for Ballard Normal School, which is supported by the American Missionary Association. Many of his victims have contacted the police and Tuesday morning when he made a call on His Honor the Mayor and laid before him his plea for funds he was placed under arrest.

The youth had letters, purported to have been written by the officials of Ballard Normal School, on his person when he was arrested and contended that he was authorized to solicit funds for the institution. Officials at the school, however, denied that he was so authorized and that a campaign was being conducted.

WHEN IN CHICAGO STOP AT AMERICA'S LARGEST NEGRO HOTEL—VINCENNES

VINCENNES HOTEL—Chicago, Illinois, located at 36th Street and Vincennes Ave. The most modern and up-to-date Hotel owned and operated by Negroes in America. Mrs. E. Barnett-Lewis, is Proprietress. Write for Prices and Rates.

## GREAT DROUTH

(CONTINUED FROM PAGE 1)

effect in this direction, but the indications are that this was a somewhat feeble gesture compared with the vast sweep of nature. Nature, through the agency of the great drouth, effected more curtailment in a week than the whole AAA could in a year. At the height of the 1934 dry period, one could see the crops curtailed hourly by the sun and the lack of moisture.

**Farm Depression Worst in 1932**

In 1932, when the farm depression was at its worst, the income of farmers was $5,337,000,000. While not all of the 1935 crops are yet marketed, estimates made on the basis of those which have been indicate that the income from the 1935 crop will amount to $7,800,000,000 Here is an increase of $2,463,000,000 or not far short of 50 per cent. While this is far short of the peak of farm income of $12,000,000,000 reached in 1929, the farmer is in a relatively good position because the prices of the things he must buy are much lower than they were in that year.

## SPIRITUALS BASED

(CONTINUED FROM PAGE 1)

Mississippi Legislature just closed.

Among the large costume social affairs planned for pilgrimage visitors on Tuesday evening is the "gypsy ball" at Longwood, home of James and Merritt Ward, and "the ball of a thousand candles" at Elms court, the home of David McKittrick.

Both Longwood, the unfinished dream house of days of the War Between the States, and Elmscourt the stately antebellum mansion house, are show places of Natchez. The unusual appearance of Longwood and the beautiful antique furniture and appointments of Elmscourt make them among the show places.

In extending welcome to pilgrimage visitors, Mrs. W. H. Hale, president of the Garden Club, has given the following statement on the origin of the pilgrimage:

"The Natchez Garden Club welcomes the visitors to our ancient and beloved city with all the warmth and hospitality of the old South. We are opening to you the doors of the past that you may live with us once more the gracious and leisure life of a bygone day Descendants of those lords and ladies of an era of culture whose renown has become legendary will envision to you once more the romance of our golden past.

"Approached by roads worn deep in the cliff by the tramp of countless feet and overhung with Spanish moss swaying the forces of a changing world, her beautiful ante bellum mansions circle her about like a girdle of precious gems. In her magnetic atmosphere, the ladies of the Garden Club recreate each year the proud days of long ago.

"The pilgrimage is only five years old, but is growing rapidly in grace and beauty. We owe a large debt of gratitude to the late Mr. James K. Lambert, editor of the Natchez Democrat, for the interest created in the magnificent old homes through the splendid series of articles written by Mrs. Edith Wyatt Moore, then a member of the Democrat staff. These histories of the old Natchez homes aroused so much interest throughout the state that when the State Garden Club's convention was held in Natchez in 1930, and it was impossible to have a tour of gardens due to a severe freeze, the guests asked to be shown the homes of which they had read

"Their admiration and appreciation was so great that the members of the Natchez Garden Club, with the enthusiastic encouragement and support of Mrs. Robert Henry, who was then president of the Garden Clubs of Mississippi, conceived the idea of making the tours an anual event.

"In 1931, under the administration of Mrs. Percy Benoist, president, the first pilgrimage was held, with Mrs. Balfour Miller as the chairman. Since then the pilgrimages have grown into importance. We have visitors from every state in the Union and some from abroad. That part of the funds which the Garden Club realizes is used for civic improvement.

"The present project of the club is the rehabilitation of Ellicott Hill, one of the oldest inns on the Natchez Trace, under supervision of Mrs. Ferriday Byrnes and her committee of Garden Club members. The American flag was first unfurled over this inn by Captain Andrew Ellicott, an emissary of George Washington, in 1797. Such notables as Louis Phillipe, who was later to become king of France; Aaron Burr, whose unquenchable ambition was to be his ruin; Bennerhassett and many others whose names figure in American history, have gathered under its hospitable roof."

### Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

## PINE SHORTAGE

(CONTINUED FROM PAGE 1)

pine lumber is a staple commodity and will always be available."

"We have largely passed the stage of harvesting overripe virgin forests," he said, "and are well within the everlasting cycle of adapting to public needs rotating crops of pine trees. Since this is true we must preserve to the greatest possible extent for private enterprise, fee ownership of our prolifically reproducing Southern pine forest lands.

"It of course is true," he said, "that some mills will close operations and that others temporarily will reduce their capacities. The great majority, however, will continue in business at the old stand for a great many years if indeed not permanently. As their timber growth increases with better fire protection and selective cutting their operations will expand."

Speaking before the advertising and trade extension committee, S. P. Deas, declared the industry faces its brightest prospect in several years in their residential market.

He said the soldiers' bonus payment furnished "an untapped market" and estimated that 25 per cent of that money could go into the building and remodeling of homes.

## FEDERAL BUREAU

(CONTINUED FROM PAGE 1)

exhibit of corn-production machinery developed by the bureau and the Iowa experiment station at Ames. Among exhibits were the basin-forming lister which checks erosion and holds moisture, a new auxiliary snapping roll for mechanical pickers which lessens shelled corn waste, new methods of using check wires on corn planters, and plow attachments such as trash shields and the self-aligning disk jointer. Tests show the latter reduce draft 10 to 15 per cent.

# Gen. R. E. Wood Lauds Results of The New Deal

Times, Chicago, Wednesday, February 16, 1936.

Praise of the present administration, particularly for its abandonment of the gold standard and the work of the Farm Credit Administration, by Gen Robert E. Wood, president of Sears, Roebuck & Co. was on the records of the Economic club today.

Gen. Wood and Dr. Henry C. Taylor, director of the Farm Foundation, addressed members of the club at a banquet last night in the Union League club. Fred W. Sargent, president of the North Western Railway Co., presided.

"In the spring of 1933, the position of American agriculture as a whole, was desperate," Gen. Wood said, "The first remedy applied was a monetary one—we went off gold and the dollar was devalued. In two months, cotton went from 6.35 to 8.95 cents a pound, wheat from 45 to 75 cents per bushel, corn from 24 to 46 cents and wool from 17 to 24 cents.

"Not enough credit has ever been given to this first and very important act of the present administration.

"The Farm Credit Administration has been doing a splendid and wise job in the refunding of farm mortgages. Farm taxes have dropped from $601,000,000 annually in 1929 to $400,000,000 in 1934 and with a drop in interest charges, there has been a total decrease of nearly $400,000,000 in such fixed charges.

"I believe we are emerging from the depression—the worst in our economic history. I believe our course is upward and will continue upward for some time.

Dr. Taylor urged encouragement of international trade to provide foreign markets for this country's agricultural produce and reduce the urge abroad to achieve agricultural independence.

"The right form of international co-operation will lead to international peace and relaxation with respect to production of the instruments of warfare," Dr. Taylor said.

The Old Age Pension law is now working in Missouri. Several of the race farmers in that state have filed their applications for aid under this act.

# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., MAY 15, 1936 No. 4.

# Colored Farmers and Land Owners Increased-Tenants Decreased 1930 to 1935

## Farmers To Get $1 to $5 Per Acre

### The Nashville Tennessean Tells of Practices of Soil Building at U. T. Extension

Rates of payments for soil building practices by Tennessee farmers, under the new agricultural conservation program will range from $1 to $5 an acre, C. E. Brehm, U. T. extension service director, said yesterday. Approval of the rates for the east central region, in which Tennessee is located has been announced by J. B. Hutson, regional director, in a bulletin to the U. T. extension service.

The rates, considered important in being made public at this time, when farmers are filling out work sheets, giving their plans for this year, follows:

For alfalfa, sericea or kudzu, $2 an acre; red or mammoth clover, $1.50 an acre; for alsike, sweet, white, bur or crimson clover, Austrian winter peas, annual lespedeza, $1. an acre.

These rates are approved for plowing or discing under any of the specified crops as green manure after the crop has two months' growth.

For soy beans, velvet beans, cowpeas, sweet clover or lespedeza plowed under between June 1 and October 1, 1935, 50 cents an acre.

For crimson clover, Austrian winter peas or vetch plowed or disced between March 1 and June 1, 1936, $1.50 an acre.

For rye, barley, wheat, Italian rye grass, winter oats or mixtures of these plowed or disced between March 1 and June 1, $1 an acre.

For sudan grass, millet, sorghum or sowed corn plowed or disced between January 1 and October 31, an acre.

For forest trees planted on crop land or non crop pasture land between January 1 and October 31, 1936, $5 an acre.

The rate of payment for applying land will range from $1.40 to $2 per ton.

Terracing, with construction to give adequate protection against erosion, 40 cents a hundred feet, but not to exceed $2 an acre.

Subsoiling to a depth of at least 18 inches, $2 an acre.

No payment will be made where labor seed, trees or other material used in connection with any practice are furnished in whole or part by a state or federal agency.

In his announcement of the various payment rates, Mr. Hutson said that the money to be thus disbursed could not cover the cost of putting the soil building practices into effect but that they would "go far toward meeting these costs and should induce farmers" to participate in the program.

—Nashville Tennessean.

## SOIL SAVING PLAN GIVEN

### Will Sow One Million Acres in Grass Seed

By Enoch A. Norem

Mason City, Iowa.—More than 1,000,000 Iowa acres are estimated to have been taking out of grain crops this spring and put into grass, indicating the swift progress of the soil conservation program.

Corn acreage in the state this year will be approximately the same as of 1935, the number of acres going into grass approximating the acreage taken out of production by the AAA program last year. There will be more corn, however, then in 1934 when a large reduction in acreage was effective under the government program.

**Grass Seed Goes Up.**

Conservatives estimates place the amount of land taken out of soil-depleting crops and sown to red clover, sweet clover, alfalfa and timothy in each of the 99 counties of Iowa at from 10,000 to 12,000 acres.

All over the countryside farmers have been at work sowing grass with other spring crops. Grass seed has jumped materially in price.

It is estimated that 75 per cent

## U. S. Seeks New Preventive For Spotted Teeth

**Communities with Flourine in Water Increase**

Washington, D. C. —(AP)— An increase of 130 in the number of communities where flourine in drinking water is causing mottled enamel in children's teeth led the United States public health service today to renew its interest in a possible new preventive.

Dr. H. Trendley Dean, dental surgeon of the national institute of health, said the number of affected districts had increased from 195 in 1933 to 325 in 1936 in 25 states.

"There is little doubt," he added, "that surveys in South Dakota and New Mexico and further surveys in Texas would largely augment the number of endemic areas known at the present time."

Consistent drinking of water containing more than one part of fluorine in one million parts of water will result in the mottling or permanent dark spotting of the permanent teeth of children during their formation, Dean said.

Dr. George R. Sharpless of Henry Ford hospital, Detroit, Mich., reported recently, however, that he had been able to prevent mottled enamel formation in rats by the use of aluminum chloride, a common sal of

## AUSTIN W. CURTIS' DISCOVERY

### Young Scientist Finds Soap Properties in Seed

Tuskegee, Alabama — (AP) — Magnolia blossoms, long associated with white-pillared mansions, mint julep and the romantic conception of the old South, soon may have more than a sentimental value.

A discovery by a young Negro scientist. Austin W. Curtis, Jr., of Tuskegee institute, has opened a new, if less nostalgic, possibility for magnolia growing states.

Working in the argicultural research laboratory already made famous by his Negro superior, Dr. George W. Carver, Curtis has pro-

## TRIBUTE PAID TO MEMORY OF LATE DR. JOHN HOPE

### Interracial Commission in Memorial Service Honors Charter Members And Former President

Atlanta, Ga., May 1—Dr. John Hope's part in organizing a fellowship for better race relations and his long service to the cause of interracial goodwill were recalled and praised at a memorial session held by the Commission on Interracial Cooperation at its annual meeting here on April 15. The exercises were attended by several hundred persons, including members of the Commission, the family of the late president, and faculty members and students of Atlanta University and affiliated colleges. At the time of his death Dr. Hope was honorary president of the Commission.

Addresses were made by two men who had long been Dr. Hope's friends and co-workers in many enterprises, Dr. Channing Tobias of the National Council of the Y. M. C. A., and Dr. M. Ashby Jones, one of the founders and former president of the Commission on Interracial Cooperation. Music was fur-

## Gnats Kill Stock

Memphis, Tenn., May 5—(AP)—Dense swarms of buffalo gnats, bred during high water stages this Spring have killed approximately 40 horses and mules during the past few days in Shelby County, Ed Grashet, county seavenger reported. Grashet said the gnats appeared last Sunday.

—Age-Herald.

## COTTON EXPENSE SETUP

### Defended by Sen. Bankhead of Alabama

Washington, (AP)—Senator Bankhead (D., Ala.) Tuesday defended the American Cotton Cooperative Association in filing a minority report on the Senate investigation into the expenditures by the federal government for cotton cooperatives.

Senator McKellar (D., Tenn.) and Townsend (R., Del.) filed the majority report last month. McKellar filed the report in behalf of Bankhead who is ill.

Senator Townsend (R. Del.) Stated that he supported neither the majority nor minority reports, explaining he had signed the majority report only to enable it to be published. He stated that he had not attended the hearings and had not read the McKellar report nor that of Bankhead.

The Alabamian wrote, "It does not appear as stated that capital loans to American Cotton Cooperative Association and its affiliates have been recklessly or wantonly made or that those whom the president has entrusted with responsibility for the affairs of the Farm Credit Association have been recreant to their trust."

## Salt Baths Will Keep Skin Firm And Healthy

By Alicia Hart

"Salt water baths do a good deal to keep skin on the body firm and healthy," a reducing expert said recently. "I always advise my clients who are losing weight rapidly to take at least three of them a week. These keep skin from sagging or wrinkling as weight is lost.

"First of all, one should take a warm, soapy shower. Then, for twenty minutes, soak in a tub of lukewarm water in which four pounds of rock salt have been dissolved. When you get out, do not rinse, but pat yourself dry with a coarse towel. Allow the salty film to remain on your skin for about an hour. Then rinse."

For skins which feel uncomfortable and dry after hours of exposure to summer sunshine, this same expert recommended glycerine baths. You simply pour one pint of glycerine into half a tub of tepid water and soak in the mixture for fifteen minutes. Afterward, rinse in clear water.

Of course, plain milk baths are marvelous skin softeners. After a regular bath, dip a large cotton pad in sweet milk and pat your skin from head to foot. Leave on for an hour. If you like or, rather if you can afford it, pour milk into the bathtub and soak in it. Buttermilk is a fi-

softener and a mild bleach as well.

Speaking of bleaches, better use fresh lemon juice on knees, elbows, feet, and hands about once a week. If your skin is dry, always smooth on cream or oily lotion after you have rinsed off the bleach.

—Nashville Banner.

## Department of Commerce Bureau of Census Report

### Compilation of Data From Statistician's Survey Released at Washington

Washington, D. C., (Special)—Negro farm owners made rapid increase from 1930 to 1935, according to the report released by the Department of Commerce Bureau of the Census here recently. Supporting this the South reported three hundred and eighty-one colored farm managers in 1935 and eight hundred twenty-nine in 1930. "There is a volume of Negroes in the United States from 1920 to 1932 on file in all depository libraries" said the report. Copies of the Department's findings were sent to the leading newspapers throughout the United States. It is estimated that there are more than eight hundred fifteen thousand colored farmers in the entire United States.

The following is the Department's statement:

"Director William L. Austin of the Bureau of the Census announces an increase, during the five years 1930 to 1935, of 4,046 farms operated in the South by colored owners, i. e., by Negroes, Indians, Chinese, Japanese and other non-white races. Increases in colored owners were reported for Virginia, South Carolina, Florida, North Carolina, Louisiana, Texas, West Virginia, Delaware, and Tennessee. However, South Carolina and West Virginia were the only southern states to report increased acreages for colored owners. There was a decrease of 69,986 other colored farm operators, including 448 managers, 24,489 croppers, and 45,049 other tenants. During the ten years 1920 to 1930 there was a decrease of 35,570 colored farm owners in the South.

From 1930 to 1935 the land in farms of all colored operators in the South decreased by 2,219,482 acres. This represented a decrease of 945,216 acres for colored owners, 86,362 acres for managers, 492,415 for croppers, and 695,489 acres for other tenants. There was a decrease in the average number of acres per farm for both colored and white owners in the South, accompanied by a proportionate decline in the value of owned farm land and buildings.

In the North and West the number of colored farm operators—all tenures, increased in the States comprising the New England, the Middle Atlantic, the East North Central, the Mountain and the Pacific geographic divisions. The number of white farm operators increased in each geographic division and in each State."

# CO-OPERATION

**Many farmers and consumers are exploring the cooperative way of making and marketing their necessities as a two-way route to a greater purchasing power and a better living. Farmers look to cooperative purchasing to cut their costs of production and to gain for themselves a larger share of consumers' dollars. Consumers look to cooperation to cut their living costs and to make possible greater consumption of farm products. From time to time we will report some of their cooperative activities.**

Within one life-time cooperative marketing by Ohio farmers has grown from a few cheese factories doing a few thousand dollars of business into State-wide organizations handling nearly $100,000,000 worth of farm produce each year, states a report from Ohio State University.

MILK cooperatives alone handled more than 100 million pounds of milk last year. Ohio farmer elevator companies now do a business of more than $35,000,000 annually. Cooperative livestock commission associations now handle Ohio livestock on the Buffalo, Cleveland, Pittsburgh, and Cincinnati markets. Cooperatives for selling eggs and potatoes under brand name have recently been organized.

OHIO farmers claim that through cooperation they have improved markets and made a better living for themselves.

* * *

EASTERN States Farmers Exchange, one of the largest purchasing cooperatives of the country, last year completed a $300,000 addition to its cooperative feed mill in Buffalo, added 6,000 farmers to its 62,000 membership, and did a business of over $14,000,000, according to a recent annual report. Savings of $100,000 on last year's business have been returned to members. Another $50,000 was voted to be set aside for expansion. In its 17 years, this cooperative has made possible for its members savings totaling over $2,000,000.

* * *

GASOLINE and oil, important items in farm management and household budgets, has become a major item in cooperative business done by farmers. One retail gas and oil cooperative in Greely, Colorado, credited with being the largest of its sort at least in this country, last year saved its members $93,000 on purchases of 1,800,000 gallons of gas. In 15 years it has returned to its 1,700 members almost $750,000 in patronage dividends.

* * *

COOPERATING farmers are throwing their strength behind the organization of city consumers' cooperatives. Pennsylvania's very active Farm Bureau Federation sets aside some of its funds to organize city cooperative outlets for many farm products. Ohio's Farm Bureau Federation voted last year to extend services of its affiliated cooperatives to city consumers. The Nebraska Farmers Union, recently in annual convention, resolved:

"That the harmonious relationship existing between the consumer groups and the marketing and producer cooperatives be cultivated and increased, and that we request our officers and directors to formulate plans and authorize them to promote such plans for a consistent working relationship between such cooperative associations, all such to be in the interests of both rural and urban associations, and in accord with the promotion of the cooperative movement as a whole."

* * *

SIXTY retail cooperatives in Oregon, Washington, and Idaho, have carried cooperation back into wholesale purchasing. They are members of the Pacific Supply Cooperative, organized a little over 2 years ago. Members of this wholesale cooperative last year distributed 7 million gallons of gasoline, 108 thousand gallons of lubricating oil, 700 thousand gallons of Diesel and stove oil, and $40,000 worth of miscellaneous goods, including tires, batteries, feeds and other farm supplies.

* * *

BUSINESS done by regional wholesale members of National Cooperatives, Inc., in 1935 amounted to over $25,000,000 and net savings made by member wholesales were close to $620,000. Approximately 1,000 retail cooperatives in 21 States are served by the 11 cooperative wholesale associations affiliated with the national organization. These associations include the Central Cooperative Wholesale, Superior, Wisconsin; Consumers' Cooperative Association, North Kansas City, Missouri; Midland Cooperative Wholesale, Minneapolis, Minnesota; Farmers' Union Central Exchange, St. Paul, Minnesota; Ohio Farm Bureau Cooperative Association, Columbus, Ohio; Indiana Farm Bureau Cooperative Association, Indianapolis; Farm Bureau Services, Lansing, Michigan; Pennsylvania Farm Bureau. Cooperative Association, Harrisburg; Consumers' Cooperatives Associated, Amarillo, Texas; Pacific Supply Cooperative, Walla Walla, Washington; and Eastern Cooperative Wholesale, New York City.

* * *

"COOPERATIVES are not an automatic method of solving problems," warns the AMERICAN FEDERATIONIST. "They require management, devotion, and time, for accounts must balance in cooperatives as in any other enterprise. Those who want to spend their incomes effectively will find cooperatives a help, provided they are looking for a cooperative way of living."

WORKERS employed in a chain of 11 consumer-owned cafeterias in New York City come in for their share of benefits. One of the rules of this cooperative is that the salary of the highest paid executive may not exceed five times that of the lowest paid employee. During the 2 years the NRA restaurant code was in effect, it is reported, this cooperative paid out $10,000 more than was required under the code provisions.

BUSINESS done by Consumers' Cooperative Services, which started 17 years ago with one small cafeteria and now has a chain of 11, two of which were opened during the depression, totals over $434,000 a year. More than 4,000 New York consumers are owners of this business. They hire their own chefs and managers, scale quality to meet their tastes and pocketbooks, and every 3 months pay themselves a dividend on food they have eaten.

* * *

AMERICAN cooperatives, many of them still in their teething period, look to Great Britain where cooperation, now 90 years old, claim a membership of 7,632,721. One out of every 7 persons in Great Britain is a member of the British Cooperative Wholesale Society which is aiming at an increase of 220,000 members this year. Goal in volume of business this year is well over one billion dollars.

* * *

FARMERS in 23 counties of Ohio have organized cooperatively for the purchase of electricity at economical prices. In two counties 533 miles of rural electric lines are already under contract and are to be completed within 150 days. Total cost of these 533 miles of line, including construction of substations, transmission, and distribution service, wires to houses, transformers to the poles, and meters furnished, will be $504,000, which has been borrowed on a 20-year loan from Rural Electrification Administration at 3 per cent. The lines will be mortgaged to the Federal Government until paid for. Only members of the cooperative may use these lines. Current will be furnished at the rate of $4.95 for the first 100 kw.-hr. and $7.95 for the first 200 kw.-hr. To aid members to utilize their electric power in their homes and on their farms, the cooperative organization has taken steps to furnish electrical equipment of all kinds at economical figures.

### YOUNG CONSUMERS

Nearly 50 million of America's consumers are under 20 years old. That means almost 4 out of every 10 people in the country. Today these young consumers are playing a vigorous part in our trends of consumption. Tomorrow they will provide the direct demand which America's producers must meet.

THIS new generation is already the product of a set of nutrition ideas and practices entirely different from the ones on which their parents grew up. Already these changes are registered in statistics of acreage planted to new crops, in carload shipments moving from new producing areas to new markets in new seasons. Eating habits now developing will determine the way future farmers plan their crops and use their land.

THIS page is to be a meeting place between farmers and their important younger customers. News from school and home and laboratory and farm about what is interesting and helping young people as consumers will be printed here.

—YC—

SPRING FEVER shows up at an inconvenient time in the school year. Just when extra spurts of pep are needed to round out the year in class work, to go out for the spring play, for spring football practice or baseball or track, even our usual quota of ambition seems suddenly to be missing.

NUTRITION experts advise students who find themselves in this plight to look to their diets. Wintertime is likely to be a period of short-changing our bodies in many of the elements they need, particularly in foods like fresh fruit and green vegetables which are not so cheap or plentiful then. Cold weather whets appetite for sausage, and pancakes and sirup, for candy and hot chocolate, leaving milk and salad trailing along behind.

TO FEEL adequate to the demands of school life, you need an adequate diet. Here is the framework on which to build this adequate daily diet:

Plenty of milk
(at least 1 pint, perferably 1 quart a day)
Plenty of fruits and vegetables, including
1 green leafy vegetable (like spinach) a day
1 raw fruit every day
Meat or egg or fish (one serving a day)
Fill out with what you like, but go slow on sugar.

ATHLETES will want to add calories in the form of cereals and potatoes and sweets. Girls who take most of their exercise in spectator doses will probably go heavier on the salads than on the fats and starches and sweets, remembering that one chocolate malted milk with ice cream adds up to 700 calories—a quarter of her total daily calory needs—and even a chocolate caramel makes its contribution of 50 calories.

WHETHER pep, endurance, speed, sparkle, or beauty seems your special spring-fever lack, the reason may go back to the same dietary lack.

# Consumer-Farmer Briefs

FROM WASHINGTON

LIFE INSURANCE is the latest offering of the insurance cooperatives affiliated with the Ohio Farm Bureau Federation. March 1 was the day Ohio cooperators could start buying cooperative life insurance, and other States will soon get theirs. Besides that, the insurance cooperatives boast as results of their 1935 expansion program: Over 49 thousand more automobiles insured by affiliated cooperatives in 8 States through the Farm Bureau Mutual Auto Insurance Cooperative; members of cooperatives added more than 15 million dollars to their fire protection during the year, doubling the coverage of the Farm Bureau Mutual Fire Insurance Cooperative; and cooperative auto insurance which only farm cooperatives once had a chance to get was extended to consumers' cooperatives in cities in the 8 States in which the Farm Bureau Cooperatives are operating: Ohio, Pennsylvania, North Carolina, Maryland, West Virginia, Virginia, Delaware, and Vermont.

RELIEF families who otherwise could not have had the milk and cheese and butter received 23 million dollars' worth of dairy products between August 1933 and February 1936. The Agricultural Adjustment Administration, by authority of Congress, bought the food in places where the supply was threatening to push down farmers' prices, and turned it over to relief agencies for distribution. In the two and a half years in which the program has been going, this two-way relief has included nearly 75 million pounds of butter, 18 million pounds of cheese, nearly 16 million pounds of dry skim milk, and 47 million pounds of evaporated milk.

AAA

CITRUS PROGRAM for California and Arizona has swung into its third year of operation. The program, developed and continued at the request of a majority of the growers and shippers of grapefruit and oranges, aims to prevent low prices to growers by regulating shipments so that quantities moving into commerce correspond with the market requirements

INCOME to growers under the program increased one-fourth during the first year of operation over the value of the crop the year before. Of course the program must share part of the credit for this boost with the fact that consumers had more money to spend for citrus fruit in 1934 than in 1933. The biggest crop on record came along in the season of 1934-35, presenting a problem in the matter of getting the fruit to market without flooding it and thereby cutting down returns to growers. Under the program this bumper crop brought in about 63 million dollars to growers, almost a third more than the income of 1933-34.

FLORIDA CITRUS shippers have developed a marketing agreement which has received the tentative approval of the Secretary of Agriculture. Under its terms regulation of weekly total shipments of oranges, grapefruit, and tangerines would be possible by means of limiting the amount of lower-grade fruit going to market.

20,000 GROWERS in Florida depend on citrus sales for their incomes. During the last few years they have been selling more fruit and getting less money for their labor and investment. While they have raised their production from an average of a little more than 20 million boxes in the 5-year period 1925-26 through 1929-30, to an average of 30 million boxes in the 5 seasons ending 1934-35, they received for the much lower production in the first 5 years an average income of about 22 million dollars, a drop of more than one-fourth. The proposed marketing agreement is designed to make the greatly needed improvements in this marketing situation.

AAA

ELECTRIFYING news from farm cooperators: 5,387 miles of cooperative electric wiring is the plan of 20,000 farmers in 62 counties organized under the Rural Electrification Division of the Ohio Farm Bureau Federation Cooperatives....Electricity will light 1,700 farm homes in Miami and Shelby Counties. Ohio, for the first time in May when the cooperative lines in those counties are due to be finished.....2,200 homes in Boone County, Indiana, will see the light of electricity when the first line, now under construction, is hooked up under the banner of the Indiana Farm Bureau Cooperative.....20 electric cooperatives in Minnesota and Wisconsin get engineering service and technical assistance from the Midland Cooperative Wholesale.....Consumers' Cooperative Association of North Kansas City, Missouri, has embarked on a special department of rural electrification to help local cooperatives with electric projects.....Stories like these will add to the tale of 85,000 newly electrified farms in 1935, will help take the remaining 85 per cent of our farms out of the dark and semi-dark.

AAA

FRESH LETTUCE, peas, and cauliflower grown in western Wisconsin will be covered by a new marketing agreement developed at the request of 90 per cent of the industry in that area, now tentatively approved by the Secretary of Agriculture and at this writing in the hands of the industry for signature. If approved by the industry, this agreement will provide that when supplies of lettuce, peas, or cauliflower seem too heavy to sell at a price that will bring growers a reasonable return, lower grades and unpopular sizes will be kept off the market. If this does not suffice, then the total shipments are to be limited on a pro-rata basis. Each grower would limit his shipments in proportion to the limitation of the whole area, in accordance with an allotment assigned him by a Pro-ration Committee composed of six growers, six handlers, and a thirteenth member chosen by the two groups. When only the lower grades are to be kept off the market, the agreement provides that shipments be graded on the basis of U. S. Department of Agriculture grades.

AAA

WATERMELON consumers who last year learned to expect the average melon on the market to be good, may continue to be optimistic this year. The marketing agreement now in effect worked to prevent gluts on the melon market by keeping lower grade melons out of shipments. Only in emergency situations were shipping 'holidays', lasting up to 48 hours, used to keep supplies from glutting the markets and causing price collapse and waste. Present prospects are for a new agreement based on the same principle. This agreement, with certain revisions based on practice, received tentative approval signature by Secretary Wallace and has now gone to the producers in Florida, Georgia, North Carolina, and South Carolina, where it applies and where the vote of two-thirds of the producers in the area is necessary for final approval and the administrative order putting it into operation.

AAA

COTTON in the roads you ride on is the newest market prospect for cotton growers of the South. Under the appropriation allowing 30 per cent of the customs receipts to be used in various ways to help agriculture, the Secretary of Agriculture has allocated ove a million dollars to tests of cotton fabric to determine its usefulness as a reenforcement membrane in bituminous surface-treated highways and for cotton mats for use in curing concrete highways.

EXPERIMENTS in Texas and South Carolina have shown the way, but testing on a large scale is the only sure proof of practicability. This appropriation will make it possible to have at least three projects in each State. About 80,000 cotton mats will be available to State highway departments for demonstrations. Up to 1,000 miles of highway may be built under the terms of the fund's allocation. To make a sure test, it will be required that each of the three fabrics now considered most suitable for the purposes shall be used in each highway, and that one section be made without the fabric in order to show the difference in duration and cost of maintenance.

AAA

GRADING is paying the potato grower, according to a report by the Pennsylvania Bureau of Markets. Farmers noticed that graded potatoes, shipped in from other States, often got the best returns on the market, so they set up their own cooperative grading and marketing organizations in some of the big potato counties, and the movement seems to be spreading. To cover the cost of the service, growers pool their crops. Grading demonstrations held by extension specialists of Pennsylvania Sate College help growers to bring their potatoes up to grade requirements. Inspectors of the Bureau of Markets at various shipping points say that growers have been able to raise their take by 10 to 30 cents on a hundredweight when they use the graded method of selling.

## CONSERVATION

**A New Farm Program—Giving Farmers of the Country New Inducements to Conserve Our Soil Wealth—Has Been Launched... What Does It Hold for Consumers?**

THREE years ago, when it took two truckloads of farm products to buy what one truckload bought in pre-war years, the farmers were hard pressed to keep ahead of the sheriff. Congress said to them, in effect, through the Agricultural Adjustment Act:

IF YOU will cooperate, the National Government will help you out of your depression by organizing with you a program to control the production of certain farm commodities which have been selling at prices ruinous to you. By controlling this production nationally—and this will mean restricting your output of these commodities until excess supplities are used up—you can lift up farm prices and receive, in addition, benefit payments for cooperating.

MORE than 3 million farmers decided to take a chance. At the beginning of 1936, when they came to chalk up results, they found that

## Pack Away Your Winter Woolens

**Science Collaborates with Common Sense to Keep Your Winter Things Whole for Next Year's Use.**

Moths, like everyone else, have their special tastes and distates. Knowing their likes— and especially their dislikes—can mean the difference between serving them well while your wardrobe takes the consequences, and vice versa.

**Warm Weather** is the first item on the list of things that make moths comfortable. That's why cold storage is one of the sure measures used for commercial care of valuable rugs and furs. That's why springtime is precaution time. In homes whose indoor climate is equable the whole year round, every month is open season for moths. But the biggest moth months are from May to July and during September and October.

**Dark Seclusion** is the next factor in a moth's happiness. The moths you see flirting with danger around the candles are not the villians of the piece. The real guilty parties lurk in dark corners or where the light is dim. Actually even they are not the ones who do the dirty work. They merely select the quiet dark spot, and lay their eggs where their minute worm larvae can hatch in the midst of undisturbed abundance.

**Diet** which moths go in for is wool, fur, hair, feathers, and everything made from these animal products. Remember that this list includes the bristles in a shaving brush, the felts in the piano, upholstered furniture, and the hairs of the family cat and dog. The less processed—the closer to the natural state—are the materials, the better moths like them. In regular dyed woolen fabrics they show their most avid appetite for soiled places.

**These** three moth predilections taken into consideration, the wise consumer draws the conclusion that winter clothes lying idle in dark closets during the spring, summer, and early fall are just asking for replacement. But depriving moths of their ideal set-up is not enough to guarantee that your woolens survive for another winter's wear. Complete moth control calls for constructive measures.

**Vigilance** is the first suggestion from entomologists in the Department of Agriculture to consumers who would conserve their wools and furs. There is no known way to mothproof things once and for all time.

**Cleanliness** is the best safeguard. Moths are not likely to be a problem in clothes that are thoroughly brushed every 2 weeks, or rugs and carpets that are electric-vacuumed.

**Rule** for preparation for the big spring wool-retirement calls for washing or dry-cleaning everything you can. Items that can't be squeezed into the dry-cleaning and laundry budget can at least get a thorough sunning and brushing and beating on the clothesline to remove any eggs that may have found a nest there.

**Tight Packaging** must follow immediately with no margin for danger. Gummed tape can seal the paper package, the cardboard hat box, the hole around the hanger in patent clothes bags, and make the closing of a trunk or closet moth-tight. For sure safety the package can include some of a tested insecticide.

**Smells** do not kill moths, nor even discourage them. Tests in the Department of Agriculture show that even the most deadly of the moth-killing chemicals do not repel moths when the fumes are not strong enough to kill them. The only way to make the vapor effective is to keep enough of it corralled in a tight container —package, box, trunk, or closet.

**Killing Chemicals** recommended for use are naphthalene, paradichlorobenzene, and gum camphor. One pound of one of these chemicals spread in folds of tissue paper through the layers of clothing will protect a trunk full of clothes. Three or four pounds sprinkled on shelves and floor will protect a whole closetful if the door is sealed tight. Protection lasts only as long as the crystals or flakes or balls are present in sufficient quantity, for it is their evaporation that makes the gas that kills the moths.

**Garment Bags** are as useful as they are tight but only for keeping moths out, once the contents are free of them. Fancy treatments can make the bags smell queer but cannot kill the destructive moth larvae. Paper bags thoroughly sealed, the tiniest openings closed, will serve to keep outside moths outside.

**Cedar Linings** in closets as we usually see them are not enough to protect clothes. The fragrance of cedar alone does not kill moths. To be really effective, a cedar closet must be tightly built with red heart wood and closed by doors that clamp shut on felt or rubber gaskets. Cedar chests are recommended for storage, partly because they are usually of tighter construction than ordinary trunks, and partly because if they are thickly enough lined and kept closed the emanation from the cedar is strong enough to kill the newly hatched larvae of clothes moths. Since it is not equal to the job on grown moths, the experts stipulate the regular cleaning, brushing and beating prelude to storage. The ordinary "cedarized" boxes and bags cannot be depended upon.

**Kerosene Pyrethrum** sprays, sold in most drug stores under trade names, are effective for killing moths in any stage of their development if the spray actually comes in contact with the moth. Professional exterminators with power sprays can make their coverage quite complete, but sprays applied with the ordinary hand sprayer cannot be forced into many of the cracks, beneath carpeting, or behind baseboards where some of the insects are in hiding. Floor cracks filled with lint are quite impervious to hand sprays and protect the insects burrowing beneath.

**Worthless** prescriptions for moth control include dustings of allspice, angelica root, pyrethrum steams, air-slaked lime, powdered sulphur, quassia chips, borax, colocynth pulp, eucalyptus leaves, white helebore, sodium bicarbonate, salt, lead carbonate, lead oxide; dashes of cayenne pepper, black pepper; tobacco extracts containing nicotine; sprayings of formaldehyde, 1 to 10; red cedar leaves or lavender flowers scattered in the clothing.

**Gadgets** sold to hang as moth-insurance in ordinary open-and-shut closets cannot do the trick.

**Moth-Proofing** solutions now on the market cannot make a garment immune to moths permanently or absolutely. Among the better solutions are those containing fluorides and rotenone. If used with thoroughness, they go some distance along the way to this goal. Those made of arsenic are not recommended by the Department of Agriculture.

**Fumigation** by methods of professional exterminators will kill moths For this and other latest complete information on the subject write for the Department of Agriculture Bulletin No. 1353, "Clothes Moths and Their Control," for sale for 5 cents by the Superintendent of Documents, Washington.

## Vegetables (Fresh)

**Spinach** prices declined 0.9 cent a pound and carrots 0.3 cents a bunch from February 25 to March 10. Lettuce increased 0.3 cents a head.

**Price Movements** of these vegetables were seasonal. This year's heavy spinach crop moved to markets in large quantities during the last week in February and the first week in March. Shipments continued heavy during that month and by March 21 they were almost equal to the total for all of last season. Texas is providing most of the spinach on the market, shipping almost twice as much each week in this March as it did last year.

**Most** of the lettuce coming to market now is from Arizona. Imperial Valley Shipments were practically ended by the last week in February. Heavy movements of Arizona lettuce did not start until the second week in March. Receipts during the first 10 days of March were low.

**California** spring lettuce is not expected to move in volume until April. Wet weather retarded growth in February, but the crop is now in good condition and should prove fair quality lettuce.

**Production** of spring lettuce in the second early States is expected to be slightly larger than last spring's crop and 22 percent above the 1928-32 average.

## Fruit

**Orange Prices** stepped up 0.2 cent a dozen and banana prices 3.2 cents a pound during the 2 weeks from February 25 to March 10. Apple prices remained unchanged.

**This** is the season for increasing orange prices, due partly to increased demand for oranges by consumers. The demand for oranges reaches its peak in May and then declines to a low around July. In July many varieties of fruits are available and these replace the higher-priced oranges.

**California** valencia or summer oranges will start moving to market in April and May. The crop this year will be 7 million boxes smaller than last year but it will be the second largest on record. The total orange crop for the 1935-36 marketing season is below last year's record crop, but it will be above average.

**The** apple market during March was weak and demand for apples slow. During the first week in March the trend in wholesale apple prices was slightly downward for no special reason except the large supply of fruit which is nearing the end of its keeping season. Storage holdings are fairly large for so late in the season.

**Strawberries** are now increasing in supply and selling at lower prices. Heavy rains in Florida have reduced crop prospects and the yield there is expected to be about 15 percent below last year. Louisiana production is expected to be about one-third larger than last year but still a little less than average. Louisiana supplies about one-half of the early strawberry crop.

## Science Looks at Soil

**Experts of the Soil Conservation Service and the Bureau of Chemistry and Soils tell about soil nutrients and the Forces that Undermine Soil Health**

Soil is a dynamic substance. It has not existed forever, but was created and is continually being modified by forces acting upon and within it, slowly building it up from the parent rock of the earth, slowly making it what it is.

**For** millions of years the original rock of the earth has been worked upon by heat, cold, rain, wind, ice, and chemical and organic forces, which cracked, ground, dissolved, burned, upheaved, mixed, and transformed the rock material until it became the finer granular mass, partly permeated with organic material, which we call the soil.

**The** resulting substance is not merely "solid" or mineral. A loam soil in good condition for plant growth is, by volume, about one-fourth water, one-fourth air, and about one-tenth organic matter. In a sense, it may be said to swim, and breathe, and live.

**Plants** and animals, bacteria, molds, lichens, moss, algae, worms, insects, all have played and continue to play their part in mixing and investing the soil with nutrients which make it the matrix for plant growth.

**The** various elements that make up the soil have their necessary functions in the growth of plants.

**Nitrogen,** phosphorous, potassium, calcium, magnesium, sulphur, and iron are elements found in the soil which are needed to nourish the plant. Carbon, hydrogen, and oxygen are also essential. It is further believed that certain other elements, in minute amounts, must be present in all normally fertile soils.

**Organic** Matter, as it decays through bacterial action, is of great importance in providing the plant roots with chemical compounds of these elements in suitable forms. Water in the soil and carbon dioxide from the air furnish the carbon, hydrogen, and oxygen required by the plants.

**Water** also dissolves plant nutrients from the minerals and makes them available to the plants, and itself provides the moisture needed for their life. Plants, like animals, can assimulate solid food only when it is in solution.

**Considered** together, the compounds of the various elements that compose the soil make it a porous, crumbly mass, which is yet sufficiently firm and compact to provide physical support for the plant, allowing the roots to penetrate and grasp the soil material and thus support the body and leaves of the plant that are thrust above the ground.

**Above** ground, through the action of light and heat, the leaves of the plant are able to take in from the air oxygen and carbon in the form of carbon dioxide (and to a small extent, nitrogen) and transform these elements chemically into the starches and sugars which make the chief foods of the plant and the cellulose which forms the basis of its cell structure.

**But** the soil provides the foundation and the nutrients needed to support the whole plant and make its above-ground life possible.

**Because** the soil is not a fixed, inert substance, but a dynamic active one, it is readily subject to improvement or destruction, depending on the condition affecting it.

**Forces** that made it are acting upon it still, and some of these forces are as capable of destruction as they are of building up the soil.

**When** man arrives on the scene, with his plow and cultivator and with his specialized needs, he becomes a potent factor in either helping natural forces to build up the soil, or in greatly accelerating their capacity for destroying it.

**He** can actually hasten nature's process of improving the soil. Careful tillage, the planting of grasses and other soil-replenishing crops, fertilization by animal or other products, may steadily improve the fertility of land. Scientists believe, for example, that the soil of England is now immensely better than it was when the Romans first appeared on the island. This has been due largely to the fact that much of the land has been kept in hay or meadows, the effect of which on the soil has been more beneficial than the original forest coverage.

**On** the other hand, many may in a few years destroy the work of centuries in the building of soil. His crops may continually use up the organic and mineral nutrients of the soil without replacement.

**His** cultivation of the soil, in keeping large areas loose and open to sun and air for long periods of the year, may cause excessive oxidation (or slow "burning") of or-

ganic matter, depleting the soil of this necessary material.

**His** cultivation of slopes and hillsides, in removing the cover from the soil, may allow large quantities of the soil to be washed away into streams and rivers. His cultivation of semiarid lands may, from time to time, allow the topsoil to be blown away by wind.

**This** last effect of man's activity, called erosion, is by far the most rapid and serious in depleting the resources of the soil. The Soil Conservation Service estimates that it takes only about 3 years of tilling moderately steep slopes in the rolling Corn Belt of northern Missouri and southern Iowa to lose an inch of topsoil which had taken the slow process of nature at least 400 years to produce. On a steep slope the inch of topsoil may be lost in 1 year, or even by a single rain of the "cloudburst" type.

**The** top 6 or 7 inches of soil is of peculiar importance not simply because it is the top layer, which the farmer can "get at," but because nature has long been preparing these 6 or 7 inches for plant growth. It is this layer which has slowly been permeated with decayed organic matter, and made loose and workable by the action of animal and plant organisms—that is to say, properly processed by nature for healthful plant growth.

**In** the case of certain soil types, particularly those deposited to considerable depth by water, a high percentage of organic matter may exist through many feet of soil depth. But in the case of most soils —those formed from the parent rock or clay underneath—it is only the top layer which contains sufficient organic matter and readily available plant food for effective plant growth.

**Scientists** find that for these soils which make up the large area of cultivated land, organic matter diminishes at a very rapid rate as lower levels are reached. Thus, if the soil down to 6 inches contains 6 percent of organic matter, from 6 to 12 inches it may contain 3 percent or less of organic matter, and at 36 inches it usually contains less than 1 percent. There is, also, less available plant food, generally, in the material beneath the topsoil.

**Therefore,** when the rich top layer is washed away, the fertile part of the soil is virtually gone, and the usefulness of the area for farming has been greatly diminished or essentially destroyed.

**The** damage that is caused by washing away of the soil is further increased by the fact that the loss of soil proceeds at a more and more rapid rate the longer it continues. This is because less moisture can be absorbed by the heavier soil material underneath, and less vegetation can be grown by it to hold the soil in place. Experiments show that on some of the most important types of agricultural land in the United States, the rate of erosion on sub-soil is from 1 1-2 to 4 times as great as the rate of erosion on surface soil.

**Sheet Erosion,** while the slowest form of soil-washing, is the most dangerous because it is least apparent in its initial stages and because it is the most prevalent form of erosion. This form of erosion takes place on all unprotected slopes with every rain heavy enough to cause water to flow across the fields. It is estimated that 45 percent of the land area of the United States, exclusive of cities, has been affected in considerable degree by sheet erosion.

**On** certain types of soil, as sheet erosion progresses, the surface water is likely to concentrate in channels, and as these channels become more defined, a more acute form of erosion begins, called gullying.

**Even** when little washing away of the soil takes place, land that is intensively cultivated may lose a great deal of its fertility through the draining away of valuable mineral elements which dissolve in water. Rainfall on bare fields, loosened by cultivation, even when the fields are almost flat, may soak through soil, dissolving the mineral nutrients, and eventually carrying them into streams and rivers. This is called leaching.

**Some** amount of leaching is, of course, inevitable. But it is increased by practices of farming which leaves a large proportion of the land bare of cover for long periods of the year, and can be decreased by greater use of grass and cover crops.

**Muddy** streams have long been telling the story of soil wastage over a wide area of the United States. Few people realize that the muddy condition of most streams is not, in a true sense, "natural."

**Except** in arid regions, the spring-fed way is the natural way for streams to obtain their water. Rain falls on land covered with trees, grass, bushes, and a spongy, absorptive, and protective cover of vegetable litter. It slowly seeps down through this spongy, matted cover and finds its way into underground channels. Thence it wells up clear, through springs, into streams and rivers. It has served its function of watering the roots of plants without carrying away particles of the soil into the rivers.

**Rain** falling on bare loose soil is only partially absorbed. The unabsorbed part runs off over the surface of the land, carrying particles of the topsoil with it. Water and sediment flow into the streams, making them run muddy, and carrying millions of tons of soil into the ocean every year.

**Instead** of clear streams, fed by underground springs or by grassy runlets, and flowing relatively steadily throughout the year, surface-fed streams are alternately swollen with muddy flood waters and dry or shallow during the summer months.

**Failure** of excessively cultivated lands to hold back the rainfall, therefore, means two kinds of losses. There is loss caused by too much water flowing into rivers at a given time, and this means flood damage, and tremendous loss of topsoil. It also means silted river channels and reservoirs.

**Soil Conservation** is basic, then, to flood control, and to moisture conservation as well as to the maintenance of soil wealth.

**Recurring** dust storms, too, are evidence of wasted soil resources and misused land. Dust storms occur when land is continually cultivated in regions where rainfall is too sparse to produce regularly an adequate growth of vegetation to protect the ground. When a period of drought arrives, as in 1933, 1934, and 1935, the topsoil which is no longer stabilized by natural grasses or cultivated crops, becomes exceedingly dry and powdery. In this condition, it is easily swept up by wind, blown in drifts of increasing size, and carried in dense clouds into the air.

**A Country** of verdant lands, with spring-fed streams flowing clear through every season, is a beautiful picture.

**It** is a picture which cannot fully be realized. Civilization, for good or ill, makes demands on the land which necessarily alter its pristine character. The needs of a populous nation require breaking of the heavily-matted sod, intensive cultivation of large areas, lumbering of forests, and cutting of hills to build roads and railways.

**These** activities may be carried on in either a destructive or a conservative way. It would be impossible, of course, for 125 million people to live on the land and interfere as little with its natural conditions as if only the native animals or a few hunting tribes lived on it. But the needs of this number of people may be met without progressive exploitation of the land's resources. The land wealth of the United States is great enough that its present and prospective population may live upon it at a high level of existence for an indefinite period, provided the wealth of the soil is conserved as it is used.

# CHURCH PEWS

Do you need Church Pews, Pulpits or Pulpit Chairs? We manufacture and furnish churches with furniture at the lowest prices, and upon the most reasonable terms.

Send us the inside measurement of your church. Let us tell you what it will cost to seat it. Send for price list on Pulpit Furniture.

## Tops Of Roses Should Be Pruned

If you receive roses from the nursery and find they have not been pruned off at the points trim back the tops, leaving stalks six or eight inches long before you plant them.

A rose bush is correctly pruned back to three or four canes or branches, with several buds left on each cane. All weak or crossed branches should be removed entirely, as well as any dead ones.

Before planting a rose bush, examine its roots to see if any are broken, and if so, trim them off. If at root is exceptionally long trim it even with the rest, otherwise it will be difficult to handle when placing in the ground.

—Nashville Tennessean.

## Four Colored Men At Boulder Dam

Las Vegas, Nev., May 1.—Four Negro workers were employed this past week at Boulder Dam following protests against the layoffs on March 1 of all the ten colored men who were then employed. On Mar. 1 the Bureau of Reclamation took over the Dam from the contraction companies and in cutting down the crews managed to fire all the colored men.

The men who were employed this past week are working under considerable difficulty, however, and are not being treated the same as other employees. In the first place the proportion is grossly unfair. Out of 1,100 employees on the pay roll, four are colored. In the second place the Bureau of Reclamation furnishes bus transportation from Boulder City to the Dam to white employees but does not haul the Negroes. Third, white people may live in Boulder City, but Negros are barred from this government-owned town and must live in Las Vegas. This means that colored workers have to furnish their own transportation from Las Vegas to the Dam each day, a total of about 30 miles each day. Incidently, ever since the Dam was started in 1931 Negro and white workers have never been hauled in the same bus.

## CO-OPERATION

(CONTINUED ON PAGE 8)

farm prices now had a purchasing power nine-tenths as large as in pre-war years, instead of one-half. They found their gross income in 1935 was close to 3 billion dollars greater than in 1932. They found returns for their labor, capital, and management were larger than for any year since 1929. They found, too, that they were getting a larger share of the national income than they had received at the pit of the depression. These gains to the farmer were not a lump-sum charge against the rest of the Nation. They both reflected and promoted greater income among all classes.

ON January 6, 1936, the Supreme Court said, in effect, to farmers: The National Government has no power to control the production of agricultural commodities, because it is not so written in the Constitution. Your production-control program, as it has been operating, must cease. Processing taxes, out of which you have been receiving benefit payments, must cease, too, because they have been instruments used to promote the production-control program. The National Government can, however, give you money provided it is for a purpose which promotes the general welfare.

ON March 1, 1936, Congress said to the farmers, through the new Soil Conservation and Domestic Allotment Act: To promote the general welfare of the people of this country, we ask your cooperation in the conservation of the soil. Agricultural adjustment, which we recognized as an emergency measure, has made it possible for you to embark on a long-time program, the fundamentals of which have long been considered by the Department Agriculture and were announced by the President last year.

AS a Nation we do not own the farms, but we need your produce. We must depend on you to use your lands so that not only this year but next year and for many years to come we shall have sufficient to eat and to wear.

IF you are to continue to feed and clothe our people, Congress continued, a stop must be put to losses of soil from your farms. Experts say that at least 400 million dollars worth of soil is being washed away each year. Already 50 million acres have been ruined for further cultivation. Another 100 million acres are badly eroded and 100 million more are threatened.

WE are losing this valuable soil because you farmers, forced to compete with each other, uncertain of your hold on your property, and struggling to make enough money, have been unable to or were uninterested in caring for your lands as you should.

YOU have been raising too much of the kind of crops which exhaust the soil and too little of the kind that rebuilds soil fertility. You have not always repaired your land or planted your crops so as to prevent rivulets of rain water from washing away good soil or from causing deep gashes in the earth. You have not been saving or rebuilding enough wood lots to serve as windbreaks against dust storms and to keep good soil rooted down. You have been overgrazing your animals on grasslands and many acres are now being eroded.

IF YOU, individually and not in cooperation with each other, were to try to improve your farming practices, you might find your efforts too costly or ineffective. The job is one for all farmers. The National Government, therefore, will make it easier for you to conserve your soil. We will allow money from the public treasury to be paid among you according to evidence you show that you are using your land wisely, and for administration, out of a fund of 500 million dollars.

PLANTING time is planning time again, this year as it was 3 years ago. This new program, passed by Congress—a program which has new objectives, and new methods—is being pondered on today in millions of farm homes.

EQUALLY important is its significance to consumers. The new Act marks the beginning of a national effort to save, instead of waste, our most essential resource. Whatever shortcomings this program may prove to have as operation gets under way, it will at least have served to emphasize anew that ownership of land must be in trust to the nation and that those who use the land must be economically enabled to keep that trust.

ONLY 75 years ago, as a Nation, we owned three-quarters of the whole area of continental United States. Today we own one-quarter, but these are lands held as forests, parks, reservations, or used for reclamation, national defense, or other purposes. Relatively only a thimble full of this nationally owned soil might be used for agricultural purposes.

IN those 75 years, we gave away one billion acres to individuals, to corporations, and to States, with lavishness and impatience. To those who promised to fell the forests and till the soil we said: Take them; they are yours to use or dispose of as you wish. The Nation needs settlement and revenue and it gave away lands to increase both. It handed over the rights and privileges of private ownership and retained only the right to tax, the power of eminent domain, and the police power.

It is to these private owners we must look now for the conservation of our soil which has been both used to our gain and abused to our loss. Three-quarters of a century ago our farm lands were producing food and clothing for only 31 million consumers. Today they are feeding and clothing 127 million consumers, but every year now more than 3 million tons of soil are washing and blowing away from the fields from which we must continue to obtain these necessities. This is enough soil to fill a train of freight cars long enough to go around the earth 19 times at the equator. Such losses, if ignored, cause irreparable damage over the years .

SOIL can be used and yet conserved, provided the right farming practices are followed. Why these practices have not been observed in the past is due to many economic causes. Some of our land was obtained and has since been bought by people who wished to speculate in its values, not to keep it as a source of income to be passed down to their children and grandchildren. Speculators in land have little interest in its long-time conservation. Impatience to expand their acres, increase their production, utilize labor-saving machines, have cost many farmers their whole property. From owners they have become tenants, and tenants who are unsure of their tenure have little interest in conservation. Over half of our farmers operate some leased land, and 42 per cent lease from others all the land they operate.

OTHER reasons lie behind soil wastage in the past—the roving spirit; the relatively greater comfort of city, as against country, living; "keeping up with the Joneses", and so on.

SOME farmers fortunately placed have always practiced good farming methods which have conserved the soil and maintianed its fertility. Many more know what good farm practices are, but have been stopped from becoming practitioners of soil conservation by increased costs or decreased immediate returns. Farmers, who try to be conservationists and find their neighbors are not, are apt to lose out.

THIS has been so since the beginning of farming in this country. It has been even more true since the World War. In the 20's and through depression years until 1933, falling prices and high costs forced farmers to exploit their soil as hard as they could so as to make enough to pay their debts. Loss of foreign markets, which had been such price boosters during the War and for a few years after, forced down prices in the late 20's. Unemployment and wage cuts in cities at home made farm prices take a further nose dive in depression years.

AGRICULTURAL adjustment during the past years put a stop to this overworking of the soil, by making it more profitable to produce less. During those years, when farmers were limiting their production to commodities which were needed at home, instead of producing also for foreign markets which no longer wanted their produce, farmers had a better chance than they had ever before to put into practice some of the conservation rules they knew about.

MAJOR objective of agricultural adjustment was to lift farm prices to "parity." A byproduct of that objective was a beginning at soil conservation. Through the AAA, farmers in 1934 and 1935 were encouraged to shift the 30 to 35 million acres, which previously had been used to grow crops bringing only poverty prices, into grasses and legumes which are good for the soil. Farmers had their first practical lesson from this experience in the wisdom of cooperating togther in their production and conservation plans.

CONSERVING those gains in income, won under production-control programs which are no longer possible, and conserving and extending those good farm practices started cooperatively under those programs, are the two major objectives of the farmers under the Soil Conservation and Domestic Allotment Act.

ROUTES to those objectives are various. Chief among them is reducing the number of acres planted to soil-depleting crops and increasing the number of acres planted to soil-conserving crops. But soil is lost to good use not only when the minerals in it are taken out by crops which humans eat and not replaced by fertilizer, but when the soil is allowed to was or blow away. So other routes to soil conservation depend on better methods of planting, building ponds and dams, extending wood lots, and so on. These improved farm practices, too, must take their place in such a program.

BETTER income for farmers, once the State programs are in operation, is to be measured in terms not of parity in price but parity in income.

PUTTING the new program into practice for this year means quick action, for planting time is here. Already regional conferences have been held to give farmers, farm organization officials, and agricultural experts, an opportunity to recommend to AAA how the program should be run. Local and national officials are busy at work, setting up standards for land use which will in the soil-conservation needs of each farming region. Later in the year, farmers who can show that they have met these standards will receive payments. In 1936 and 1937 these payments will be made by AAA directly to individual farmers who comply with the conditions laid down in the matter of the conservation of the soil of their farms, unless the State-aid plan provided in the Act becomes operative before 1938. From 1938 onward, money from the National Government will be paid to States which will then be responsible for its distribution to individual farmers. Only those States which want to participate and which submit plans satisfactory to the Secretary of Agriculture will receive Federal funds.

THESE are significant changes in the direction of the new farm program. Economists in the Department of Agriculture figure that the 1935 per capita farm income—including benefit payments—had a purchasing power equal to 83 per cent of the pre-war income. Non-farm income had a purchasing power of about 93 per cent of pre-war. Farmers, last year, were about 10 per cent below income parity with other people in the country. Without benefit payments they were nearly 20 per cent below.

FARMERS' new program goes still further to take consumers' interest into account. The new Act gives consumers a definite assurance that, so far as the Act is concerned, there will be no reduction of supplies below consumers' normal needs.

YARDSTICK for "normal" is taken as the 10 years, 1920 to 1929. These years cover a brief period of depression, a longer period of "prosperity," which touched higher levels of production and consumption than we had ever known before. They do not include years of drought, such as the past 2, when despite the best intentions many farmers could not produce normal quantities of some foods.

CONSUMERS have been eating an average of about 1,450 pounds of food a year per person. During the years 1920-24, the average was somewhat less, 1,422 pounds. In the next 5 years, it increased to 1,474 pounds. During the depression years, 1930-33, the average dropped to 1,454 pounds. The per capita average of the 1920's to be used as a measure of normal consumption is 1,450 pounds.

BACK in the 20's, farmers were playing a losing game in providing consumers with these 1,450 pounds, but the reason was not that consumers could not pay a fair price for this quantity of food but that they could not pay a fair price for all the food which farmers produced.

DURING those years, farmers produced not only for domestic consumption but for a foreign market which had largely disappeared. What they could not sell abroad

stayed at home and depressed all farm prices.

UNDER the AAA, farmers cut down on their production of the extra pounds for foreign consumers and by doing so were able to raise the price of food sold at home. Under the Soil Conservation Act they can continue to measure their production to fit consumers' needs at home, but the law provides that no powers under the Act shall be used to encourage farmers to produce less than average requirements.

TOTAL food quantities consumed in the years 1920-29 would not be enough for our present population, but the Act takes account of the increase in the number of consumers. In 1920 there were about 106 million consumers in the United States. By 1935 the number had stepped up to almost 127 million.

NORMAL consumption at which the Act is aimed is the per capita amount. To get a total figure for normal consumption the per capita amount would have to be multiplied by the number of consumers there are now in the country.

FOOD HABITS, in some cases, have changed since the 20's. Consumers obviously do not want farmers to continue to produce the same amount of a particular food which has either lost or gained greatly in consumer favor since those years. These days we are apparently eating less cereal products and potatoes than in the yardstick years—about 16 pounds per person less. On the other hand, our consumption of fresh vegetables has increased some 16 pounds per person. Milk and cream consumption has stepped up 14 pounds. We eat more eggs, too.

MANY changes in eating habits have come about because consumers know better how to plan a balanced diet. Some have resulted from better transportation making it possible to load our city markets with fresh fruits and vegetables all year round. Some are due to better refrigeration, which has improved the quality of perishable foods sold and so increased their consumer appeal.

STILL other changes are due to the luck of low prices. During the last half of the 20's we are, on the average, 10 pounds per person more pork and lard than we ate before the war, and the reason was largely because pork had become so cheap. Consumers' gain, however, was at a serious cost to hog producers. War-time foreign demand for pork products had encouraged farmers to boost their hog production. The habit stuck, long after the export market was gone. All that pork was thrown on the domestic market to be sold at what it would bring, and farmers took the loss.

WHEN farmers measure the normal supplies which consumers expect from them under the new farm program, they will take into account all such changes in population, eating habits, and export business.

NORMAL consumption, as measured by the 20's or any other year past or present, is a workable yardstick for farmers now, but neither farmers nor consumers look to that as the ideal permanent goal. Recognition that present consumption levels might be raised has been made in Section 32 of the Agricultural Adjustment Act, passed in 1935 and still in effect, which provides that certain tariff revenue may be used to expand domestic consumption of farm products.

MILLIONS of consumers, even in our flushest years, have not had enough to eat or enough of the kind of food that builds strongest bodies. According to one estimate, a third of all nonfarm families in the United States in 1929 had less income than required in order to buy the kind of diet that would give them a satisfactory margin of safety, without stinting on other necessities.

ANY ideal standard would provide food stuffs enough to give every one an adequate diet. Ideally, farmers should produce all the varieties and quantities of food necessary to supply that amount. There is probably not a farmer in the country who would not welcome the chance to step up his output to that standard, provided he were assured, in return, an adequate income.

TWO MAJOR stumbling blocks lie in the way of putting such an ideal standard into practice. One is that consumers do not now—nor did they even in 1929—receive an income large enough to buy the foods required for an adequate diet for everyone. The second is that by requiring farmers to produce such quantities at prices which consumers could now afford to pay, we would be forcing farmers to continue to overwork their soil and to neglect good farming practices as they have been forced through economic pressure to do in the past.

TO consumers there is a large difference between these two parties. The first means getting the price of a truckload up to the point where it will buy as many shoes, shirts, cars, blankets, and pay as many debts, taxes, wages, and so on, as it did in pre-war years. The second means getting a farmer's purchasing power to the point where it was in pre-war years in relation to the purchasing power of people not on farms.

LIFTING farm prices to parity in some cases would require cutting down severely on the amount produced. Cutting down too far on the amount of food consumers can buy means boosting the price so high that some consumers have to go without or all consumers have to cut down on what they buy.

SERIOUS questions for farmers as well as for consumers loom up when quantities of food are reduced below normal needs. Obviously, if a farmer can sell two truckloads of farm produce and clear $100 apiece, rather than one and clear $150, he is going to be better off. He is going to have a bigger income to spend on the shoes and suits his family needs.

MORE dollars coming in are cause for rejoicing, but we can't eat dollar bills; they can't keep us warm; they can't amuse or educate us. What we are after is the food and clothes and movies and books they will buy. Being able to buy more counts for more than getting a bigger pay envelope.

## "BREAD BASKET" OF WORLD TURNS TO DAIRY FARMS

Crookston, Minnesota —(AP)—The "bread basket of the world"—the Red River valley—is turning to the milk pail to maintain farm incomes.

Driven from wheat fields by three years of dust storms, drouth, and rust, and by this year's cold spring, farmers are diversifying their crops to put diarying in a leading role.

"The dairying outlook," said Fred R. Crane, former agricultural development agent of the Great Northern railroad, which under James J. Hill tapped the "bread basket" 50 years ago, "is good. Feed is plentiful and cheap, and prices for milk and dairy products are fairly steady at a good level."

Old-timers, however, are not ready to see wheat abdicate.

# WILL EXHIBIT IN NORWAY

## Periodicals From Publishing Board Going To Europe

## Secretary Boyd Has Secured Space in Convention Hall in Oslo

When the Sunday School forces of the world meet in Oslo, Norway the representatives from foreign countries will have the privilege of seeing a complete line of publications manufactured at the National Baptist Publishing Board's plant at Nashville. Secretary Boyd is already arranging for this exhibit and display. Periodicals for the Sunday School, beginning with the Picture Lesson Cards and going through to the Sunday School Lesson Commentary, will be neatly bound, placed upon cardboard so that they may be set upon easels in the exhibition hall. Copies of the twenty song books and three Anthems will be forwarded, and a number of books for ministers and Bible students will also be sent.

The Publishing Board sent such an exhibit to Tokyo, Japan where it received a blue ribbon and prominent mention. It was repeated when the Sunday School forces of the world met in Los Angeles, Calif., where the National Baptist Publishing Board's booth attracted the attention of thousands, so that the board's management felt that such an exhibit should be installed at the Twelfth Convention which opens on the morning of July 6th in the Scandanavian capital known as Oslo, in the country of Norway.

The shipment is already being crated to go to New York where it will join the exhibits of the other publishers of this country that they might all be forwarded to the World's Convention Exhibit Hall.

# CHURCH BOARD OF PRESBYTERIANS HITS CHILD LABOR

New York, May (CNA)—The Southern plantation system which systematically keeps young children out of school to tend the fields and harvest cotton, and child labor in all its ugly ramifications throughout the nation, was vigorously assailed at the close of a two-day conference of the Presbyterian church of the United States held at the Presbyterian Church Building, 156 Fifth Avenue.

In a digest of the mended report of the committee on Social and Industrial Relations, headed by the Rev. Dr. T. Gurthis Speers of Brown Memorial Church, Baltimore, the board said:

"The use of children as wealth producers should be condemned for folly and injustice, and in the future the demands of industry should not be allowed to prevent any child from securing the full opportunities of education as a human being and a citizen."

To date the Catholic Church is the only religious denomination to come out openly and brazenly in defense of the economic exploitation of children.

## Twelve Get Jobs In Navy

The following twelve (12) men were enlisted in the U. S. Navy as Mess Attendants Third Class at the local Navy Recruiting Station, 405 Custom House Building on May 2, 1936, and transferred to the Naval Training Station, Norfolk, Va., for a period of recruit training. After completing this preliminary training they will be granted leave of absence, if practicable, to visit their homes, and will then be assigned to duty on vessels of the U. S. Fleet.

## Yes, I Want to Go on this WORLD TOUR

Will the Religious Forces

**Send me to the World's Sunday School Association**

In Oslo, Norway this Year?

Send all donations to
HENRY A. BOYD
523 2nd Avenue, North
Nashville, Tenn.

The National Baptist Convention of America at its Washington, D. C. session, the Sunday School Congress and Executive Board said they wanted me to represent the denomination at the World Convention in Oslo, Norway this year. I accepted the election and am preparing to make the voyage over seas. It will enable me to meet the representatives of the nations of the world and find out the Religious needs of the Darker Races of the world. Do you favor such a program and trip? Will you allow the people of your church to express themselves in a collection or donation? If so, you will be helping your denomination in a forward Religious work that will make for good in the "Kingdom Building" program we have worked out. Let every individual have an opportunity to express themselves. Be it little or much, send it to me. I will send a receipt and a letter of thanks and use the money sent in to make the trip.

### AUSTIN W. CURTIS' DISCOVERY

(CONTINUED FROM PAGE 1)

duced an aromatic oil from magnolia seed, which he said possessed many of the soap-making properties of palm oil.

In a partial report on his experiments with magnolia seed, Curtis said the new oil "gives a soap that lathers freely and has the softening effect of the palm oil."

Hundreds of tons of magnolia seed are available for use in the southeast, the partial report pointed out in discussing commercial possibilities of the discovery.

Another possible use for the oil is seen by Curtis in its aromatic qualities, which suggest the possibility of it being utilized as a base for perfumes.

Discovery of the oil occured during experiments with various flowers, fruits and seeds grown in Alabama and adjoining states. Water color pigments, ranging from a bright crimson to a deep green and several shades of brown were developed from horse chestnuts, osage orange chips, peanut hulls, tomato skins and orange peels, Curtis said.

These pigments, he explained, cannot be used in commercial paints, since they will not mix with an oil base.

A Cornell university graduate. Curtis conducted his experiments in the midst of preparation for an exhibit of the numerous discoveries of Dr. Carver, noted for products derived from sweet potatoes and peanuts. Tuskegee institute is the country's largest school for higher education of Negroes.

The exhibit will be on display at the Texas centennial.

—Nashville Tennessean.

### TRIBUTE PAID TO MEMORY OF LATE DR. JOHN HOPE

(Continued from Page 1)

nished by Morehouse and Spelman students directed by Prof. Kemper Harreld. Dr. E. McNeill Poteat, Jr., president of the Commission, opened the meeting and introduced the speakers.

Dr. Tobias paid high tribute to Dr. Hope as a teacher and as one widely connected with educational altruistic and religious movements of national and international scope. He was not a man to accept honor and shirk responsibility," said Dr. Tobias, "but one who spent himself freely for every interest with which he was connected." Much of Dr. Hope's high ambition, determined purpose, and fine spirit, Dr. Tobias attributed to his early associations in Augusta with great spirits of both races.

Dr. Jones spoke feelingly of a warm personal friendship going back through many years. He lauded Dr. Hope's faith in his own people which prompted him after graduation to come back South and work among them. He praised also his faith in the best of the white race and his willingness to work with them for mutual upliit.

"John Hope believed that there is in people of both races that which responds to the best," said Dr. Jones, "and in that faith he rendered an imperishable service to human life. I charge you tonight, by the blessings of his spirit, that you emulate his faith and his courage, and so help to make his dreams come true."

### SOIL SAVING PLAN GIVEN

(CONTINUED FROM PAGE 1)

of the farmers in this vicinity entered the soil conservation program this spring, with many more planning to come in next year when they will be able to adjust their farms to the new program. Insurance companies and other landlords are generally heartily in favor of the plan that will conserve soil and reduce the possibility of producing a surplus of grains.

**Live Stock Better Fed**

The result of the program will be not only conservation of soil but better pastures and better appearing live stock, according to County Agent Marion E. Oslon of Cerro Gordo County. From 70 to 90 per cent of the pastures in this section, he said, have been overgrassed in recent years.

"Cattle will be better fed," Olson added. 'The use of more grass will bring about a balance that is essential in the production of live stock, a balance that we have been more and more in need of for several years."

To get the maximum of benefit under the soil conservation plan a farmer must seed at least 15 per cent of his soil-depleting crops, such as corn and oats, into hay land.

Operations of farmers this spring indicate that the soil conservation program is reasonably effective as successor to the invalidated AAA program. While the other brought time of dire emergency the feeling is growing that the present program is the right track to solumore ready cash to the farmer in a tion of the agricultural problem for Iowa.

### THIRTY MILLIONS FACE STARVATION

Shanghai. — (UP) — Thirty million inhabitants of the remote, mountainous Szchuan province on the Tibetan frontier are starving and have only grass and bark to eat dispatches from the interior said today. Some people, desperate, were reported to be eating corpses.

Floods, droughts, earthquakes and Communist warfare have combined to bring disaster to the province. Many thousands are seeking to migrate over the inadequate roads.

—Nashville Tennessean.

## Fragrance Added To Gardens By Certain Plants

Many plant flower beds for color and decorative masses, kitchen gardens for utility, herb gardens for savor, but only a few plant for perfume in the garden.

Women of Martha Washington's time knew how to save the delicate scent of rose petals by putting them in jars with salt, or they made a potpourri of different flowers. They gathered damask, roses, and lavender and dried them to make linen drawers sweet, or used violet water.

It is possible to plant shrubs and vines and flowering annuals and perennials to add to the fragrance of the garden—roses, English violets, carnations, and little clove pinks, and some of the fragrant peonies, say floriculturists in the United States Department of Agriculture.

The perfume garden is so planned that one group of planting is succeeded by another, each with its own appeal, such as sweet alyssum, mignonette, pinks, perennial phlox, sweet heliotrope, stock and some of the nicotianas. Nasturitiums have a spicy fragrance. The leaves of rose geranium are both fragrant and spicy and may scent a fingerbowl or flavor a mild jelly.

Many shrubs are delightfully fragrant—the reddish velvety "sweetshrub" or Calycanthus; lemon verbena; lilac; and mockorange, called Philadelphus or syringa in the North, Carolina cherry in the South; the butterfly bush (erroneously called "summer lilac") from China, whose long dropping rich violet blooms give off deep fragrance all summer. The sweet-scented, summer-blooming honey-suckle vine of the South is the naturalized Japanese honeysuckle, Lonicora japonica. The beautiful and fragrant Chinese and Japanese wisteria, and various sweet spices of clematis.

## ELECTION RESULTS IN FRANCE ALARM ITALIAN FASCISTS

New York, May 7 (CNA)—Election results that will affect the future of the Negro peoples of Ethiopia and this country by giving world-wide impetus to the fight against Fascism with its war- mongering and race hatred theories were reported last week from France and Spain, where the forces of fascist reaction suffered severe set-backs.

In the French national elections, the People's Front scored a decisive victory over the reactionary coalition which has been supporting Mussolini's robber war against Ethiopia and holding up the application of oil sanctions in the League of Nations. The French Communist Party which has vigorously condemned Mussolini's war of plunder made especially sweeping gains, causing grave concern to Mussolini, according to advices reaching here from Rome.

Only 179 of the 618 election districts achieved definite elections, necessitating run-off elections in 438 districts. With nine Communists elected in the first elections and 60 more topping the remaining People's Front candidates in as many districts, it is believed that the Communists will obtain at least 40 and possibly 60 deputies in the next Chamber after the second ballot. There were only ten Communist deputies in the last Chamber elected in 1932.

It is estimated that the French Socialist Party will obtain 80 seats in the new Chamber, and the Radical Socialists about 70. Both parties are members, with the Communist Party, of the People's Front.

In the Spanish elections for presidential electors, the People's Bloc, consisting of the Socialist, Communist and other left-wing parties, decisively defeated the clerical reactionaries. The Left Front parties named 240 of the 311 electors elected. The electors and the 473 members of the Spanish Cortes (parliament) will name the President at a joint meeting on May 9. The People's Bloc has a majority in the Cortes.

The defeated Spanish right wing parties have strong sympathies with Mussolini't aim in Africa.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.

# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., JUNE 15, 1936 No. 5

# Government Buying Farm Lands in Arkansas

## 25,931 ACRES IN STATE UNDER R. A. OPTION

Sixty-nine options on 25,931 acres in the Sixth Region of the Resettlement Administration have been assembled, it was announced yesterday at the office of T. Roy Reid, regional director. Three hundred and twenty-five tracts, aggregating 93,732 acres, have been appraised.

Sixty-nine options on 25,931 acres in the Sixth Region of the Resettlement Administration have been assembled, it was announced yesterday at the office of T. Roy Reid regional director. Three hundred and twenty-five tracts, aggregating 93,732 acres, have been appraised.

The average price per acre on all lands appraised at or below the optional price is $26.96, making the average cost on the average to be bought for each resettlement family $1,671.52.

**Status of Projects**

The status of land acquisition and planning on resettlement projecets in Arkansas follows:

Wright plantation— All land has been optioned and options accepted. Abstracts have been sent to the Department of Justice, Washington. Detailed plans for 42 four room houses, 53 five room houses and 11 six-room houses have been forwarded to Washington. A survey party is staking out the farm plants.

Lake View—Options on 5,594 acreas have been accepted and abstracts are in the Department of Justice. Plans for 35 four-room houses, 43 five-room houses and nine six-room houses have been sent to Washington and surveyors are staking out farm plants.

Lake Dick—Options on all land to be purchased have been accepted. The place is leased by the Arkansas Rural Rehabilitation Corporation and is being farmed by its clients. Preliminary subdivision plans were forwarded to Washington April 14. House plans will be ready about May 9.

Campbell farm— Options on 2,323

## PEANUT VINE MEAL FED TO LIVE STOCK

Little Rock, Ark., June 10.—Peanut vine meal, made by grinding peanut vines and nuts in a hammer mill, has been used for feeding stock by Bradley county farmers during the shortage of grain feeds for the last two years, reports J. A. Hemphill, county agent. I. F. Ferguson of Hermitage has been using the meal as a hog, mule and dairy feed for some time. Recently he decided to use it in poultry feed. He reports that the chickens seem to like the peanut vine meal as well as alfalfa meal. The peanut vines and nuts are harvested and piled around stakes in the field to cure, then stored in a barn or dry place for winter feed.

# J. P. Davis Addresses Conference of Negro Extension Workers and Farmers

## SUB-AVERAGE WHEAT HARVEST IS FORECAST

### Agricultural Department Predicts Yield of 482,000,000 Bushels Gain Over Last Year Winter Wheat

Wheat production of 482,000,000 buhels considerably above the 1935 production but far below the 1928-32 average, was forecast Wednesday night by the agriculture department in warning of a threat of widespraed crop damage by drought.

The 1935 production was 433,000,000 buhels. The 1928-32 average was 618,000,000.

The crop reporting broad said that during May heavy general rains benefited late crops and ranges in the southern part of the great plains area from Central Nebraska nad Northeastern Colordo to the Rio Grnde. However, in much of this area, the board said, winter wheat was too far dvnced to be benefited.

With the exception of the 1934 drough yer, the board said the present June 1 condition was the lowest or ecord for spring wheat, oats, barley and rye.

Because of drough, the Piedmont section of the Carolinas nad Georgia have ragged stands of cotton and much of the planted sced had not sprouted Jnne 1.

The board said adequate moisture

(CONTINUED ON PAGE 8)

## MAY COTTON CONSUMPTION BETTERS LAST YEAR'S MARK

Cotton consumed during May was reported today by the Census Bureau to have totaled 530,799 bales of lint and 64,670 of linters, compared with 576,762 and 61,450 during April this year and 470,412 and 64,583 during May last year.

In consuming establishments 1,090,077 bales of lint and 239,556 of linters. compared with 1,190,413 and 250,061 on April 30 this year, and 974754 and 231,376 on May 31 last year.

In public storage and at compresses 5,237,082 bales of lint and 57,276 of linters, compared with 6,020,526 and 62,543 on April 30 this year, and 6,580,599 and 49,416 on May 31 last year.

Imports for May totaled 19,891 bales, compared with 12,629 for April this year and 10,423 for May last year.

Exports for May totaled 351,734 bales of lint and 21,053 of linters. compared with 352,710 and 12,532 for April this year, and 277,977 and 21,910 for May last year.

Cotton spindles active during May

(CONTINUED ON PAGE 4)

## COTTON EXPORTS FROM HAITI MOUNT

Washington, June 13—Exports of cotton from Haiti have increased steadily in recent years, according to a report from Vice-Consul Joseph H. White, Port-au-Prince, made public by the commerce department today.

Shipments abroad of Haitian cotton in the crop year 1934-35 amounted to 13,500,000 pounds compared with a 20-year annual average of 9,150,000 pounds. Cotton ranks as Haiti's second most important money crop, following coffee, and accounts for approximately 15 per cent of the country's total exports, the report states.

The boll weevil was discovered last year in several cotton areas and seriously affected production, the report states. The Haitian government has taken energetic measures to restrict the spread of the pest in unaffected districts. The Saint Marc district, where approximately 40 per cent of the entire crop is grown, has thus far been entirely free from the boll weevil, it is pointed out.

(CONTINUED ON PAGE 8)

## FORMULA IS LISTED FOR WHITEWASHING

Whitewash on brick, stone or concrete walls is coming more and more into favor. A good mixture used by the United States government on its lighthouses follows:

Slake 40 pounds of quicklime with boiling water keeping it covered. Strain, and add a pack of salt dissolved in warm water, three pounds of ground rice boiled to a thin paste, one-half pound of powdered Spanish whiting one pound of clear glue dissolved in warm water. Mix well and let stand for several days. Use as hot as possible. Fifty-two lbs. of hydrated lime can be used in place of quicklime.

## IZARD INCREASES LESPEDEZA

Farmers of Izard county have seeded approximately 6,675 acres of lespedeza since January 1, 1936, using more than 80,000 pounds of seed This is an increase of more than 100 per cent over last year, reports G. I. Gilmore, county agent. The increase can be accounted for in two ways, the county agent says, one being the successful use of lespedeza demonstrations in the county last year. and second, the new soil conservation program. About 1,225 acres of this lespedeza were sown for hay purposes, 5,250 for pasture, and 250 for soil building.

## STARVATION DAYS OF THE CIVIL WAR

### Woman Cooked for Gen. Ulysses S. Grant in Washington

Boston, Mass. — Mrs. Frances Ann Whiting of Cambridge, once a slave, recently celebrated attainment of the aged of 104 years, according to a story in the Boston Evening Transcript. She is not sure of the exact day of her birth, it was so long ago, but is as vigorous and zestiful as many a woman half her age.

Mrs. Whiting was born on Bentley plantation in Virginia, as were her parents. She worked in the master's mansion, while her brothers worked in the fields. These two brothers fought for the South— and never returned from the war. Her father, devoted to his white master, served the South in the war by going around with a team and getting food and supplies for the soldiers.

"I can remember," she said "when we used smoked glass and could see from our plantation the smoke and gunfire from the Gettysburg battle field. Those of us who were farsighted could see the fighting and the fallen soldiers. We could hear the stirring martial music that was the only thing that spurred

(CONTINUED ON PAGE 8)

## SOIL PROGRAM MODIFIED TO AID DRY AREAS

Washington, June 13 (AP)—Secretary Wallace modified the agricultural conservation program for the Southern Region today to allow payments for additional cotton base acreage planted to soil-conserving crops or diverted to soil-building practices.

The changes had been asked by Senators and Representatives from the Southeast as aid for farmers hit by the drouth. Although the modifications are not limited to drouth areas. Cully A. Cobb, director for the Southern Region, said they should be of particular benefit there.

Two changes were made. One eliminated for small producers the restriction to a maximum of 35 per cent the amount of the base acreage for which diversion payments will be made. It allows producers with a base acreage of five or less acres to receive full payment for diverting up to two acres.

The other amended the provision that payments for a county as a

(CONTINUED ON PAGE 4)

## NEGRO FARMER AND CONSERVATION PROGRAM OF THE SOUTHERN DIVISION

This is truly a most auspicious occasion. For my part I am especially happy to endeavor to add some humble expression of gratitude and hope on the part of the 651,000 farmers of our racial group operating 28 1-4 million acres located in the nine States that make up the Southern Region.

Harking back to the earliest days of slavery, and coming down to the present time, America and more in particular the South, has made great and rapid strides in so many particulars. Business and commerce thrive and flourish; education and economic advancement has continually been moving onward and upward.

Interwoven as has been the welfare of the colored people with the welfare of the white people in America in general, and the South in particular, there the whites have succeeded the blacks have succeeded. And where the white neighbor has failed, the colored neighbor has found himself deep in the mire of despondency. Success of one race has meant the success of the other race. It has been ever thus, and apparently as if written in the stars, it shall ever be that the two races dwelling side by side under the guidance of the Divine Providence are to go onward and upward together or else if one fails all fail.

When the history of America is written, to my mind the most beautiful chapter will not be that of the heroes whose blood stains the battle fields for liberty; the most glowing chapter will not be that of song or story of scenic beauty of this great land with its towering mountain peaks, as if arms outstretched towards heaven, nor of the calm and beautiful rivers slowly meandering their way through

(CONTINUED ON PAGE 4)

## DECREASE IN POTATO, CABBAGE CROPS SEEN

Washington, June 12—An early potato crop 12 per cent smaller than in 1935 and 27 per cent smaller than the five-year average was forecast today by the department of agriculture. It reported that the Eastern seaboard drouth had "seriously" affected the production now ready to move to market from North Carolina, Virginia and Maryland.

The department said the drouth also had hurt the cabbage crop and that it would be 22 per cent less than the 1928-32 average. Late potato production in Nebraska and New Jersey was not included in the predictions and comparisons.

# THREE BODIES EXPRESS GRIEVANCES TO PLATFORM COMMITTEE; PLAN TO URGE SAME IDEAS ON DEMOCRATS

## National Bar Association, "Independents" And N. A. A. C. P. Get Hearing On Lengthy List Of Vital Questions

Cleveland, O., June 18—(ANP)—Although the hearings before the credentials committee during which herculean efforts were made to secure the seating of various "black and tan" delegations, drew large crowds of colored political leaders, only a half dozen were present at the perhaps more important resolutions committee session.

This latter group which draws the platform upon which the party will run this year represents, if the long view is taken, values of more importance than the seating of delegates. The delegates pass out of the picture at the close of the convention, but the platform to which the party is committed, while frequently overlooked and sidestepped after the November elections, nevertheless is on its face a binding obligation committing the party to work for the achievement of whatever planks or principles it espouses. .

### Three Groups Act

Three groups were represented during the resolutions committee public hearing: the National Bar Association, an independent political group and the N. A. A. C. P. Charles C. Calloway of Kansas City read the bar association plea for inclusion of effective Negro mention in the platform. The bar association brief, which was drawn up by President George W. Lawrence and past presidents C. Francis Stradford and Jesse Heslip, is in substance:

Abolition of property and educational qualifications for voting and the substitution of universal suffrage in both state and national elections; safeguarding of the Negro's civil rights in every state, if necessary by constitutional amendment; Negro representation on the federal bench and in the various state judicial offices; representation in all branches of the government and the substitution of fingerprints for photographs in civil service applications to avoid racial discrimination: enactment of a federal anti-lynching law.

Atty. Francis E. Rivers of New York City presented a proposed Negro plank after a stirring plea for the platform makers to remember that the party could not hope to go to the people in the campaign unless it took a foursquare stand upon all the problems facing America. He pointed out that the needs of the Negro under the government were not Negro problems alone but the problem of America.

His plank follows:

1. "Our Colored Citizens—The Republican Party pledges itself to the securing and maintenance of equal opportunity and rights for our colored citizens, and favors the protection of their economic status, and Governmental intervention wherever possible, to accomplish their fullest integration into employment in the gainfully occupied life of the United States, in particular in private industry, agriculture, business, emergency agencies and Civil Service.

We condemn the present Democratic New Deal policies which tend unquestionably toward the regimentation and ultimate elimination of the colored citizen from the productive life of America, compelling him to become solely a ward of the Federal government."

2. "Anti-Lynching—We favor the enactment of a .Federal Anti-Lynching law."

3. "Suffrage—We denounce the wholesale disfranchisement of colored citizens in the South by the Democratic Party, and we urge the enactment of Federal legislation guaranteeing the enforcement of the 14th and 15th amendments to the Constitution.

4. "The Constitution and the Supreme Court—We reaffirm our faith in the Constitution of the United States and express our confidence in the wisdom and integrity of the Supreme Court.

5. "Civil Service—We advocate the elimination of discriminatory practices under Civil Service, such as the requirements for submission of photographs of eligibles for appointment, thus disclosing their racial identity."

6. "Denunciation of New Deal administration of relief, social security and housing—We condemn the present discriminatory administration of relief, social security and so-called 'low cost housing' under the 'New Deal' and we oppose the allocation of Federal funds for relief, social security and low cost housing to States guilty of racial discrimination. in the disbursement of such funds, so long as such discrimination continues."

The Committee claims to represent the states of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, Maryland and West Virginia with a combined registration of more than 700,000 bona fide active colored Republicans.

Harry E. .Davis, former Cleveland Civil Service commissioner, read the N. A. A. C. P. proposals which he said would be presented to both the Republican and Democratic conventions in similar form. The N. A. A. C. P. thus lost perhaps whatever of partisan party appeal their planks might have possessed as campaign documents but the appeal against lynching was a stirring one. It said:

1. "We unequivocally pledge ourselves to passage at the earliest possible time of federal legislation against lynching and enforcement of that legislation after it has been enacted into law.

2. "We pledge ourselves to the abolishment, wherever it may exist, of discrimination against the Negro in the apportionment of relief.

3. "We pledge ourselves against discrimination in employment on all projects financed, in whole or in part, by federal funds; and we further urge upon congress the passage of legislation, to which we pledge our support, specifically prohibiting, with appropriate penalties, discrimination in employment on such projects, based on race, creed or color.

4. "We advocate that congress enforce the 14th and 15th amendments and take whatever steps are necessary to end the disfranchisement of Negro Americans even to the extent of reducing the representation in the congress of those states which deny the ballot to Negro Americans because of their race.

5. "We urge the substitution of finger prints for photographs as a means of identification in the United States Civil Service.

6. We deplore the present discrimination in the apportionment of federal funds for education.

7. We pledge ourselves to oppose vigorously any and all attempts to exclude Negro Americans from the benefits of social welfare legislation such as old age pensions, unemployment, social security and other such legislation."

The cause of the Negro was thus presented to the platform makers. Members of the committee reporting personally said that what was included depended upon the length of the platform. No definite statement was secured from the Landon forces, however, who were reported to be in actual charge of the platform fashioning.

## New Film Shows Horror

New York, June 5—The full horror of lynching with its effects upon law and order is shown dramatically in the new talking picture "Fury" to be released this week by Metro-Goldwyn-Mayer. Representatives of organizations interested in fighting lynching including the N. A. A. C. P. saw a pre-view here May 27th and pronounced the film a powerful factor in educating the country to the danger of lynching. The picture opened at the Capitol theatre in New York today.

## ARE YOU WILLING?

To close your book of complaints and to open the book of praise?
To stop looking for friendship and to start being friendly?
To be content with what you have and to stop whining for what you have not?
To cease looking for someone to help you and to devote yourself to helping others?
To consecrate your life to the service of an imperfect Church and to remember that Christ chose twelve imperfect men to be His disciples?
To accept Jesus Christ as your Saviour and let your life be an outlet for His joy, love, and peace?

—Author Unknown.

**Teachers BIBLE**

No. 4408 REDUCED PRICE **$2.95**

LARGE BLACK FACE TYPE
8 VO. SIZE 5½x8 INCHES with Family Record, marginal references, full Helps to Bible Study.

The best intrinsic value ever offered in a Bible for Adult Readers, Teachers, Preachers and Students. The durability of materials, mechanical excellence and value of contents are equal to any Bible at double this price.

Best Quality Thin Bible Paper
Clear Black Superior Printing
Durable Flexible Binding
MOROCCO GRAINED BINDING, OVERLAPPING, GOLD TITLES

THIS COMPLETE Holman TEACHER'S BIBLE also contains a Bible Study Course, Complete References and over 400 pages of Copyrighted Helps by most reliable Authorities. A Treasury of Biblical Information, Practical Comparative Concordance, a Complete Illustrated Bible Dictionary, Four Thousand Questions and Answers, New Biblical Atlas with Index.

## SALUTE TO THE "WONDER BEAN"

**Human food, forage crop, factory raw material, and soil builder.... these are the attributes of SOYBEANS, one of nature's most versatile crops.**

HOU TSI, one of the gods of agriculture, according to Chinese legend, wishing to give humans a superior food, planted a soybean seed. His seed prospered and from its increase grew great crops which for more than a hundred generations have supplied a valuable source of tissue-building-and-repairing food to people who have never known the taste of cow's milk and seldom tasted meat.

CENTURIES before there were any written records, soybeans were an essential food of Orientals. Ancient Chinese books recount more than 400 ways of preparing them. Decades before we turned curious eyes on them, soybeans were used for important industrial products. To Occidentals, they now come as something like a Twentieth Century wonder.

RICHEST of all vegetables in protein, soybeans are given a white mark by nutritionists for their potential aid to consumers with small budgets who want to keep their family diets in balance.

TO INDUSTRY soybeans are even more of a wonder bean since science has revealed the dozens of ways in which they can be used as factory raw material.

FARMERS, struggling with feed problems for their livestock, with soil impoverished by other crops, are learning the great value of his protein food for animals and the soil-building qualities of the plant in restoring nitrogen to exhausted earth.

WITHIN the century, from an almost unknown plant, American farmers have made soybeans a major crop, and production, in response to food, factory, and farm demand, is now expanding faster than with any other agricultural crop.

MORE VERSATILE a bean has never been known to science From the seed comes meal and oil. Out of the meal can be made flour for use in infant foods, macaroni, breakfast foods, bread, and cakes. Soybean oil meal provides feeds and fertilizer for farm use Out of the oil can be made soap, enamels, varnishes, paints, salad oils, cooking fats, linoleum, printing inks, and lubriating oils.

NOR does the list stop there. Lecithin—useful to bakers and confectioners —is still another valued byproduct Celluloid, and even glycerine, can be made from soybean oil. From the dried beans come soy sauce, soups, sprouts, roasted beans, a vegetable milk in liquid, powdered, or curd form. To these and other uses science is adding constantly.

SO MULTITUDINOUS are the uses of these beans, the wonder is that they had not long ago become an important agricultural crop in this country. That development had to wait on science. Only certain types will grow in certain soils and climates. Research into these type and soil relationships takes time and money—rare resources of the average farmer.

A NEW ENGLAND clipper, back from trading along the China coast, brought the first soybeans to this country. That was in 1804. Then there were botanical curiosity, and fashionable houses grew the beans in their gardens. From gardens to a national crop has taken over a century and a quarter.

UNION soldiers in the Civil War, lacking many of the more common foods, were given soybean "coffee," but aside from that brief emergence into the front lines, nothing much was heard of soybeans from their arrival in this country until 1890 when the Government began experimenting with them. These early Government experiments showed soybeans were a fine soil builder when plowed under, and made fine forage for livestock. Farmers were urged to plant more for these purposes.

ANOTHER WAR, IN 1915, encouraged explorations into the use of soybean oil. A shortage of cottonseed in the South coincided with a surplus of soybean seed in North Carolina Mills dependent on cottonseed oil turned to soybeans for some of their supplies. War conditions which forced large exports of meat and boosted food prices provoked some more researches by the Department of Agriculture into new cheap sources of proteins for human consumption.

SLOWLY and gradually over the years, soybeans have won through to their present recognition as a valuable aid to good farming, a commercially worth-while crop, a useful human food, and a source of raw materials for industry. To State experiment stations, together with experts of the Department of Agriculture, must go most of the credit.

PROTECTIVE foods, modern nutritionists have drilled into occidental minds, are a necessary part of any diet if bodies are to attain their greatest growth and maintain their maximum strength. Daily calory requirements of the average American are around 3,000. At least half of these needed 3,000 calories, according to one eminent authority, should be provided by protective foods.

WESTERN world consumers fruits, vegetables, eggs, and dairy products are the protective foods par excellence. Soybeans now come to claim rank with these foods because they are rich in high quality protein, rich in minerals and rich in vitamins. Often they have the additional virtue of being cheaper sources of some of these food values which ordinarily come high.

WITHOUT benefit of modern nutritional knowledge, millions of consumers in the Far East, forced by economic necessity to an almost exclusively vegetable diet, have compensated for a shortage on animal foods by the consumption of soybeans. Compensation has come in part because soybeans furnish a protein equal in quality to that found in meat, milk, and eggs.

NO TWO foods are exactly identical in their protein, which is composite of substances, called "amino

acids," containing nitrogen. Proteins in foods vary in the kind and amount of the amino acids they contain. To build bodies and keep them in working order they must have the kind of proteins that are efficient or "complete." Almonds, eggs, lean meat, milk, all have complete proteins. So do soybeans which sometimes, as in the case of many eastern people, are the only source of efficient protein within pocketbook reach.

KEEPING mineral rich foods in the diet and keeping the diet within budget limits, too, challenge the best of planners. Minerals are among the major necessities of a balanced diet, yet many of the foods rich in them are expensive. Soybean flour, on the other hand, is both a rich and a cheap source of such minerals as calcium and iron.

Government experiments on a certain kind or soil showed that when soybeans were cut for hay and roots were left in the ground, the yield of wheat per acre was 3.5 bushels greater than no soybeans were grown. When the entire soybean crop was turned under for fertilizing the soil, the yield of wheat was 6.6 bushels an acre greater than when the soybeans were cut for hay.

BUILDING bones without calcium in the diet is as making glass without sand. Calcium needs are imperative if bones are to grow straight and teeth strong. Soybean flour scores again, this time as a cheap source of calcium.

LECITHIN, a phosphorus-like substance found in vital organs tissue of humans, is still another constituent of soybeans. Important as a transporter of fat around the body and a builder of tissues of fat deposits, lecithin has commercial uses too. Bakers use it to improve shortening effects. Confectioners add a little to candies to make them glossier, or to gumdrop to keep them from hardening. Egg yolk used to be the chief commercial source of lecithin until soybeans were found to be cheaper. One pound of soybean flour contains as much lecithin as 4 to 6 eggs.

VITAMINS have not passed by this extraordinary bean. Tests show that it is a probable source of Vitamin A (the good-general condition vitamin); a good source of B (the "appetite" vitamin); and G (the "anti-pellagra" vitamin). Bean sprouts can claim C, the scurvy-fighting vitamin. Flour made from the beans with only light heat treatment retains their Vitamins A and B. Solvent-extracted flour loses practically all Vitamin A which is found in the oil instead of the flour.

NEGATIVE virtues are sometimes the most commendable for consumers who must guard against certain nutrients in food. Soybeans, unlike most beans are shy on starch. For this reason they are recognized as a good food for people needing a low starch diet. For some years food companies have had on the market forms of soybeans flour prepared for such special diets.

OTHER BEANS take honors in carbohydrate supremacy, and many foods, such as white flour, cornmeal, macaroni, bread, and sugar, are better sources of these energy-giving nutrients than is soybean flour. Energy-giving quality in food, however, comes not only from carbohydrates but also from fat and protein. Since soybeans rate grade A in these two, soybean flour as a source of energy is no laggard.

LITTLE wonder, then with such qualities to commend them, that food experts look upon soybeans as a useful addition to the diet of families in areas where animal products are scarce or where pocketbooks are slim, and particularly of families on relief who must stretch their dollars farthest.

BLOCKING their more extensive use as a green vegetable has been the limited development, until recently, of varieties suitable for consumption in this form. Between types of soybeans there is as much difference as between types of corn; some are good for eating, as a green vegetable, some not so good. A few years ago the Department of Agriculture sent its experts to the Far East to bring back seeds of green vegetable varieties. In the past 2 years experiments on these seeds have been going ahead with success, and farmers are planting more and more of them each year.

NUTTIER, richer in flavor than tender lima beans, soybeans would probably rate highest in popular favor in the green, rather than the dried, form. Their pods are tough and the beans are difficult to shell, but if the pods are first boiled for 3 minutes they will shell readily. The oriental way, more piquant, is to boil them in water flavored with soy sauce or salt, and then eat the bean directly from the pod. Some beginning has been made in canning the green beans, and those who have tried it praise soybean salad.

GREEN soybeans sometimes can step in and fill a breach when other fresh vegetables fail. Because of different maturing dates, soybeans can spread the green vegetable season for farm families which cannot afford fresh vegetables shipped from distant places. Because soybeans resist drought better than many other greens, they are a good insurance for farm families where that weather misfortune may descend.

DRIED bean uses read like a bill of fare, from soup to nuts, though of course no nutritionally wise planner would include only one food in even the simplest and cheapest diet. Between the soup and nuts, however, could come baked soybeans, flavored perhaps with soy sauce or Worcestershire sauce which now-a-days is frequently a soybean product. Next might come a salad of beans sprout, either cooked or raw, and dressed with a soybean salad oil (sole exception to the dried bean menu). Salad might be touched off with a bit of soybean curd, also a dried bean product Candy made with the roasted beans could even top off the meal with a soybean beverage or even with soybean milk.

"MILKING" dried soybeans is an achievement learned from the peasants of the Far East. Compared with cow's milk, soybean milk contains most of the same food substances but, pint for pint, only one-sixth as much calcium, less fat, and no milk sugar. Its protein, though more "efficient" than any other vegetable protein, is less in quantity and not equal in quality to proteins in animal milk.

FLOUR, so far, s the major food use of soybeans. An unpleasant beany taste in soybean flour used to weighi against its more extensive consumption. Now science has removed that blemish, and made possible refinement of the flour so that it will keep fresh and sweet. Wheat flour must always be combined with it to give the bread, cakes, and cookies the texture desired.

GREEN and dried seed uses only begin the amazing list of character roles which soybeans can play in human lives. Two other big parts come when the oil is extracted and oil meal is left to work upon. Both the oil and the meal can be used for human food and industrial uses.

FROM SALAD OIL to doormats, soybean oil is capable of supplying a hundred needs, only a few of which are listed. Perhaps its greatest demand will come from industry which is finding the oil and its derivatives adaptable for many purposes. Soybeans are credited even with sinking ships in the World War when glycerine, obtained from soy soap manufacture, was resdistilled and made into high explosives. From meal come glue, paper sizing, and plastics. One important automobile firm has made notable experiments with soybean accessories.

TOPPING all their variegated uses, soybeans have in the past and probably will continue for some time to have their major usefulness on the farm. More farmers are coming to learn the value of soybean meal for their livestock and poultry, and for fertilizer, soybean hay and soybean pasture for livestock and poultry, and finally soybean plants, plowed under, for soil improvement.

HOW GOOD a job is done by soybeans in improving the soil depends on the inoculation of the plants, how much of the crop is returned to the soil, and the effect of the roots on the mechanical condition of the soil.

TO DO their best work as a soil builder soybeans must be plowed under. When the AAA classified crops for the 1936 soil conservation program, it put soybeans under the "soil-building" class, for which special are to be made, only when the beans are harvested for grain—so that the seeds can be used for human food or for industrial purposes, or for hay—for animal food—then soybeans are classed as a "soil-depleting" crop, with two exceptions. In the South, where farmers more frequently plant soybeans between rows of other crops or graze them off, soybeans are a "soil-depleting" crop only if they are harvested for crushing. In other cases in the South and in some East—Central States they can be counted "soil-conserving" or "soil-building", depending upon the handling of the crop.

PRODUCTION of soybeans has been leaping ahead on the farms of this country. Fifteen years ago it is doubtful if 50,000 farmers had ever grown as much as an acre in a separate crop. In 1935 more than 600,000 farmers were in the business of producing this bean. Less than 500,000 acres were grown in the United States prior to 1917. Last year close to 5 1-2 million acres were planted, encouraged in part by the drought and in part by AAA. Soybeans on about half of these acres were harvested for beans or used for grazing; on the other half they were used for hay or silage, or were turned under for soil improvement. Production of the beans in 1925 was only 5 million bushels. The 1935 crop was more than 40 million bushels.

INCREASES in production are coming along at such a pace that science has had a new job laid at its doors—the job of helping industry and consumers to keep pace with the output of soybeans. Last month the United States Department of Agriculture and 12 North-Central States opened a cooperative soybean industrial research laboratory at Urbana, Ill., to find

## SPEECH DELIVERED BY JAMES P. DAVIS BEFORE THE CONFERENCE OF NEGRO EXTENSION WORKERS AND FARMERS AT WASHINGTON, D. C., APRIL 10 AND 11, 1936

(CONTINUED FROM PAGE 1)

meadows green and beautiful to the sea; the most brilliant chapter of American history will not be the chronical or magnificent structures whose lofty towers and great business blocks occupy space of our cities, nor will it be alone of the splendid culture ornate learning and unequalled attainments of America's sons and daughters in music, art and literature, but to my way of thinking, when the historians of the future shall begin to chronicle the epoch of the men and women who have made America what she is today and which is to be tomorrow, the one chapter, the outstanding chapter of this American history will be that chapter which relates the true story of the fine comradeship, of the undying loyalty, of the unswerving courage (even while laboring under the greatest disadvantages ) displayed between the loyal southern white man and the faithful, self-denying man of color whose labors have done so much—working side by side to make America grand. This loyalty, this sincere friendship, these untiring efforts on the part of the Negro is by no means new. It had its incipiency back in the dark days of slavery, where even then notwithstanding his vile servitude, in conditions over which the black man had no control, the Negro's contribution was not even then one merely economic. During the war between the States, back home on the great plantations of the Southland attending those farms, caring for the operations of the agricultural investment, were the hordes of colored farmers, laboring then, not for themselves, for they did not own themselves, but these black agriculturists labored for the protection, for the preservation of defenseless women and children—the wives and daughters of their white masters, into whose hands and care the flowerhood of the South had fallen. And, until this day undying credit will always be due this great mass of slave labor, who with their blood, brawn, muscle and heroic courage gave every care and protection to these defenseless women, who at that time needed defense.

Following slavery, the economic conditions naturally changed. Schools sprang up and education brought many new and needed ideas. But the great ideals inculated in the breast of the loyal black men and black women have never changed.

During that period just referred to, there was never a time that the honor of any white family was violated by one of these men, black though they be, who were left behind to guard and defend them.

And on down through the years each and every Negro man, woman and child, can take particular pride in the fact that notwithstanding besetting handicaps which have befallen them, "stony though the road he has trod" never for once has the black man of this country lifted his hand against the flag, nor proven traitor to his counrty.

So today, as a Negro farmer and descendant of the far South, I am most happy to come and acknowledge our debt of gratitude to the greatest of all presidents, Franklin Delano Roosevelt, to Secretary of Agriculture Henry A. Wallace and those far-seeing gentlemen in charge of the Southern Region, Director Cully A. Cobb and his Assistants, Hon. W. P. Camp and Hon. E. A Miller, who are doing more for the farmer than the executives of any other administrations of the past to make it possible for them to improve their standards of living, educate the children and live in comfort on the farm. That today, for the first time, the Negro farmer is being given the deserved consideration that of any other American, which he has long ago merited and justly deserves.

The main objectives of the Soil Conservation and Domestic Allotment Act recently passed by Congress are, to preserve and improve the soil and reduce the wasteful and unprofitable methods now practiced by many of the farmers of our racial group. The annual average acreage of farm crops for the United States total around 400.-000,000 acres. Fully three-iourths of this volume is now being planted in soil-depleting crops. To continue in this direction would mean wreck and ruin for the American farmer. As a result of an exhaustive survey by specialists in the Department of Agriculture, it is necessary to increase soil building and soil-conserving crops by at least 30,000,000 acres. In order to aid and encourage the farmer to cooperate in the promotion of this new program, two types of payments will be made to producers who voluntarily participate. These payments are known as the soil-building and soil-conserving payment.

To become eligible for these payments the producer must file an application with the County Committee for grant, but first execute what is known as a work sheet, showing name of operator, location of the farm, number of acres in certain crops and yield for each crop as of 1935. This information will be used to determine the basis for the grant.

The Community Agricultural Conservation Committee of the County Association composed of three members of the Association and residents of the community will assist applicants in preparing their work sheet and application for grant. This Committee will also make recommendations for payment and have the power to investigate the acreage and production of all crops.

Soil-depleting crops are classed as follows:

Corn, including both broom-corn and sugar-corn, cotton, tobacco, Irish and sweet potatoes, rice, sugar cane, commercial truck and canning crops, melons and strawberries, peanuts when harvested as nuts, grain sorghum, sweet sorghum and millet, small grains, such ar wheat, oats, barley and rye.

Soil-conserving crops are listed as:

All winter legumes, which include vetch, winter peas, clover, alfalfa, soybeans (except when produced for seed) velvetbeans, cowpeas and lespedeza, peanuts when pastured and grass mixtures including Bermuda.

Soil-building crops are, annual winter legumes, which include vetch, winter peas, clover turned under as green manure crop, biennial legumes, including alfalfa, weet clover and annual varieties of lespedeza, summer legumes, including soybeans, velvetbeans and cowpeas, if left on the land, winter cover crops when turned as green manure and followed in the summer by an approved soil-conerving crop.

The acreage in soil-conserving crops added to the acreage of soil-building crops make up maximum soil building payment for the individual farm.

The rate of soil-building for a farm is fixed by the State Committee for each State and approved by Secretary of Agriculture, Hon. Henry A. Wallace.

The soil-building payments are to be made to the producer.

The soil-conserving payment is to be divided: 37 1-2 per cent to the producer who furnishes the land, and 12 1-2 per cent to the producers who furnishes the work-stock and implements; the remaining 50 per cent to be divided among the producers in the same proportion they are entitled to share in the proceeds, resulting from the production of soil-depleting crops, as indicated in the operating agreement. Where two or more persons are entitled to receive payment under the grant, check will be drawn payable to each individual.

The rate of soil-conserving payment for diverting acreage from cotton will be approximately 5 cents per pound of the normal yield of lint cotton per acre, for tobacco 6 cents per pound of the normal yield for flue cured or burley, 5 cents per pound of the normal yield for flue cured or burley, 5 cent per pound of the normal yield for Ga.-Fla. type known as 62, 3 cents per pound of the normal yield for Ga.-Fla. type known as 45, and any other grade, for peanuts 1 1-4 cents per pound of the normal yield per acre for the farm, for sugar cane grown for production of sugar, a rate equal to 12 1-2 centr per hundred pound raw product, provided, there is grown on the farm in 1936 on crop land, an acreage of soil-building crops equal to not less than 50 per cent of the acreage of sugar cane grown on the farm in 1936.

The rate of payment on rice varies from 20 cents per hundred pounds of the producer's domestic consumption quota of rice to an amount of 5 per cent less than above-named amount for each one per cent by which such 1936 rice acreage exceeds 80 per cent of such rice base acreage.

Under the new farm act the owner of a farm means a person who actually owns the land and which is not rented to another for cash, or a fixed commodity payment, or a person who rents land from another for cash or for a fixed commodity payment, or the person who is purchasing land on installments for cash or a fixed commodity payment. A share tenant is the person other than the owner or share cropper who operate a farm without direct supervision of the owner and who is entitled to a portion of the crops produced on the farm or proceeds thereof.

A share cropper is the person who works a far min whole or in part and who receives for his labor his share of the crops or proceeds thereof.

A farm means all tracts of farm land, 3 acres and upward, in the same county under the same ownership and operated in 1936 as all or a part of a single farming unit by the same operator.

## MAY COTTON CONSUMPTION BETTERS LAST YEAR'S MARK

(CONTINUED FROM PAGE 1)

totaled 22,828,888 compared with 23.-123,536 during April this year and 23.040,788 during May last year.

## SOIL PROGRAM MODIFIED TO AID DRY AREAS

(CONTINUED FROM PAGE 1)

whole may not exceed 25 per cent of the county's base acreage so as to allow individual producers to be paid for diverting the full 35 per cent regardless of the total diversion for the county.

The first of this year, the Department of Agriculture estimated that there were 11,637,000 horses in the United States.

## WORTH $2,556 AN ACRE

**Census Bureau Estimates Highest-Priced Farm Land in Country Is In District of Columbia**

The District of Columbia has been revealed as having the highest priced farm land in the United States by the census bureau in a late announcement.

In 1935 there were 89 farms in that region, worth $2,556.47 an acre and with an average lsited value of $80,708 each, the censsus bureau reports.

The bureau further revealed that farming is gradually dying out in the district. For in 1930 there were 104 farms there, compared with the 89 now.

## STATES SHARE IN BONUS PAYMENTS

How the various states will share in the distribution of the huge bonus funds is shown in the tabulation below. The figures were prepared by the American Legion.

| State | Number | Amount |
|---|---|---|
| Alabama | 50,867 | $26,888,528 |
| Arkansas | 43,849 | 21,993,238 |
| Florida | 39,539 | 21,921.858 |
| Georgia | 58,588 | 32,262,946 |
| Louisiana | 53,885 | 27,849,762 |
| Mississippi | 36,802 | 19,308,411 |
| Missouri | 111,706 | 60,820,922 |
| North Carolina | 63,926 | 34,622,162 |
| Oklahoma | 67,181 | 35,202,766 |
| South Carolina | 35,747 | 19,316,831 |
| Tennessee | 59,009 | 32,497,536 |
| Texas | 148,771 | 83,696,221 |
| Virginia | 63,132 | 36,811,791 |

## NOTE INSIDE OF EGG LATEST FEAT OF HEN

In Kansas City, American Butter Co.'s president, L. H. Smith astonished his friends by cracking open normal-looking egg out of which fell a hollow cork out of which Mr. Smith took a note written to himself, says: Time

To prepare the trick, Robert E. Phillips, Jr., postgradnate student of poultry husbandry at Kansas State College, had busied himself anesthetizing hens, inserting in their egg duets hollow corks containing notes to Mr. Smith. Finally a hen laid an egg with a cork.

## PAMPHLET LAUDS FARMS

**Vice President of Union Central Life Completes Booklet**

Oulining the advantages of farm life, J. C. Hatfield, assistant vice president of the Union Central Life Insurance Co., has completed a four-page pamphlet entitled "Cottages for Kings."

Mr. Hatfield points out that 30 per cent of the population of the nation live on farms or homey farm villages. "Most of these people seem infinitely happy in their snug cottages surrounded by acres of life-sustaining soil."

"To live like a king, one does not necessarily need vaults filled with gold," he points out. "One needs only to stand in the center of a plot of land and be able to say, 'this is all mine—this is my home—it affords shelter at all times and this land shoulders the needs and wants of my family and myself."

Movie Aetor Lee Tracy punched cattle in Colorado when he was 18 for his board and $30 a month.

## MOWING THE COTTON CROP

A population of perhaps 3,000,000 in the South Atlantic states, particularly the Carolinas, is dependent on the growth of lint cotton. But the textiles for which this particular kind of cotton is most suitable are no longer in great demand. To substitute some other crop for the unwanted cotton is impossible.

What is the solution? Grow cotton cheaply—so cheaply that it can be used by other than textile manufacturers—suggests Professor Frank A. Cameron of the University of North Carolina. He would simplify the cultivation process, do away with picking, mow down the whole cotton crop to within a few inches of the soil, recover oil from the seeds, reduce the residue, stems and all to pulp. Result: Alpha cellulose, for which there are many uses. Credit is given to Nicholas W. Dockery, a former student of the University of North Carolina, for pioneer experimenting on his mother's plantation in Richmond county, N. C.

Dr. Cameron crowds and starves the plants, this to hasten growth. Not length of fiber or yield per acre is his goal, but the maximum number of bolls ripening at one time and a maximum amount of oil and cellulose for the investment.

There is reason to think that a scrubby plant, with a spindly stem and large development of lint and seed, will do. But whatever the plant, the boils must ripen at one time and in the shortest possible period.

### CARRY OVER COTTON CUT 12,500,000 BALES

Washington, June 10.—With cotton consumption establishing a new high record, the Agricultural Economics Bureau today estimated the world carryover August 1 would be about 12,5000,000 bales, compared with 13,624,000 a year ago. The 1923-32 average was about 10,155,000 bales.

American cotton carryover was estimated at 7,300,000 bales, compared with 9,000,000 a year ago and 10-year average of 6,000,000.

Most of the world consumption increase this season, the bureau aid, has been in manufacture of American cotton.

### COTTON QUALITY IN 1935 LOWER

Cotton ginned from the crop of 1935 was lower in grade and sligthly shorter in staple than that ginned from the crop of 1934, according to the U. S. bureau of agricultural economics.

The bureau of census reported 10,417,237 bales ginned from the 1935 crop. All of this cotton was reported as American upland with the exception of 17,622 bales of American-Egyptian.

Of the American upland cotton, 28 per cent was white and extra white, strict middling and better in grade, compared with 48 per cent in the 1934 crop and 29 per cent was middling which is about the same as the proportion for last year. There was appreciably more spotted cotton than the year before—20 per cent, compared with 13 per cent in 1934.

Nearly 13 per cent of the 1935 crop was shorter than 7-8 inch in staple, but only eight per cent of the 1934 crop was of these lengths. About 15 per cent of the 1935 crop was 1 1-16 inches and longer in staple compared with 18 per cent last year. The proportion of cotton ranging from 7-8 inch to 1 1-32 inches was about the same each year.

The proportion of untenderable cotton increased from 10 per cent in 1934 to 20 per cent in the crop of 1935.

### 80-YEAR-OLD NATURALIST CONDUCTS OWN 'FUNERAL'

#### 1000 'Mourners' Eat Picnic Lunch After He Gives Oration Requesting Pyre at Death

DANVILLE, Ill., June 16—L. F. Bailiff, 80 years old, conducted a funeral for himself yesterday.

Some 1000 "mourners" stood under the trees of his farm in Warren County, Ind., and heard him deliver an hour-long oration during which he requested that when he died they lay his body on a pile of logs, set them afire and go forth without weeping. After the "funeral" they opened their picnic baskets and ate.

Bailiff, a retired school teacher and naturalist, declared "There is no god but nature." He wanted no minister "prattling" over his bier, he said. He composed his own sermon with this as the theme:

"To know one's self is wisdom, to govern that self is strength."

Asked for his views on the hereafter, he said: "I don't know where we go from here and I don't care. Whether to Heaven or Hell, I haven't had time to figure out. I do all the kindness I can here and I'll take my chances."

### 92 Cents for First Kansas Wheat

KANSAS CITY, Mo., June 15.—Two carloads of Kansas wheat, first of the new crop for sale on the open market here, was auctioned off today on the Kansas City Board of Trade. Bidding was spirited and the wheat sold at 92 and 95 cents a bushel.

### Terraces $21 Per Mile.

Seven and one-fifth miles of terraces were constructed recently on the 553-acre farm of B. B. Logan, Hartman, at an average cost was $21 per mile. Most of Mr. Logan's upland farm has washed in deep gullies. By using two teams with slips, four men filled the gullies where the lines crossed to make it possible to drive machinery over. After the terrace was finished with the machinery, the surveyors staked the fills to be made and the men with the slips filled the low planes to the required height. Some of the fills measured 10 feet from the bottom of the gully to the top of the hill, said Earl F. Goodwin, assistant county agent in Johson county.

### RADISH SHIPPER AT JONESBORO SECOND LARGEST IN WORLD

Special to the Gazette.

Jonesboro, June 6.—An unsung Arkansas industry's magnitude was disclosed here this week when it was revealed that W. T. ("Tom") Lane, Jr., of Jonesboro is the second largest shipper of radishes in the world. Mr. Lane has been handling the Buffalo Iisland radish crop for 15 years. His place in the radish shipping world was ranked second by E. E. Peer, representative of the Ferry-Morse Seed Company of Detroit, who was in Jonesboro this week.

"A shipper near Corpus Christi, Texas, is the largest shipper in the world," Mr. Peer said. "He usually uses about 40,000 pounds of seed. Mr. Lane is second. He uses about 20,000 pounds. Over five tons of radishes were shipped by Mr. Lane this year.'"

Mr. Peer had only the highest of praise for Buffalo Island soil. It's one of the richest spots in the world. You have a real 'garden spot' in your county," he said, declaring that truck farming should be an important part of the county's agricultural program.

# NATIONAL DEFENSE COMMITTEE TO CONTINUE BATTLE FOR RELEASE OF YOUTHS UNDER SAMUEL LEIBOWITZ

## Noted Group Looks With Suspicion On Efforts Of Prosecutor Knight's Desire To Get The Boys A Lawyer

New York, June 18—Replying to an announcement from Alabama of the formation of an Alabama Scottsboro Committee, the Scottsboro Defense Committee with headquarters in New York City yesterday issued the following statement through its chairman, Reverend Allan Knight Chalmers, pastor of the Broadway Tabernacle Church:

"This committee is in full charge of the Scottsboro case as it has been since its formation. At that time all of the various organizations believing in the innocence of the Scottsboro boys and having as their aim the acquittal and freedom of the nine youthful victims of injustice united their strength in this committee. In doing so, we agreed to draw into this committee or into cooperation with it other organizations and public spirited citizens who might share our aims and purposes.

Several outstanding organizations and many prominent citizens of northern and southern states have responded by giving us their support in one form or another. It was and is our natural desire that organizations and citizens of Alabama should have a high place in sharing this grave responsibility and participating in this service of the cause of justice.

The formation of an Alabama Scottsboro Committee to add its strength to the defense of the boys is not in any sense at cross purposes with our efforts. On the contrary, we most cordially welcome its formation.

We do not know how it happens that Lt. Governor Thomas E. Knight, Jr., special prosecutor, appears to have possession of correspondence between friends of the defense nor by what right he undertakes a premature announcement of the formation of an Alabama committee for the aid of the defendants but it is to be presumed that Mr. Knight's motives are those of prosecution. We state most emphatically that Mr. Knight shall have no part in determing counsel for the boys whom he has prosecuted for more than five years for a crime of which they are innocent.

Samuel S. Leibowitz is chief counsel for the Scottsboro boys and there is no basis for any impression to the contrary. In the final analysis the legal conduct of the future trials will rest in the joint discretion of this committee, the defendants, their families and Mr. Leibowitz.

## HOW TO SET OUT SWEET POTATO PLANTS

If sweet potato plants are set in the field when the ground is very wet they are likely to set more potatoes than the plant can very well support, hence we have a lot of small potatoes that are of little value, though if the season is very favorable we will have an enormous crop of fine tubers. The same result follows when the plants are watered when the land is a little too dry, some of the plants will give a good crop; some that set only one tuber will have a very large potato; and some will barely live, making two or three small potatoes, while some will die, this makes a very unsatisfactory crop. The best results are had when the plants are set without watering, when they do not wilt down too badly and stay wilted too long. Should there be a prolonged drought just after the plants have gotten a good start, the roots reach out some distance from the plant in search of moisture, then should there be a good soaking rain, the roots attempt to make potatoes their full length, hence we have long, stringy potatoes fit only for hog feed. Plants set with a transplanter when the soil is wet are sure to be flat and otherwise ill shaped if there is a prolonged dry spell during the growing season. Plants that are set sloping will produce a better crop than if set vertical. Plants that are set very deep are likely to set more tubers than they can carry to a good size, and the ones from the lower buds are likely to be mere strings. The best potatoes grow from the roots that put out from the nearest the top of the soil, which means that very shallow cultivating and hoeing is best.

## CLOSES SUCCESSFUL YEAR UNDER VERNON

### High Churchmen at Commencement Pledge School Their Support

Kansas City, Kansas, June 18—(By the Continental Press—The thirty-seventh annual Commencement exercises of Western University were brought to a close Thursday, June 4th before an overflow audience in the university auditorium.

The Commencement day exercises ended a week of activities at the historic Quindaro institution and proved a fitting climax to the excellent series of programs rendered during the Commencement period.

Bishop W. T. Vernon, superintendent of the State Industrial Department at Western University was in charge of the exercises. A gorgeous procession led by the Western University band, under the direction of Prof. Guiou H. Taylor wended its way from Grant hall to the university auditorium. Accompanying Bishop Vernon in the procession were: Hon. Homer Hoch, Chairman of the State Corporation Commission, former Congressman and Commencement Speaker, J. J. Rhodes, State Treasurer; W. A. Bailey, editor of the Kansas City Kansan; Bishop J Arthur Hamlett, Bishop Noah Williams; the faculty; the graduating classes and other distinguished guests. The processional was a dignified spectacle. The robes, caps and gowns of varying hues and colors indicative of the degrees and departmental graduates lended splendor to the occasion.

To the graduating classes, Mr. Hoch advocated "an open mind, a responsive heart, determined will and purpose," as necessary "highways along which to travel." The message was forcefully delivered, and abounded in epigrams and scintillating thoughts and statements which gripped the audience from beginning to end. Thunderous applause interrupted the address at several points and he was greeted by a prolonged applause at the conclusion.

Remarks were made by Bishops J. Arthur Hamlett, C. M. E. Church and Noah H. Williams recently assigned Bishop of the A. M. E. Church; W. A. Bailey, editor of the Kansan and State Treasurer J. J. Rhodes.

Bishop Williams pledged wholehearted support of the nine annual A. M. E. Conferences over which he presides and "harmonious cooperation to the limit of his ability in the development of Western University. He announced his plan to operate a divinity school as the church side of the university, leaving the state to operate the other departments. He said, "I was Bishop Vernon s campaign manager when he was elected a Bishop in 1920 and I have never had cause to regret my support of him since then. Bishop Vernon is a full fledged Bishop, as much as I am a Bishop and he was relieved at his own request to develop and do his work here at Western University. He is eligible and like to be given an episcopal district assignment whenever he desires it or when it becomes necessary. I intend to work with him in the development of this institution. I have nine annual conferences running from here to the Pacific ocean and they are all open to him. I have absolute confidence in Bishop W. T. Vernon now as I have always had." Significance was attached to Bishop Williams' promised support due to the opposition which was offered the operation of the school by his predecessor.

Bishop Hamlett in response expressed appreciation on the part of the Board of Trustees for the support promised Bishop Williams. State Treasurer Rhodes and W. A. Bailey paid glowing tribute to Bishop Vernon and those who had supported him in his administration in the affairs of the State Industrial Department at Western University.

There were thirty-nine persons in the graduating classes, there being sixteen from the junior college, eleven in high school; two in printing; two in commerce; one in carpentry; two in high school home making and five in college food and clothing. The list of graduates follows:

Junior College:—Marjorie Calhoun, Opal Rutherford, Sarah Maddox, Naomi Hollis, Helen Lewis, Florence Robinson, Mary Graham, Willie Powell, Edna Hollis, Louise Agent, Arvil Lovett, Hazel Gantt, Rosavelt White, Donald Richardson, Almer Story and Hazel McCray. High School —Clara Humphress, John Underwood, Granville Harris, Mary Underwood, Corinthian Clay, Mary Arnold, Odessa Sims, Alpha Grigsby, Mary Creal and Leon Adams. TRADES—Printing: Cecil Hercey and Mazelma Mott Commerce:—Eldridge Williams and Mazelma Mott. Carpentry:—Samuel Burton. High School Home Making:—Lillian Wilson and Mary Underwood. College Food and Clothing:—Oree Thomas, Louise Agent, Mable Richardson, Willie Powell and Brooksie Canady.

The announcement that for the first time in the institution's history the school had been placed on the accredited list and that diplomas were signed by the Chairman of the State Board of Administration as well as the Superintendent, President of the Board of Trustees and heads of departments brought the most prolonged applause of the day's exercises. The student body of the present year is the largest since Bishop Vernon served the institution several years ago.

**Prominent Visitors**

Among those who occupied seats on the platform were: Bishops J. A. Hamlett and Noah W. Williams of the C. M. E. and A. M. E. Church, respectively; Drs. W. B. Brooks, T. H. Wiseman, F. J. Peck, E. R. Vaughan, I. S. Wilson, W. T. Biggers and J. W. Williams of the A. M. E. Church; C. E. Chapman, L. E. B. Rosser, A. C. Bailey, L. A. Story, and B. J. Gamble of the C. M. E. Church; D. A. Holmes, S. W. Bacote, J. W. L. Underwood of the Baptist Church, G. D. Hancock of the M. E. Church; B. J. Whitlock, rector of the Episcopal Church; Prof. W. T. White, J. J. Rhodes and Hon. Homer Hoch. In the audience all of the professions of the city were well represented. Drs. I. M. Miller, I. M. Gill, J. E. Dibble and several others represented the medical profession; Profs. J. H. Collins, M. H. C. Collins and Fred K. Douglass. Many of the prominent visitors were accompanied by their families. The attendance throughout the week is said to be the largest in the past fifteen years.

## U. S. DEPARTMENT OF JUSTICE MAKES ITS USUAL GESTURE

### Belatedly Decides to Investigate Peonage in Arkansas

Memphis, June 18—(ANP)—According to officials of the Southern Tenant Farmers' Union, Attorney General Cummings has ordered Sam E. Whittaker, special assistant to the Attorney General, attached to the criminal division, to come into the strike area of Arkansas to make an investigation of reported violations of the peonage statute and forced labor. This action came as a result of a request from the National Committee for Rural Social Planning. The committee charged that District Attorney Fred Isgrig of Little Rock, Ark., was not the proper person to make the investigation due to his local connections with planters involved.

James Myers of the Federal Council of Churches of Christ in America left New York this week for Little Rock. He will make an investigation of the strike situation for the Federal Council.

Following is a telegram sent to Attorney General Cummings on receipt of the news given above:

**Homer S. Cummings, Attorney General, Washington, D. C.**

**Associated Press reports that a special investigator is being sent to investigate violations of the Federal laws against Peonage and Kidnapping. We are prepared to lay before him a number of cases of violations of those laws, and will see that he gets the evidence from our people.**

**(Signed) H. L. Mitchell, Executive Sec. Southern Tenant Farmers' Union.**

## SECRETARY ICKES TO ADDRESS ANNUAL N. A. A. C. P. MEETING

### Popular Member of the Roosevelt Cabinet to Speak June 29th

New York, June 12—Secretary Harold L. Ickes of the Department of the Interior will deliver the principal address at the opening of the 27th annual conference of the N. A. A. C. P. in Baltimore, Maryland on the night of June 29, it was announced here today.

Mr. Ickes, whose work has touched more colored people than any other government department with the exception of that of Harry L. Hopkins, is expected to deal with the problems of colored Americans, and to explain how the New Deal is attempting to include them in the various plans for recovery. It is expected that the address will be broadcast over a nation-wide radio network.

The conference will be welcomed to Baltimore by Mayor Jackson for the city and by Mrs. Lillie M. Jackson, president of the Baltimore branch. Also speaking on the opening night will be Dr. Louis T. Wright, chairman of the board of directors, who will give a report of the year's work.

On Tuesday, June 30 the speakers will be Dr. E. Franklin Frazier of Howard university, who will discuss relief problems; and John Brophy, secretary of the Committee for Industrial Organization, who will talk on industrial unionism and the Negro worker.

Wednesday night, July 1 will be N. A. A. C. P. youth night with Miss Marjorie Penney of Philadelphia, Franklin Bourne of Columbia University, Martin L. Harvey of the Christian Youth Council of North America, and Miss Juanita E. Jackson of the N. A. A. C. P. national office as speakers.

On Thursday, July 2 Charles H. Houston, in charge of the campaign against educational inequalities will discuss the courts as a means to remedy school conditions. Friday evening July 3 will see the presentation of the 22nd Spingarn medal to the late Dr. John Hope. The award will be accepted by Mrs. Hope. Sunday afternoon at the closing session of the conference, the speakers will be Senator Robert F. Wagner of New York, co-author of the Costigan-Wagner anti-lynching bill, and Walter White, secretary of the association. The Sunday meeting will be preceded by a parade of delegates and Baltimore organizations and citizens.

In the daytime meetings delegates will hold group discussions on various topics including: consumer cooperation; lynching; legal defense; labor problems, including sharecropping; the use of the ballot; fascism; education; and N. A. A. C. P. organization problems. Among the discussion leaders will be Rabbi Edward L. Israel of Baltimore; Dr. E. W. Taggart of Birmingham, Ala.; John P. Davis and George Rycraw of Washington, D. C.; William H. Hastie of Washington; Irvin C. Mollison of Chicago; Mrs. Estelle P. Dye of Baltimore; R. D. Evans of Waco, Texas; Roscoe Dunjee of Oklahoma City, Okla; C. H. Hamlin of Wilson, North Carolina; and others.

# FROG FARM STARTED NEAR CAMDEN

Arkansas Gazette

(Special to the Gazette)

Camden, June 13—Raising bullfrogs for marketing is being undertaken for the first time in this section of the state by the Ouachita frog farm, located on the old Millville sawmill pond, about 14 miles from Camden, by Louis Hendricks and Ed Chidester of Camden.

J. E. ("Gene") Stearns of Amarillo, Texas, one of the few survivors of the original Princess Pat regiment of the World war, is the frog expert in charge of raising about 20,000 "croakers." Stearns knows the frog business from leg to frying pan, and back. He s traveled around the world, having served in several branches of military service and at one time was a member of the Third and Fourth London Scottish regiments.

The Millville pond is ideal for such an industry. The pond is about 100 yards wide and a quarter mile long. It is fed by springs. Stearns has a house on the bank where he lives and tends to his frogs. Five large tanks on the bank and two huge fenced in ponds are where the frogs grow.

It requires about 14 months for the egg to become a full grown marketable frog, according to Stearns. In the largest pond are the breeders. He has 38 pairs of these. There are around 4,000 frogs in this pond. This does not include the eggs or first stages of tadpole. Stearns removes the baby frogs from this pond into the first tank and they remain there until about 14 or 15 days old. Then they are removed to another tank when they become nine to 10 weeks old. In two weeks they are removed to another tank. Finally, they are moved to the other large fenced in pond and there they remain until they are sold. Stearns must watch these frogs carefully and make sure that the frogs of the same age are always in the same ponds. A large or adult frog will devour younger ones.

Some of the frogs reach a length of 23 1-2 inches from toe to nose and many weigh over three pounds. The cow frog is larger than the bull frog. It requires about 100 days for the frogs to develop from eggs to full developed frogs. They must be fed and cared for in order to fatten up. They are fed crayfish, crickets, grasshoppers and other insects. Stearns has a special crayfish pond he uses to raise food for his pets. He is trapping insects and has a large container he keeps them in. At feeding time, the spectator is given a real treat watching the small frogs devour a crayfish twice its size. They gulp them down whole. Queer to say, the frogs will not touch a dead crayfish or a dead insect of any kind. They wait until it moves before striking it. If it remains motionless for any length of time they will not bother it.

Stearns keeps an accurate check on his frogs and can tell you almost the exact number of frogs he has in all the pens. Of course, some may escape to the pond proper but at night with the aid of a large dip net, he goes out and captures the wanderers. Croaking season comes just before the mating time, according to Stearns and when the frogs stop croaking, the hatching period sets in.

The ordinary sized frogs bring $3 per dozen in Camden. either dressed or alive.

The "Jumbos" bring $6 a dozen. The entire frog is sold and in many instances is shipped alive to Northern and Eastern cities where hotels, restaurants, etc., feature the Southern delicacy. The live frogs are placed in large refrigerators or cooling units and kept for months.

Although it requires much patience and care to nurse from tadpole to saleable size in 14 months, the price warrants it. To the ordinary Southerner, a bull frog is something to go gigging for every season and to eat on camp hunt, but the growing of these for market represents a new industry that nets a good profit because the demand is always great.

# ATLANTA UNIVERSITY GRADUATES ADVISED TO LOOK FORWARD

Atlanta, Ga., June 9—(Special)—In a plea for a new spirit of scholarship which will look forward not backward, and be concerned more with changing realities than with fixed ideas, Donald Slesinger, until recently professor of law and associated dean of social science at the University of Chciago, yesterday told the graduating class of Atlanta University that their aim must be to create a future world for themselves. Following his address, which was heard by an audience that virtually filled spacious Sisters Chapel, degrees of Master of Arts were conferred on a class of 21 and Master of Science on two.

Boldly striking out against the traditionalism and empty formalism of most present-day scholarship, Mr. Slesinger declared that graduate education to day consists largely of the passing on of ideals, not experiences, which give the holder a specious sense of truth." While much field work in the social sciences is being carried on, such as studies of slums, of delinquency, and the way courts operate, most of these studies, he thought are directed by persons who have no feeling for their material and consequently have no intuition about it. The result, he found, is often a tiresome elaboration of the obvious."

Speaking especially to the graduating class of Atlanta University, Mr. Slesinger recalled that they as students during the depression years had been exposed to misery and hunger, and said: If you can only keep that in mind as you construct your syllogisms and read your columns of statistics, you will be on the way of creating a real science out of the pain you suffered. When you interpret the curves of the elasticity of demand for cotton, never forget the aching muscles and sweating backs that produce it. When you make spot maps of delinquency in metropolitan areas, remember the boys and girls, with the marrow scarce formed in their bones, who spin the cotton sweated from the fields. Your sciences are human sciences, not the juggling of figures, and the neat fitting in of proposition to doctrine. That, too, has to be done, but with men and women, boys and girls in mind, not symbols."

Declaring their inspiration lay in America today, Mr. Slesinger called on the graduates to create, not recreate. Their contribution, he said, is to form the new American culture that will be a blend, no matter how they try to purify it. Instead of trying to reconcile what they are doing with what has been written, through, or painted in the past, he urged the graduates to look ahead and ask what would be thought of their work three hundred years hence.

"When that time comes" he said the men and women who are now being traditionalists and fighting to maintain their status will have been forgotten, and the high places given to trail blazers, to those who were concerned at all costs with understanding the truths of their day. If that way is pard, it doesn't matter for there is no way of making your lives soft. The world into which you and your university was born was not created for you. Nothing remains then, but to create a future world for yourselves. And that takes knowledge and spirit, and the calm assurance of and faith in your eventual triumph."

The exercises of the morning were preceded by an academic procession to Sisters Chapel, and were opened with the singing of "Holy Spirit, Truth Divine," and a prayer by Reverend John C. Wright, pastor of the First Congregational Church. The address was preceded by the playing of the Lento movement of Dvorak's American Quartet by the Kemper Harreld String Quartet, and was followed by a spiritual by the Morehouse College Quartet. The candidates were presented to Acting President Florence M. Read by John P. Whittaker, registrar of the University, and the degrees were conferred by President Read. The Altanta-Morehouse-Spelman chorus sang "Praise Ye the Lord" (Randegger), and the benediction was pronounced by Dr. James M. Nabrit.

Degrees of master of arts were conferred upon the following young men and women: Violet Alice Garrett, New Iberia Louisiana, biology; Lila Moore Brown, Brunswick, Ga., economics; George Russell Finley, Atlanta, economics; Marian Amelia Allen, Atlanta, education; Charles Morgan Clayton, Decatur, Ga., education; Annie Belle Hatcher, Atlanta, education; Howard Lafayette Johnson, Atlanta, education; Sadye Mae Watson, Atlanta, education; Lillie Sirmans Weatherspoo, Columbus, Georgia, education; Ethlynne Elizabeth Holmes, Albany, Ga., English; Augusta Victoria Jackson, Brooklyn, New York, English; Augusta Juanita Johnson, Cartersville, Ga., English; Emma Ophelia Weathers, Rolling Fork, Miss., English;; Lois Elaine Greenwood, Atlanta, French; Ellihu Quinten Norris, Atlanta, history; Emma George Wesley Wesley, Corzet, Virginia, history; Robert Alexander Bonner, Altanta, mathemattics, William Floyd Crawl, Sumter, South Carolina, mathematics; Franku Geneva Foster, Florence, Mississippi, mathematics. Bonita Golda Harrison, Fort Worth Texas, sociology, and Pouise Dephia Davis Shivery, Atlanta, sociolog.

Degrees of Master of Science were conferred on the following: Birde Lucile Scott, Seneca, South Carolina, biology, and Henry Cecil Ransom McBay. Mexia, Texas, chemistry.

## Paralytic Held On Liquor Charge

Jackson, Miss., June—(ANP)—Jesse Gilmore, a paralytic who hasn't been able to walk for 11 years, was arrested at a downtown Negro poolroom last week when officers found two pints of liquor in his wheel chair. Three more pints were confiscated in a search of his home. Gilmore is paralyzed in both legs and hips.

# TEN TUSKEGEE GIRLS GET READY FOR BIG OLYMPIC TRY-OUTS

Tuskegee Institute, Ala., June 8,—Ten young women, members of the Tuskegee Institute track and field squad, promising Olympic prospects, are practicing daily in the Alumni Bowl under the watchful eyes of the Institute coaching staff. If these young women are able to undergo the rigorous training schedule they will take part in the Final Olympic tryouts and the National A. A. U. Championships which will be held at Providence, Rhode Island, July 4. The party is scheduled to leave the Institute the last week in June for Providence.

The star of the team is Jeanette Gipson, 17 years of age, a native of Tuskegee, Ala. This little girl weighs 105 pounds and runs the 100 meters in 12 seconds flat. She is also a member of the relay team, running at anchor.

Gertrude Webb, 17 years old, niece of Dr. W. T. B. Williams, vice president of Tuskegee Institute, runs the 50 meters in 6.7 seconds. She broad jumps 17 feet and runs the 100 meters in 12.8. She is a member of the relay team. Her weight is 103 pounds and she is 4 feet and 8 inches tall.

Vesta Crayton, 17 years old, weighs 106 pounds. She is 4 feet and 10 inches tall, runs the 80 meter hurdles in 12.5 seconds, broad jumps 16 feet and 7 inches and runs the 100 meter in 12.5 seconds. She is also a member of the relay team.

Jessie Abbott, 17 years old, 5 feet and 8 inches tall, weighs 118 pounds, runs the 100 meter in 13 seconds. She is a member of the relay team.

Mabel Smith, 18 years old, is 5 feet and 7 inches tall, and weighs 118 pounds. She broad jumps 17 feet and 8 inches; high jump 4 feet and 10 inches and runs the 200 meters in 26 seconds.

Mamie Hardnett, 19 years old, weighs 115 pounds, is 5 feet 6 1-2 inches tall. She high jumps 4 feet and 11 inches and runs the 80 meter hurdles in 13.5 seconds.

Cora Gaines, 19 years old, weighs 120 pounds and is 5 feet and 7 inches tall. She runs the 80 meter hurdle in 13 seconds and high jumps 4 feet and 10 inches.

Florence Wright, 20 years old. weighs 150 pounds. She is 5 feet and 9 inches tall and puts the shot 40 feet, throws the discus 110 feet and the javelin 115 feet.

Azzie Smith, 18 years old. weighs 115 pounds. She is 5 feet and 8 inches tall and throws the baseball 240 feet.

Lula Hymes, 18 years old, weighs 110 pounds, and is 5 feet tall. She runs the 100 meters in 12.5 seconds, the 50 meters in 6.4 seconds, broad jumps 16 feet and 6 inches. She is a member of the relay team.

# TUSKEGEE INSTITUTE LEADS IN EXHIBITS AT DALLAS, TEXAS

Dallas, June 18—(ANP)—The first truck loads of exhibits to arrive at Dallas to be placed in the Negro exhibits buildings were assembled at Tuskegee Institute under the direction of President Frederick Douglass Patterson. In charge of these two truck loads of the exhibits and serving as pilots for the motorcade were Arthur P. Mack, in charge of steam engineering, and Matthew Wood, a member of the agricultural faculty of that institution.

So important and valuable were the Carver and Curtis section of the exhibit that Dr. Carver consented for his products and discoveries to be assembled only under condition that his assistant, A. W. Curtis, should accompany the exhibit to Dallas and supervise the installation.

Exhibits have also been received from the State of West Virginia. Advance information indicates that exhibits are on the way, having been crated and shipped from practically every state in the Union and most of the educational institutions in the South.

## SALUTE TO THE "WONDER BEAN"

(CONTINUED FROM PAGE 3)

new industrial uses and improve present known uses, to test for the best varieties for industrial uses. At present some 35 soybean mills and a number of cottonseed oil mills are crushing soybeans for oil and oil meal; 20 concerns are manufacturing soybean food products; 15 mills are making soybean flour, and more than 50 factories are turning out various industrial products.

RECIPES for curious consumers who are unfamiliar with this product have been published by the Bureau of Home Economics of the Department of Agriculture in a mimeographed bulletin, "Soybeans and Soybean Products for Table Use," which will be sent free to anyone addressing that Bureau. Another food source of general information is "Soybean Utilization," Farmers' Bulletin No 1617, which can be bought for 5 cents from the Superintendent of Documents, Washington, D. C.

## GOVERNMENT BUYING FARM SEEDS IN ARKANSAS

(CONTINUED FROM PAGE 1)

aeres have been accepted. Also leased by the corporation and farmed by its preliminary subdivision plans under way. Work on house plans will begin immediately.

Central Arkansas Valley (infiltration)—Ten options have been taken on 1,0267 acres on which appraisals have been made. Plans have not yet been developed for these scattered farms.

Western Arkansas Valley (infiltration)— Twenty-four tracts, aggaggregating 3,145.3 acres, have been optioned and appraised.

Crowley's Ridge (infiltration) — Twelve options have been taken on 2,117 acres of appraised land. Boundary surveys are being made.

Northwest Arkansas (infiltration) —Fifteen tracts, totaling 2,149 aces, have been optioned and appraised. Fifty-four options have been taken on 7,299 acres and 40 tracts, totaling 5,52 acres have been appraised.

### Other Accomplishments

The report on farm tenats purchase a project for farmehs who have not been on relief or the rural reettlement program, showed 16 options obtained on 2,436.7 acres in Arkansas.

Under the land utilization program 297,045 acres had been optioned and 285, 521.47 acres accepted in the region. In Arkansas 169,687 acres had been optioned and 162,56.-35 acres accepted. The other land is in Mississippi and Louisiana.

The labor report for April 24 howed 4,413 men employed at security wages on the 10 utilization projects in the region, of which 2,582 were in Arkanas.

Farm debts totaling $511,484 were adjuted in 392 Arkansas cases. A eases. A total reduction of $151,-958 was effected and taxed aggregating $11,219 were paid.

## SUB-AVERAGE WHEAT HARVEST IS FORECAST

(CONTINUED FROM PAGE 1)

still was lacking in a large portion of the area east o fthe Mississippi and in northern portions of the great plains.

If dry weather continues in these areas there is danger of extensive crop failure, the board said. On the other hand, it added with the exception of the large acerage of winter wheat abandoned and some fields was cotton and tobacco where no stand was obtained, there has been little actual loss of crops to date.

## STARVATION DAYS OF CIVIL WAR

(CONTINUED FROM PAGE 1)

those gray and blue uniformed men on."

The sprightly centenarian also recalled Harper's Ferry, although she never saw John Brown.

### Always Food Was Scarce

"It was the time that food and shoes were scarce in our town. I went over to Harper's Ferry to get shoes and it was then that John Brown was hanged. I went past the place of the hanging, but at that time, I guess I was more interested in shoes."

To Mrs. Whiting the civil war is as yesterday, so vividly does she remember it—the men of both armies marching wearily past the dirt road by the plantation— the starvation everywhere, the never-ending sounds of fighting. She says she was in Leedsburg when it was boomed and remembers how the houses shook and saw the great torn places in the streets.

But the memory is a pleasant one. "There was a very pretty lady in the house with me at the time of the bombing," she laughs heartily, and when the bombing came nearer the house she became panicky and, woman-like rushed to a flour barrel. She thrust her head in— I suppose she didn't care about the rest of her when the bombs came near!"

### Freed When War Ended

When the war ended Mrs. Whiting was freed. She went to Washington and, working as a cook, served some of the great statesmen of the day, Senator Sargent and Congressmen whose names are now past history. She knew Col. Stevenson, a Confederate soldier, because had so often visited the plantation, later marrying the granddaughter of the house. She was in the capital when Lincoln was hot and grieved because of the loss.

This woman who has seen so much in her life is perfectly healthy. "Why not?" she retorts. "I have worked hard and constantly all my life, I have eaten good food; I have enjoyed living." She still cooks the dishes that made her a famious cook in Washington years ago.

### Motors Appall Her

Restaurants with their peculiar way of cooking food, modern machinery and modern food that is of much poorer quality than that of a generation ago, she finds intolerable. Most of all, she resents automobiles. "Ugly things— what under this sun is more beauitful than a fine of span of horses!"

Mrs. Whiting, until a year ago, was the most active person in the neighborhood. Then both her feet got frostbitten and the toes were amputated. It made her lame, but still undaunted, she goes about home in her yard, holding herself upright by broomhandles or by pushing a chair in front of her. She cooks dishes to tempt the most stubborn palate, using her limitless Southern lore, and likes most of all to have visitors call and tell her news.

Mrs. Whiting lives alone, still getting a great deal of pleasure out of living, and looks forward confidently to more birthdays.

## COTTON EXPORTS FROM HAITI MOUNT

(CONTINUED FROM PAGE 1)

Experts employed by the government are reported to have developed a native cotton which is somewhat similar to Sea Island cotton. Seeds of this selected cotton have been distributed to Haitian farmers in increasing quantities. The bulk of the Haitian cotton exported at the present time consists of a mixture of selected cotton and the ordinary short fiber, the report shows.

Although it is probable that Haiti could substantially increase the volume of its cotton export trade over the present figure, in view of the appearance of the boll weevil and the character of the native farmer it is not believed that Haiti will become a serious competitor of cotton-produeing countries in the near future, according to the report.

# COLORED SERVANTS IN MIAMI, FLORIDA BEING PERSECUTED

## All Workers Forced to Give Fingerprints at Police Station

**Miami, Fla.**, June 18—(By Marty for ANP) Miami's reign of terror against Negroes, which began last March with an attempt to force labor into the bean and celery fields at 60 cents a day in many eases, came out into the open this week with an official recommendation from the Director of Safety that Negro servants be fingerprinted and registered at the police station. Alexander Orr and Robert Williams, city commissioners, hastened to add to the recommendation that "this measure is for Negro servants; it is unnecessary to subject white women working at barbecue stands and in homes to this embarrassment."

Last March 21 the sheriff's office sounded the bell for the beginning of the campaign for persecution when two carloads of Negroes were taken off the streets and from their homes, and given the alternative of working on farms under a forced labor condition or serving six months on the roads. An effort to make this action a state law had been defeated a year previously when a delegation of unemployed whites and Negroes marched into the state capitol and demanded that the proposed law be scrapped.

Miami has been noted for several years for its practiee of forbidding Negroes to be found in the white sections of the city after dark. Previously the penalty for violating this "law" was a handling by the police. The new proposals, however, would force those servants who have business in white areas to "carry identification cards showing their photograph, fingerprints, name and address." The fate of those without the identification cards can only be guessed.

## ORGANIZATION URGED BY FARM EDITOR

(Arkansas Gazette)

(Special to the Gazette)

Russellville, May 5—Only by the political strength and bargaining power that comes through organization can American agriculture approach its place in the economic world, Dr. Tait Butler, editor of the Progressive Farmer of Memphis, Tenn., declared here today as the principal speaker at an Agri Day program at Arkansas Polytechnic College.

"Four things are necessary to assure the future of United States agriculture: To secure and maintain economic justice for agriculture in its competition with other industries; more efficient production, especially through greater soil fertility and larger per acre yields, control of the production of non-perishable surplus or export crops, and the co-operative, or more efficient marketing of farm products," Dr. Butler said.

### New Deal Opponents Scored

Scored the opponents of the New Deal farm program, Dr. Butler said: "I must admit the AAA is unconstitutional, but I don't believe it was before the decision by the Supreme Court. The most unconstitutional thing about the AAA was the decision itself.

There are always more people in rags because of overproduction of farm products than because of any attempt by the government to curtail or control production," the editor declared in answer the adverse criticism of the cotton and corn-hog reduction programs.

"Agriculture is naturally handicapped by the inability of its workers to exercise control over the volume and quality of their products," the speaker continued. "For this reason, in no country has unaided agriculture been able to keep the economie pace with commerce and industry.

Every farmer should belong to a farmers' organization in which he can help in choosing his representatives to fight for his economic rights. If agriculture is to hold what it has gained in the last decade, and especially in the last three years, it must not only hold its present militancy, but must increase it somewhat in proportion to basic importance of the industry to the general welfare and in proportion to the numerical power of its numbers.

Stressing the need for greater efficiency in agriculture, Dr. Butler said:

"The consuming world never has and never will afford the inefficient production anything more than the hardest sort of a plain living. Even full economic justice to agriculture from our governments cannot insure a successful agriculture, unless agriculture increases its efficiency in production and the marketing of its products."

In conclusion, Dr. Butler said: "The system of selling farm products now largely in vogue, whereby an outsider buys the products from the producer as cheaply as he can and resells them to the consumer for as much as he can, has never proved satisfactory to producers in any industry. So long as this system is in vogue, farmers will continue to be hewers of wood and drawers of water."

### Parade Precedes Assembly.

A parade, held preceding the assembly, opened the ninth annual Agri Day program at Teeh, fifteen floats carrying out the Arkansas centennial idea, under the supervision of Charles Evans, chairman of the Pope County Centennial Commission, were entered. First prize on floats was awarded the Tech agri float, which portrayed better homes and agriculture. Second and third places were awarded to the Ozark National Forest and the Arkansas Power and Light Company, respectively.

A. R. Rogers, director of the centennial, spoke on the Tech assembly program. and at a civic luncheon held at the American Legion hut.

Following the luncheon, open house was observed on the Tech campus. Other features of the afternoon program were a baseball game, Hector vs. Teeh, and a pageant depicting the history of Arkansas.

## HORSE 39 YEARS OLD IS STILL IN COLLAR

St. Joe, Ark.,—"Old Sam," 39 year-old bay horse belonging to J. H. Duncan of Choctaw, who had owned him and used him on the farm continuously for 33 years, having bought him as a six-year-old from Sam Stephens, who had acquired him as a colt, trading for him a "side of meat," is still in service.

Only two years ago, Mr. Duncan then 75, cultivated a 15-acre crop with the old horse. This spring "Old Sam" had helped prepare the garden. There were eight children in the Duncan family, and "Old Sam" was the first horse ridden and handled by them all. In late years his glossy coat became streaked with gray.

The only time "Old Sam" ever "cut up" seriously was when the first aeroplane landed in a field near Choctaw and not far from his pasture, several years ago. As the plane circled low, Sam jumped the pasture fence and sought refuge in the timber, where he remained in hiding for three days.

## RA HOMESTEAD PROJECT CALLS FOR 120 HOMES AT TUPELO.

Tupelo was assured of a homestead project today by T. Roy Reid of Little Rock, regional director for the Resettlement Administration.

The projeict, for white people, will be on a 350-acre plot outside the city limits. A 50-acre selection will be occupied by Negroes.

A total of 120 new homes will be built to replace those destroyed in the April tornado. The two units will cost about $35,000.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

# THE MODERN FARMER

Vol. IX. NASHVILLE TENN., JULY 15, 1936 No. 6.

# Government Project For Negroes

## LAND TO BE DIVIDED INTO 91 TRACTS OF 40 ACRES EACH

Negro tenants and sharecroppers will be given an opportunity for land ownership in the state of Arkansas by the Rural Resettlement Division of the U. S. Government.

A 600,000 dollar project about 15 miles south of Helena in Pillips county Arkansas has been decided upon.

The land is to be divided in 91 tracts of 40 acres each with a home, barn and other improvements.

Officials will select the farmers after a trial period, and if the farmers are worthy, they will be given the opportunity to buy their farms over a period of several years.

The Resettlement Administration also plans to build a community center with commissary, administration buildings, cottongin, school and community building, repair shop, grist mill and hospital.

The farm houses will be of various design and size and the cost of construction will vary in price from 1,075 to about 1200 dollars each.

It is said that work on the buildings will be started sometime in July.

## California Cotton Choppers Protest Recent Wage Cut

BAKERSFIELD, Calif., May 8—Citizens of both races in Kern county, who are members of the Allied Workers' club, have launched a vigorous protest against the new wage cut which was recently made by the San Joaquin Valley Cotton Grower's Association. None of the workers was represented when the wage cut was made.

The workers are now getting only 20 cents an hour or 75 cents per acre for clear fields for cotton chopping. The Allied Worker's club is demanding 40 cents an hour as a minimum wage. The workers have sent out a stirring appeal for an investigator. Protests were made of the recent discrimination in laying off some Race workers.

## LOOK TO PLATFORM FOR CROP INSURANCE

### Says Plan is Needed to Relieve Government

#### DROUTH DEMANDS HEAVY

**Tugwell Orders Resettlement Officials To Make Loans To Cotton Farmers in South Carolina and Georgia**

Washington, June 24.—With new requests being made for drouth relief, agriculture department officials looked to Philadelphia tonight to see if the final draft of the Democratic platform would contain a certain plank advocating crop insurance.

They said a crop insurance plan to tie in with the new soil conservation program was needed to relieve the government of the heavy demands for financial assistance which has been made on it since 1930.

Crop losses from this year's drouth are increasing daily in the north central states, officials said, noting that a four-point emergency program calling for the expenditure of between $50,000,000 and $100,000,000 in that area was agreed upon yesterday.

Today Rexford G. Tugwell, resettlement administrator, announced that he had ordered resettlement officials to make loans to cotton and corn farmers in South Carolina and Georgia.

**Two Proposals**

Two separate proposals for crop insurance were taken to Philadelphia by Secretary Wallace and Senator Pope, Democrat, Idaho. Under Wallace's proposal, the insurance plan would be directly linked with the $500,000,000 soil conservation-subsidy payment program which, officials said, already had acted indirectly as crop insur-

## NEGRO FARM MEETING AT PRAIRIE VIEW TEXAS

There will be a four state meeting of Negro farmers, educators, ministers and extension agents from Arkansas, Louisiana, Oklahoma and Texas at the Prairie View College, Prairie View, Texas, Aug. 12. A special program has been arranged, and visitors will be given a real Texas barbecue in the afternoon.

Secretary of Agriculture H. A. Wallace, Director Southern Region Soil Conservation, Cully A. Cobb and several other prominent governmental officials will speak.

Prof. C. H. Waller, State Leader of Extension Work in Texas is in charge of the program, and says there will be not less than five thousand in attendance.

## DR. H. A. BOYD INVITED TO MAKE SPECIAL ADDRESS

Dr. Henry Allen Boyd who is now in Norway attending the International Sunday School Association has been invited to make the principal address at the big farm meeting to be held at Tuskegee Institute, Tuskegee, Alabama, August 14. Farmers, educators, ministers, agricultural leaders from Alabama, Florida, Georgia, Mississippi, and South Carolina will attend. Secretary of Agriculture H. A. Wallace, Dr. L. A. Tolley, Administrator Agricultural Adjustment Administration and Honorable Cully A. Cobb, Director Southern Region Soil Conservation, all of Washington, D. C., will make special talks to our farmers.

This will no doubt be the largest gathering of Negro farmers and their families ever held at any time in this country. A special committee is now at work perfecting plans that will permit them to comfortably care for the thousands of visitors that will attend this gathering. Statistics show as follows:

| No. Farms Operated by Negroes | |
|---|---|
| Alabama | 91,275 |
| Georgia | 73,285 |
| Florida | 12,764 |

(CONTINUED ON PAGE 8)

## Farmhand Pay Gains Reported For Spring

**Salaries Are 11.78 Higher Than 1935 Throughout Nation**

Farm hands in the United States received $1.78 more a month durin the spring of this year than they did in 1935, the United States Department of Agriculture announced yesterday. An increase in employment was also reported.

"During the spring farm wages with board average $20.89 over the nation, compared to $19.11 during 1935," officials reported. "This compared with $35 during 1929 and $15 in 1933.

"A preliminary estimate indicates that about $400,000,000 was paid to hired labor on farms in 1935, with a prospect that the pay roll this year will be considerably higher because of the increase in labor and wages.

"From 1924 to 1929 the pay roll for farm hands averaged about $900,000 a year. The low was reached in 1933 when only $352,000,000 was paid. In 1929 there were about 2,555,000 hired hands on farms in the nation against 1,770,000 last year," the report said.

## SHARECROPPER RELIEF PLANS ARE OUT LINED

### Regional Director Gives Views of Tenant Problems

T.Roy Reid regional director of the Resettlement Administration, expressed the belief in a statement today that "a permanent, family-sized, owner-operated farm program of the government," was the answer to the sharecropper problem in eastern Arkansas and elsewhere in the cotton South.

He said funds available to the Resettlement Administration could provide only "a demonstration of the possibilities of rural resettlement," naming absentee-ownership of land, and lack of owner-interest by tenants on large plantations as the real cause for the strife that has recently stirred eastern counties in this state.

The root of the trouble he described as "the collapse of the tenancy system.

"The current controversy between landlords and workers in eastern Arkansas focuses attention upon a growing agricultural evil and the need for a changed land policy, if agriculture is to survive," he said.

**RA Disinterested in Quarrel.**

"The Resettlement Administration is not interested in either side of the current quarrel, but it is concerned with the underlying causes of the disaffection and with what it believes to be the only so-

## TENANT FARMERS DEMAND RIGHTS FOR COLORED

Muskogee, Okla., May 8—Reversing the usual attitude of whites in the South toward Negroes, the Oklahoma section of the Southern Tenant Farmer's Union, holding its first state convention here on April 25, went on record as demanding equal rights for Negroes and adopted a resolution two clauses are of significant interest to Colored workers. They are: (1) We demand equal rights to all workers and farm labor with special privileges to none, and (2) We demand the repeal of the unfair and discriminatory sales tax, and the substitution of a tax on incomes and inheritances to take the place of the tax on consumers.

Convention support for the Negro workers in Waggoner county in

(CONTINUED ON PAGE 8)

## N. F. C. F. SESSIONS WILL BE HELD OCT. 26, 27, 28

Chicago.—The main offices of the National Federation of Colored Farmers Inc., announces that the next convention will be held at Charleston, Mo. The dates are Oct. 26, 27, and 28th. The main sessions will be held in Currin Hall. Secretary of Agriculture, Hon. H. A. Wallace and Hon. Cully A. Cobb director of Southern Region Soil Conservation have been invited to speak.

As usual there will be several hundred dollars worth of valuable prizes awarded for best exhibits, farm products, sewing, canning and baking.

Local citizens in and around Charleston have already started activity in arranging to take care of the delegates and visitors. Special rates will be granted on all railroads.

## West Tennessee Farm Will Get Cotton Basis Payments

Memphis, Tenn., July 2—Rezoning of the 21 Tennessee counties west of the Tennessee River to a cotton payment basis instead of a tobacco payment basis in the new federal soil conservation program which will bring "thousands of additional dollars" to West Tennessee farmers, was announced today by Mrs. Amy Brown Miles, acting State National Emergency Council director.

When zoning was announced by the Departmet of Agriculture in April Mrs. Miles said Tennessee was listed in the East-Central region with a tobacco basis of payment, rather than in the Southern or cotton states region.

## FARM MEETING AT TUSKEGEE

Ministers, educators, extension agents and farmers from Alabama, Florida, Georgia, Mississippi and South Carolina have been invited to attend a meeting at Tuskegee Institute, Ala., August 14. Many matters of interest to the Negro farmer and his family will be up for discussion. The principal address will be delivered by Secretary of Agriculture.

Mr. T. M. Campbell, field representative has appointed committees to look after every phase of the program and care for the thousands of visitors who will be in attendance. Special excursion rates have been granted by the railroads.

# Helping the Farmer to Help Himself

## Resettlement Administration, Washington, D. C.

For many years the American people have regarded farming as the one activity certain to yield at least three square meals a day and a place to sleep at night. Many thought the farmer was never threatened with starvation, even though there were years when he did not make any money.

This idea was proven false during the depression, when more than a million farm families were forced on relief. The Government had to feed these families to keep them from starving. It was during this period that the Government learned that in most cases it is far better to help the farmers help themselves than to give them direct relief. It was shown that a small loan, better land, and good farming methods would put many of these distressed families on their feet permanently.

The Resettlement Administration is the Government agency now carrying out this program of aid for needy families. Resettlement is extending loans and providing agricultural guidance to enable low-income farm families to become self-supporting. The purpose is to enable individual farm families to get a new start under more favorable conditions on the farms they now own or rent or on nearby lands. This part of Resettlement's program is called "rehabilitation."

—.1.—

**What Does "Rehabilitation" Mean?**

"Rehabilitation" means to restore or reestablish. As the Resettlement Administration uuses the word, it means simply making loans to farmers to help them get back on their feet. In emergency cases it means providing more for food and proper shelter until they are able to provide for themselves.

—.2.—

**Who Are Being Helped Through Rehabilitation?**

Farm owners, farm tenants, share croppers, farm laborers, and other persons with farm background who need help and cannot obtain reasonable credit from any other agency are eligible for aid.

—.3.—

**How Can a Farmer Go About A Loan**

A farmer who desires a loan from the Resettlement Administration should apply to his County Rehabilitation Supervisor, his County Agricultural Extention Agent, or to the local public welfare office in his county.

— 4 —

**For What Purposes Are Rehabili- Loans Made?**

Rehabilitation loans are made for the purchase of necessary farm supplies, livestock, household needs, feed, seed, fertilizer, for payment of rent, taxes, and for food.

— 5 —

**How Long Before A Loan Must Be Paid Back And What Is the Rate Of Interest?**

Loans are made for periods of from 2 to 5 years, depending on the purpose for which the money is used. For example, a borrower may be given 5 years to return money used to buy a horse while money lent to buy feed for the horse would have to be repaid within 2 years, as the borrower should be making his own freedom within that time. The rate of interest on all rehabilitation loans is 5 per cent per year..

— 6 —

**What Security Is Requested For The Loan?**

The borrower gives a note on his personal property, on property to be acquired through the loan, or on his prospective crop. A loan is not made unless there is good reason to believe that the borrower can pay back hte money through the operation of his farm management plan.

— 7 —

**What Is A Farm Management**

It is a plan worked out by the farmer, the County Agricultural Extension Agent, and the County Rehabilitation Supervisor. They decide which crops can best be grown on the farmer's land and how he can make the most money from his farm. As part of his farm plan, the farmer is shown how he can raise his own food and feed addition to cash crops. In this way he can live better and pay off his debts quicker than by using all his land for one crop. It is interesting to note that many farmers do not need a loan after their plans have been worked out by the county supervisor.

— 8 —

**Are Loans Made To Groups?**

Yes; under certain conditions. Many good farmers are forced to work inefficiently because they lack the right kind of equipment. Resettlement seeks to remedy this situation by making loans to individuals to enable them to join with their neighbors in buying heavy farm machinery which all of them can use. The borrowers, for example, may cooperate in the purchase of a hay baler just as they have long cooperated in the loading of a carload of chickens when no farmer had enough poultry to fill a car. These loans are chiefly for cooperative activities of families aided by Resettlement, but other farm families in need of the same services are urged to join in whenever a cooperative arrangement is started in their community. Loans may also be made to cooperative groups and associations for the purpose of helping rehabilitate the members provided such loans are not available from other established credit agencies.

— 9 —

**How Can The Farmer Be Expected To Repay A Rehabilitation Loan ..If He is Already Heavily in Debt?**

If the farmer is already in debt, the Resettlement Administration tries to do something about it. Volunteer committees, called Farm Debt Adjustment Committees, have been organized to help debt-ridden farmers. These committees met with the debtor. They try to have the debt scaled down, or to get the debtor more time in which to pay off the debt, or to find a new creditor. This service is available in every county to all farmers who are in debt and threatened with foreclosure.

For further information write Resettlement Administration, Washington, D. C.

(United States Department of Agriculture. Agricultural Adjustment Administration)

**MAKING THE MOST OF THE HOME MARKET**

**Adapted from an address by Secretary of Agriculture Henry A. Wallace before a meeting of farmers at the University of Nebraska, Lincoln, Nebraska, May 4, 1936.**

Highlights.—While industry has looked almost entirely to the domestic market, agriculture has had to look in considerable part to the foreign market. Industry has asked and obtained high protection for its goods in the home market, while agriculture could get very little benefit from such protection except temporarily ,and after a year of unusually bad weather.

The peak of imports caused by the unprecedented drought of 1934 was reached in 1935. Imports of oats have been negligible since May 1935. Imports of corn have receded rapidly since November. Imports of rye have been insignificant since August. Imports of butter reached their peak in April 1935, and since July have been below the 10-year average. Only wheat imports have continued in unusual amounts, because the 1935 crop was badly damaged by rust disease.

The real question is, Are farmers going to accept the high tariff idea as a cure-all for agriculture. All through the twenties farms asked for a real program for agriculture that would enable them to meet the situation of surplus acres, and they got high tariffs. Agriculture was not helped, but harmed.

To sell abroad we must buy abroad, particularly more industrial products. But tariff on such products are now so high as virtually to create domestic monopolies.

While time and money spent by industrialists in opening up new uses for agricultural products are a fine contribution to the general welfare, this industrial-use program in itself does not seem to be a solution to the farm problem.

For agriculture, the real hope of making the most of the home market does not lie in cutting off a few imports, but in building up the purchasing power of city consumers. Agriculture benefits from increased industrial activity and from measures designed to put purchasing power into the hands of the large numbers of people who still have almost none. This is agriculture's great stake in the national welfare.

**Americans Proud of Their Home Market**

The United States has long been proud of its home market as the broadest and wealthiest single market for goods in the world.

There has, however, been difficulty in working out equitably the ideal of a preeminent domestic market. While industry has looked almost entirely to the domestic market, agriculture has had to look in considerable part to the foreign market. Industry has asked and obtained high protection for its goods in the home market, while agriculture could get very little benefit from such protection, except temporarily, and after a year of unusually bad weather. Industry also obtained great advantage from the corporate form of organization as a means of exploiting its markets more efficiently, while agriculture in its very nature could make little use of this powerful instrument.

**Farmers' Market at Mercy of World Prices**

Since 1920 farmers' troubles have largely grown out of the unprotected export position of farm products. The collapse of the World War market, coupled with a high industrial tariff policy and great foreign indebtedness to the United States and coincident with a shift on the farms from animal to tractor power, left American farmers with some 50,000,000 excess acres under cultivation. The products of these acres could no longer be sold profitably abroad, and when they piled up at home they smashed prices on the home market as well.

Since 1933 the Government has grappled with the task of helping farmers to adjust exportable surpluses to demand, and thus to keep them from weakening both the home and the foreign market.

Many nations have felt it necessary to adopt nationalistic policies, setting up quotas, embargoes, domestic subsidies, and the like on farm products. Through its high tariff policy the United States has joined in making international trade difficult, although this country is now not a debtor nation, but a creditor nation, and needs to enable foreign nations to send goods to the United States to pay their debts and to pay for United States exports. Recently, a beginning toward increased foreign trade has been made through reciprocal trade agreements and farmers have more to gain through this policy, if it is wisely carried out than has any other group. The progress has, however, been necessarily slow, and many Americans have lost faith in expansion of the foreign market as a way to renewed prosperity. They believe we should concentrate on the home market instead, with agriculture as well as industry taking the nationistic view.

It is entirely reasonable that American farmers should want to make the most of their great home market, but the question still remains, How can they really do so?

A number of answers are suggested.

Some people, observing the increase in farm imports during the last 2 years, are saying that the thing to do is to cut out all imports of farm products that can possibly be grown in this country.

Another suggestion is that we set up a 2-price system with no production control, and sell the export part of our crop at low prices abroad, and the domestic part at a higher price at home, with the Government or the farmers themselves absorbing the difference.

Other people urge the encouragement of new industrial uses for American farm products.

Let us examine these proposals.

**An Embargo on Farm Imports?**

What about farm imports? Have they damaged the domestic market and domestic prices? What is the relationship between farm imports and farm prosperity? Would farmers benefit if, by high tariffs or an embargo, we cut out all imports of those products which American farmers themselves can produce?

The Department of Commerce reports that during 1935 this country imported a total of $1,106,000,000 worth of products classed as agricultural. This sum is a good deal less than the 10-year average of 1 2-3 billion dollars, or the 20-year average of 1 3-4 billion. In 1929 we imported over 2 billion dollars worth of agricultural products, and in 1920, nearly 3 1-2 billion dollars worth.

The 1935 total, like the others, included coffee, rubber, raw silk, tea, cocoa, spices, bananas, and similar commodities, none of which is produced by American farmers. These products accounted for more than one-third of the total value or about $483,000,000.

There were left then, some $623,000,000 worth of agricultural products, partly or wholly competitive, imported in 1935. The largest item in this total is sugar, amounting to $134,000,000. This country has a high protective tariff on sugar, as on many other items such as wool and some of the oils.

The increases in imports of competitive items, including those on which there are high protective duties, are due partly to improvement in the purchasing power of consumers in the United States, which brought about a return toward normal volume in imports of those items that we regularly imported before the depression.

But the most important single factor in the increased importation of

many items has been the drought of 1934.

It was the worst drought in our history. It caused a reduction in our total feed supply, compared with normal, of some 50,000,000 tons, or about one-half. The corn crop alone was cut down by a billion bushels. The adjustments in corn and wheat acreage through the Agricultural Adjustment Act were negligible in comparison with the reduction due to the drought.

In the 18 months from July 1934 to December 1935, during which time the drought shortage was most felt, feed imports represented only about 7 percent of the drought reduction.

All these imports paid the usual tariff duties—25 cents a bushel for corn, 16 cents a bushel for oats, 10 percent ad valorem for wheat unfit for human consumption, and so on. Only on hay brought into the drought-affected area at the urgent request of farmers in the Northwest, was the duty removed.

**Imports Returning to Normal**

The peak of imports caused by the drought was reached in 1935, the months differing with the different products, and depending on when the new crops were harvested. Since then imports have greatly receded and, for most products, are now practically normal. Imports of oats have been negligible since May 1935. Imports of corn have rapidly receded since last November; in March of 1936 they were 66 percent less than in the same month a year previously. While rye tariffs are proportionately lower than tariffs on other grains, rye imports have been insignificant since August 1935.

Imports of butter reached their peak in the late winter of 1935; in the last half of the year they amounted to only a little over a million pounds, which is below the 10-year average.

Imports of wheat have continued into 1936 because the United States spring-wheat crop of 1935 was greatly reduced in both quantity and quality by serious rust damage, and therefore did not offset the drought shortage. The bulk of present wheat imports is of hard spring wheat, brought in to meet domestic requirements for this type of wheat, and paying the usual duty of 42 cents a bushel.

A drought twice as bad as any other that has occurred since the Civil War, resulted in imports of corn representing only about 2 percent of the average United States production; of wheat, a little over 3 percent; of beef, including canned beef, 3 percent of average slaughter; of pork, one-tenth of 1 percent of average production; and of butter, 1 percent.

The situation caused by the drought of 1934 is now pretty well over, although its effect on livestock marketings will be felt for another year. Imports brought about by the situation have receded and are receding, and will soon be back to normal.

The increased imports were due to an absolutely unprecedented condition. There is no point in viewing the farm imports of 1935 which were caused by the drought of 1934, as reflecting a normal situation. It is wholly misleading to compare the situation in 1935 with the situation in 1932, without regard to production figures for the 2 years. Both farm and industrial imports were low in 1932, in fact, the lowest in a generation.

**What Do Imports Do To Income?**

This leads to a consideration of the relationship between farm imports and farm prices, and between farm imports and farm income. When farm prices drop after a period when imports have been coming in, it is almost never because the imports caused the decline in domestic prices.

Imports are attracted over the tariff by unusually high domestic prices, and to keep on attracting imports the price has to remain high. The tariff really works for the farmer in such a situation.

But what is the usefulness of the tariff to farmers during a year like 1932? In that year imports were certainly kept out. Imports of corn were only 400,000 bushels. But corn was selling for as little as 10 and even 5 cents a bushel in some of the Corn Belt States, and of what use was the 25-cent tariff on corn then? Wheat sold for 28 cents a bushel and of what use was the 42-cent tariff in that situation? Butter sold as low as 14 cents a pound while being "protected" by a 14-cent tariff. Hogs sold for $3 a hundredweight and less, and of what use was the $2 tariff?

In 1935, after a year of extreme drought, imports were large. But farmers were receiving an average of 58 cents for corn, $1 for wheat, over $10 for beef, $8 for hogs, over 30 cents for butter. Cash farm income stepped up from less than 4 1-2 billion dollars in 1932 to almost 7 billion dollars in 1935.

The right tariff level for any farm product is another question. When protection is so high that prices rise to very high levels, the result is either that consumption is reduced, or more producers enter the field and eventually bring about overproduction, so that the benefit is only temporary. Protection ought to be applied equally to both agriculture and industry and in such a way that those branches of agriculture which have long been in the export market, are not harmed.

For most American farmers, 90 percent of the time, the farm tariff does not mean a thing either way. During the other 10 percent of the time, after unusual weather, the tariff is effective, as shown by the coming in of a few imports, and it means farmers are getting good prices for their products.

**Tariffs Harmed and Did Not Help Agriculture**

Are farmers going to accept the high-tariff idea as a cure-all for agriculture? All through the twenties farmers asked for a program for agriculture that would enable them to meet the situation of surplus acres, and they got high tariffs. The result was that agriculture was not helped, but harmed. Farmers had to buy in a protected market and sell in an unprotected market. In 1932, with surpluses three times the normal volume, corn at 10 cents, hogs at $2, wheat at 30 cents, what did the tariffs mean?

Farmers wanted a program that would protect their home market from the price-smashing weight of surpluses that could not be sold either here or abroad. They wanted an equivalent of industry's tariff. In 1933 they got at least a start toward such a program, with adjustments in acreage financed by processing taxes that were somewhat the equivalent of industry's tariff. Farmers began to see their way to a balanced relationship with industry, so that agriculture as well as industry might obtain just benefit from the home market.

Farmers have more to lose through nationalistic policies, than any other group. In 1936 farmers are cultivating probably 35 to 45 million acres to produce things which will be sold abroad. If all imports that can be produced in this country were shut out, the most land that would be required to produce those imported products in this country would be perhaps 10 million acres. It wouldn't be good sense to risk having to leave 35 to 45 million arces idle in order to try to gain a market for 10 million acres Other countries do not want to accept our products if we will not accept some of theirs. They are able to put up trade barriers overnight to keep out any of our products that they do not want.

**The Real Farm Problem**

With normal producing weather this year and next, extraordinary things could happen to supplies and prices of farm products.

This is the central farm problem. American farmers would like to see their remaining foreign markets improved, but great surpluses of exportable farm products should not be allowed to wreck the domestic market and price in the future.

To meet this situation it is suggested that we discard all checks on production and adopt a 2-price system, or export bounty, which would be a straight subsidy of production. This, some believe, would enable farmers to send surpluses abroad at lower prices, while selling the domestic part of the crop at home at higher prices.

For a given commodity, and for a short time when certain foreign conditions are favorable, this plan can work. However, as a long-time policy applied on a large scale, the dual-price or export-subsidy system would bring more grief than benefit to farmers and to the Nation, particularly if it were used in place of some control over production.

Underwriting the export market in this manner would surely bring into production an increasing acreage of the commodity affected. Increasing production would mean increased export surpluses which in turn would require higher and higher subsidies to maintain price. Finally, the policy would result in the economic insanity of virtually giving away to foreign nations a large part of our wealth and soil fertility.

Besides, it is extremely probable that we could not get rid of huge surpluses in this manner, no matter how big the subsidy, especially if at the same time we refused to accept imports.

Use of export subsidies by nations is really international price cutting. It is a form of cut-throat competition that ruins everybody if it is carried far enough. The only kind of international trade which is worth anything on a large scale and in the long run, is the kind that trades goods and services for goods and services.

**Reciprocal Agreement Policy**

Efforts by the State Department to work out better foreign trade conditions through a reciprocal trade agreement policy, when compared with congressional tariff-making, constitutes a much fairer approach, at least from the standpoint of agriculture. In this new approach every item on which an import duty reduction is proposed, receives careful and scientific study that takes into account the significance and effect of any duty reduction, from both the national point of view and that of the industry involved. Under the old approach the rates of duties on particular items were determined primarily by relative political strength and bargaining skill of contending interests. In such a set-up agriculture was manifestly at a disadvantage since most of its major branches are on an export basis or so close to it that they are not in position, under ordinary weather conditions, to benefit from increased import duties.

Agriculture has obtained real benefit from the reciprocal trade agreement policy. Though temporary adjustments by certain producers may be required, farmers as a whole group have much to gain from it.

Another suggestion for bettering the market for farm products is to encourage their greater industrial use. Industry already buys more than 40 percent of its raw materials from the farmer. It buys cotton for making clothes and other products, it buys tobacco, it buys corn for starch, for sirup, and for other products, it buys soybean oil for paints, varnishes, and other industrial uses. The Department of Ag-

## THE LYNCHING RECORD FOR THE FIRST SIX MONTHS, 1936

Dear Sir:

I send you the following information concerning lynchings for the first six months of this year. I find according to the records compiled at Tuskegee Institute in the Department of Records and Research that in the first six months of 1936 there were four lynchings. This is the same number as for the first six months of 1936 there were four lynchings. This is the same number as for the first sir months of 1935, and 2 less than the number 6 for the first six months of 1934.

All of the persons lynched were Negroes. The offenses charged were rape, 2; attempted rape, 1; murder, 1.

The States in which lynchings occurred and the number in each State are as follows: Arkansas, 1; Georgia, 3.

## Farm Notes

Farmers throughout the southern belt have been complaining of the drought this year. Statistics from the Weather Bureau show 1894-1895, 1901, 1910, 1914 and 1930 were exceedingly dry in many sections of the country, but no year since the Weather, bureau, nearly 70 years ago started recording day-to-day precipitations, has had such generally deficient rainfall in April, May, June and July as 1934.

There are more than 6,000 known species of insects of economic importance in the United States according to Dr. Ressler of the U. S. Department of Agriculture. Damage caused to agriculture and its products is more than two billion dollars annually. Animal diseases account for a loss of two hundred fifty million, and animal losses due to insect damage are estimated to be in the neighborhood of one hundred fifty million yearly.

The insect pest creating the largest loss is the boll weevil, which inflicts annual damage of over one hundred sixty million dollars on the cotton crop.

Farmers should be careful in buying only the best quality of seeds. It is poor economy to buy any kind of seed because it is cheap. Generally seeds are offered at a low price because they are old or because of impurities.

When buying, be sure to get a statement of the percentage of germination and of the date when the test was made. And again, be sure you buy only those seeds which you know are adapted to your locality.

Chickens raised on farms in the United States in 1933 numbered 662-550,000 at an average value of 42 cents per chicken at the farm.

Eggs produced on farms in 1933 numbered 31, 813,000,000 valued at $359,471,000 dollars or an average of a little over 13 cents per dozen at the farm. Estimated value of other poultry on farms in 1929 was turkeys 479,115,000, ducks 12,212,-653, geese 6,643,746 dollars.

Soy beans prices continue on the grade with sales of number 2 yelow in Chicago on June 30th up to 96 cents per bushel. This is a new high for the season and 11 cents above the level which prevailed early in the month.

Whipporwill peas will be in good demand this winter and next spring. Our farmers should anticipate their requirements for soy beans and peas well in advance of their needs.

Reports from the offices of the National Federation of Colored Farmers Inc. Chicago reflect much activity among the members in preparing to attend the next annual convention. Several valuable prizes will be offered for different farm products besides for canning, sewing, etc.

Charleston, Missouri, Nashvlle, Tenn., Atlanta, Ga., are bidding for the convention.

Announcements as to the city that will be selected will be in the next issue of the Modern Farmer.

## Hamilton Sights Victory in Fall For G. O. P. Ticket

Chicago, Ill.— Gov. Alf M. Landon and Col. Frank Knox, Republican nominees for President and Vice President, respectively, have in the month since their nomination at Cleveland taken more than one and one-half million voters away from President Roosevelt and appear assured of 272 electoral votes six more than necessary for election.

This is the opinion of John M. Hamilton, chairman of the Republican national committee, as set forth in a statement made public yesterday by the G. O. P. committee's national headquarters in Chicago. It is based, the statement reads, on copyrighted statistics compiled by the American Institute of Public Opinion.

**Poll Shows Turn of Tide**

"On the basis of the institution figures," read the Hamilton statement, "President Roosevelt's strength has slumped about 4 per cent since the Landon nomination. In total votes this means that Landon and Knox have taken between 1,500,000 and 2,000,000 votes from Mr. Roosevelt.

"The figures of the institute show that on the basis of electoral votes Landon actually is leading the nation. Director George Gallup of the survey gives him 272, with a number of states marked doubtful.

"These figures apparently are the first taken by the institute since Landon was nominated. The trend is significant because Republicans have not yet started their campaign. It therefore is a spontaneous expression of confidence in the Republican candidates and their program of dealing fairly with all voters, especially the common man."

**Trend Followed Nomination**

The chairman, who arrived in New York City last night said the institute's poll is only one of severed statistical indications that have become public substantiating his lief that a Republican trend set in as soon as the Cleveland convention nominated Landon and Knox.

"Judging by the information coming into Republican national headquarters," the statement continued, "the common humanity of Gov. Landon has impressed itself upon the people of the nation in an unmistakable manner.

"People are realizing that he knows how to keep his promises, that he is of and for the common people, and that instead of adding to the burden of taxation imposed upon the common man, whether it be in the city or on the farm, Gov. Landon can be depended upon to deal with governmental deficits as ugly things they are.

**Greater Gains Are Seen**

"When the Gallup survey indicates that states like Ohio, Coroda, Minnesota, New York Pennsylvania Illinois, Indiana, and Montana are definitey enough for Landon as to give the Republicans the edge there can be little doubt that when further polling of the voters is done there will be shown an even greater swing from President Roosevelt."

The poll, according to the chairman, supports his conviction that Landon and Knox undoubtedly will carry New York in spite of the Democratic political maneuvering which has been going on there. He added that all the states listed by Dr. Gallup as in the doubtful group will be safely Republican and that some of those listed as safely Democratic will be found in the Republican column on Nov. 3.

Col. Knox is leaving Chicago tomorrow nigh tfor Topeka, Kans., where he will confer with Gov. Landon on Wednesday on campaign plans.

**G. O. P. Meeting Here Today**

Republican state leaders will meet today in the LaSalle hotel to make plans for a united drive to return Illinois to the Republican column in the November election. To the meeting, which was called by Perry B. McCullough, state chairman, have been invited the chairman of the 102 county committees, the state central committee members, and all the state candidates.

Besides mapping coordinated plans for the Republican campaign in the stite, arrangements will be made for the participation of downstate Republicans in the official notification of Col. Knox of his nomination for Vice President. The notification will be held in the Chicago Stadium on July 30.

Illinois Republican nominees for congress will meet in Peoria on Thursday to make plans for coordinating their activities. Wayland Brooks, Republican nominee for governor, has been invited to the meetng.

## Report Early Planted Corn is Spoiled Over Wide Area

Reports of damage to the corn crop are increasing. Messages from various parts of the leading producing states to Chicago commission houses yesterday indicated a considerable part of the early planted acreage had been injured beyond recovery. "White caps" are now being found in a great many fields, indicating tassels and upper leaves of the plant are burnt and pollenization of the ears will be imperfect.

According to B. W. Snow, crop expert, the corn crop has reached and passed the limit of its endurance over wide areas from Oklahoma and Kansas to Indiana, so that irreparable damage has begun. When this point is reached, he says, crop deterioration proceeds at cumulative rate.

The bulk of the Iowa corn acreage can recover and produce a good crop with normal temperatures and moisture, according to the weekly report of C. D. Reed, head of the Iowa weather bureau. There has been no rain in 30 to 42 days of a agricultural importance in large areas in western Iowa.

Earliest planting corn has been forced too rapidly and as fast as tassels appear they are burned white and the silk on the ears is seared and made unreceptive of pollen, while the late planted corn, which has not developed a deep root system, dries up and vanishes. The yield of corn is estimated to have been reduced 10 per cent from the 10 year average, but owing to the increased acreage as compared with 1935 the crop might be estimated at about the same as the 373,000,000 bushels produced last year.

"Following several years of partial crop failure, the northwest is facing this season a crop calamity of unprecedented proportion," says the Van Dusen-Harrington company of Minneapolis. "The benefits to be derived from the limited territories which can still produce a fair crop are greatly overshadowed by the losses in the extensive areas which produce the major portion of the northwest's spring sown crops.

"In most of South Dakota, in at lease two-thirds of North Dakota, and in all of eastern Montana small grain crops are definitely a complete failure."

Unless the province of Alberta receives rain and lower temperatures the spring wheat crop this year will probably be one of the poorest in recent years, said a report from R. O. Cromwell, crop expert, to Lamson Bros. & Co. from Calgary. In smallest yield in the last ten years was 92,534,000 bushels in 1929.

H. C. Donovan, crop expert, in a report of Thomson & McKennon from Mac Leod, Alberta, estimated the three Canadian provinces would do well to equal the 260,000,000 bushels produced in 1935 unless there was a quick change in weather conditions.

Soy bean prices continue on the upgrade with No. 2 yellow selling yesterday at $1.26 per bushel at Chicago, a new high level for several years and nearly 42 cents above the level which prevailed early in June. Despite the sensational advance in prices, local interests reported it was impossible to buy any material quantity of beans from the country. No 2 yellow corn sold in the sample market at 92 cents per bushel, a new high for the season.

Cash corn in western Kansas, according to a report from F. F. Thomson, a Chicago grain man, to James E. Bennett & Co., is selling around $1.05 per bushel, while farmers can secure wheat from country elevators at 75 to 80 cents per bushel This disparity in prices is said to have resulted in considerable wheat being fed to livestock.

Drouth and heat prevails in southern Russia and cables yesterday reported the spring wheat crop was in very poor condition, while yields of rye will be small.

## Certain Colors Retain Heat, Tests Disclose

A scientific test, made with black, white, and green wooden paddles and a small sunlit snowdrift, proved in an interesting way how certain colors have the power to absorb and retain heat. The black paddle sunk deep into the drift while the white one stayed practically on top and the green one remained halfway between the two. By tests such as these, scientists have discovered that radiators painted in light tints allow the radiation of more heat than ones painted in the dark shades which retain the heat instead of allowing it to pass through.

## Simple Way to Keep Poultry Water Clean

A practical and simple way of supplying his poultry flock with clean water has been devised by C. C. Smith, Lake City, reports John J. White, assistant county agent in Craighead county.

Until recently Mr. Smith had nothing but open water vessels in which trash and dirt collected. Now, eight pound lard pails have been ingeniously transformed into closed containers for clean water. Holes about two inches square were cut three inches from the bottom of the pails. The top can be removed from the pail, and filled with water up to the bottom of the holes. The poultry flock can drink from the container with ease, and the water is kept free from trash and contamination.

# Helping The Farmer

(CONTINUED FROM PAGE 3)

riculture has made important discoveries in new industrial uses for farm products. In cooperation with the experiment stations of the leading Corn Belt States it has recently established a soybean industrial utilization laboratory at Urbana, Ill. It is supplying funds for experiments in the use of cotton in road building.

Although time and money spent by industrialists in opening up new uses for agricultural products are fine contributions to the general welfare, this industrial-use program in itself does not seem to be a solution to the new farm problem. Experimental activities are slow. It is not likel ythat a sudden industrial discovery will open up the need for the products of 30 to 40 million acres and solve the farm problem overnight.

**Farmers Are Part of "The Home Market"**

Grim experience has taught agriculture to be realistic about the problem of achieving and maintaining the home market for its products. Farmers have learned that they themselves and the industries directly dependent upon agriculture comprise a large part of the home market. They know that nothing is gained but everything is lost by extreme tariff measures which do not protect the home market, but do bring retaliatory amputation of export outlets, backing up of farm products at home, wrecking of American farm prices, crippling of farm buying power, and actual ruin of the home market, instead of building it up.

Applying the test of practicability to the various suggested alternatives, we may fairly classify into two main groups the workable measures offered to enable agriculture to make the most of the home market.

The first group includes those measures designed directly to maintain a balanced agricultural supply situation in this country, to avoid piling up price-breaking surpluses, and to substitute sound and economic land use for exploitive methods that exhaust the agricultural plant.

The functions of the agricultural adjustment programs included reducing surpluses, restoring balance to supply, raising farm prices, and helping to restore a home market to American industry. The reciprocal trade agreements are part of a general effort to remove barriers to international commerce, to revive world trade, reopen foreign outlets for farm products, and improve supply conditions for our basic farm crops.

In the present agricultural conservation program farmers are making another approach to the supply problem, for a long-time as well as an immediate point of view. The reasons for ruthless exploitation of soil have often been economic—under pressure of extreme supply and price fluctuations farmers have alternately been forced by ruinously low returns and induced by boom conditions to mine and sell the fertility of their land or to turn under millions of acres of grasslands which should have remained in sod. To the Nation and to the individual farmer it is important that production and prices be stabilized, and that the productivity of farm land be maintained.

While the agricultural conservation program will be of immediate assistance in stabilizing supplies, it is not a direct production-control measure. The drought helped to dissipate surpluses, but normal weather would bring surpluses again, and would require the utilization of production-control measures by States, in the way left open to farmers. The year 1938 is sure to see an experimental effort by farmers to meet their supply problem through cooperation of the States. The farm surplus problem is not abolished, nor has agriculture's interest in a balanced supply stiuation evaporated. Agriculture will fight against recurrence of the surplus condition that ruined farmers in 1932.

**Measures for Enlarging Demand**

The second great group of measures available to protect and increase agriculture's stake in the home market includes those which bear upon the demand side of the farm problem. They comprise all those means by which this country is attempting to extend buying power to vast groups of citizens who now have little or no buying power, and to open the great market which could be opened in this country if the 10 or 11 million people now unemployed were working, had incomes, and could buy the goods of farm and factory. Besides the jobless, great numbers of others have incomes so low or so uncertain that they can buy only meagerly.

The great problem of an industrial nation is to assure distribution of the fruits of industry back to the masses of workers. Mass-producing industries can function steadily and successfully only on a basis of mass consumption. Otherwise goods pile up, purchasing power becomes concentrated in a few hands, and civilization is shaken by recurrent plagues of unemployment and depression.

**Industrial Recovery Helps Farmers**

Revival of the purchasing power 30,000,000 farming population has resulted in great improvement in activity and employment in a good many industries. Conversely, the successful revival of industrial activity, the distribution of the products of industry among the masses of the people, the protection of the people's savings, and the stabilization of employment mean to farmers a healthy and growing home market for their products.

Gains have already been made in this direction. During the first 3 months of 1936 farm income from the sale of products was over a billion and a half dollars, an increase of 20 per cent over the income for the same months of 1935. Benefit payments are not included. The recession in farm income and rural retail business that followed the Hoosac Mills decision has been succeeded by new gains as farm confidence has been restored, benefit payments have been resumed, and the price situation strengthened.

This increase in farm income came about not through higher prices, but through the ability of consumers to absorb a larger volume of farm products at a reasonable price, through increased purchasing power.

The trend of income to farmers follows very closely the trend of factory pay rolls. The incomes of consumers, and the sums they spend for dairy and livestock products, follow an almost identical trend. Both reached a low point in 1932, and both had increased by approximately one-third by the beginning of 1936. The same general rule holds, though with variations, for other farm products. Now that factory pay rolls and consumer purchasing power are increasing, farmers are benefiting in a rather striking way, since the margin taken out by middlemen tends to remain fairly constant, and additional consumer expenditure therefore goes quite largely to the producer.

**Agriculture's Stake in National Welfare**

The real hope of attaining and maintaining a great home market for American agriculture actually lies in keeping a healthy farm supply situation; in opening and keeping open the channels of international trade, so that surpluses of our great basic commodities will not back up on the domestic market; in conserving soil resources by sound production of sufficient supplies and not in wasting these resources by reckless overproduction of price-breaking surpluses.

On the demand side, agrculture's interests are served by building up the home market. Agriculture benefits from increased industrial activity and from measures designed to put purchasing power into the hands of the large numbers of people who still have almost none. This is agriculture's great stake in the national welfare.

## 1936 AGRICULTURAL CONSERVATION PROGRAM IN BRIEF FOR THE SOUTHERN REGION

(This leaflet outlines the procedure to be followed by farmers in Texas, Oklahoma, Arkansas, Louisiana, Mississippi, Alabama, Georgia, South Carolina, and Florida. Additional details may be obtained from the 1936 Agricultural Conservation Program—Southern Region, Bulletin No. 1 Revised, Bulletin No. 2, and from county agents or committeemen.)

**Things Participating Farmers Should Do**

1. Attend community meetings.
2. Become members of county associations.
3. Vote in election of community committee.
4. Fill out work sheets and assist committee to determine 1936 soil-depleting bases.
5. Plant a part of their soil-depleting base acreages to soil-conserving crops.
6. Carry out approved soil-building practices. .
7. Make application for payments on the prescribed form.

The Agricultural Conservation Program was designed to carry out the provisions of the Soil Conservation and Domestic Allotment Act of 1936. The primary purpose of the program is to conserve and improve the Nation's farm land.

The program encourages every farmer to participate in the conservation of our national agricultural resources. Farmers may qualify for payments by increasing the acreage in crops that conserve or build up the soil, and by adopting practices that improve hte soil. The program, although national in scope, has been adapted to local conditions.

In organizing the program, community meetings were held and community committeemen elected; County Agricultural Conservation Associations were formed and county committeemen elected. A State committee was seleced o see that the provisions of the 1936 Agricultural Conservation Program are carried out in each State.

**KINDS OF PAYMENTS**

**Class I, or soil-conserving, payment.**—This payment will be made to the farmer who in 1936 devotes a part of his base acreage of soil-depleting crops to soil-conserving crops or uses.

**Class II, or soil-building, payment.**—This payment will be made to the farmer who in 1936 carries out one or more approved soil-building practices on his cropland or pasture. .

A farmer may qualify for either or both of such payments.

**HOW FARMERS QUALIFY FOR PAYMENTS**

1. **Fill out work sheets.**—The work sheet provides spaces for a description of the farm, for recording the acreage and yield of crops harvested in 1935, and for the producer to record the acreage that is

usually devoted to each crop and the usual yield of each crop. These spaces should be filled out under the supervision of a community committeeman or the county agent. Filling out the work sheet does not bind the farmer in any way. It is necessary, however, that a work sheets is to be returned to county committee if an application for payment is to be made at a later date.

2. **File work sheets with county committee.**—A copy of the approved work sheets is to be returned to each farmer after the committee has gone over the work sheet and has adjusted the bases established for the special soil-depleting crops and for the group of general soil-depleting crops.

3. **Adjust farming operations** in keeping with the purposes of the program.

4. **File,** on a prescribed form, **application for payment** with county committee.

### HOW LAND USE IS CLASSIFIED

Cropland is land from which at least one crop other than wild hay was harvested between January 1, 1930, and January 1, 1936. It also is all other land in orchards or vineyards which had not reached bearing age on January 1, 1936. It is important to note that cropland does not include land which has been in permanent pasture since January 1, 1930. A farmer's cropland will be classified under two headings—soil-depleting and soil-conserving.

The following crops are classed as soil-depleting:

Corn, cotton, tobacco, Irish potatoes, sweet potatoes, rice, sugarcane, truck and vegetable crops, including melons and strawberries; peanuts if harvested as nuts; grain sorghums, sweet sorghums, millets, small grains harvested for grain or hay; and soybeans if harvested for crushing.

Cropland devoted to any of the following uses is classified as soil-conserving crop acreage:

Annual winter legumes, includvetch, winter peas, bur and crimson clover; biennial legumes, including sweet and alsike clover; perennial legumes, including alfalfa, kudzu, and sericea; summer legumes, including soybeans (except when produced for seed for crushing), velvetbeans, crotalaria, cowpeas; and annual varieties of Lespedeza.

Peanuts, when pastured.

Perennial grasses, including Dallis, redtop, orchard, Bermuda, carpet or grass mixtures, also Sudan grass.

Winter cover crops, including rye, barley, oats, and grain mixtures, winer pastured or not, if turned as green manure, or if harvested and followed by summer legumes.

Forest trees, if planted on crop land since January 1, 1934.

Acreage devoted to the following uses will be classified as neutral:

Vineyards, tree fruits, small fruits, nut trees, idle cropland, cultivated fallow land (included clean cultivated orchards and vineyards), wasteland, roads, lanes, lots, yards, etc., and woodland other than cropland planted to forest trees since January 1, 1934. .

### HOW THE SOIL-DEPLETING BASES ARE ESTABLISHED

The soil-depleting base acreage is established by the county committee from the data furnished by the producer. In most cases the soil-depleting bases will approximate the bases that could have been established under the 1936 adjustment programs. If no cotton, tobacco, peanuts, rice, or sugarcane for sugar grew on the farm in 1935, the base will approximate the acreage planted to soil-depleting crops in 1935. The acreage held out of production of a particular soil-depleting crop under AAA programs will be incluled in the bases of such crops. Other adjustments may be made if the producer's soil-depleting base or bases are unusually high or low due to weather or other factors.

The total soil-depleting base for a farm includes all the acreage ordinarily planted to soil-depleting crops.

The general soil-depleting base represents all soil-depleting acres with the exception of those planted to cotton, tobacco, peanuts, rice and sugarcane for sugar.

The soil-depleting base for cotton, rice, tobacco, and peanuts will approximate the bases that would have been established for these crops under the 1936 AAA adjustment programs, but adjustments may be made to correct inequities. The base for sugarcane will be the acreage planted to the crop in 1936, unless the acreage planted will with normal yields exceed the quota established for sugarcane. In that case the producer's base acreage shall be his pro-rata share of the acreage needed to produce the quota.

The base rice acreage for any producer in 1936 will be the acreage assigned to him in 1935, subject to adjustment to correct inequities.

### RATES OF AND LIMITS ON CLASS I PAYMENTS

The Class I, or soil-conserving, payment will be made on land shifted from soil-depleting base acreage to a soil-conserving crop or use.

The rate of payment for cotton base acreage planted to soil-conserving crops in 1936 will be 5 cents for each pound of the normal yield per acre of the farm.

The rate of payment for tobacco will be: Burley and Flue-cured, 5 cents per pound; Georgia-Florida type 62, 6 cents per pound; Georgia-Florida type 45, or any other wiwll be 1 1-4 cents per pound.

The rate of payment for peanuts will be 1 1-3 cents per pound.

The rice payment will be 20 cents for each 100 pounds of the producer's domestic consumption quota of rice if the acreage planted to rice in 1936 is between 85 per cent and 100 per cent of the producer's base rice acreage. Deductions will be made if the acreage planted in 1936 is less than 85 per cent or more than 100 per cent of the base. The domestic consumption quota is that percentage of the producer's average rice production which is required for domestic consumption.

The sugar payment will be 12 1-2 cents per pound for each 100 pounds of sugar normally produced on the sugarcane base acreage.

The rate of payment for diversion from the general soil-depleting base acreage to soil-conserving crops will be based on the productivity of the land in the farm.

The above rates are subject to a pro rata revision either upward or downward; however, the rates shall not be inceased or decreased by more than 10 per cent.

Class I, or soil-conserving, payment may be made on diversion up to 35 per cent of a farm's cotton base, but the payments for a county or group of counties may not exceed 25 per cent of the cotton base for the county or group of counties.

The maximum class I payment for tobacco will be on 30 per cent of a farm's tobacco base; for peanuts, 20 per cent; and for the general soil-depleting base, 15 per cent. A producer might divert additional acreage, but he would not receive class I payments for so doing.

### RATES AND LIMITS ON CLASS II PAYMENTS

The class II, or soil-building, payment as set forth in Southern Region Bulletin No. 2, will be made for practices which actually improve the soil. These payments will be made for seedings of legumes, turning under green manure crops, establishment of permanent pastures, planting of forest trees, liming, terracing, and the application of acid phosphate on specified soil-conserving crops and pastures. Other soil-building practices may be approved to meet special local conditions.

The class II, or soil-building, payment is limited for each farm by the soil-building allowance for that farm. That allowance is the most that the operator of a farm can receive for soil-building practices on that farm. The limit for the soil-building allowance is computed on the basis of $1 an acre for each acre that the farmer devotes to soil-conserving crops in 1936, unless he has less than 10 acres, in which case his maximum soil-building allowance is $10.

### MINIMUM REQUIREMENTS AND DEDUCTIONS

Deductions will be made from the payments to the farmer unless he has an acreage in soil-conserving crops in 1936, equal to the sum of 20 per cent of the base acreage of cotton, tobacco, and peanuts; 40 per cent of the sugarcane base acreage; 25 per cent of the rice base acreage; and 15 per cent of the general soil-depleting base acreage after the acreage needed for production of food and feed to meet his home farm needs has been deducted.

The deductions for each acre that the farm falls short of the minimum soil-conserving acreage will be one and one-half times the per-acre rate other class I payment for diversion from the general soil-depleting base. If the class I payment for diversion from the general soil-depleting base is $6 per acre rate the class I payment for farm would be $9 per acre.

Deductions will be made if the producer's plantings in 1936, of crops with special bases exceed the bases established for these crops, or if the sum of the soil-depleting crops planted exceed the total soil-depleting base. The amount of the deduction will be the excess acreage times the rate of payment for diversion from the base which has been exceeded.

### DIVISION OF PAYMENTS

The division of payments between landlord and tenant will be:

37 1-2 per cent to the person furnishing the land;

12 1-2 per cent to the person furnishing the work stock and tools;

50 per cent to be divided in the same proportion as the crops or the proceeds from crops on which class I payments are made, are divided.

A change may be made in the division of payments if it is recommended by the State Agricultural Conservation Committee and approved by the Secretary of Agriculture.

## About Tenantry

Upton G. Wilson says in the Reidsville, N. C., Review that North Carolina has 141,000 tenant farmers and that it should be the aim of the state to make them all landowners.

It is doubtful if North Carolina or any other state could make landowners of all tenants for the simple reason that many are not qualified to be landowners and many who are qualified prefer to remain tenants.

Capital outlays, taxes, insurance and maintenance of buildings and lands constitute something of a burden on landowners. A great many tillers of the soil prefer that the other fellow shoulder this burden while they pursue the peaceful ways of tenantry undisturbed.

## $198,000 Resettlement Site Purchase Made

CONWAY, ARK., June 27.—Comprising 6800 acres which eventually will be the site of a 100-home project, the Resettlement Administration has completed the purehase of the Wright plantation in Jefferson County near Pine Bluff, paying $198,000 to the Deming Investment Company, Oswego, Kan. The purchase is the first big one by the Resettlement Administration in its national operations.

R. O. Deming, eompany president, said the farm is too large to be operated as a single unit under the tenant system. He predieted that other large eotton plantations in the South will be found unprofitable and will be broken into small farms for those who aetually do the farming.

## ITALY "BROKE"

Dallas, Texas, July 23 (C)—The Dallas Morning News, commenting on "Italy's Trade" in an editorial, says Italy, "poor in natural resources" and "almost bankrupt from the expense of the Ethiopian war," now "seeks to add to its national income by increasing foreign trade."

## "Home, Sweet Home" First Sung By Payne At Indian's Funeral

(St. Louis Daily Globe-Democrat Sunday Morning, June 28, 1936)

**Author Under Surveiliance as Insurrectionist at Time.**

Kentwood, La. New light on the sometimes disputed origin of John Howard Payne's old favorite, "Home, Sweet Home," is cast by the family recollections of Mrs. Frank Barnes of Kentwood and by newspaper clippings in her possession, says a correspondent of the Times-Picayune, New Orleans.

This old song, long of such significance to wanderers and to dancers, was not first sung in Payne's opera, "Clari; or the Maid of Milan," produced in London, England, in 1823, as has been generally believed, but according to a story told to Mrs. Barnes by her mother, Mrs. O. M. Dobbs, a native of Gainesville Ga., it was first sung at a place called "Red Hills of Georgia" during the burial of an Indian chieftain who committed suicide over the grave of his wife and child, about 1820.

**Song Wins Freedom**

Payne's wanderings had brought him South and he was at the time held on an Indian reservation under surveillance on a charge of preaching insurrection to the Indians. The Governor of the reservation was Gen. W. N. Bishop, great-grandfather of Mrs. Barnes.

The General heard Payne humming the song at the graveside and questioned him about it, finally telling him, "I am going to set you free, for no man who can compose like that can be guilty of the crime of which you are accused."

What called Payne South to the reservation at the Red Hills of Georgia is not known, but his appearance there was in accord with the wanderings which carried him over Europe and America and across the sea several times.

Payne was born in New York on June 9, 1791, "of fine old New England stock." He spent his childhood in Long Island, living in the home he later immortalized. Experiencing a strong tendency toward the stage, he founded and conducted a little paper called the Thespain. The New York Evening Post reprinted one of the Thespani's articles, and Editor Coleman, astonished to find the writer a 15-year-old boy, aided Payne in financing an education at Union College, Schenectady, N. Y.

**Brilliant Success**

Somewhat against his father's wishes, Payne went on the stage and experienced a brilliant but brief success, making his debut at the Drury Lane Theater in London in 1813.

Payne's talent, however, strangely flagged. He withdrew from the stage and began his wanderings, supporting himself by writing, adapting and translating.

## Actors and Tomatoes

ABINGDON, Va., June 24,—The success of an actor still is measured in terms of onions, eggs and tomatoes offered by the audience—it's the proportion that's different.

Robert Porterfield and the actors in his barter theater, summering here, report bountiful supplies of vegetables, fruits and poultry contributed by the neighbors who attend the performances. Nothing is refused.

## Tenant Always Be Poor, Say

ROCK HILL July 10,—South Carolina club women, holding their 21st annual club institute at Winthrop today turned their discussions to agriculture, the relations of industry and farming and the problems of "youth and the farm" and the "tenant system."

With Mrs. J. L. Williams, of Greenwood county, president of the South Carolina Council of Farm Women, presiding, William P. Jacobs, president, of Presbyterian college, spoke on "The Place of Agriculture in South Carolina."

Strongly urging better marketing conditions, he stressed the importance of improved methods for distribution of farm products in this state and section.

J. Roy Jones, commissioner of agriculture, gave a survey of his department.

**Explains Objectives**

Dr. D. W. Watkins, of Clemson college, director of extension work in South Carolina explained the objectives of the new farm program.

"It is not enough to stop producing so many acres of soil-depleting crops," he said. "The farmers must continue to grow a reasonable acreage of such crops in order that an adequate supply will be available, but at the same time should grow a larger than average of soil-conserving crops.

J. E. Tiddy, of Columbia, assistant to the vice president of the Production Credit corporation spoke on "Youth and the Farm."

Dr. W. H. Mills, of Clemson college, told the club women "nothing more important in education is being done in South Carolina than your work to inspire interest in public affairs."

In discussing the "tenant system" he said the tenant of a farmer was caught between economic laws by which "wages tend to fall and rent tends to rise. The tenant farmer has always been a poor man and always will be," he said, "The only solution for this is a stationary or declining population."

## Meeting Tomorrow of Illinois Farm Debt Adjustment Group

**State Committee Named by Horner in 1933 Said to Have Saved 4700 Farms**

SPRINGFIELD, Ill.,—June 24.—The State Agricultural Conciliatory Committee, which claims to have saved 4700 Illinois farms from foreclosure proceedings, will meet in annual session here Friday.

Organized in October, 1933, the committee appointed farm debt adjustment committees in every county in the state to arrange amicable settlements between farmers and their creditors. The past year the state committee has co-operated with the Rural Rehabilitation division of the Resettlement Administration to aid tenant farmers in need of financial help.

Members of the Governor's State argricultural conciliatory committee are Walter W. McLaughlin, director of the Department of Agriculture, chairman; Hudson Burr, Blooming-Illinois; John M. Crebs, Carmi; C ton; H. C. M. Case, University of V. Gregory, Chicago; C. E. Hopkins, Pontiac; William E. Tanner, Kankakee; Z. L. Linton, Springfield; John G. Oglesby, Elkhart, and George F. Tullock, Rockford. Others attending the Friday meeting will be B. W. DeBord, state conciliator representing the Governor's committee; O. B. Pace. Farmer City, state supervisor, and Perry S. Richey, Champaign, regional chief of the farm debt adjustment division of the Resettlement Administration.

## Big Plantation Acquired By RA

Pine Bluff—A lease transferring the Wright plantation formerly operated as a part of the state penal farm system to the Resettlement Administration was recorded in Pine Bluff Thursday.

The Resettlement Administration has purchased the Wright plantation from W. W. Bowman and his associates in the Deming Investment Company for a reported consideration of $198,000 and deed has been executed and now is up in escrow pending payment of the purchase price.

The lease recites that it was made for the purpose of permitting the RA to begin operations on the plantation which will be colonized with small farmers. The rental on the farm from March 24 to December 31, 1936, is $2,000 but will apply on the purchase price if the Resettlement Administration completes payment by December 1.

The RA already has begun work at the plantation under the direction of Ben Reives, formerly of Marianna, who is superintendent.

A crew of about 25 carpenters and laborers under the direction of George H. Barton, construction foreman. now is engaged in repairing and remodelling buildings on the farm and a further construction program has been planned.

A number of Negro farm families have been assigned to the farm by E. T. Miller of the U. S. Employment Bureau in Pine Bluff and farming operations already are under way.

## U. S. WOULD STABILIZE NAVAL STORES CROPS

**Payments Offered Operators for Curtailment of Areas in Production.**

Joseph C. Kircher, southern regional forester, announced yesterday a program to stabilize the naval stores industry through payments to operators to curtail production and to promote conservation.

He said, the program will be inauguarated immediately by the United States forest service and that co-operation on the part of producers will be entirely voluntary.

A meeting of forest service officials and representatives of the industry will be held at Valdosta on July 8, at 11 o'clock; in the town hall at Savannah on July 9, 10:30 o'clock; at Jacksonville on July 10 and at Pensacola, on July 11.

**Wallace Authorized**

Kircher said Secretary Wallace authorized the program following a conference with Robert M. Newton, of Wiggins, Miss., representing the American Turpentine Farmers' Association.

"The program is simple," Kircher said. "Producers desiring to co-operate will cease chipping on 25 per cent of the faces on or before July 15 and will remove the cups on or before August 1.

"The cups to be removed must be in solid blocks, otherwise government checkers will be unable to inspect on the reduction that has been made. Operators and factorage houses will be furnished with "work sheet" forms on which to report the reductions. These forms will be submitted to the regional forester at Atlanta."

## 500 WOMEN TO GET JOBS ON PROJECT

NEW YORK—Approximately 500 Harlem women will be given employment as seamstresses by the newly opened sewing center at the 369th Regiment Armory.

Sixty-three hundred women employees of the Works Progress Administration's women's division met in the armory, at 143rd Street and Fifth Avenue, Tuesday afternoon to celebrate the opening of the divison's ninth center.

About 150 women are already assigned to the project.

**8,500 Employed**

Mrs. Sarah S. Dennen, director of the women's division, state that the division which began last fall with 120 women now numbers 8,500 women in the five boroughs.

About 3,500 of these are employed in the sewing centers, and the remainder in a variety of projects including hospital help and the home care of chronic invalids and old age security clients.

**Show Garments**

The garments made by the women of the sewing project, which are distributed free to needy women and children on the relief rolls, were exhibited in a fashion show in which the models ranged from very small children, to housewives and included a large variety of dresses useful in the home and for work and street wear.

A brass band from the WPA Federal Music Project played for the fashion show and later for a short period of dancing in which the women and a sprinkling of men, who had occupied all the seats in the armory's balconies and a block of camp chairs on the floor, took part.

## SHARECROPPERS RELIEF PLANS ARE OUTLINED

(CONTINUED ON PAGE 8)

lution of the problem.

"The present conditions provide fertile soil for Communist and Socialist agitators, and the result of their agitation is bitterness without any progress whatever toward a settlement of the differences between landlords and workers. However sincere the agitators may be, it should be obvious even to the casual observer that their methods do not constitute the proper approach to a solution of the farm labor problem."

He said "their methods" made the mistake of assuming the landlord was making enormous profits from "greedy exploitation" whereas "a recent survey shows that the landowner in recent years, far from making a profit has actualy lost money through his farm operations.

"More than one-half of the farmland in the United States is operated by farmers who do not own it. Recent studies show that the crop yield on rented farms is consistently lower than that of owner-operated farms.

**Little Farmer Security.**

"About 10,000,000 farm people in our country have little security or stability, as a result of farm tenancy. The average tenant changes farms about every third year."

He said that "both the landlord and the farm worker are victims of a system and the only solution is to change the system."

"The funds available to the Resettlement Administration are sufficient only to provide a demonstration of the possibilities of rural resettlement. But there is no reason why its methods should not be embodied in a permanent, family-sized, owner-operated farm program by the government.

"Such a program would end such situations as now exist, not only in eastern Arkansas, but all over the cotton South, and would bring about the development of a rural civilization embodying a higher standard of living and a better developed and more stable community life than has been possible under a system characterized by land speculation absentee landlords and migratory tenants."

## Tenant Farmers Demand Rights For Colored

(CONTINUED FROM PAGE 1)

securing the right to vote was pledged by Howard Kester, secretary of the Central Defense Committee of the Union. Oklahoma is one of the few southern states granting the right of suffrage to members of the race.

Anything worth having is worth sacrificing for. If you can not compete with your neighbor in styles and comforts and at the same time get the substantial things you desire, such as education, a home of your own or a permanent position, you had better postpone styles and comforts until these more or less substantial things have been accomplished. Be wise or you will be otherwise.

—William Henry Huff

## Look To Platform For Crop Insurance

(CONTINUED FROM PAGE 1)

ance in some drouth areas.

Outlining the insurance plan, officials said that, for instance, if a farmer were entitled to government payments of $10 an acre for land taken out of production in the soil conservation program, he would be offered perhaps $6 an acre with the remaining $4 going into an insurance fund.

If the farmer produced a normal crop on the land, under cultivation he would not be entitled to benefits beyond the $6 an acre already received, but if from natural causes his crop failed his insurance premium would entitle him to perhaps $15 or $20 an acre.

Wallace and his aides are understood to favor recognition of drouth lss as a cnstantly threatening agricultural disaster, and to have immediately available flexible means for meeting the menace as a regularly constitute part of any national farm program.

## Church Loans Now Available Up To $50,000

**Federal Funds May Be Used for Repairs or Additions**

Clergymen are expressing their pleasure over the amendment to the national housing act, which permits the extension of modernization funds to churrhes by private financial institutions in amounts up to $50,000 under the terms of the modernization credit plan of the Federal Housing Administration.

These funds must be used for property improvement and may cover such items as repairs, alterations, building of additions, installation of heating, lighting and plumbing systems. They may also cover landscaping, laying of walks or driveways or installation of kitchen equipment, and the purchase and installation of eligible machinery and equipment when the amount for this purpose exceeds $2,000.

Loans must be repaid in monthly installments over a period up to five years.

Commenting on the amendment, Rabbi Joseph L. Pink of Buffalo, N. Y., termed the new regulations "very helpful," He said:

"I am glad to learn that church properties are now included among those eligibles for Class A loans under the modernization credit plan of the Federal Housing Administration.

## Powerful New Locomotive Exhibited

The Illinois Central System in connection with Railroad Week, yesterday placed on exhibition in the Central station, Roosevelt road and Michigan avenue, its new 2,000 horsepower Diesel-electric freight locomotive, the largest single unit Diesel locomotive in the country.

The locomotive, which was delivered to the railroad yesterday by its builders was reported powerful enough to haul a train of more than 150 freight cars. Its maximum safe speed is 62 miles an hour. It is 60 feet long, 15 feet 6 inches high, and 10 feet 2 inches wide.

The engine was built by the Busch Sulzer Brothers Diesel Engine company of St. Louis at a cost of about $200,000. It shortly will be placed in service in the Chicago terminal of the Illinois Central.

## $250,000 Federal Aid In Grasshopper Fight

Columbia, Mo., June 27.— A federal appropriation of $250,000 and the assistance of an entomologist been allotted Missouri for grasshopper control work, it was announced here today by Dr. Leonard Haseman, state entomologist.

The funds will be used to purchase 1000 tons of Bran, mostly from local mills, and 10,000 gallons of sodium arsenite, Dr. Haseman said. S. B. Walker, Kansas City, will have charge of securing the brand he said.

The arsenite and brand will be shipped in carload lots to central points for distribution in counties needing aid. Fred Butcher, United States Department of Agriculture specialist, has been sent to cooperate with the entomology and extension departments of the Missouri College of Agriculture in controlling the crop pests.

## Grasshopper Army In South Dakota

Gettysburg, S. D., July 11,—(AP)—A voracious grasshopper army levelled remaining vegetation today in this drought-scarred north central South Dakota region, where farmers face the greatest water famine in memory.

Fields adjoining roads north of Gettysburg were a picture of desolation after the insect incursion.

"Drought has ruined my crops and now the grasshoppers are getting the ruins," despaired W. H Wordman, proprietor of a stock farm nine miles north of Gettysburg. "The sky was dark with them a day ago."

Thirst-crazed wild rabbits swarmed the barn on the Wordeman place and many lay dead about the yard, bait for thousands of tantalizing flies. Chickens and turkeys huddled, panting, in the shade offered by the buildings.

"The hoppers are even entering the house," the farmers continued, "And you can't leave clothes hang out on the line. It's terrible. On top of it all I expect foreclosure and will have to ship my cattle out for pasturage. I only pray I'll get them back."

The vegetable garden of Wordeman, in common with other farmers of the devastated area that extends northwest were burned crisp. The temperature on the house thermometer showed 120 degrees yesterday.

Adjacent to the north is Walworth county where Farmer Fred Perman of Lowry, hauling water by truck six miles for his stock said: "It's the worst drought and grasshopper scourge in my career."

At Mound City, to the north, there is a dam the most popular place from mites around in Campbell county, but the crops are in the same parched condition as further south and North Dakota border. The garden of the city folks have been destroyed by grasshoppers and blister beetles.

Beyond the North Dakota line in Emmons county there is no change. The yellowed grass stretches on and on a desert of burned vegetation where a sea of lush-green wheat waved years ago.

## Strawberry Checks For $400,000 Mailed

**Sum for Shipments from Kentucky County.**

Paducah, Ky., June 24. — Between 3,500 and 4,000 strawberry checks amounting to $400,000 made payable to members of the McCracken County Growers' Association were placed in the mails Monday night, according to E. S. Brager, secretary and sales agent of the association.

The checks represented payments to growers for Dixie Aromas shipped by the association sales agents during the 1936 season. Good prices were received, but the yield this year was one of the smallest in many seasons, only 290 cars having been shipped.

Berries shipped prior to and including May 14 brought $4 a crate; berries shipped from May 15-21 shipped from May 22-28 brought $3.05 and those shipped during the remainder of the season brought $2.60.

## Farmers Trickling North

New census figures just issued show:

1. Colored farms in the United States have decreased 61,0000 in the past five years.

2. Practically all of this decline occurred in the lynching belt of the South.

3. Georgia lost 13,000 colored farms and 10,000 share-croppers, Arkansas 8,200 farms and 5,000 sharecroppers, Texas 5,000 farms and 11,000 sharecroppers, North Carolina, 7,000 colored farms and 4,800 croppers.

4. While colored farms and farm operators decreased in the past five years, the census figures show the number of colored farm owners increased by 4,000. But 69,000 farm tenants left the soil and 2,400 sharecroppers went along with them.

5. Where did they go? Some of them went to the cities. Others came North to farm, quitting Dixie forever.

6. There are 200 new colored farms in West Virginia, 600 new ones in Montana, 800 in New Mexico, 1600 in Arizona, 200 in Washington State, 1400 in California, 200 in Ohio, 150 in Winconsin.

7. By geographic divisions, the census shows: 3,000 new colored farms in the Mountain States alone; even New England has 250 new colored farms that weren't there five years ago.

Over half the farm workers in Mississippi are still colored; two-fifths of those in South Carolina ant Louisiana are colored. One-fifth of the farm work in Georgia, Arkansas, Virginia, Alabama and North Carolina is done by us.

But the census shows that colored farmers are leaving the South. The migration to the North and West is just a tricke now, with a promise of becoming a larger stream.

Well, why should we stay in Dixie where lynching, jim crow disfranchisement and rotten schools are the rule? This is a free country, why not move North,

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.
No supplies sent free. Remittance requested with each order.

# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., AUGUST 15, 1936 No. 7.

SEP - 4 1936

# Resettlement to Help Negro Farmers

## TOTAL OF 341 NEGRO FAMILIES

### Will be Resettled by the Resettlement Administration

A total of 341 Negro families or approximately 1,700 persons will be resettled on productive farms in Mississippi, Louisiana and Arkansas by the Resettlement Administration.

Two community resettlement projects are designed especially for Negroes. One is at Lakeview, near Helena, Arkansas, and the other is at Mound Bayou, Mississippi, a strictly Negro town in the Delta section of Mississippi. The farms are of the same size as those being purchased for white families, and the houses are of the same design and comparable in all other respects.

A recreational lake, complete with camping nad picnic facilities, is being constructed especially for Negroes in two of the land utilization projects, one near Mariana, Ark., and the other near Starkville, Miss.

Of the 4,000 persons employed in developing ten land utilization projects in Arkansas, Louisiana and Mississippi, 1,316 are Negroes and are heads of families that would otherwise be on relief.

Our "breakdown" on the rural rehabilitation program is not complete and will not be complete for several weeks. However, the state director for the rural rehabilitation in Arkansas advises that approximately 1,918 Negro families have received loans totaling $604,170 for which to

(CONTINUED ON PAGE 8)

## NEEDLE WORK IS FINANCING WATER SYSTEM

Money made from home sewing has been used by Mrs. Roy Fincher, member of the South Lakeside Home Demonstration Club. Lake Village, to buy paint, calcimine, and paper for her new house, according to Miss Evelyn Hogue, Chicot county home demonstration agent.

Mrs. Fincher has won first place in the county house dress contest for the past two years, and this year won second place in the afternoon dress contest. Because of these achievements, she has gained a reputation for doing high quality sewing, and has as much work as she can take care of. She has made $67 from sewing since January 1.

The amount spent on the paint, calcimine, and paper came to $4.50. The remaining $62.50, and the money she will earn in the future, Mrs. Fincher plans to install a water system and bathroom. A kitchen sink and electric pump are to be installed as soon as Mr. Fincher has finished with the crop this year.

The Finchers live on the bank of Lake Chicot, and plan to use the lake as the source of their water supply.

# Large Crop Forecast For North Ark.

## FRUIT JUICES ALL JELL WITH APPLE PECTIN

### Easily Made and Saves Disappointment, Says Specialist

In grandmother's day the top notchers of the housekeeping profession were those who could store away rows and rows of glasses of perfect jelly for winter use. In those days it was not an easy accomplishment to make a perfect glass of jelly, because the basic principles of jelly-making were not understood, said Mrs. Ruby Mendenhall Smith, extension economist in food preservation.

Fortunately, those guess-work days are over, Mrs. Smith continued. The present day makers of jelly maintain a high standard of perfection because the modern methods are simple and well known, she asserted, adding:

"The quantity of pectin in the fruit juice was what kept our

(CONTINUED ON PAGE 8)

## ILLINOIS CO-OPERATIVES

While President Roosevelt's special commission to study cooperatives have surveyed Danish agricultural societies, the Co-operative Trading Co. of Waukegan, Illinois, has issued a statement for the first half of 1936 showing sales volume and membership gains, says the Associated Press. Owned and controlled by 2,250 consumers and some 60 producers, the 25-year-old Waukegan organization—one of the oldest of its kind in the nation—claimed an increase in sales of $25,244 to $328,945 and in membership of 188 to the 2,250 for the first six months of this year as compared with the same 1935 period. "And with such a good start we should have one of our best years in net profits," said Jacob Liukku, general manager. In 1935 the net profit was $19,345. Total sales were $631,408. The society, operated on Rochdale co-operative principles, was founded by Finns in 1911.

## SAVES CUCUMBERS AND TOMATOES FROM DROUTH

Dr. Marvin Hunter, Choctaw, has successfully irrigated the tomatoes and cucumbers in his garden during the dry season, reports Miss Dorothy Beuse, Van Buren county home demonstration agent.

Dr. Hunter has tramped the middles in his garden full of hay, packing it down with a small amount of soil. He then turns the hose on the rows and allows the water to seep down beneath this straw mulch. He says this usuccessfully holds the moisture in the soil over a long period of time.

## SODIUM ARSENATE EFFECTIVE ON LOCUSTS

Washington —A campaign against locusts in Argentina has proven that sodium arsenate is effective in poisoning this pest which is credited with destroying approximately 30 per cent of the country's annual agricultural crop, a report from American Trade Commissioner J. D. Walstrom, Buenos Aires, made public today by the Department of Commerce reveals.

The ministry of agriculture of Argentina has recommended the use of more and larger machines to spray and sprinkle sodium arsenate during the autumn and winter when the locusts have to cross the desert regions, and again in the spring when they are on their way back south. The minister is reported to be working on a plan which will establish a central agency to direct future campaigns, the report states.

Many methods have been used in Argentina in combating the locust plague but so far none have been wholly successful. One of the most common methods has been the erection of sheet steel barriers to divert the locusts into trenches where they can be destroyed, it was stated.

Most of the damage is done while the locusts are in the "hopper" stage and before they are able to fly.

During the past two years the minister of agriculture of Argentina has been experimenting with locust meal, as a fertilizer, the meal being made by grinding the dried bodies of locusts. Considerable progress has been made and it is anticipated that between 2,000 and 3,000 tons of locust meal containing 9.66 per cent of nitrogen, will be available for export during the current season.

## COTTON CARRYOVER OFF NEARLY 2,000,000

The New Orleans Cotton Exchange releases the following:

The world carryover of American cotton was placed at 6,732,000 bales in the annual report of Secretary Plauche of the New Orleans Cotton Exchange. This compared with 8,728,000 bales last season.

World consumption was placed at 12,405,000 bales, compared to 11,325,000 last season.

Exports, including that sent to Canada, were 6,257,000 bales, compared to 5,038,000 the previous season.

The total supply of cotton in the hands of government agencies, was 3,216,000 bales. This compares to 4,581,000 on the same date last year.

Gross consumption of cotton by southern mills during the last season amounted to 5,587,000 bales, compared to 4,514,000 for last season.

## BUR CLOVER BIG HELP FOR COTTON

Fordyce—The value of bur clover as a soil building crop is being demonstrated on the farm of R. N. Goza, six miles west of Princeton on Highway No. 8, according to H. K. Sage, country agent.

A large field has been planted in cotton, with no commercial fertilizer of any kind used. One-half of the field had been planted to bur clover which was turned under. On that part of the field the cotton stalks are considerably larger, the cotton is more heavily fruited, and there are lots of almost mature bolls, and the cotton shows no effects of the drouth.

The crop on the land where there was no bur clover does not compare with the other crop at all.

There is considerable interest among farmers of Dallas county in this demonstration, and Mr. Goza has been asked by several farmers to save the seed from his clover to help them get a start on their lands.

## 10 ACRES OF BERMUDA PLANTED IN FOUR DAYS

A 10-acre permanent pasture is being established on the farm of Earl Kilpatrick, Lee county, according to Willard H. Ballard, assistant county agent, with Bermuda grass as the base and lespedeza and white clover added.

The land was disked so that hay could be cut, and two large funnels were placed in front of the rear wheels of a wagon, which was pulled across the field. Pieces of sod were dropped through the funnels at intervals of 20 inches. As the sod hit the ground it was pushed into the soil by the wheels of the wagon. The rows of sod were placed about two feet apart.

The disking and sodding was completed by three men in four days. After the field was sodded, 12 pounds of lespedeza and five pounds of white clover per acre were sown.

## TCHULA PLANTATION SOLD

Lexington, Miss., August 1.—Sale of the Horeshoe Plantation near Tchula in Holmes County to E. R. Seward of Eden was announced today by Morris Lewis, Jr. Retirement of approximately $121,000 in bonds through a cash transaction is embraced in the payment price

The plantation is one of the largest in this section and the purchaser is a leading delta planter. It was formerly owned by Mr. Levy and Sons of New Orleans and is rented to J. E. Gwin of Keirn until December, 1938

## BALE OF COTTON PER ACRE EXPECTED IN AREA

Jonesboro, Ark., August 1.—The section of eastern Arkansas between the Mississippi and St. Francis rivers will average more than a bale of cotton per acre if favorable weather conditions continue, according to Houston Bowers, district field representative of the Resettlement Administration.

"Crops in Northeast Arkansas look better at this time than I have ever seen them before," Mr. Bowers said. The record cotton yield for this section was in 1926 when the average was more than a bale an acre and farmers say that the prospects are better now than they were during the same period that year.

Mr. Bowers said that a large percentage of the early corn already is made and that hay and pea crops are in fine shape. Rain is needed in some sections of sandy land over this area.

"Resettlement clients have taken on new life with the excellent crop prospects," Mr. Bowers said. "The majority will be able to make their RA loan payment on schedule without difficulty."

## THE DAILY DIGEST SAYS

"Industry is constantly conducting scientific investigations to find new and better methods of production," says an editorial in the Utah Farmer (July 15). "Agriculture also has its investigators. One of them may be your neighbor. If he consistently grows a better crop of sugar beets than you do, there is much to be learned from him in that respect. If he can produce better gains per day on his cattle and lambs, he has information that should be worth a great deal to you. Get acquainted with your neighbor, it may be a profitable friendship. Other investigators for agriculture are provided by the county, state and national government. The county agent is a valuable source of information. He not only knows what is going on in your immediate neighborhood, but is informed on what is taking place elsewhere. The information that is accumulated at his office is done with the purpose of being of service to you. The state and national governments provide experiment stations and farms. The best scientists in the field are at work at these stations in order that you might cut production costs and increase the profits of your farm. The information available is yours for the asking."

# COTTON VALUE INCREASED $2 TO $7 PER BALE BY DRYING, FEDERAL SCIENTISTS REPORT

With the proper use of commercial drying machinery at the time of ginning, and with good ginning, government scientists find that they can increase the monetary value of cotton as much as $2 to $7 a bale, although the operating costs of the drying process amount to only 20 to 50 cents a bale. The drying was done in a dryer worked out by a government expert, and directions for making one can be had in a bulletin printed on the subject.

An estimate made by the U. S. Bureau of Agricultural Economists and the Bureau of Agricultural Engineering—during a recent year not considered unusual with respect to weather conditions—indicates that approximately one-third of the cotton 1 1-16 inches in staple length and about one-fifth of that shorter than 1 1-16 inches was more or less damaged in the ginning process as a result of too much moisture in the seed cotton.

The moisture content of seed cotton has a pronounced effect on the smoothness with which it is possible to gin the lint, successively lower preparation being associated with increases in moisture content, engineers explain. The unfavorable effect of ginning cottons with excess moisture are intensified as the staple length of the cotton is increased and as the seed roll density is changed from loose to light.

### Longer Cottons Gain Most

In the experiments reported, the Department of Agriculture experts used 69 varieties of American upland cotton, selected from the 1931, 1932 and 1933 crops. Average grade improvements, or the combined influence of generally smoother preparation and occasionally brighter color and reduced leaf, as a result of artificial drying, were more pronounced for the longer than for the shorter cottons.

Drying at a temperature of 150 degrees F. showed grade benefits ranging, on the average, from about one grade for either length group having 16 per cent or more moisture, to approximately one-third of a grade for the longer cottons having 8 to 11.9 per cent and the shorter cottons having 12 to 15.9 per cent moisture. Cottons having a moisture content below these respective limits did not show enough grade improvements to justify drying.

### Heat Must Be Controlled

With the experimental conditions employed, the amount of moisture decreased only slightly when the drying temperature was greater than 150 degrees Fahrenheit. However, average fiber strength was not weakened by drying the tested seed cotton samples at temperatures ranging as high as 200 degrees Fahrenheit.

In many cases, the drying temperatures above 200 degrees were associated with a shortening of the staple to the extent of 1-32 to 1-16 of an inch. On a basis of these findings, the department does not advise a drying temperature to exceed 150 degrees, except for very wet cotton, and then it should seldom if ever, exceed 200 degrees. And the period of exposure should not be longer than that recommended.

The tests reveal also that the critical temperature is reached sooner with short-staple or lower moisture-content than with long-staple or higher moisture-content cottons.

The percentage germination of seed from the lots of seed cotton dried at test temperatures was not affected adversely. In fact, in some instances the dried seeds showed somewhat better germination.

Facilities for artificial drying at the gin permit cotton picking to be continued during damp seasons, and in fields of heavy foliage sooner than otherwise would be desirable. An opportunity is afforded by this means to handle cotton which heretofore has been left unpicked because of inadequate means for conditioning and ginning.

### Allows Continuous Operation.

Artificial drying of green, damp or wet seed cotton also enables the gin-

ner to operate continuously without loss of time due to choked gin stands and breakdowns, which frequently occur when damp or wet cotton is ginned under ordinary conditions. The investigators found a reasonable increase in ginning capacity at no loss of quality to the product, and a slight reduction in power requirements.

Ginners in 16 of the 19 cotton-producing states have installed the vertical drier for seed cotton, which was designed by C. A. Bennett of the U. S. Department of Agriculture. It is estimated that approximately 350,000 bales of the 1935 crop were ginned and dried successfully by this method.

Widespread interest of growers and ginners has prompted the bureau engineers to work out different methods of installation to obtain wider application in ginning. Now, the process of drying seed cotton artificially, also developed by bureau engineers, is used successfully in horizontal revolving cylinders as well as the vertical dryer, or combined with the operations of distributing, cleaning and extracting.

### Dryer Simple in Design.

In the process the cotton is treated with a continuous current of hot air, the temperature and period of exposure depending upon the amount of moisture in the seed cotton as well as on the design of the drying machinery.

The vertical dryer designed by Bennett is regarded as simple in design and economical in operation. The drying tower has no moving parts and the seed cotton is carried through it by the continuous blast of hot air.

The dryer automatically adjusts the period of exposure to a certain degree, as cotton containing little moisture is carried through much more rapidly than heavier damp cotton.

Complete information regarding construction, operation and advantages of the vertical seed cotton dryer are contained in Miscellaneous Publication No. 239, "The Vertical Drier for Seed Cotton," by Bennett and F. L. Gerdes, of Bureau of Agricultural Economics. It may be purchased from Superintendent of Documents, Washington, D. C., at five cents a copy.

## WHY DO FOODS SPOIL?

### Molds

The appearance of molds is familiar to us all because they usually grow on the surface, at least when they form their fruits or spores. These black or white or variously colored spores are formed in such abundance that their fuzzy mass is very plainly visible to the naked eye. They grow readily in, and on the surface of, such materials as breads, fruits, vegetables, jelly, cheese, sour milk, and even leather and cloth in the form of "mildew." Their spores or "seed" are blown about in the air, and are always ready to grow on the surface of jelly, preserves, and many other foods which have been left exposed Molds, however, do not give much trouble in canning by modern methods.

### Yeasts

Household yeasts are also more or less familiar to most of us, because one of the wild yeasts has been "tamed" or domesticated and is used either in the form of "Yeast cakes" or in some liquid form, for the making of bread. This same yeast is also useful in starting the process of vinegar making. There are many kinds of yeasts. When any kind of years grows in jelly, perserves, or canned products, its presence is highly objectionable because the fermentation which it brings about destroys the attractiveness and wholesomeness of such foods, so far as ordinary table uses are concerned However, yeasts (like molds) are usually killed by heating for a short time, and therefore give little trouble in canning.

### Bacteria

The destruction of bacteria is an altogether different matter. There organisms are very much smaller than are yeasts and molds and are much more likely to cause trouble in canning. Bacteria are so small that it would take over ten thousand of them of average length, placed end to end, to measure one inch.

There are always micro-organisms of one kind or another present on the skin or rind of fruits and vegetables Bacteria, Yeasts, and molds are found to a greater or less extent in the air, in natural waters, on our own skin as on all animal bodies in the soil, and in dust. If we are canning food which we expect to keep perfectly for a period of weeks, months, or even years, we must make every effort to see that we do not allow any bacteria, yeasts or molds to remain in the can to grow on the food in the sealed container and spoil it All utensils and materials must be kept as clean as possible, and must be carefully handled to prevent the entrance of dirt and bacteria or other organisms, so that the chance of spoilage will be greatly lessened. Bacteria multiply with astonishing rapidity, especially in a warm, moist place. Many bacteria, yeasts and molds cannot grow except in the presence of air or oxygen. Other bacteria grow very well in the sealed can, although practically all of the air or oxygen has been removed.

### Sterlization prevents Canned Food Spoilage

Since many very common kinds of bacteria can live without air, it is desirable to apply sufficient heat to foods which are sealed away from the air to kill all such bacteria; or at least, all of those which can grow in the canned food material. When we succeed in killing all bacteria present in a given space or on a given article we say that we have sterilized it; just as the surgeon sterilizes his gown and instruments by boiling or steaming or baking them for a long time or at a very high temperature, or by the use of certain chemicals. Absolute sterilization is however, difficult to attain, because of the unfortunate circumstance that many bacteria and highly resistant bodies called spores can from every minute. The spores are capable of surviving for long periods of time in spite of unfavorable conditions.

The bacterial spores are so well protected that they can endure extreme temperatures for considerable periods. The spores of some bacteria have been found to resist the temperature of boiling water for thirty-eight hours. Of course, no one would think of cooking young, tender vegetables for that length of time. Fortunately, most of the spores commonly found on fruits and vegetables appear to have much less resistance to heat.

Dog Catcher—Do your dogs have licenses?

Small Boy—Two of them have just been washed, so they haven't any; but the dog we got this morning is just covered with them.

## FARM COLD STORAGE

Jonas Howard, author of an article on cold storage, in American Fruit Grower (July) says: "...Of unusual significance during the past year is the development of individual grower-owned and co-operative cold storage units. In the background of this development are the introduction of reasonably priced cooling units and refrigeration systems, the expansion of government credit and the extension of electric facilities. That the farm cold storage is a profitable investment for the grower is shown by the experience of Otto Klenk, a progressive grower in Sparta, Mich. 'The storing of apples has kept black ink on the ledger of our fruit farm.' Although first quality fruit goes into the Klenk storage, which has a capacity of 11,000 bushels, last year a portion of the storage that was being held open for winter varieties was used to store windfalls for a better price after the other windfalls in the section had been 'dumped' on the market. There has also been a striking change in the method of handling apples from harvest to market during the past 10 years in the New England apple area, according to the studies made by William R. Cole, extension specialist in horticultural manufacturers at Massachusetts State College. In 1925 the total commercial crop of apples for the New England area was approximately 6,000,000 bushels. The cold storage capacity, which was concentrated almost entirely in the large cities, was about 1,600,000 bushels. The total commercial production for 1935 in this same area was 4,275,000 bushels. The cold storage capacity was approximately 2,850,000 bushels, made up of the same, 1,600,000 bushels city capacity and 1,250000 at country points."

## INCOME FROM EIGHT ACRES OF POTATOES WAS $868 IN CLEAR

Good labor returns for an eight-acre crop of Triumph potatoes were received this year by Arthur C. Wear of Farmsville community, Bradley county, according to R. D. Setzler, county agent.

The potatoes were planted in wide rows, thereby reducing the number of plants per acre, the cost of seed, and the cost of fertilizer. The seed, fertilizer, and spray material for the field cost $102.47, the entire cash expense of producing the crop.

From the field Mr. Wear sold 28,108 pounds of potatoes at an average price of $3.10 per hundredweight, giving a gross return of $971.35. This amount less the cost of producing the potatoes, leaves a labor income of $868.88.

Mr. Wear marketed his potatoes through the Bradley County Truck Growers' Association and took an advantage of the f. o. b. selling privilege. Throughout the season this method of selling netted him from 50 cents to $110 per hundredweight more than the cash buyers were offering he said.

"I am sure that this field, planted to potatoes, made more money that would have twice the acreage in cotton," the grower commented.

### Grew 9-Pound Cabbages

While many of her neighbors suffered from the recent drouth, Mrs. Ben Roth, of Goldman community, Arkansas county, sold cabbage to her neighbors and to Stuttgart grocers. Mrs. Roth has grown some heads that weighed nine pounds. Mrs. Roth explained that irrigation and fertilization were responsible. The cabbage were watered from the rice canal at no extra cost, relates J. H. Dean, county agent.

## SOY BEANS AT TOP ON GRAIN EXCHANGE

Chicago, Aug. 8.—Soy beans grading No. 2 yellow sold on the Chicago Board of Trade today at $1.40 a bushel to arrive, track Chicago, highest price they have achieved since reaching the status of a full fledged commercial crop. Later bids of $1.42 were made for that grade.

The advance in soy beans this season has proceeded almost uninterrupted from the 1935 low of 79 1-2 cents per bushel in March. In June the new farm utility crop sold at 87 1-2 cents.

The sensational upturn, caused by a scarcity of supply, has made the soy bean today the most expensive, bushel for bushel, of crops listed for trading on the Chicago grain market.

Decreased production in the United States this year, particularly because of drouth, and a dearth of supplies on farms, coupled with an unusually broad demand from domestic and foreign interests, has tightened the market.

## VINEGAR TAKES 3 TO 6 MONTHS

### Use Only Sound, Matured Apples, Advises Food Specialist

Vinegar making will accompany the apple harvest in many Arkansas farm homes. Cleanliness and absence of contamination during the entire process are of greatest importance, advises Mrs. Ruby Mendenhall Smith, extension food economist. All utensils used must be kept clean and it is essential to use storage containers which will not give undesirable flavors or odors to the vinegar. Stone jars are suitable for vinegar-making in the home.

Almost all varieties of good ripe, sound apples contain enough sugar for vinegar making but winter apples are best because of their high sugar content, Mrs. Smith continued adding:

"Use only sound, ripe apples. Any decayed or bruised parts should be removed. Crush the apples and press out the juice. One bushel of apples ordinarily yield from two to three gallons of juice.

"Let the juice stand for a day or two in a vessel covered with a thin cloth to allow the pulp to settle. Drain the clear juice off into another container, but do not fill the vessel more than three-fourths full. Cover with a thin cloth and store in a warm room.

"The addition of one thoroughly dissolved yeast cake to each five gallons of juice will hasten the fermentation. Fermentation will be complete, as shown by the absence of gas bubbles, in from four to six days. Pour or siphon off the hard cider into another clean vessel. Avoid stirring up the settlings in the bottom.

"If a starter is not added to the hard cider the process of vinegar-making is very slow.

"One part of good strong vinegar to four parts of hard cider is the best proportion to use for a starter. Cover the vessel with a thin cloth to keep out insects and dirt and trash and allow to stand until a good strong vinegar is made.

"If a good starter is added and the juice is kept around 70 degrees F., the vinegar will be ready for use in from three to six months. The thin film which forms on the surface of the juice a few days after the starter is added is known as 'mother of vinegar' and special care should be used not to break or disturb this film.

"As soon as the vinegar gives a satisfactory acid test, siphon it off, bottle and pasteurize by heating to 160 degree F. Seal and store in a dark dry cool place to age. Vinegar is best after it has been stored for six months or a year."

## ACRE OF TOMATOES NETTED $144 IN SPITE OF RAIN SHORTAGE

M. N. Owens, farmer living in the Spring Hill section of Drew county, has demonstrated that good practices will pay with tomatoes as well as with any other crop, says Arthur F. Lee, county agent.

Mr. Owens reports that he grossed $165 from one acre of tomatoes this year. His cash outlay was $20.70, leaving a net income of $144.30. This return is unusual for so dry a season, the drouth coming just as the tomatoes were maturing, Mr. Lee pointed out.

Mr. Owens attributes his success largely to good seed bed preparation before planting, which included deep plowing, and cultivation. Cultivation was continued during the growing and harvesting season.

Mr. Owens has made it a practice to follow good soil conservation methods by terracing, plowing under legumes and returning as great a supply of humus as possible to the soil. This has enabled his soil to take and hold more moisture.

### Sunflower Seeds Fed Hogs

Sunflower seeds for hogs were found at the Missouri experiment station to have a feed value of $1.80 a cwt. when corn is worth 50 cents a bushel and tankage is $2.50 a cwt. However, the pork produced on sunflower seeds was rather soft and oily, it is stated.

## TURNIP KRAUT ANCIENT FOOD

### Long Made in Germany Where It Is Called "Sauer Ruben."

Europeans have long used fermented turnips, beans and other vegetables as well as fermented cabbage for sauerkraut. "Sauer ruben" is the German name for fermented turnips, an appetizing easily made food. Both spring and fall turnips may be used, but the fall crop gives better results.

Recent studies of sauer ruben by the U. S. Bureau of Chemisty and Soils show that the best-sized turnips range from 2 1-2 to 3 1-3 inches indiameter. This size produces a sauer ruben of superior flavor and texture compared with very small or very large roots. The sweeter the variety of turnip the better.

The investigators say that unpeeled shredded turnips produce a sauer ruben of superior quality resembling the texture of sauerkraut, more closely than when the turnips are ground or sliced. Peeling the turnips removes some of the sugar and results in a product with a very mild flavor, but low acidity and inferior keeping quality.

Slightly less salt than is used in making sauerkraut gives the best-flavored sauer ruben. When the fermentation reaches the desired stage of acidity the sauer ruben may be canned in tin, or kept in open stone jars with the surface completely covered by mineral oil; or it may be fermented from the start in glass jars and sealed wtihout processing as soon as the fermentation stops. Detailed directions for these three methods of treatment are given in a circular issued by the United States Department of Agriculture.

The important feature in the entire process is to exclude air from the sauer ruben throughout fermentation and storing, says the department.

A FOUR PIECE PULPIT SET

For $125.00

This is a beautiful set of Pulpit Furniture consisting of three chairs and the pulpit—Just the set you need for your church

Terms: $50.00 CASH—Balance In Three Monthly Payments

## SOUTH RICHEST IN RESOURCES, SOCIAL PLANNING GREATEST NEED, DR. ODUM DECLARES

By Howard W. Odum

Sherwood Anderson, once wrote, "The American South should be America's garden spot. It should be one of the very lovely lands of the world." In the same vein, a geographer said the South is "one of the two regions on this earth, and only two, which eventually will outdistance all others as to the number of people they will support by agriculture and factory production.. Above all other regions, they are the gardens of the world." In the middle 1920's, Walter Lippmann asserted that "everything that was ever possible for civilized man is possible here," and a few years later, at the crest of regional and national achievement, he risked the statement that "the adventure of American life today is in the South."

What are the bases for such statements?

First of all are the geographic factors. In contrast to other regions of the nation that are sometimes parched by dust and drouth, the Southeast has abundant rainfall and ever-flowing streams, and its long growing season in a favorable climate may well serve as vivid reminder of that abundance which is so commonly taken for granted. Of the 55 per cent of the nation's area with a frostless growing season of six months or more, the South has more than two-thirds.

**Fabulous Resources**

Yet climate is only one factor in the South's natural wealth. The geographer and economist can point as well as to coal and iron and phosphate and hundreds of other minerals; sticks and stones of fabulous quality and quantity for the fabrication of great buildings and for the construction of roads and bridges; energy and power from streams and oil and gas; sea-water minerals and tidal power; iodine and phosphorous and nitrogen wealth; parks and playgrounds in the mountains and at the seashore, summer and winter resorts, play places of a nation; sanctuaries for wild life; grasses and cultivated plants to feed men and animals and land; millions of game animals, for commerce and recreation; and immense number of domesticated animals on farms and grazing land.

The range and quantity of the South's human wealth may be indicated by the fact that the region has educated and sent away to do the nation's work something like four million people. It is a land of predominant youth. It has higher birth rates than any other region of the nation, and it will continue for many years to be a source of supply for the cities and other regions of the nation.

Such are the bases for the judgment of geographers and publicists and ecoonmists that the region is the garden spot of the world. But what have we in the South done with our resources?

**Soil Fertility Wasted.**

In the first place, we have made of our two greatest resources, rainfall and land, the two greatest drains on our wealth. The combined forces of rainfall and single-crop agriculture have eroded lands, filled streams, ruined the great bottom lands, and wasted untold amounts of soil fertility, threatening to turn this garden spot back to the briar patches and rabbits. Of the nation's nearly 150,000,000 acres of eroded land, approximately 97,000,000 acres are in the South. No one has estimated accurately the immense losses of nitrogen phosphoric acid and potash, not only through removal in crops but by leaching and erosion. The resultant picture shows poor lands for poor men, with vast gullies and gulches, wagon-wide and tree-deep, and great stretches of land marred like some battlefield; promise of impotence for either agriculture or industry.

And how does the artificial and usable wealth of the South compare with its resources? Well, here are some indications: The South has the lowest average income in the nation's lowest farm income; the lowest wages, the lowest values of farms and homes and factories; the smallest bank deposits, the smallest savings accounts, the smallest margin between tax moneys and public expenditures, the largest number of children to educate and the least to educate them with, an unfavorable balance of migration, an inadequate store of technology, and a lack of independence control of its own finance and resources.

**Farm Tenant Problem.**

And what of the people? The South boasts of the best people and complains of the worst. It has half of all the farm tenants in the United States. It keeps it Negroes "down" and thereby keeps down its white folks. It begs for wage differentials and maintains its people in low earning levels rather than train them for technical efficiency and greater achievements. The South has the highest illiteracy, the shorter school terms, the most poorly paid teachers and the most poorly equipped school houses in the nation. Its housing in many areas is below any American standard. Its home hygiene are below any reasonable norm.

The South has no technical university of the highest rank and no research laboratorics commensurate with its needs and opportunities. In fine, just as it lacks technology, wealth, and management to develop its boundless natural wealth, so it lacks institutional means to develop and conserve its human wealth. No matter what its potentialities are, therefore, the facts are that the Souh is a deficiency area of scarcity instead of a region of abundance.

If we should classify the region's excellencies and its deficiencies in terms of this chasm between possibilities and realities, the result would be somewhat as follows: Of the five fundamental sources of wealth, the South excels in natural wealth and human wealth; it lags in technological, wealth, artificial wealth and capital, and institutional wealth. Or to chraacterize the region in another way: As to resources, it shows a superabundance; as to science, skills, technology and organization, it shows deficiency; as to general economy, it shows waste; as to culture, it shows richness, impaired by immaturity and hesitancy and relative retrogression in some recent aspects of the region's development.

Nevertheless, these are remediable deficiencies. The conclusion is justified that the way onward for the South can be plotted, though the task is difficult. All the necessary elements are present; they need only to be focused in the right ways. On the other hand, unless a definite change in regional economy can be brought about the prospect for the region is alarming. The South can ill afford to make many more mistakes in its choice of roads to follow. The answer must be found in a program of regional reconstruction well integrated with national cooperative arrangements in order to start the flow of new currents and processes, and to guarantee their continuance. This is the task of regional planning, American style, which is the greatest single need of the South today.

## ELECTRIC EYE TO GRADE MILK IS ANNOUNCED

The latest development toward the "dairymen's dream" of complete electrification, and electric eye that grades milk according to color, was announced today by the research laboratory of the New Jersey agricultural experiment station at Rutgers university.

Laboratory and field tests with the device have been so satisfactory that there is tangible promise of producing long-sought milk color traits in specific herds.

## Farm Notes

**The Farm Journal Says:**

**Electrocution of Poultry**

A machine to eletrocute chickens is the invention of Paul Oronato and Emil Weinaug, poultrymen of San Mateo county, California. This machine kills chickens painlessly, gives them a preliminary cleaning, then put them through a process that allows them to be plucked quickly without tearing the skin. All this at a rate of 750 birds per hour.

---

A white giant hen on the M. L. Chaffin ranch near Corvallis, Mont., laid her eggs in the crouch of a big popular tree. Everything was fine until she hatched 11 lively chicks. Then the rancher had to get a ladder to bring the brood to earth.

---

Mrs. E. H. Strawn of Clarendon, Texas owned a hen that laid an egg weighing half a pound, was 7 inches in circumerence and 8 inches long.

---

**1,000 Eggs in Five Years**

Hens with a useful laying life of five years, producing 1000 eggs during that period have been produced by special breeding at the West Virginia Experiment Station by E. T. Wightman. This contrasts with the conventional "standard" hen, which is regarded as satisfactory if she has a two year laying life with 200 eggs a year. To produce such long-lived, high-yielding poultry strains, male as well as female birds have to possess the right hereditary factors. Since roosters do not lay eggs, Mr. Wightman had to keep the male birds until he could measure them indirectly by the performance of their daughters — which of course prolonged both the duration and the difficulty of the tests. (Science Service.)

---

Mrs. S. W. Stice who lives near Blackwell, Oklahoma, placed 14 eggs under a setting hen, about a week later the hen was found dead on the nest. Week later some lusky cheeping chicks were found in the nest.

---

**CURLY TOP STUDIES**

Western Canner & Parker Says:—

To produce a tomato with qualities resistant to western yellow blight, commonly known as curly top, is planned by Dr. Loran Blood, plant pathologist of the Utah State agricultural College, Logan. The main difficulty is finding a host plant. More than 800 varieties and strains of tomatoes have been tested and no resistance has been found to any marked degree. Twenty wild varieties have been imported from Mexico and tested, some of these show favorable signs of resistance. By careful crossing and hybridizing this resistance may be increased until a plant evolves which will have the power to resist western yellow blight, Dr. Blood believes. The plant breeding is being carried on at Logan, although trial grounds, under the direction of Dr. Blood, are at Hurricane where between 30,000 and 50,000 plants are set out each year to test for curly top resistance.

## TOMATO JUICE

Tomato juice, although the industry is only ten years old, ten million cases of tomato juice were sold last year.

Tomato juice is best made as follows:

Wash the tomatoes thoroughly. Remove the stem and any green or over-ripe portions. Put the trimmed tomatoes in a kettle and mash them with a wire potato masher. Heat until the juice begins to simmer around the edge of the pot. This occurs at approximately 150 degrees. Run the heated tomatoes through Sep-or-siv using the first screen. The tomato juice should then be brought to 180 degrees temperature or slightly under boiling point, Add one-half teaspoonful of salt to each quart of tomate juice. Fill into the cans as hot as possible. Close immediately and cook same length of time as canned tomatoes water cool.

Tomato juice is equally as suitable for feeding infants as orange juice. In preparing Tomato Juice for infant feeding do not use any seasoning, except a very small amount of salt.

Some home canner add a teaspoonful of lemon juice to each pint of tomato juice. This gives a very desirable flavor.

## TOMATO JUICE COCKTAIL

A very delicious cocktail may be prepared from tomato juice by using the following recipe:

To 1 pint strained tomato juice add 1 teaspoonful of salt.

2 1-2 teaspoons of vinegar, 1 1-2 teaspoons of lemon juice and 1-2 teaspoon of Worchester Sauce. Add 1 drop of Tobasco Sauce. Serve cold.

## GEORGIA'S TOBACCO CROP

The tobacco crop in Georgia during the past seven years brought the state around $62,000,000 which is as follows:

| Year | No. Pounds |
|---|---|
| 1929 | 89,670,000 |
| 1930 | 104,538,000 |
| 1931 | 60,881,696 |
| 1932 | 12,171,179 |
| 1933 | 59,853,963 |
| 1934 | 33,623.724 |
| 1935 | 71,826,352 |
| Totals | 432,564,914 |

| Av. Price | Total |
|---|---|
| 18.6c | $16,678,620.00 |
| 12.9c | 13,485,402.00 |
| 6.41c | 3,901,841.56 |
| 10.41c | 1,267,211.07 |
| 11.30c | 6,764,125.31 |
| 18.73c | 6.299,761.96 |
| 18.91c | 13,582,912.00 |
| Total | $61,979,873.90 |

## CORN NEEDS HUMUS

Soil without humus is dead. Corn won't grow on dead soil.

Without moisture corn burns and dries up. Humus helps to keep the moister in the soil.

Corn will not do well in cold soil. Humus keeps the soil warm.

Corn cannot thrive in hard, packed soil. Humus makes the soil loose.

Corn needs air around its roots. an early start in the spring.

Humus keeps the top soil, which contains most of the plant food, from washing away.

If we give our corn a square deal, it will give us a square deal.

## U. S. WILL AGAIN OFFER LAND TO HOMESTEADERS

Interior department officials said today they were preparing regulations under which homesteading —halted for more than a year under presidential order withdrawing all public land from entry— will be revived under carefully specified conditions.

The maximum claim will be limited to 320 acres and prospective settlers must select really good land that will not be in danger of abandonment. Insurance of the regulations has been delayed by Secretary Ickes pending decision on whether the grazing division or the department division of investigation is to verify assertions that the acreage is fertile enough and gets enough rain for cultivation.

**Large Acres Withdrawn**

The executive orders of November, 1934, and May, 1935 which together withdrew the entire 165,000,000 acres of unappropriate public land from settlement, are still in force. Amendments to the Taylor grazing act, however, were enacted by the last congress authorizing the secretary of the interior to permit homesteading on land be considered more valuable "for the production of agricultural crops than for the production of native grasses and forage."

Although land once more will be obtained for the asking and living on it—officials do not expect a revival of rush for homesteads expressed in the phase, "do a land office business."

Farmers who do not own land can write Department of Interior, Washigton, D. C. for full information as to homesteading government lands.

## WORLD WHEAT SHORTAGE SEEN

(Chicago Tribune Special to the Gazette.)

Chicago, July 25—The world is short more than a half billion bushels of wheat, estimates indicate. If consumers eat their usual amount of bread and cereal during the next 12 months, there will not be a single bushel left as a "nest egg' to carry over into next year.

There is a stronger demand for wheat now than at any time during the last five or six years. This nation, once one of the largest wheat export countries in the world, will be forced to scrape the bins to feed its own people and continue to bring in foreign wheat. Approximately 40,000,000 bushels of wheat, including flour, have been imported into this country during the last year.

**U. S. Second Largest Wheat Importer**

In the 1934-35 crop year the United States, for the first time since records were started in 1866, became a net importer of wheat. Today this country is the second largest importer of wheat, exceeded only by Great Britain including North Ireland. In the 1924-25 marketing year, farmers in the United States raised 259,000,000 bushels of wheat that were sold abroad, exceeding the exports of any other country.

Current production of wheat, totaling 4,639,760,000 bushels, plus 635,000,000 bushels left on hand, gives the world an aggregate supply of only 5,274,726,000 bushels.

This shortage, plus a normal carrying over of about 550,000,000 bushels, leaves the world 65,000,000 bushels short of its normal needs for the next year.

**Russia and China Included**

In these calculations Russia and China wheat figures—usually left out of most world summaries—are included.

During the five-year period from 1929 to 1933, this country produced more than 15 per cent of all the wheat grown, raising more than any other nation on the globe with the possible exception of Russia, for which accurate figures are not available.

This year farmers have experienced their second unprecedented drouth in two years. Today they are threshing a reduced wheat crop estimated to be approximately 638,000,000 bushels. This is 145,773,000 bushels less than the five-year average from 1929 to 1933. The normal consumption is about 650,000,000 bushels annually. The usual carry-over is in the neighborhood of 125,000,000 to 150,000,000 bushels.

It is the opinion of Nat C. Murray Chicago authority on crop statistics that during the next year it will be a seller's market instead of a buyer's market with higher prices prevailing.

## FIRST BALE GINNED

Eudora, Ark., Aug. 4. — The first bale of cotton to be ginned in Arkansas was brought in by J. C. Hall. It was grown on the Lindsay plantation, and weighed 1600 pounds net. The bale classed 1 1-8 inch middling.

## Iotas Open New Chapter In Iowa

Des Moines, Iowa, Aug. 20 (By Dorothy Wheels for ANP)—Mrs Florence K. Williamson of New York City, Eastern regional director of Iota Phi Lambda Sorority officiated at ceremonies this week held at the Blue Triangle Y.W.C.A. which marked the opening of Alpha Delta Chapter of the sorority. Following installation of officers a banquet was held and later in the evening a reception was given honoring members of he new chapter.

Officers installed were Mrs. Susie Hart, president; Mrs. Ciara Johnson, first vice president; Adelyne Wilson, second vice president; Evelyne Brooks, recording secretary; Mrs. Gertrude North, corresponding secretary; Mrs. Beatrice Robinson, financial secretary; Mrs. Lena S. Wilson, treasurer and Dorothy Wheels, journalist.

## ATTEMPT TO FRAME NEIGHBOR PROVES HARSH BOOMERANG

New York City, Aug. 20 (ANP) —Had an 11 year old girl placed a three cent stamp on a letter instead of marking it "C.O.D." her attempts at vengeance on a neighbor who ordered the girl out of her yard might have come closer to success.

Angered, the girl wrote a letter to President Roosevelt and put the neighbor's return address on the envelope. The letter read: "Dear President: If you don't put $100 in the backyard of 196 South Sixth Street, you will be killed." Without a stamp, the letter was returned to the above address.

Police Sergeant Moregenroth questioned the girl. He said he'd decide later what to do.

June—Mother, we're going to play elephants at the zoo and we want you to help us.

Mother—What on earth can I do?

June—You can be the lady who gives them peanuts and candy.

## TWO PENNSYLVANIA THEATRES ABOLISH RACE SEGREGATION

Media, Pa., Aug. 14—The moving picture theatre here against which a suit was brought last March under the 1935 Pennsylvania eqaul rights law, has abolished all segregation which formerly existed in the house. Immediately after the trial of the test case last March, the theatre assigned one whole side to colored people instead of the few rows in the rear which had been previously assigned. Later in the spring the whole theatre was thrown open to colored people and the manager states that so far there has been only one complaint from a single white patron.

A theatre in Darby, Pa., a suburb of Philadelphia, which has been practising segregation for years, recently has permitted colored people to sit anywhere in the theatre.

He only fears men who does not know them and he who avoids them will soon misjudge them—Goethe.

Do not anxiously hope for what is not yet come; do not vainly regret what is already past.—Chinese Maxim.

Grow old along with me
The best is yet to be
The last of life for which the first
was made.—Robert Browning.

## GOVERNOR DAVEY OF OHIO SENDS STATE'S PRAISE TO JESSE OWENS

**Columbus, Ohio,** August 3—(ANP) —Jesse Owens, currently Ohio's foremost citizen and possible member of the state legislature within the next few months, was felicitated in a telegram sent by Gov. Martin L. Davey to Berlin immediately after the dusky sensation turned in his phenomenal triple win in the 1936 Olympics.

"As Governor of Ohio it is my pleasure to convey to you the congratulations of the people of your State for your brilliant achievements in the Olympic games.' the telegram read

Owens is currently being spoken of as a candidate for the state legislature and reputedly has the backing of the political bosses. Because of his popularity, victory at the polls is deemed a certainty. It is also understood that should he run and be elected, there would be no objection to his continuing as a student at Ohio State university which he must attend for another year before graduation.

Such a position as state assemblyman would also carry more honor than his present connection as page boy in the legislature through which he supports himself and wife. Several white athletes also have similar positions as page boys.

Should Owens be elected, his treatment would be in direct contrast with that accorded Eddie Tolan who became the first Negro double winner in Olympic history, setting new world records in the 100 and 200 meter sprints at Los Angeles. Several months after the games, it was "discovered" that the great Michigan atulete was unemployed and practically broke, whereupon he received a job as clerk in a recorder's office.

Immediately following his victory for the Germans in the shot put last week in which he established a new Olympic record, Hans Woellke was rewarded with a job as lieutenant of police conferred by Hitler himself.

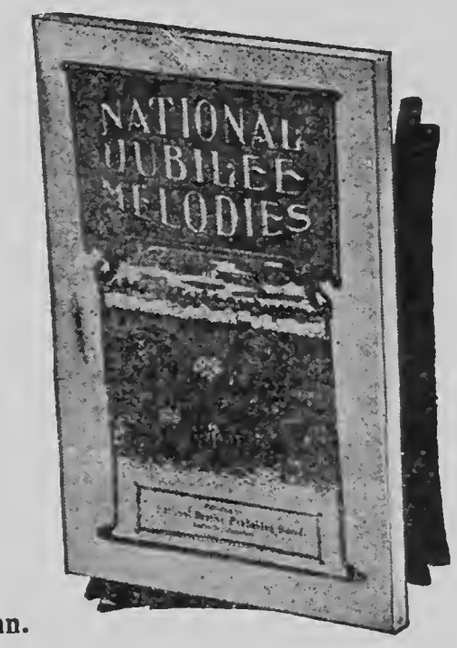
## Drunken Motorist Lands In Jail

Williamson, N. C., August 30 (ANP)—He remembered faintly driving through Norfolk and taking a few drinks but that was all, said Olive Lane, of Boston, to local police when he woke up in jail Sunday morning without the slightest idea of where he was.

In passing over the causeway leading to Williamston, Lane tore down three posts and landed in a swamp. It required a wrecking crew four hours to get him out. He is being held on a charge of drunken driving.

# National Jubilee Melody Song Book

America's original music. Songs from the Plantation and Slave Days. More than two hundred thousand sold in the year of 1935 More now going. Send your order.



**PRICE 50c**

## EGGS AND ROOSTERS JOIN WITH BANANAS IN KEEPING FOOD PRICES FROM SOARING

Price increases in fruits, vegetables and produce during the year ending yesterday in Freater Little Rock are shown in figures prepared by the Arkansas Democrat from price listings furnished by a Little Rock commission house. Excepting for eggs, roosters and bananas, most products show a definite increase.

Oranges per box wholesale today for $5, compared to $4 a year ago, and $4.75 two months ago. Lemons per box sell at $7.50 a box, the same as last year, and a 50 cent drop from two months ago. Grapefruit is up $1.50 a box today's price of $5 comparing with $3.50 a year ago, and $4.50 two months ago.

Bananas fell from $525 a year ago to $4.75 today. The price per crate June 1 was $5 Cabbages show a tremendous increase in the past 12 months, selling for $5.25 per 100-weight today and $2.65 a year ago. On June 1, this year, cabbages wholesaled for $2.50.

Price listings revealed that potatoes reached a high of $4.25 per 100-weight June 1, compared to $3.50 today and $3.15 a year ago.

Onions per 50 pounds sell for the same today as they did a year ago, $1.50. June 1 onions were $1.15. Green peppers sell for 15 cents a pound today, were 13 cents June 1 and a year ago, 10 cents Limes in four-quart baskets are $1 compared to $1 June 1 and 90 cents August 1, 1935.

Produce merchants revealed price of hens has risen in the 12-months period from 8 to 11 cents a pound to 11 to 14 cents while spring chickens and roosters remained about the same selling at from 13 to 15 cents and 6 to 8 cents a pound, respectively.

Eggs have fallen from 20 to 24 cents a dozen to 19 to 23 cents.

Hens dropped from 13 to 14 cents a pound to 11 to 14 and spring chicken from 17 to 22 cents to 13 to 15 cents in the past two months. Merchants said the drop was due to dry weather and lack of feed on poultry farms resulting in producers flooding the market with poultry.

A rise is expected in price of poultry by early fall, they predicted.

Managers of Greater Little Rock bakeries reported that no increase in price of bread had been made during the 12-month period, but that weight of loaves had been increased slightly.

## SNAKE STRIKE EXAGGERATED, EXPERTS HOLD

How far can poisonous snakes strike? About one-half to three-fourths their length, says the United States Bureau of Biological Survey. The greater distance is rarely reached even during times of extreme excitement, and the longer strokes have little accuracy. It is commonly believed that they strike their full length or greater distances.

In striking at an object a snake simply straightens out the S-shaped curves in its body with great speed, the federal scientists explain. When coiled it uncoils about half of the front part of its body and hurls that part forward from a looped position. The western diamondback rattlesnake, when excited, frequently raises its head 10 to 15 inches above the ground. From this position it strikes sideways and downward.

Poisonous snakes often misjudge distance in striking at objects. Venom flying from their fangs, when they strike at objects beyond their reach, accounts for stories of American snakes spitting poison. An African species really does this.

Reports of persons bitten by venomous snakes indicate that in most cases the victims were bitten on the legs or feet. High topped boots or heavy leggings therefore are an efficient safeguard against most attempts of snakes to bite. Waist-high rubber wading boots with inserted canvas shank gives good protection in swamps and lowlands.

## LARGER RICE CROP FORECAST THIS YEAR

Louisiana rice crop in four years was predicted today by William W. Reid, executive secretary of the Rice Millers Association. He said the other two states that make up the Southern rice area, Arkansas and Texas, also have increased production about 15 per cent.

"We look for a broader market this year than for some years past." Reid said. "The anticipated shortage and higher price for corn, beans, potatoes and similar staples will, we believe, turn more people to rice for their table."

The drouth that has ravaged most of the great farming areas of the nation has had little effect on rice crops, Mr. Reid said. Harvesting will begin around August 5, and reach its heighth by the middle of September.

## CANNING ROOM IN HER YARD BIG CONVENIENCE

A modern canning center, which takes the heat and muss of canning out of the house has been built in her yard by Mrs. L. E. Morris, member of the Brannon Home Demonstration Club, Quitman, reports Mrs. Dora S. Stubblefield, home demonstration agent in Faulkner county.

The canning center is 14 by 18 feet in size, and has a screened opening across the north and south sides. Wooden shutters serve the purpose of an awning in keeping rain and sunshine out. Large windows on the east and west sides of the room are glassed.

A counter is built across the south end of the room. A large stove and a furnace built around the wash pot serve for the blanching, heating and processing of the vegeetables.

The cost of this outside room, which serves both as a canning center and a laundry, was $11. Mr. Morris did all the work, and the shingles were made at home.

—Arkansas Democrat.

## PEACH TREE YIELDING FIVE VARIETIES BORE FRUIT TILL SEPTEMBER

An unusual and helpful demonstration in grafting and the production of fruits and berries, is being conducted by M. M. Dunn, Izard county farmer, who has a model two-acre orchard.

Mr. Dunn has an orchard of producing peaches. Last year he sold his peach crop to local markets and averaged from $2 to $3 a bushel for the entire crop.

Experimenting with unusual varieties is a hobby of Mr. Dunn. He has one large peach tree on which he has grafted and budded five different varieties of peaches and two plums. This tree bore friut from May until September last year, and each of the varieties made a normal yield.

Mr. Dunn is working with the county agent, G. I. Gilmore, to develop better fruit farms in Izard county. His whole orchard is a food demonstration as to what can be done with fruits on the rough land in Izard county, states the county agent.

## Kentucky State

### STATE COLLEGE HOLDS CONVOCATION

Frankfort, Ky., Aug. 6—Announcements for summer convocation of Kentucky State Industrial College list eight Louisville and Jefferson County teachers among the sixty candidates for degrees to be conferred in the college auditorium Thursday, Aug. 13. The Louisville names are those of Virginia Alexander, Olive K. Boone, Hattie .Dainels, .Kathleen Dowery, Georgia Nugent, Alice Nugent, Luey C. Phillips and Henrietta Warren. Twenty-four other Kentueky counties and two other states are the homes of the other candidates whose names and home addresses follow:

Mamie Allen, Lexington; Edward Baeoyn, Hopkinsville; Esther Pall, Middlesboro; Thelma, Baughman, Pineville; Ida Belle Black, Midway, Princia Boner, Florenee Buckner, Luther Buckner, Hopk'nsville; Margaret Burdette, Lancaster; Clarence Cabell, Henderson; Frank Cannon, Nieholasville; Gladys Carter, Versailles; Lafie Coffield, Marion, Katie Coulter, Houstonville; John Cooper, Ashland; Green Curry, Glasgow; Mildred Edwards, Earlington; Eliza Elmore, Lexington; George Freeman, Cleveland, Ohio; Eleetra Gooduloe, Russellville; Wilhelmina Green, Bowling Green Minnie Hall, Paduean; Arthur Hawkins Shelbyville; Luey Herrington, Flemingsburg; Roy Higgins, Viceo; Frances Jackson, Richmond; Marian Jameson, Bowling Green; Lillian King, Harlan; Mary Lancaster, Lebanon; Vesta Martin, Trenton; Dona E.. Moore, Hickman; Sally Moore, Lexington; Alfred Moses, Hickman; Loretta, Mullins Lynch; Helen D. Noel, Madisonville; C. B. Nuekolls, Ashland; Garland Offutt, Lexington; Catherine, Pleasant, Lawrenceburg, Nettie Printers, Midway; Emma Rice, Hopkinsville; Carma Shaw, Paducah; Alyce Simpson, Frankfort; Harold Smith, Waukesha, Wis.; William Stone, Richmond; Wallace Strader, Burlington; Audra Tucker, Hickman; Annie Turner, Richmond; Karl Walker, Hazard; Aritha White, Richmond; Henrietta Woodson, Paduaeh; Estella Yates, Richmond.

The convocation address will be delivered by Dean Rufus E. Clement of Louisville Municipal College and degrees conferred by President R. B. Atwood.

## LATE GARDEN MAY INCLUDE BIG VARIETY

Wherever rain has moistened the soil, gardeners should now be at work on their fall planting; suggests Claude Woolsey, extension horticulturist. A wide variety of vegetables may be planted, and some of them are hardy enough to withstand light fall frosts, he said.

Among the crops Mr. Woolsey recommends for planting in July are the following:

Stringless green pod beans, Henderson's bush lima beans, pinto beans, early Detroit beets, Jersey Wakefield cabbage, Danver's half long carrots, Georgia collard, Lookout Mountain, triumph or cobbler potatoes, purple top rutabagas, Gulf State and Pritchard tomatoes, and purple top, seven top and louse proof turnips.

Desirable crops for planting in August include: Lucullus chard, Simpson lettuce, southern giant curled mustard, yellow Bermuda onion plants and bloomsdale spinach, Mr. Woolsey said.

White Globe onion sets and Prizetaker onion seed can be planted in September, the specialist added.

Other crops which can be planted in the fall garden are Chinese cabbage, Whipple's corn, Davis perfect cucumbers, Siberian kale, white Vienna kohlrabi, Alaska peas and scarlet globe radishes, according to Mr. Woolsey.

The following vegetables, he said, will stand a light frost: Beets, cabbage, carrots, chard, Chinese cabbage, kale, kohlrabi, lettuce, mustard, onions, radishes, rutabagas, spinach and turnips.

Succession plantings can be made with snap beans, beets, carrots, letture, mustard, radishes and spinach, the specialist suggested.

## COTTON EXCHANGE REVIEW

Cotton brought $1,000,000,000 to the South during the last season, the annual review of the New Orleans Cotton Exchange disclosed yesterday. It was the staple's largest money yield Issued by Henry Plauche, secretary, the report showed that 13.321,308 bales were sold in the year ended on July 31 for $762,-464,631. Cottonseed sales brought the total to $931,756,291. Benefit payments from the government pushed the total across $1,000,000,000. Not since the 1929-30 season when lint cotton alone sold for $1,211,217,737 has the South's money crop reached such proportions. (A. P.)

WHEN IN CHICAGO STOP AT AMERICA'S LARGEST NEGRO HOTEL—VINCENNES

## RALPH HAYNE, AUTHORITY ON SWINE, SAYS:

The hog will produce more meat from 100 pounds of feed than will any other animal.

The hog will eat, and grow and fatten on more kinds of feed than will any other useful animal.

No farm animal multiplies so rapidly as the hog— we can start with one sow and have 200 hogs within three years.

Humus lets air into the soil.

Humus aids the germination of the seed and helps to give the corn

There are very few farms but what can and should produce enough pork to feed the farmer's family. There is no better meat than ham, sausage and bacon. Hogs are needed to eat chicken scraps and unmarketable grain and to make profitable use of skim milk and butter milk. Hogs mustn't be expected to live entirely on scraps and refuse. They must have other good feed.

Hogs are profitable when fed on the by-products of dairying. Hogs and cows make a good combination. When well managed the hog is one of the best sources of farm income. Hogs have paid for many a farm. We can sell hogs any time of the year and at almost any age and weight.

## CORN, AMERICA'S GREATEST CROP

Corn is the most important crop in American agriculture. It is grown in every state and can be grown with profit on nearly every farm. It brings in more money to the farmers of America than does any thing else, except dairy products, and it is necessary to the success of every dairy farm.

Corn is king of all farm crops

Corn and alfalfa form a balanced ration that is hard to beat.

Corn means a prosperous agriculture because it makes possible dairy cattle, beef cattle, hogs, sheep and poultry, and these are the profit makers, the mortgage lifters. They create cosy homes, happy families. They provide education for the children, home convenience for mother, peace and contentment for father. They make life worth living.

No other grain crop has so wide a range of possibilities as corn has, No other grain crop will pay so well for care and attention. No other grain crop has the capacity for responding to fertility and cultivation that corn has.

While our average yield of corn be only 30 bushels to the acre, with the necessary care and attention it can be made to produce over 100 bushels.

When wheat or oats are ripe there is danger of losing them even to the last moment as the result of rust or blight or storm. But corn, once matured, will wait days or even months, for the busy or overworked farmer, withuot suffering injury.

Corn produces three crops a year. Because of its big yield it produces what is equal to two crops of any other grain, and in addition, a crop of hay in the form of stover.

In addition to being a good money crop, corn is an important crop in other ways. It helps in the production of meats, dairy products, and poultry products and is an aid in diversified farming, on which permanent farm prosperity depends.

Corn is a cultivated crop and its cultivation helps to keep our land free of weeds.

## DIRECTIONS FOR CANNING CHICKEN

1. **Dress, clean, and cut up each chicken in the usual manner.** For convience in packing it, is well to place together the like pieces that is, all things in one pan, all backs in another, all legs in another, etc. Then, by taking a piece from each pile when packing, we make sure of having all parts of a chicken in each can.

2. Pack. If you are packing in a glass jar, put a thigh in the saddle and pack these first; put put the other thigh in the ribs and pack these next; put one leg in the can with the big end down and the other leg in the can with the little end down. The other pieces will fit in on top of these. If packing in tin start with the saddle pieces put a thigh in it and pile on top of it enough other pieces to fill the bottom of the can. Pack the giblets separately.

3. **Add one teaspoon salt to each** quart. Fill jor with boilding wa"er if the chicken is well packed practically no water can be added.

4 **Seal and cook.**

Glass jars.

a. Put on the rubber and cap. Do not fasten covers tight.

b. Sterlize 3 hours in hot water out fit; in the pressure cooker sterilize one hour with 10 to 15 pounds. pressure bringing pressure up slowly,

c. Remove jars; tighten covers: inverted to cool and test jonts.

Tin cans.

a Seal tight.

b. Sterlize the same in glass jars.

c. Remove cool Do not stack tin cans until they are cold, for if there are many cans, the heat is retained and the cans on the inside are over-cooked.

For canning fried chicken, brown each piece in hot fat before packing. Do not fry until tender, as the chicken will cook while being sterlized. Add no water. Sterlize three hours.

**Ways of Serving Canned Chicken**

a Simply heat and serve.

b. Beat an egg and thin it with milk; dip pieces of canned chicken in the egg-milk mixture, then roll them in cracker crumbs; brown in the oven.

c. Remove the bone and cut the meat into small squares for creamed chicken on toast, chicken patties, or chicken a la King.

d. Remove the meat from the bone and run it through the food chopped to make a sandwich filling.

## IT IS A BILLION DOLLAR CASH CROP

In addition to being a part of the grow-your-own- living farm program, poultry is an important cash crop for farm folks.

The poultry census is taken only every 10 years. The last census showed there were in the United States, 360,000,000 chickens. They produced 1,656,000,000 dozen eggs. The year's production of chickens and eggs brought $1,048,000,000.

Th's is more than the value of oats about equal to wheat, only a little less than hogs, more than hali as much as cotton, and about two-fifths as much as corn.

Ninety per cent of this billion dollars goes to farmers or rather to farmers' wives These good wives spent it for groceries, clothing, lights, washing machines, rugs, pictures, books, phonographs. If we should take the poultry money out of a farm community, the country town merchants would wonder what had happened to their business.

## POULTRY IS AN IMPORTANT PART OF THE GROW-YOUR-OWN-LIVING FARM PROGRAM

Most of us have poultry. We like our eggs for breakfast and fried chicken every twice in a while. Poultry produces wholesome food which our family needs; this alone is reason enough for keeping it.

A farm without some poultry, a garden, and a little fruit is not a real farm. When farm business is good, the poultry and garden products more than feed the family and leave the money crop clear profit when farm business is bad, they feed the family and save the day.

The cow, the sow and the hen is a combination hard to beat in the grow-your-own-living farm program. Add a garden to this trio and the farm family slides along easily in a year of prosperity and is well-fortified to meet a year of adversity. The hen fits in with diversified farming — the only kind of farming that brings permanent success to an individual or to a community.

## PLANT FALL GARDENS NOW

A fine variety of garden products can still be grown in most parts of the south if there is normal weather during the remainder of the season. often the fall garden is better than the spring garden, experienced vegetable growers point out.

"Gardeners should not accept defeat from the dry weather which may have destroyed their spring efforts."

"They still have a good chance to produce an abundance of many kinds of vegetables."

String beans, cowpeas, kale, mustard and turnips are among the garden staples that may be planted in August with excellent prospects of success.

String beans should be planted at intervals through the season up to six weeks time before frost.

Cowpeas should be planted in the garden, or in the field along the edge of the cotton row to provide a nourishing stable for the table. The old time black eyed peas are best, but any variety will serve in an emergeniy.

Kale and mustard may be planted late as these vegetables will endure cold weather.

Carrots will produce a good crop if sown soon. Fall grown carrots are more likely to be tender than those started in the spring. Carrots can be stored in an outside pit and kept in good condition. They are especially valuable in the fall. Chinese cabbage is one of the newer vegetables. Like the common cabbage it may be served raw or cooked. Chinese cabbage can be planted during the winter months. Spinach also should mature before frost if planted during August.

To have cabbage head in the early fall or late winter, the early maturing varieties such as Charleston, Wakefield, or golden acre. For winter use Flat Dutch and Savoy are recommended.

Late August is also a good time to plant a fall crop of English peas and if planted on moist, fertile, well prepared ground, and the weather is favorable a worthwhile crop can be produced.

Since the growing season is short from August on, the use of fertilizer is suggested in order to speed the crops where it is needed.

The kind and amount of fertilizer to apply will depend on the fertility and general productivity of the soil. A complete fertilizer containing phosphoric acid ammonia and potash, usually fits all the needs of the garden. Many soils are deficient in potash especillay in the southern states. A complete fertilizer containing 4 per cent nitrogen, 12 per cent phosphoric acid and 4 per cent potash will give Al fertilizer contained 4 per cent nigtrgen, 12 percent phosophoric acid, and 4 per cent potash will give good results in ordinary garden soils. Where the soil is light, sandy, and low in postash, the percentage of this element should be increased.

Quickly available nitrogenous fertilizer gives good results on poor soils when one to three applications are made at intervals of ten to twenty days. An application of one-half pound to one hundred square feet is recommended. Carc should be used in applying nitrogenous fertilizer so as to not burn or kill the plants.

## MANHOOD LOSS?

Help Your Glands by Using **Dr. Holloway's Vigor Treatment.** Special gland medicines— No. 1 for men, No. 2 for women. You have tried the rest, now try the best. The Doctor's own private prescription. Don't be satisfied until you have tried VIGOR. Feel young at 70. Price $1.00 double strength, $4.00. If C. O. D. postage extra.

**HOLLOWAY MEDICAL CO.**
**5404 S. Parkway, Dept. 3, Chicago, Ill.**

Good results may be had by placing a small spoon of fertilizer on a ring around tomato plants about three week after they have been in the field. The fertilizer should not be placed too close to the plant.

Vegetables such as lettuce, cabbage, spinach, kale, parsley, swiss chard, and celery are benefited by side dressings of small amounts of nitrate of soda at frequent intervals throughout the early part of the growing season.

## 1935 BEST RECENT YEAR FOR DAIRY FARMERS

**New York,** July 25 (AP)—Cash income from milk brought American dairy farmers $683,000,000 in the first six months of 1935, best return in five years, the Milk Industry Foundation announced today. The figures were around $28,000,000 ahead of the total income from milk in the same period last year, the report said.

## DANDELION GREENS

In the days of our childhood, most of us lived on diets consisting of vegetables buried in pits or cellar, together with fresh meat and the everypresent salt pork. With the coming of spring, the first dandelions to show the leaves above the ground were eagerly sought for as "greens." Little was known of canned foods and the necessity of vegetables in preparing a safe diet. Now canned foods have changed all of that. The housewife may go to her pantry shelves and secure home canned vegetables at any time of the year.

### FRUIT JUICES ALL JELL WITH APPLE PECTIN

(CONTINUED FROM PAGE 1)

grandmothers guessing. Today, a splendid artificial pectin can be made from fresh apples, which, when added to any juice, will produce a prize-winning glass of jelly."

Thus the uncertainty of making jelly from delightfully flavored well-ripened fruits as peaches, pears cherries and strawberries which are deficient in natural pectin, has been eliminated, the home specialist declared.

Home-made apple pectin can be made from small and imperfectly shaped apples, Mrs. Smith explained Apples selected for making pectin extract should be fresh, tart firm, free from decay and worm holes and hard rather than mealy. It is useless to try to make pectin from fruit that is mealy, non-acid, or overripe, the specialist said.

**Use Cores and Peels**

The apples should be washed thoroughly, and stems and imperfect spot removed, Mrs. Smith advised. Never peel or core apples when extracting juice for jelly or for pectin. Slice thin, weigh, put in a large granite saucepan, and add nine cups of water for each four pounds of apples. Cover the pan and bring quickly to the boiling point. Boil rapidly for 20 minutes.

When the boiling in finished, extract the juice by straining through a flour sack or four thicknesses of cheesecloth. Do not squeeze the bag but let it drip until all the juice is drained out. When dripping is completed, remove the pulp from the bag, measure it, return it to the saucepan and add an equal amount of water for the second extraction of juice. Boil again for 20 minutes and strain.

Mix the two extractions and put in a large flat granite pan and boil rapidly until the liquid is reduced to one-fourth of its original volume; 35 or 40 minutes of fast boiling is generally required for this concentration.

The concentrated juice is a thick, syrupy liquid and varies in color from dark to light reddish brown, depending upon the variety of apples used, the color of their skins, and the length of time required for the cooking, Mrs. Smith continued.

If the pectin extract is not to be used at once, it should be poured while boiling hot into hot sterilized jars or bottles and sealed. When the liquid gets cold, there is a heavy white sediment in the jar. This sediment contains pectin; therefore the liquid should be stirred before using.

In making jelly, usually about five tablespoons of the extract is used with 3-4 cupful of sugar and one cupful of fruit juice.

Apple pectin extracts are very practical in Arkansas because apples are plentiful and cheap, said the specialist. Since spring and summer fruits that are suitable for jelly making were scarce, some of the fall fruits may be used successfully if combined with artificial pectin, she pointed out.

### RURAL RESETTLEMENT TO HELP NEGRO FARMERS

(CONTINUED FROM PAGE 1)

purchase mules, feed, seed, fertilizer and subsistence. In Mississippi, 3,139 Negro families averaging five persons to the family have received loans of approximately $784,750. No figures are available for Louisiana.

# MORE WHITES THAN COLORED VISIT "HALL OF NEGRO LIFE" AT DALLAS

## Up To July 19, Total of 83,000 Reported As Having Seen Exhibit At Texas Centennial

Dallas, July 30 (ANP)—From June 19 up to closing time, July 18, 83,000 persons had passed through the Hall of Negro Life, according to statement issued from the office of the assistant general manager at the Texas Centennial. The Negro building located near the Second Avenue entrance and adjacent to General Motors exhibit is proving by far to be one of the centers of attraction on the grounds. The type and character of the exhibits housed in this building shows the achievement of Negroes in the United States over a period of 100 years, giving a new light from what the Negro has done to the future of his broad possibilities. Although 95 per cent of the visitors to the Negro building are white, Negro attendance is gradually increasing.

The following is a list of quotations from prominent persons who have recently visited the building:

Mayor Sargeant, "The items to be witnessed in the Negro exhibit building are a true revelation to me. I urge each of us in the South to see this exhibit. It will lead to a better understanding of our races."

Senator Guffey, Pennsylvania, "The progress that the Negro race has made in this country in the past 70 years and which has been accelerated in the past quarter of a century is little less than miraculous. I am very glad to have had the privilege of seeing for myself these concrete evidences of achievement, rugged industry and artistic sensibilities."

Lieut. Gov. Woodhul, "I had no idea nor preconceived notion of the things the Negroes in America have done and are doing until I visited the Negro exhibits building."

Commssioner General Cullen F. Thomas, "Although I had a part in the creation of the Negro Advisory Committee, I had no idea in the beginning that the exhibits would so concretely show progress of the American Negro as it has. I am proud of the record made by Negroes and the Advisory Committee."

Executive Secretary Yeager of the United States Commission, "Your exhibits are simply marvelous."

President W. R. Banks, Prairie View college, "Not only are the exhibits representative, but well kept and the floors are scrupulously clean. The atmosphere around the building is not only fine and courteous, but inviting. I am happy over the progress of the exhibit in the building."

President Rhoads, Bishop college, "The interesting accumulation of rare objects of Negro achievement will do more for racial advancement than even anticipated by the Committee."

President Dogan, Wiley college, "Let me congratulate the Negro Committee on the fine work that is being done in connection with Negro participation."

President Clark of Southern university, "It is simply wonderful."

Will H. Kittrell, Centennial Assistant General Manager, "I am very much pleased at this unprecedented attempt to show the progress of the Negro race in America."

Mr. and Mrs. C. J. Cundee, Pittsburgh, Pa., "This is the most interesting building it has been my privilege to visit."

Z. S. Armstrong, District Administrator, NYA, "The interesting part of this exhibit is that all of the items are creative as contrasted to other exhibits on the grounds which are mechanical in nature."

Dr. S. W. Geiser, S. M. U., "This is my sixth visit to the building. Each time I come I find something new and interesting that I did not see on my previous trip."

Members of the Board of Education, Hawkins, Texas, "You mean to say that Aaron Douglas was a Negro. He must have had a lot of white blood. These are the finest pieces of art I have ever seen."

Members of the Board of Education, Dallas, "Where are the exhibits from the Negro public schools in Dallas? I am going to see about getting some of their exhibits in this building."

white person can come in this build-

Mrs. G. J. Byron, Fort Worth, "You have here the most attractive exhibit I have seen anywhere. No ing without going out with a higher appreciation of the Negro and his potentialities."

Chairman J. L. Clark, State Interracial Commission, "This is the most unique feature of the entire Centennial Celebration."

Dr. R. T. Hamilton, Dallas "I have visited most of the expositions in which Negroes have participated in the past 50 years. I am glad that Dallas is the host to the world so that this course in education on the Negros contribution to American culture can be given its widest circulation in the hearts of the South."

# BIRMINGHAM CHIEF OF POLICE PRAISE FOR FINE WORK

Greensboro, N. C., Aug. 13 (C)—The Greensboro Daily News, in an editorial Saturday captioned "Novel Police Technique," say: "A Negro, who had been 'positively identified' by a young woman and her escort as their assailant, is free because the chief of police of Birmingham, Ala., introduced an innovation into the investigation of the case. The accused man probably owes his freedom, if not his life to the offical's 'check and double check' method of investigation.

"It is the usual procedure of law enforcement agencies to conduct investigations designed solely to accumulate evidence against the defendant or defendants. The Birmingham chief went farther than this; he assigned two detectives to search for evidence favorably to the accused prisoner while two other investigators were seeking information against the accused. After the facts in the case thus amassed by the investigators had been submitted to and studied by the police chief, who admittedly had been convinced at first of the Negro's guilt, he ordered the suspect released from custody.

"It is, indeed, encouraging to find manifestation of such a desire upon the part of the police to guarantee justice to innocent men while protecting society through conviction of guilty parties. Significant, too, is it that a southern city was the scene and a Negro the benefactor of this new technique in law enforcement. The Daily News, mindful of the hapless souls who have been improperly convicted of crimes committed by others, is hopeful that the Birmingham chief has set a precedent that will serve as a guide for law enforcement officers everywhere. Is it too much to contemplate the day, not far distant, when the policeman will visualize his sworn duty as an obligation to assemble all the facts in a criminal case? We have known of all too many officers who were more interested in getting a conviction than they were in seeing justice meted out."

## Hubbard Hosiptal, Meharry Medical College, Nashville, Ten., Plans University Courses In Nursing Education

Arrangements have just been completed with Dr. George W. Frasier, President and Mr. George Irvin, Director of the Extension Division of Colorado State College of Education, Greeley, Colorado, for Professor Phoebe M. Kandel, R. N., Director of Nursing Education, to come to Meharry Medical College and give six weeks intensive courses in: "The Curriculum and Principles of Teaching applied to Nursing Education," and "Ward Management and Ward Teaching."

These courses have created unusual interest among the graduate nurses of the Southland because there are no opportunities in this section for Negro nurses to pursue advanced study in Nursing Education.

Meharry Medical College is the most ideal place to conduct these courses because of the facilities offered by the Hospital, College and Library. Fifteen graduate nurses have already enrolled for these classes.

Miss Phoebe M. Kandal will arrive in Nashville on August 27th and will begin classes on August 28th, 1936.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

# BIRMINGHAM LIQUOR SELLERS SWEAR TO PAYING OFF "COPS"

## Four Patrolmen Laid off After Affidavits Are Filed

**Birmingham,** Aug. 20—(ANP) Three affidavits filed by Negroes charging pay-offs to Birmingham officers for the privilege of selling liquor in this prohibition state were part of the nine which resulted in the suspension of four patrolmen and two detectives last week pending action by the civil service board.

Mrs. Mary Jo Combs accused officer P. L. Stapp of accepting two $5 payments to drop liquor charge against her. One of the payments, her affidavit says, was made in Officer D. J. Ratliff's presence and the other while Ratliff waited outside in a police car. The officers had raided her home and found a quart of whiskey. An affidavit from her husband, George, corroborates her statements.

Alex Brown in another affidavit charged that Stapp and Officer J. R. Phillips raided his home for liquor and arrested him in December, but a week later came around and told him it would cost $5 to get the bond tore up so he would not have to go to court, and $3 a week to sell liquor in North Birmingham.

The remaining affidavits, similar in nature, were made by whites. Two private detectives worked on the case and secured the evidence.

## Steals Guitar From Church

**Memphis,** Aug. 20—(ANP) Members of the Lane Avenue Church of Christ kept one eye on the preacher Sunday night and another on Booker T. Bailey, 23, loitering under a window. So when someone passed a guitar to him, several began chase. After a short run Bailey was caught, arrested, and next day ordered to pay a fine of $15 or serve 15 days in jail.

# NINE WHITE POLICEMEN IN CHICAGO SUED FOR BRUTALITY TO PRISONER

**Chicago,** Aug. 20—(ANP) Nine white police, attached to the 48th Street Police station in the heart of the Southside, were named defendants in a $25,000 brutality suit filed for Orrie Branch by Attorneys George A. Blakely and Sidney A. Jones, representing the Chicago branch of the N. A. A. C. P.

The officers from whom damages are sought include John Dawe, Peter Keeley, Michael Kelly, James Woulfe, Peter Mayer, Patrick Kelliker, Thomas Bellos, Frank M. Butcher and Harold E. Colander.

This represents what is called "one of the most shocking exhibits of police brutality ever brought to the attention of the association." On March 11, according to Branch, he was held up by two gunmen. A squad car containing Dawe and Michael O'Connel came by and the bandits opened fire. Branch was shot twice in his right leg and Dawe was wounded in the abdomen. Branch got a motorist to take him to 48th street station where he reported the incident and was accompanied by police to Provident hospital for first aid.

While at Provident, another squad car containing Woulfe, Colander, and others drove up. They arrested Branch, took him to the hospital where Dawe lay and asked the wounded officer if he was one of the men who shot him. When the policeman identified Branch as his assailant, the officers attacked the wounded man and fractured his jaw in two places, according to the complaint. He was carried back to the police station and charged with a breach of the peace which failed to hold up in court and resulted in his freedom.

Branch, 41 years old and married, was a WPA laborer up until the time of his injury.

## Four Thousand Families Placed Picking Cotton Crop

### MANY WILL HAVE OPPORTUNITY FOR PERMANENT WORK, SAYS ROOKSBERY

LITTLE ROCK, ARK.,—Cotton pickers are being supplied plantation owners by the National Reemployment Service here as requests are received from plantation owners by the organization, W. A. Rooksbery, state NRS director, said today.

Approximately 4,000 families have been provided work during the cotton picking season through the state NRS, and to date no shortage of labor is known by the NRS to exist in the cotton area, Mr. Rooksbery said.

While many workers have been taken from WPA projects to meet demands of the cotton picking season, work has been provided many others by the organization which is serving as a go-between workers and owners.

Any person will be aided in obtaining cotton picking jobs by the NRS, it was pointed out. That organization's only policy in aiding is the guarantee of plantation owners that cotton pickers will be housed and arrangements made for food and transportation.

WPA workers, it was emphasized, will not lose their status with the WPA by taking cotton picking jobs

### RESETTLEMENT AID IS USED TO GROW SECOND BIBB BALE

The second bale of cotton sold in Bibb county this year and the first bale sold by a family of the Resettlement Administration was sold yesterday by Arthur Taylor, a farmer of the Rutland district.

Raised on a farm in Muscogee county and a railroad man for 13 years, Mr. Taylor was laid off several years ago, he says. After working on public relief for a few years, he finally moved to a farm

### 38 NAMED FOR FARM TENANT PROBLEM STUDY

#### Governor's Honorary Commission to Meet Next Month at Spa

Thirty-seven Arkansans and one former Arkansan prepared today to launch at the request of Gov. J. M. Futrell a study into the farm tenant problem in Arkansas and meet in Hot Springs on September 21, to discuss the situation as a move preliminary to the holding later of a Southwide conference with similar commissions from other states.

Governor Futrell yesterday announced his selection of aides to make the study of the sharecropper-farm tenant problem, which dates back to the war between the states 70 years ago.

Announcing appointment of 38 persons to his special state group, overnor Futrell said he was advising chief executives of all cotton growing states of the action and that he hoped to assemble the Dixie-wide conference by November.

The Arkansas commission, which will form the nucleus for the Southwide meet, was set up to examine the tenant problem with a view to evolving a solution designed to extend farm home ownership to field labor now working on a share basis.

**To Meet Next Month.**

Requesting the state group to held its first meeting on Sept. 21,

### DAILY DIGEST SAYS:

A new experimental peach, known only as "87" is being harvested at Hammonton, New Jersey, for the first time, says a report in the New York Times. It promises to surpass in popularity the Elberta variety, for which this section of the state is famous. The peach, developed several years ago by the New Jersey Experiment Station, is a trifle larger than the Elberta, has less fuzz on its skin and ripens several weeks earlier. The fruit did not reach maturity during the last two years because of the severe early frosts, which destroyed the buds.

**CROP INSURANCE**

"By crop insurance is meant," says Eugene Butler in Progressive Farmer (September), "Insurance against nature's destruction by drouth, hail, or flood, rather than against man's shiftlessness or price fluctuations. And it has been suggested that the insurance premium be paid in the form of the commodity itself. It has been shown that one-third to two-thirds of the excess yield of wheat, if paid only in years of good yields, of which have covered cost of insurance up to 75 per cent of average yield in poor crop years. Such a plan would tie in splendidly with the ever normal granary plan, with crop insurance requirements serving as the bulwark against years of scarcity. It would also provide a form of price stablization, but no funds would be required to buy up the commodity....Produc-

### THOMASVILLE, GA. REAPS BENEFITS FROM PEAR CROP

#### Pineapple Variety Finding Ready Market in East; Plant Going Full Blast

THOMASVILLE, Ga., Aug. 18.—a bumper crop of the delicious pineapple pears in this section, for which there has been only a limited sale in past years, is now finding an outlet through marketing channels as well as providing big scale operations for a canning plant.

The local canning plant Saturday advertised for 100 women to go to work Monday morning, and the number is being increased to 150 today, two shifts being used and the plant running at capacity to take care of orders.

Two carloads of canned pineapple pears are being shipped to a Kansas City broker and orders have been booked for other sections.

The local plant is absorbing not only what would be considered the surplus production of this crop but has purchased from one grower alone 20,000 bushels, and from other growers varying amount.

One grower last week shipped a solid carload of pears in crates to New York and is planning to send another car this week, if prices hold up. Trucks visiting the state farmers' market here likewise have handled many bushels.

## AAA Invites Negro Agricultural Leaders to Aid Soil Conservation Program

Washington, D. C., September 3, —Negro Agricultural Directors of Land-Grant colleges in nine southern states have been selected as technical speaker on Soil Conservation during a series of thirty intensive meetings of Negro farmers in Southeastern and Southwestern regions. These meetings which have been arranged by the Agricultural Adjustment Administration in cooperation with Negro State Extension Agents and Land Grant College Presidents will begin on September fourteenth and continue through October ninth.

Negro farm population centers in South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, Oklahoma and Texas have been carefully chosen for this series of conference, and their purpose is to acquaint Negro farmers with the government's fall program of soil rehabilitation and conservation.

The Ne ro agricultural specialists who have been invited to serve as speakers include: S. A. Haley, A. and M. College, Normal, Alabama; J. N. Carruthers, A. and M. College, Pine Bluff, Arkansas; J. R. Otis, Tuskegee Institute, Alabama; B. L. Perry, Florida A. and M. College, Tallahassee; F. M. Staley, Georgia State College, Savannah; C. V. King, Southern University Baton Rouge, Louisiana; Professor Bowles, A. and M. College, Alcorn, Mississippi; W. E. Simms, A. and M. College, Langston, Oklahoma; W. M. Buchanan, State College, Orangeburg, South Carolina; L. A. Potts, Prairie View, Texas.

Other speakers who will assist at several of the meetin"s include C. A. Cobb, Director Section, AAA; E. A. Miller Assistant Director, Cotton Section, AAA; T. M. Campbell, Field Agent, United States Department of Agriculture, Tuskegee Institute, Alabama; James B. Pierce, Field Agent, United States Department of Agriculture, Hampton Institute, Virginia; James P. Davis, Field Officer, AAA.

### SEVENTH ANNUAL CONVENTION, OCT. 26, 27, 28

SPECIAL

Committee on arrangements for the Seventh Annual Convention National Federation Colored Farmers to be held here last week in October, is unusually busy perfecting arrangements to care for delegates and visitors. The session will be held at Currin Hall. Special committee has been appointed to secure homes for those who are to attend the three day session. E. A. Miller, Assistant Director Cotton Division, Department Agriculture, and W. A. Sherman Fruit and Vegetable Marketing Specialist, Washington, D. C., have been invited to make principal addresses on the opening day. Dr. Henry Allen Boyd, Nashville, Tennessee, and Rev. J. C. Austin, Chicago, will also speak.

A special musical program is being arranged. The local citizens of Charleston will sponsor a ball on tht evening of 28. Orchestra from St. Louis has been engaged to furnish the music. Many prizes will be

### LESS MEAT IN STORAGE, JULY 1ST

With drought against fore.... shadowing a possible curtailment in meat supplies, the United States will have less stored meat to rely on than was available a year ago, according to figures released today by the Department of Agriculture.

July 1 storage supplies of pork were little changed from a year ago, but beef stocks were off sharply, as were lamb and mutton supplies. Lard, on the other hand, was ahead of the July 1, 1935, total.

Pork in storage in July 1, totaled 431,292,000 pounds, as compared with 440,618,000 on June 1, and 445,307,000 on July 1, 1935. The is 656,677,000 pounds.

Beef on hand July 1, totaled 41,225,000 pounds, comparing with

### OVER 3 MILLION FARMERS IN CHINA

There are 320 million farmers listed in China, 45 per cent of whom are independent farmers, 23 per cent semi-ndependent and 32 per cent on tenant farms. The cotton crop this year will exceed 16,000,000 piculs (about two billion pounds) as stated by the cotton control committee of the National Economic Council.

# HOW MUCH MILK?

Take it in whatever form you like, **some** milk—nutritionists say—should be included in the everyday diets of every family. Milk contains an abundance of calcium and other essentials which are likely to be deficient in diets without milk.

HOW MUCH milk is needed and how much is desirable depends somewhat on the makeup of the rest of the diet, but for most families between 3 and 5 quarts per person a week will provide a satisfactory allowance.

THREE quarts for the average family will do if it must. Five quarts is better. For the ordinary sized family, 3 quarts would allow 1 pint per child and 1 cup per adult. Five quarts would allow between 3 and 4 cups a child and 1½ to 2 cups an adult.

TWO years ago, committees of women in 59 cities, working with the Consumers' Counsel of the AAA, set about getting at the facts of actual consumption of whole and evaporated milk. They gathered reports covering one week in April or May 1934, from 28,966 families, some of whose children went to school in slum districts, some in industrial areas, some in middle-class or better districts.

FACTS which these women collected have now been analyzed, evaporated milk consumption has been translated into the equivalent of whole milk, and these are some of the results that stand out:

529 families reported that they bought no milk at all.

4,126 families reported that they purchased less than a quart a person weekly, and more than half of that quart represented evaporated milk.

More than two-thirds of the 28,966 families consumed less than 2 quarts per person weekly.

FAMILIES in only 8 of the 59 cities reported an average consumption of whole and evaporated milk as high as 3 quarts a week per person.

ALL but 5 percent of the families consumed an average of less than 5 quarts of these kinds of milk per person.

AVERAGE consumption for all 28,966 families was 2.44 quarts of whole milk and the whole milk equivalent of evaporated milk—18.7 percent less than the 3 quarts called for in emergency diets of 3 quarts a week and less than half of the adequate standard of 5 quarts a week.

RECOMMENDED standards include milk in whatever form. Reports gathered in the National Milk Survey refer only to whole and evaporated milk. They do not include such other forms as skim or dried milk, buttermilk, ice cream, or cheese, in which milk might have been consumed by these families. Conceivably in some instances the addition of these other forms might bring the amount of milk consumed closer to desirable standards. This must be a guess only, since no figures are available from which to estimate how much skim or dry milk or buttermilk are consumed by the average person; ice cream consumption by such families as are included in this study cannot even be hazarded. One careful estimate of the weekly per capita consumption of cheese puts the amount at only 0.08 pound.

OTHER limitations of data must be noted. No facts are known about milk which these families might have purchased and consumed away from home. With children, milk consumed at school should be an important part of the weekly quota, but from milk facts reported for public-school systems in 45 of the 59 cities it was learned that milk consumption at school for this group averaged only 0.15 of a quart a week.

SOMETIMES nationality and race make a difference in food habits. No information on these factors was collected. By the method of selecting the families, no attempt was made to get a completely representative picture of milk consumption by all families in each city. Families in extreme poverty, without children or too poor to have their children in school during those weeks, were not included. If there was any overemphasis of any economic group in any of the cities it was in the direction of low-income families.

NO DOUBT remains, however, after surveying the results of this study, and after making due allowance for its limitations, that the facts point to a **grave deficiency** in the average amount of milk consumed by a large number of families.

CONCERN over the dangerous hazards to health from underconsumption of milk was what led a committee of women from 12 national organizations to ask that this survey be made. During 1933 and 1934 Federal and State emergency relief agencies were reporting a large increase in the number of cases of malnutrition among children. This committee of women called on the Secretary of Agriculture in the spring of 1934 and asked his help in getting at the facts of milk consumption.

"WE are prompted to make this request," they said, "by the apparent grave under-consumption of milk, and wish to learn more concretely than has ever been done before how much milk is being consumed by those who need it most. We feel that the facts obtained in such a survey are vital to the solution of the milk problem and we are sure that it will arouse the widest interest of the women of the United States."

INSTRUCTED by the Secretary of Agriculture to undertake this survey, the Consumers' Counsel set to work. A list of 63 cities was drawn up; some large, some small (four cities later had to be omitted). Care was taken to include those which would show an equitable geographic distribution of the population of the country. Local committees of women were asked to help in distributing and collecting the questionnaires, and in tabulating the preliminary results. Local committees asked their municipal authorities to select three schools representative of a poor or slum district, an industrial area, a higher income district. Each school principal then received 250 questionnaires. Principals gave these questionnaires to children, selected at random, to take home and ask their parents to furnish the information, and then return the questionnaire to the school. A few families without school children were included in the number of questionnaires returned.

RETURNS from 28,966 families gave such data as these: The number of people in each family; the number of children of school age, from 5 to 16 years; the number of children under 5; purchase of whole and evaporated milk; the amount obtained which was not purchased. For 19,427 families, family incomes were reported. Included in this number were 9,728 families, each with 2 adults, some with no children, others with from 1 to 10 children.

HIGHEST consumption of whole milk and the whole milk equivalent of evaporated milk among all the 59 cities were reported by families in Reno, Nev., where the average amount consumed weekly was 3.42 quarts per person. Other cities reporting on average of 3 quarts or more were Boise, Idaho, Seattle, Washington, Fargo, N. Dak., Burlington, Vt., Boston, Mass., and Minneapolis, Minn.

LESS than a 2-quart average was reported for 8 cities, with the lowest consumption for all cities in Charleston, S. C., where the average, pulled down by low milk consumption by Negro families, was only 1.23 quarts. The other 7 cities were: Winston-Salem, N. C., Richmond, Va., Pueblo, Colo., Baltimore, Md., Gary, Ind., Louisville, Ky., and Oklahoma City, Okla.

NORTHERN and western families showed a better record for milk consumption than did southern families, due in part probably to the larger number of dairy cattle and dairy farms in the former regions. Other factors such as income, the cost of milk, and ignorance of the importance of this food in the diet, too, bear on variations in milk consumption.

CITIES in Pacific Coast States showed the best average record. For the 5 in that region the average consumption was 2.75 quarts. Close second was the West North-Central area, where the average for 7 cities was 2.71 quarts.

BOTTOM on the list of those areas was the South Atlantic. Nine cities in this region reported an average of only 1.93 quarts a person a week. In none of the other 8 regions did the average consumption drop below 2 quarts.

ALMOST 80 percent of all the families reporting from South Atlantic cities showed they were getting less than 3 quarts a week. Nearly as large a proportion of families in East South-Central cities fell below this low level. Even in New England, West North-Central, and Pacific cities close to 60 percent of the families failed to get 3 quarts a person a week.

IMPORTANCE of evaporated milk varied greatly, also, from city to city. Consumption of milk in this form was reported from all cities. In three—Butte, Mont., Globe, Ariz., and Charleston, S. C.—the proportion of milk consumed as evaporated averaged from 37 to 39 percent of the total. In 10 cities, the average was less than 10 percent. These included: Fargo, N. Dak., Minneapolis, Minn., Sioux Falls, S. Dak., Burlington, Vt., Lawrence, Mass., Manchester, N. H., Oshkosh, Wis., Louisville, Ky., Washington, D. C., and Wichita, Kans.

EVAPORATED milk was a big item in the milk consumption of Negro families reported on in Baltimore and Charleston, S. C. Records from Negro families in the latter city showed that 45 percent of their milk was in this form; those in Baltimore reported 21 percent as evaporated.

BIG families, little milk; big incomes, more milk—these two important relationships run through the data which the families reported.

FAMILIES with the lowest consumption per person, it was found, were almost always families with the largest number of children. Put another way, this serious fact is still true: The greater the number of children, the less milk consumed on the average by each member of the family. Furthermore, families with low milk consumption per person were families with a greater proportion of children below school age, the period when a deficiency in milk can perhaps do most permanent damage.

RECORDS of 9,728 families each with 2 adults were studied to see how consumption of whole and evaporated milk changed with the size of the family. Largest per capita consumption was reported by such families who had one child. Their average was 3.06 quarts a week for each person. Families with 2 children consumed 2.93 quarts per person; with 3 children, 2.61 quarts. Almost without exception, with each increase in the number of children the per capita consumption decreased, until with families of 10 children the average was only 1.22 quarts a person.

EVEN if the 2 adults in each

## 38 NAMED FOR FARM

(CONTINUED FROM PAGE 1)

to Hot Springs far removed from the troubled east Arkansas sharecropper belt, Governor Futrell named C. E. Palmer of Texarkana, south Arkansas newspaper publisher, as chairman of the honorary farm tenancy commission, to which other appointments will be made later.

On the same date, September 21, the federal grand jury will meet in Little Rock to study recently discovered evidence indicating possible violation of peonage laws in Arkansas cotton fields. George P. Jones, special assistant to the attorney general, recently was named by Attorney General Cummings to present the data before the grand jury.

Included on the list appointed late yesterday were sharecroppers, professional and business men, landlords, landowners, various federal agency attaches, educational and religious leaders. Futrell said all were named as individuals and not as representatives of any specific organization.

The state commission is designed to make recommendations to the legislature and state administration, said the governor, "and probably the federal government, for the improvement of the economic status of farm tenants, and extending farm home ownership among them."

### Ideas Are Invited

The chief executive invited anyone with definite ideas and plans for a solution to the problem to send them to the state commission, expressing the hope for an open minded group able to consider every phase of the farm tenant situation.

The chief executive has announced his intention of retiring from public life at the end of his present term in January, indicating a desire to devote his major effort in the last months of governorship to working out a solution for the tenancy question, a source of discord in the farming South since reconstruction days.

First announcement of his proposed Dixiewide meet recently brought from Southern governors expressions of interest and pledges of co-operation.

### Commission Members.

Named to the state commission with Mr. Palmer were:

Dan T. Gray, dean of the University of Arkansas, college of agriculture, Fayetteville.

Dr. A. C. Millar, Little Rock minister and editor of the Arkansas Methodist.

Donald Murray, Jonesboro newspaper publisher.

J. B. Watson, superintendent of the A. M. and N. College for Negroes, Pine Bluff.

T. Roy Reid, regional director for the Resettlement Administration, Little Rock.

C. C. Randall, university extension service director, Little Rock.

Floyd Sharp, state Works Progress Administrator, Little Rock.

J. W. Sargent, regional director for the Soil Conservation Service, Conway.

J. O. E. Beck, Hughes planter.

James Hammond, Memphis newspaper publisher.

Clyde Byrd, county judge of El Dorado.

Connie Bonslagle, university extension service, Little Rock.

C. T. Carpenter, Marked Tree, former attorney for the Southern Tenant Farmers' Union.

V. C. Kays, president of A. and M. College, Jonesboro.

J. K. Mahoney, El Dorado attorney.

T. J. Gaughan, Camden attorney.

Rev. Ray L. Davis, Wynne Minister.

Carl Hollis, Warren, member of the state board of education.

M. L. Sigmann, banker of Monticello.

Charles T. Evans, Little Rock.

M. E. Melton, Texarkana Chamber of Commerce secretary.

Bob Hall, El Dorado Chamber of Commerce secretary.

Mrs. E. W. Frost, Texarkana, Democratic nominee for national committeewoman.

Mrs. Scott Wood, Hot Springs, former president of the Arkansas Congress of Parents and Teachers.

Col. T. H. Barton, El Dorado oil company president.

C. E. Dungan, Augusta attorney.

Charles Goslee, Hot Springs publisher.

Mrs. Winrfred C. Pope, Little Rock, manager of the magazine, Arkansas Farmer.

E. C. Morton, Heber Springs.

Joe Knight, Paragould.

Paul M. Pfieffer Piggot.

Horace Sloan, Jonesboro.

James Crane, Wilson.

A. Carlson, Turmann.

John Mitchell, Havana.

W. G. Padgett, Marion.

Harry Williamson, Hughes.

### Criticizes Futrell Action.

Memphis, Tenn. (AP)—H. L. Mitchell, secretary of the Southern Tenant Farmers' Union, criticized as a "political gesture" today the action of Governor Futrell of Arkansas in naming a committee to study the sharecropper problem.

Mitchell said the governor had failed to give the union representation.

J. O. E. Beck, Sr., Hughes, Ark., planter named on the commission charged the union had given a false picture of eastern Arkansas, to the world."

"Governor Futrell's proposition is all right," he said. "Some people couldn't keep land if you gave it to them, but everybody is in favor of making it possible for the man who wants to work to buy a home."

## HOW MUCH MILK?

(Continued from Page 2)

family had gone without milk entirely, the average amount of milk consumed, it is estimated, would have been below 2 quarts a child in all groups of 7 children and more and below 3 quarts in all groups of 5 children and more.

INCOME, too, obviously had much to do with the amount of milk families could buy. Large families were usually found to have low income. With pressure from both ends—little money coming in and heavy expenses—the chance for an adequate supply of milk did not come within reach of such families.

THE BIGGER the family purse, the better the chance for larger milk consumption is supported by the data collected from 19,427 families. (Other families did not report their income.) Families whose members were each getting less than 1 quart of milk a week had an average income of $13.21, which meant $2.04 for each person because these families had an average of 6.5 people in them. Over half, 55 percent, of the income of such families was spent on food and yet, either because milk was expensive in relation to the money available for food, or because the families were unaware of the importance of milk, the amount of whole or evaporated milk consumed was one-third only of the minimum amount the body should have even for emergency periods.

SEPARATE count of incomes was made of 9,728 families from whom records received were complete. In this group, the restricted diet level of 3 quarts per person a week was not reached by any of the families with incomes smaller than $25 a week and 57 percent of the families had incomes of less than $25.

COST of milk in relation to income apparently is not the only holdback on better milk consumption. The records of 52 families showed that, even with relatively high incomes of $100 a week and above, consumption of whole and evaporated milk averaged only 3.43 quarts a person, although most nutritionists recommend in their suggested adequate diets at least an average of 5 quarts of whole milk or its equivalent each week.

CITY by city, the records show the close relation between low milk consumption and low income. Such uniformity suggests that this condition cannot be due primarily to race, nationality, or climate. In Charleston, S. C., where the average consumption of all families was lower than in any of the 59 cities, families consuming less than 1 quart per person a week had incomes of less than $22; those consuming from 4 to 5 quarts a person had about $37 a week to spend. Reno, Nev., with the record for highest per capita consumption, shows that families in that city consuming less than 1 quart a week per person had an average income of less than $24, while those consuming between 4 and 5 quarts had incomes averaging about $33 a week.

THIS SURVEY did not attempt to get an answer to the question as to whether families would buy more milk if its cost, in relation to their incomes, was lower. That is a major question which needs answering.

WHATEVER proof can be found on one side or the other of this question, three vitally important facts stand out from the present survey: (1) Consumption of milk by thousands of families comes nowhere near an adequate standard for building and maintaining strong bodies. (2) The larger the family, the lower is milk consumption. Children in such families may be penalized for life because of lack of the important food nutrients in milk. (3) Low incomes go along with low milk consumption.

TWO YEARS ago, in launching the National Milk Survey, the Consumers' Counsel wrote: "I do not think that it is the moral responsibility of the Nation's dairymen to bear without help the burden of providing dairy products to that portion of the consuming population unable to pay a fair price for the dairymen's product. Society as a whole must recognize this problem of providing adequate milk supplies to needy children.

"THE PURPOSE of this survey," he continued, "is not only to measure the extent of the problem of underconsumption but to focus public attention on a grave national responsibility. Out of this effort we hope to see a quickened social consciousness on the part of consumers and all businesses interested in the distribution of milk to the needy for meeting at least the minimum milk requirements of all our people, no matter how poor."

## COOPERATION

The first tractor to be designed by farmers and to be manufactured by and for farmers through cooperative organization has been on demonstration in recent weeks at various places in middle western States. This "CO-OP" tractor is built with a high compression motor, with six cylinders, an electric starter as standard equipment, and is intended to be run with high octane fuel. It has been built to be adaptable for all types of farm work.

"WE are tired," states an editorial in a prominent food trade journal, "of answering individual questions about the possible dangers in a movement toward cooperative consumer ownership of retail stores So, once for all, No!! We feel quite sure that this is just another spook that people insist on seeing under the bed.

"THE history of consumer cooperation shows that there are but two conditions under which consumer cooperation is successful: (1) When the sluggishness of competition amounts to monopoly. (2) When consumer agreement is necessary to establish a new item in trade. The latter is irrelevant. The former does not apply to our present food trade nor to many other trades.

"WHEN the Rochdale Society was started during the industrial revolution in England by 27 families who were so poor that they had to save for a year to amass their capital of about $140, the sluggish competition of that day was not geared to our present super-market speed. Established out of abject necessity, it was later adopted as a financial unit by British trade unions and became an integral part of their crusade.

"IN the early days of the Grange, the Farmers' Alliance, and the Farmers' Union, muddy roads and restricted buying radii caused local petty monopoly prices by retailers that farmers were oblige to break up by a system of cooperative purchase. When active competition was brought in by mail order catalogs and improved roads these stores were discarded. The limited number of essential staples handled successfully by these early co-ops were the very items that are now being generally used as loss leaders to draw customers into the stores. For a co-op to succeed now in competition with our throat-cutting loss leaders would be surprising."

---

A GAIN in sales of over 20 percent in 1935 over 1934 is reported by the State Exchange of the Nebraska Farmers' Union. Business last year totaled $1,635,125, not including sales of its retail branches. Net savings on this volume were $71,805, a 15 percent gain over 1934.

---

MARKETING wool cooperatively brought higher prices last year to growers who disposed of their supplies through the Illinois Livestock Marketing Association, it is reported. They received an average of 55.48 cents a pounds, or 25 percent more than the price received by growers not in the pool.

---

TRANSPORTATION costs from mid-Western sources of supplies are given as the reason behind the acquisition by the Pennsylvania Farm Bureau Cooperative Association, Inc., of a financial interest in the Southern States Cooperative mills, located at Baltimore, Md., and owned by farmers. These mills are able to take in coastal grain, molasses direct from Cuba, cottonseed from the South, and other material that must be brought long distances. Their manufacturing capacity is from 30 to 40 cars a day. All kinds of feed are produced for dairy, poultry, and hogs, and are made on open formulae. Farmer-members in the eastern part of Pennsylvania expect to look to this source for their supplies, while farmers in the western en buy "Farm Bureau Feeds" from the Farm Bureau Milling Company at Chicago, in which the Pennsylvania Farm Bureau Cooperative Association, Inc., is an equal stockholder with Ohio, Indiana, Michigan, West Virginia, and Wisconsin cooperatives.

---

COOPERATORS are going to school. The Central Cooperative Wholesale, with headquarters at Superior, Wis., which did a business of over 2 million dollars last year and services 101 member retail societies, 54 of whose members showed a retail business exceeding 5 million dollars in 1935, is starting the organization of a National Cooperative College. The primary function of this college, it is planned, will be to train managers and employees for cooperatives. As a first step in this educational program an 8-weeks training school for present and prospective cooperative employees has been authorized for this fall. The training school is expected to be held in Superior, Wis., under the direct supervision of the Central Cooperative Wholesale and the Northern States Cooperative League.

---

TWELVE Cooperative Institutes drawing students from 30 States, have been set up for this summer. Three of them will be held by the Eastern States Cooperative League. Featured in these summer schools will be general and technical courses on cooperation for students and prospective leaders, and special sessions on cooperative recreation and culture. A National Cooperative Recreation Institute at Columbus, Ohio, is planned for June 1 to 13, to be followed by regional recreational institutes in each section of the country. The Northern State Cooperative League will conduct its first cooperative institute at Maple Plains, Minn., from June 7 to 21, with similar institutes at Cloquet and Lake Eshquagama, Minn., and in upper Michigan later in the summer. The American Peoples School will hold a special Cooperative Leadership Summer School in New York City from June 27 to August 15. The Central State Cooperative League plans an institute at Ashland College, Grant, Mich., to run from August 30 to September 5. Two additional seminars are scheduled for Chicago and adjoining areas.

---

A COMPREHENSIVE bibliography, the first of its kind, covering books and articles on credit unions has been announced for publication. It includes a list of more than 700 separate titles, covering material published as far back at 1857, but emphasizing particularly material appearing since 1921. Anyone interested in this form of cooperative organization will find this a convenient reference book. Inquiries should be directed to Clarke J. McLane, President of the Library of Congress Federal Credit Union, Washington, D. C. We pass on this information because of the many inquiries reaching the Consumers' Counsel regarding Credit Unions, which are the special charge of the Credit Union Section of the Farm Credit Administration in Washington.

## FOODS RICH IN VITAMINS

BEETS are most valuable for their leafy tops. Though more roots than tops are eaten, the contribution of the roots to nutrition is a minor one. Beet greens, if not cooked too long, in too much water, or with soda, make a striking showing on the food value chart. They rate as "excellent" sources of Vitamins A, B, C, and G, with very rich supplies of iron, phosphorous, and calcium besides, to say nothing of their delicious flavor. This time of year consumers are more likely to find beets sold complete with fresh tops. To be sure of the best in the market, look for young, fresh, tender, and clean leaves. Sometimes when they are flabby and wilting, their freshness can be brought back if it has not gone too far. If they are slimy, pass them up.

CUCUMBERS make their own modest bids for attention in the matter of food value even if their claim as a flavor accent is sufficient to give them place on any menu. Though the facts are not all in, they are known so far to provide—like all vegetables—small quantities of necessary minerals, the necessary fiber to help keep digestive tracts in order, along with a good supply of Vitamin C. In looking for cucumbers to slice for salad, favor the firm, fresh, bright, well-shaped ones of good color, avoiding the kind that are shriveled or withered, or overgrown and puffy. If there is a dark-sunken uneven place, it may mean decay which rules out that cucumber.

TOMATOES, one of the best gifts of nature to diet and the taste, whether fresh or canned, are at their best for flavor in the fresh state in June. Though not as potent as orange juice in Vitamin C, they rate as "excellent" for Vitamin C, and the same for Vitamin A, as well as "fair" in Vitamin B.

CHERRIES get their special recognition as a "good" source of Vitamin C, and of course need no recommendation as providers of dessert sweetness and "appetite appeal" in a healthful way. Whether you buy the sweet cherries for eating fresh, or the sour cherries for pies and canning, good quality shows in a bright fresh look, plumpness, and good color. To be ripe they should be plump and firm and the right color for the type, and juicy. If they are not ripe enough they may be small, hard, and not well-colored; if too ripe they look soft and dull, and the box may be stained because they are leaky. Look close for worm injuries, for decay in the form of small, brown, round spots.

BANANAS are a good source of Vitamins A, B, C, and fair source of G. and high among fruits in carbohydrates for fuel. Though they used to be libeled as indigestible they have come into their own lately, when ripe, as an early food for babies. If you buy bananas for immediate use you can often get bargains in the fully ripened fruit which is tinted with brown and flecked with small brown specks. Even though the skin is entirely brown, if the flesh is firm and not discolored the banana may be in prime eating condition. Ripening that has gone too far shows in soft and mushy flesh. Bananas with tips still green or those solid yellow or red from stem to stern can be bought for cooking or for further ripening in the kitchen.

LEMONS AND LIMES are traditionally excellent sources of Vitamin C, the scurvy preventing "tooth-nutrition" vitamin, but they are also a fair source of Vitamin B as well. Look for fruit that is heavy for its size. Lemons are usually better if they are a deep yellow color, while green is the color for limes. When limes are yellow they are likely to lack the tartness we like in them. Mold is equally taboo in both lemons and limes, but limes also suffer "scald" which shows in purple or brown-colored spots and lowers the price without necessarily lowering the value very much.

LEAN MEAT makes practically the same important contribution to nutrition, no matter what animal it comes from: The particularly useful protein for building and repairing body tissues; minerals, especially iron and phosphorous for healthy red blood; Vitamins B and G for stimulating the processes that help to keep us fit. Chicken is special in its "excellent" supply of Vitamin B. The dark meat of poultry is richer than the light in iron. Government grades help in selecting the choicest June meat. U. S. Prime or Grade A is the top grade you'll usually find on the market in poultry, lamb, veal, or calf.

EGGS rate high for so many precious nutrients that they are frequently good buys when they are not at their cheapest. June prices are usually only a little higher than their April low. Nutritionists urge that we find a place in the budget at least for four egg yolks a week for babies and young children. Eggs supply protein, fuel, iron, calcium, phosphorous, and are "excellent sources of Vitamins A and G"; also of the rare sunshine Vitamin D, especially at this time of year, and contain some Vitamin B.

BUTTER is most favored by nutritionists for its high supply of Vitamin A and also of Vitamin D, which does not come with the other fats we may substitute for butter. Extra supplies of these vitamins usually go into butter made at this time of year when cows are eating the green vitamin-rich pasture and living in the sunshine. Some dairy cows receive vitamin-enriched feed even in the winter and the resulting butter is also rich in vitamins. but this season's butter is most certain to have the extra vitamin value.

BUTTER GRADES are coming into use in some States and though they do not affect food value they do raise quality standards. In Oregon when compulsory grade labeling went into effect, less than a quarter of the butter was high enough quality to be marked Grade A. A year later, three-fifths of it was graded A, creameries were making less and less Grade B, and Grade C had almost disappeared from the market. It was no coincidence that consumers ate more and more butter during the year, even though at that time drought was driving butter prices rapidly upward.

GRADE A butter in Oregon is butter that by Federal standards would rate "92-score" or better. "93-score" is about the highest marking that butter ever gets. Though only a fraction of America's butter is graded by Government graders, all butter at wholesale is sold by score. Some manufacturers use the Government grading service and present it to consumers with the certificate of grade in the package. It is the best assurance consumers can find for purity and high quality in the butter they buy.

POTATOES present an exception to the usual rule of high quantity—low prices. The fact that the big supply of potatoes on the market in early summer is made up of two over-lapping season's potatoes—last fall's storage potatoes and this season's "new potatoes"—while prices are usually quoted on the new or more expensive kind, accounts for the discrepancy. Consumers who buy the old potatoes stored over from the Fall may still be able to make the rule work for them in the matter of low prices. The new potatoes will keep longer, making it more practical to buy in large quantity under the variety name that assures cooking and eating quality. The chief contribution of potatoes to the diet is fuel in the form of starch for energy.

## RIDING A CABBAGE BACK TO THE FARM

Tracing a nameless, unmarked, unticketed head of cabbage from the kitchen back to the farm it started from can one of the most difficult detective jobs anyone can undertake. No Cook's Tour agent is at hand to map the route. No Bureau of Missing Vegetables

(CONTINUED ON PAGE 8)

# DAILY DIGEST SAYS

(CONTINUED FROM PAGE 1)

tion control and soil conservation could be made a part of the contract for crop insurance by providing that a farmer's crop would be insured as to production of a specific number of acres, provided he planted the remaining acres in soil-improvement crops.

### U. S. COTTON STOCKS

The total stock of all cottons in the United States at the close of the cotton season just ended, on July 31, was smaller than that on any comparable date since 1930, according to preliminary figures issued by the New York Cotton Exchange Service. It totaled approximately 5,477,000 bales, compared with 7,208,000 on the corresponding date last year and a maximum of 9,678,000 in 1932. (Press).

### ARTIFICIAL SUNLIGHT FOR PLANTS

Artificial sunshine in the home to bring on plants at any season, can be easily applied by means of an ordinary electric lamp, according to Jean Didier, writing in the monthly journal L'Europe Medicale, says a Paris report by Routers. So far the glass of electric bulbs has prevented the passage of ultra—violet rays, but M. Didier states that bulbs have now been produced the glass of which allows the rays to pass. This "integral" electric light resembles real sunlight and it is sufficient to employ an ordinary sixty-watt bulb, with special glass and reflector, placed a foot above the plant which is to be forced, for the plant to bloom at any season.

### MOSQUITO SPRAYING

Engineering News-Record (August 13) says: "In the series of articles on mosquito control, of which 'Control Technique and Organization', by Russell W. Gies, Department of Health, New York City, is a part, reference is made to the use of pyrethrum larvicide as a means of killing mosquito larvae and pupae in water where breeding is taking place. Quite recently this chemical has also been adopted for use as an insecticide in protecting outdoor gatherings from annoyance by adult mosquitoes. It is of general interest to describe the preparation and use of the oil pyrethrum extract emlusion os developed by Dr. J. M. Ginsburg, of the New Jersey Experiment Station, New Brunswick. The stock emulsion consists of the following ingredients mixed in the proportions given: kerosene, 90 gallons; kerosene pyrethrum extract (analyzing 2 percent pyrethrins) 5 gallons; sodium laurel sulphate, 6 pounds; water, 50 gallons....."

### TO EXTEND LOANS IN DRY AREAS

W. I. Myers Governor of the Farm Credit Administration, said yesterday, the Associated Press reports, that farmers in drought areas who owe money to FCA agencies will get extended time in which to meet their payments, provided their cases are meritorious. No blanket extension of interest payments is contemplated, he said. When the drought or grasshoppers have caused extensive crop failure and seriously restricted income, the FCA agencies will consider extension—treating each case on its own merits.

### RECORD TOBACCO SALES

The first three weeks' sales on the Georgia tobacco market brought farmers $17,585,270,27, the greatest sum in the history of the industry in the State, says and Atlanta report to the Baltimore Sun. Garland Bagley, statistician of the State Department of Agriculture, said sales totaled 81,586,758 pounds, or an average of 21.55 cents a pound. Some of the markets are still in operation, but the auction season will end throughout the belt within a few days.

### DIRTLESS FARMIING

Frank Thone, author of "Dirtless Farming" in Today (August 15) describes the experiments of Dr. W. F. Gericke, of the University of California, previously mentioned in the Daily Digest, as "tank agriculture." "The typical 'field' in one of Dr. Gericke's experimetal 'dirtless farms,' "says the author," is a shallow tank or basin, two and one-half feet wide, ten feet long and eight inches deep, made of metal, concrete or wood. Over the top is the 'seed bed.' It is a sheet of wire netting held rigidly by a wooden frame and holds a layer of excelsior, sawdust or peat moss, in which seed is sown or seedlings planted. The seed bed is kept moist by contact with the water in the tank below....To maintain a constant supply and the necessary concentration of each nutrient element with a minimum of trouble. Dr. Gericke puts the fertilizer salts into stoppered glass bottles with openings that will permit the contents to diffuse slowly into the water. He places one of these 'fertilizer units' in each tank. Strung along the bottom of the tank are thickly insulated electrical heating cables. This feature is almost as important in off-season production as the use of nutrient salts, for it makes possible the accurate adjustment of the temperature around the roots to exactly the point where best growth is promoted. This is the objective of warming the soil on greenhouse benches, too, but the method works better in a freely circulating medium like water than it does in the immovable soil....."

### URGES CROP INSURANCE

With one disastrous drought following another in quick succession during recent years, the prospects are that when the next session of Congress convenes there will be a demand for legislation providing for crop insurance under federal auspices, says the National Grange Clip Sheet (August 10). It is likely that the National Grange will favor such a plan if it can be put on a sound and self-sustaining basis. During recent weeks Secretary of Agriculture Wallace has advanced certain ideas in this connection. Under the plan the government would not charge a cash premium, but during fat years would take a certain percentage of the farmer's house it. In lean years the government would pay indemnities in the form of actual wheat.

### COTTON-PICKING MACHINE

Felix Belair, Jr., in a Stoneville, Miss., report to the New York Times, says: "A ponderous machine, 10 feet high, lumbered through a delta cotton field near Stoneville yesterday and in less than an hour picked more cotton with its moistened steel fingers than a man could gather by hand from daylight to nightfall.....It was estimated by W. E. Ayres, head of the agricultural experiment station at Stoneville and recognized cotton authority, that the Rust machine picked cotton at the rate of about 400 pounds per hour ....None who saw the machine in operation could deny its ability to pick cotton under conditions of crop and land such as prevail around Stoneville. Yet many went away skeptical and many were the objections voiced by planters and experts who came from all parts of the Cotton Belt to see what the machine would do....."

### TOP SOIL HOLDS MOISTURE

Drought in the South this year," says a brief article in Southern Agriculturist (September), "has taught farmers the importance of saving the soil. Where the topsoil had been well protected from erosion stands of cotton corn and other crops did not seem to be seriously affected by the drought. Where the topsoil had been lost through sheet erosion, the land was baked, and had a very poor stand. It is the first few inches of top soil which contain most of the organic matter and fertility necessary for plant growth and as erosion removes this top layer, the fertility and productivity of the land is diminished and is especially noticeable in years of insufficient moisture."

### TRIPLE CROPPING

An item in Farm Journal (September) says: "A....Newton Varner, Page County, Virginia, is going to show farmers of the Old Dominion that three crops can be raised on the same land in one year, and that a 17—acre tract can be made to bring a return of $1,760. A month ago he thrashed 680 bushels of dollar wheat, then planted the tract in beans for canning. He expects to get $400 for the beans. When they are gathered the 17 acres will again be sown in wheat

### PERSIAN CLOVER

"Persian clover (Trifolium resupinatum,) also called Shaftel, a new crop variety for the South, is rapidly gaining in popularity in that section," says Seed World (August 28). "This annual clover is used as a forage and as a soil-improving crop in northern India and in parts of Persia. It was first introduced into Louisiana in some imported White Dutch clover about 1924. At first Persian clover was considered a pest in the white clover fields as it kept them from producing only pure white clover, but its value as one of the best cover and forage clover grown in the South is gradually being recognized. According to W. T. Nolin, a grower of Persian clover at Hamburg, Louisiana, it has no equal as a hay crop. Mr. Nolin says: 'As a soil builder I have doubled my yields of corn after two years of this clover. The production of this seed this year was 35,000 to 40,000 pounds, most of which has been sold."

### RICE MEAL IN HOG RATION

E. W. Crampton of McGill University, reports in Scientific Agriculture (Ottawa, May) results of feeding rice meal in the hog ration. His summary says:"..... rice feed is a product which when properly used has considerable value for hogs, particularly for young growing pigs, where its high fat and low fibre are of special importance. Because of its tendency to produce soft carcasses when fed in excess, rations for fattening pigs should probably not contain over 25 of this feed. Larger allowances may also adversely affect feed consumption and hence reduce rate of gain on fattening pigs. The possibility of correcting the tendency toward soft fat by a 'hardening period previous to Marketing, thus taking advantage of the value of rice feed for the growing pig but avoiding its undesirable effects on carcass quality, would seem well worth investigating. Barley would seem to be a more desirable feed with which to mix rice feed than oats."

### SOY BEAN IN POULTRY RATION

In reporting experiments on preventing nutritional encephalomalacia in chicks by feeding vegetable oils, Marianne Goettsch and Alwin M. Pappenheimer say in part in the Journal Biological Chemistry, (July): "The experiments demonstrate that this nutritional brain disease is preventable by the addition to the synthetic diet of certain vegetable oils. Furthermore, the protective factor may be extraced, though not completely, by

95 percent ethyl alcohol. This extract has been stored for a year in the refrigerator without losing its efficacy. It has also been shown that the antiencephalomalacic factor is present in the non-saponifiable fraction of soybean oil. Care must be taken to exclude oxygen during saponification, and to select the proper solvent for extracting the non-saponifiable fraction..A 200—fold concentration of the active substance has been obtained.... approximately 2.4 mg. daily per chick afford complete protection."

### TOMATO SICKNESS

"The part played by the eelworm, Heterodera schachtii, in potato sickness, is well known and more recently it has been shown that another strain of the same pest brings about beet sickness in the sugar beet," says an editorial in the Gardeners' Chronicle (London, July 18). "Now, according to Messrs. Johnson and Thompson, the tomato has also gone sick with the same trouble. It appears that the sickness is on the increase.... There appears to be but little doubt that soil sterilization is the best preventive. Chemical sterlizing agents—mercuric Chloride—have been tried with sati factory results, but in the long run heat will surely prove the best disinfectant. It has been claimed that potato sickness may be prevented even in soils heavily infested with eelworm by liberal dressings of a potassic fertilizer. In the case of tomato sickness, however, the authors state that cases have been observed on soils in which it is a common practice to apply sulphate of potash at the rate of two tons to the acre. Further investigations however are needed; for the more work is done on the subject the larger is the number of discoveries which fall into the category of deficiency diseases."

### PLOUGHING FOR GRASS

Notes For the Month in the Journal of the Ministry of Agriculture (London, July) summarizes a paper by Professor R. G. Stapledon dealing with land policy as preparedness for war emergency. His scheme, he contended, "would assist to maintain a large and vigorous rural population; would, by increasing the supplies of fresh foods, such as milk, eggs and meat, tend to ensure the health of the nation; would help to safeguard supplies in time of war; and, incidentally, by employing more labour on the land, would invigorate the country side. Reclamation and land improvement, he said, meant the plough, and modern methods of getting the most out of grass also meant the plough. The only security the nation could achieve, as regards food, was to ensure that every available acre of the country should always be in fertile and ploughable condition, and every farmer skilled in the arts of husbandry. In peace we should produce all the milk, eggs, potatoes and vegetables we needed: in war, we could go a long way on a superabundance of these. If our methods of farming were right, we could in an emergency, easily and at once, concentrate more on cereals also wheat on wheat lands, rye and oats on other lands; the highest acreage would be ready for the plough, because, if land were ploughed periodically for grass, on a rational rotational system, it could be kept at a level incomparably higher than at the last war crisis."

### LONG DISTANCE SIRES

Veterinary Medicine (August) has a brief editorial note as follows: "Professor Prawochenski of the Zootechnical Institute of Borowina, Poland, recently had a lamb born to a ewe that he had impregnated with siminal fluid received from the Cambridge (England) University, School of Agriculture, 1500 miles distant. The seminal fluid was packed in ice immediately upon its collection and was used the third day following. The experiment demonstrates the widening possibilities for the future of using valuable sires to improve the quality of farm liye stock. At the reseach station at Cambridge, a calf was recently born from fluid kept under controlled conditions for three days, and a lamb from fluid four days old. New York can now be reached from Central Europe by air transport, in but little more than half this period."

## LESS MEAT IN STORAGE

(CONTINUED FROM PAGE 1)

51,134,000 on June 1, and with 55,653,000 a year ago and a five-year average of 42,344 pounds.

Lard in storage on July 1, was taled 1,123,000 pounds, against 1, 382,000 a month earlier; 2,376,-000 on July 1, of last year, and a five-year average of 1,866,000 pounds.

Lard in storage on July 1, was totaled 106,892,000 pounds, against 99,656,000 a month prior; 84,-680,000 on July 1, last year, and 142,398,000 pounds for the five-year average.

### PRESERVING FRESH MILK

After experimenting for more than ten years of German scientist claims to have perfected a method of preserving milk and other dairy products in a fresh state over long periods by the application of oxygen and controlled refrigeration, according to a report from the American Consul at Frankfort-on-Main to the Commerce Department. The process, which has been patented in Germany, said to be simple—oxygen being added to milk under low pressure. Milk so treated is stored in airtight containers made on the soda-water siphon principle. At the beginning of April sealed tanks of oxygenated milk were distributed to British and Dutch vessels for test and on July 14, one of the ships returned to a Dutch port with the report that it had presented the inhabitants of Capetown with fresh milk from Holland. While the Department of Commerce has not investigated the inventor's claims or looked into the economics of the reported discovery, tests conducted under official German control are said to prove that raw milk preserved by the new process for a period of two months was found to be in excellent condition.

### TAX FARMERS' PAYMENTS

The Treasury ruled yesterday that payments received by farmers from the Governments under the soil conservation act would be subject to the federal income tax. In a statement, it said: "Payments or grants made by the Secretary of Agriculture to agricultural producers, including tenants and sharecroppers....constitute taxable income to the recipients for federal income tax purposes." (A. P.).

## "THE OTHER HALF OF OUR FARMERS AND THE OUTLOOK FOR THEIR CHILDREN"

By Dr. O. E. Baker
Senior Agricultural Economist
U. S. Department of Agriculture

It may be said of American farmers, as Jacob Riis once said of the people of New York City, that one half does not know how the other half lives. In 1929, one of the most prosperous years since the World War, the census revealed that 49 per cent of the farms—practicially one-half—produced less than $1,000 worth of products, including those consumed by the farm family (fig. 1).* Twenty-eight per cent of all farms, nearly 1,800,000, produced less than $600 worth of products. The typical peasant farm of northern Europe produces more than this—indeed it produces probably nearer to $1,000 worth of products. Fifteen per cent of the farms in the United States, nearly 1,000,000, produced less than $400 worth of products. This is close to the Chinese level of production. Less than 200,000 of these were part time farms. Three-quarters of a million farms producing less than $400 worth of products constituted the principal source of income for more than 3,000,000 rural people in this fairly prosperous year.

Some years ago it was suggested, even by students of the subjects, that the purchase of these submarginal farms, to use a popular term, and the conversion of the land in these farms to forest or pasture would contribute notably to the solution of the so-called agricultural surplus problem. More recently, some of our statesmen have suggested such a program as a partial solution. But the census figures indicate that the 15 per cent of the farms that produced less than $400 worth of products contributed only 1 per cent of oll products sold from farms, and that the 28 per cent of the farms that produced less than $600 worth of products contributed only between 3 and 4 percent of the Commercial production. The purchase of the least productive quarter of our farms, apparently, might have no more influence on the surplus than a good rain in the Corn Belt. Even were the 49 per cent of the farms that produced less than $1,000 worth of products bought and converted into forest, it would have reduced the commercial production of farm products in the aggregate only about 11 per cent in 1929. The objective of the poor-land purchase program is not to reduce the surplus, but to conserve soil resources, raise the standard of living of the people now on these farms by giving them a better chance elsewhere, and lower the cost of providing them with public services, particularly schools and roads.

It is clear that the outlook for the youth on these poor farms is different from the outlook of the youth on the better farms, particularly the large and fertile farms of the Corn Belt and the Dairy Belt.

### Where the Other Half of Our Farmers Live

About 67 per cent of all the farms that produced less than $1,-

000 worth of products were located in the South—that is, south of the Potomac and Ohio Rivers, and including Arkansas, Louisiana, Oklahoma, and Texas (fig. 1); whereas only one-half of all farms in the Nation are in the South. About 60 per cent of all farms in the South. and the census it should be recalled considers each cropper holding as a farm, produced less than $1,000 worth of products in 1929, as compared with 27 per cent for the remainder of the United States In New Jersey the proportion was nearly 25 per cent, slightly below the average for the North and West.

In reality, the line that separates the regions in which the less productive farms are more numerous from the regions in which the more productive farms dominate does not follow state boundaries. Several counties in northern Virginia should be included in the region of larger farms, measured by the value of products, whereas most of the counties of western Pennsylvania and many in eastern and southeastern Ohio belong to the region of smaller farms (fig. 2). Indiana south of the Wisconsin glaciation and most of southern Illinois, also practically all the Ozark region of southern Missouri, but only the southeastern half or less of Oklahoma, and the eastern third of Texas belong in this region of low production. One outlying area will be noted, i. e., the cut-over portions of Northern Minesota, Wisconsin, and Michigan. On the other hand, in the peninsula of Florida and in the Coastal counties of Texas and Louisiana a fairly high average value of production per farm will be noted. In 1929 the Great Plains region had a high average value of products per farm.

In the two major regions of small farms, and we should keep in mind that the upper Great Lakes region is almost insignificant in number of farms compared with the southern region, are located nearly three-fourths of all the farms in the Nation that produced less than $1,000 worth of products in 1929, and within these regions such farms constitute more than two-thirds of all farms.

### Why Are These Farms Less Productive?

Both physical and social factors have induced the lower productivity of these farms in the South and the upper Great Lakes Region. In the upper Great Lakes Region the growing season is short and the soil generally poor, while he cost of clearing the land is heavy. In the South, the mild winter and unfrozen soil has permitted leaching of the soluble salts from the soil during this season when vegetation is nearly dormant and in no condition to hold the salts as they become available; while the heat of summer favors bacterial action and hastens the decomposition and destruction of the organic matter or humus. Moreover, the rain fall is heavy in winter as well as summer, leaching the soil and inducing erosion. This erosion has been further facilitated by the crops grown —corn and cotton principally, both intertilled—thus exposing the soil to the rains during more than half the year. In much of the South the surface of the land is hilly or rolling, which retards the use of machinery. Finally, came the cotton boll weevil, with its devastating consequences, at least temporarily.

In a recent classification of the soils of the United States into five grades, it was found that there was practically no excellent soil in the South outside the river bottoms, and very little good soil, while even the acreage of fair soil was generally exceeded by that of poor soil; and in two states the area of almost non-tillable exceeded that of poor soil. Speaking generally and with notable exceptions, the South has the poor soils of the tropics.

Turning to the social factors, one of the most important is a high birthrate and natural increase (fig. 3) which has promoted subdivision of the farms. Another very important factor has been the absence of a successful cotton picker, which has retarded the use of machinery for other farm operations. The correlation between the amount of power available per farm and the value of the products is extraordinarily close (fig. 12 and 13).' Apparently one man, with one horse or mules, produced about $900 worth of prodcts prior the depression, and each horse power added generally about $100 to the value of his production.

Growing out of this low value of products per farm has been a tenant system, a credit system, and educational system, and a social system, entirely aside from the race problem, that have hindered agricultural progress.

### Migration From the Farms

Because of these and other factors, 60 per cent of the migration from farms of the Nation during the decade 1920 to 1930 was from the South (fig. 7).* Georgia and Texas each lost over 500,000; South Carolina and Kentucky over 300,000. Measured in percentages of the 1920 farm population, it appears that the net migration during the decade exceeded 30 per cent in South Carolina and Georgia, and exceeded 20 per cent in Virginia, West Virginia, Kentucky, Tennessee, and Texas. (fig. 4.). Even in the North and West the net migration ranged between 15 and 20 per cent of the farm population in 1920 in most states. In Massachusetts, Rhode Island, and California, however, there was a net movement to farms. In the United States as a whole, apparently nearly half the youth left the farms during this decade of urban prosperity, with the result that the farm population decline more than a million.

But with the coming of the depression, the migration from farms rapily declined, because of inability of the youth to find employment in cities, while the movement back to the farms continued (fig. 5). In 1930 the movement to and from farms almost balanced. In 1931 the net movement to farms apparently exceeded 200,000 and in 1932 rose above 500,000. But in 1933, partly because of the Civil Works Program, the net movement from farms was resumed, amounting to more than 200,000 in this year, also in 1934. The estimates for 1935 have not been made, nor are the 1935 census figures on farm population yet available.

## MOTHER OF TWINS EXCELS PREVIOUS MILK RECORD

Three tons of milk in three months time, is the 1936 accomplishment of Irene. At present she is giving more than 80 pounds a day.

Sired by the Institute's King Korndyke Hermes, this cow has been one of the foremost producers in the Shellbank herd for several years. Her milk yield in 1934 was 13,649 pounds, and in 1935, 15,082 pounds. This milk was produced under ordinary farm conditions of two milkings daily. No special forcing was done.

Her present feed consists of abundant pasture, supplemented with 18 pounds of grain.

Irene very obligingly gave birth to female twins last January. Both calves are healthy and thrifty.

—Agricultural News.

## HAMPTON ASSISTS VIRGINIA EXTENSION SCHOOLS

Agricultural specialists from Hampton Institute again contributed to the popular two-day extension schools sponsored by the Negro Extension Service throughout Virginia this year. Carried on every winter since 1926, these special programs have had a remarkable influence on the farm practices in rural Virginia.

The more any one member attends these schools, the better he realizes that improved methods in agriculture will enable him to get ahead.

The principal topics discussed this year were the government's soil conservation program, year-round gardens, home beautification, the family cow, poultry, swine production, and agricultural engineering. The last is fast coming to the front as a subject of major interest.

The schools have changed the thinking of the farmers to the extent that they are asking broader questions that lead to very significant discussions.

—Agricultural News.

## BEEF FEEDING PROJECT GIVES VALUABLE EXPERIENCE

As a feeding experiment, Hampton bought six long yearling Hereford steers last October and fattened them for market during the succeeding months at a slight gain.

The animals were kept in comfortable quarters, and fed a balanced ration of corn, peanut meal, and hay. When purchased they averaged 820 pounds each. The average rate of gain during the ensuing months was 1.9 pounds per steer each day.

The first steer was butchered February 6, and the other killed in lots of one or two during the following month. When dressed they aggregated 3588 lbs. or approximately 59 per cent of their live weight. Students had the experience of observing and assisting with the killing demonstrations.

The dressed meat was sold to the campus meat market. At first, 12 cents a pound was the highest price attainable, but when the customer discovered the superior quality of the grain fed meat, the demand became so persistent that the local market offered a premium of two cents a pound for all the remaining meat.

The project provided valuable educational experience but the margin of gain was very small.

The financial summary of the project follows:

**Receipts**

| | |
|---|---|
| Dressed meat sold: | |
| 280 lbs. at 12c | $ 33.60 |
| 3308 lbs. at 14c | 463.12 |
| Hides: 372 lbs. at 4c | 14.88 |
| TOTAL RECEIPTS | $511.60 |

**Expenses**

| | |
|---|---|
| Initial cost: | |
| 4930 lbs. live wt. at 7c | $345.10 |
| Transportation | 22.50 |
| Total feed cost | 141.42 |
| TOTAL EXPENSES | $509.02 |

—Agricultural News.

## JARRING CURCULIO IS FOUND EFFECTIVE PRACTICE

The plum curculio, which looks very much like a boll weevil with bumps on its back,' is the cause of most wormy peaches and plums

It is not particularly difficult to control if the lead arsenate sprays recommended by your experiment station are properly applied. Those farmers who lack efficient sprayers will do well to try the jarring process used by the Horticultural Department at Hampton.

Jarring can readily be accomplished by spreading a large piece of muslin or other cloth under the tree, and then jarring or shaking the branches. If this is done and adult curculio arc on the tree they will double up their legs, fall to the ground, and play "possum" for a few moments. They can then be picked up, dropped into kerosene, and destroyed.

As each adult female will lay from 100 to 500 eggs, it is recommended that all peach, plum, and cherry trees be jarred regularly every few days from the time the blossoms begin to fall until six weeks thereafter.

All of the small fruit which drops to the ground during May and June should be gathered promptly and completely destroyed. A large proportion of these "drops" contain curculio worms, which if not destroyed, will enter the ground. and be ready to lay their eggs in the fruit just before it ripens.

Hampton has an efficient orchard sprayer, but this spring it has been using the jarring method to determine how many curculio were present, and in what parts of the orchard they were most abundant.

Since the adult beetle usually spend the winter in fence rows and other waste places outside of the orchard, it is natural that infestation is greatest on the outside rows of the orchard. Thus in early May, nine times as many curculio were found in the four outside rows of the Institute's orchard as were found in the center.

Jarring and careful observation of "drops" has enabled the school to time its spraying most effectively. maintain excellent control, and at the same time save some 4,000 gallons of spray this spring. This is a worthwhile saving for the commercial grower, and it is believed that these suggestions will also prove beneficial in the case of the home orchard.

Jarring and the destruction of "drops" do not take the place of spray or dust, but prove an excellent supplement, and an effective check where the recommended sprays cannot be applied.—Agricultural News

## MR. FENN CALLS UPON MANY GRADUATES DURING TOUR

On a recent trip along the seacoast route to Florida and back to Hampton by the mountains, Mr. and Mrs. Fenn saw many agricultural graduates and ex-students. Limited space makes it necessary to confine the remarks in this issue to Florida and Tuskegee.

William McKinley King '29, at A. & M. College, Tallahassee, Florida. active in athletics, is also teaching horticulture and is in charge of the planting on the campus. The latter job is especially rewarding as the college covers the top of a prominent hill, the buildings are good, there are many fine old trees already there. and there is distinct evidence on the campus that students and teachers alike are determined to have things look right and be right.

James E. Sanford, student from '19 to '22, is in charge of poultry at Tallahassee. He has an excellent strain of White Leghorns, is hatching very successfully, and has built a battery brooder to start his large batches of chicks.

A very stimulating meeting of 15 Hampton graduates was held in the evening.

Lorenzo E. Hall '31, principal of Hungerford School at Maitland, Fla., has a private boarding and day school, with a farm,—everything clean, well arranged, and well managed, testifying that the physical work around the plant is of the highest standard. A formidable display of state prizes shows that the classroom work is also of the highest quality.

John C. Williams '32 is doing one of those unsung and unnoticed jobs behind the scenes—"Slim" is pretty quiet anyway. But he is admitted by his colleagues to be carrying his responsibility well. Obviously the community is leaning on him more than the casual observer would realize.

Lawton K. Boston '39 now a student in Agriculture at Hampton, when he writes to his wife addresses his letter to the teacher of English and French at Hungerford. He owns farm land in Florida and is planning to use it when he graduates. All the good farmers in Florida say there is a good living to be made from farming in that state if a man will farm instead of being always in the employment office looking for work for wages.—Agricultural News.

## HAMPTON AGRICULTURAL MEN DOING WELL AT TUSKEGEE

Reuben A. Munday '27, in charge of Poultry at Tuskegee, is busy and full of ideas, as usual, and the work he has his hands on is moving forward, as one might expect it to do. He and Mrs. Munday have been away for a year; Mr. Munday got his master's degree in Poultry at Iowa State last summer.

Thomas N. Roberts '27 is in charge of the Land Use Projects at Tuskegee under the Rural Resettlement Administration. This means establishing forest on a large tract of submarginal land from which the former farmer-occupants will be moved to better land. At present Mr. Roberts is planting his own forest nursery, setting out trees, building roads through the tract for recreational and fire-fighting purposes, and hiring the men who formerly were starving on the same land as farmers. They are apparently looking forward with enthusiasm to the possibility of beginning to make payments on good land of their own. This is one of the big social experiments of the Roosevelt Administration and many eyes are watching its progress, so far strikingly successful at Tuskegee.

## RESETTLEMENT AID

(CONTINUED FROM PAGE 1)

in Bibb county in March, 1935.

Then he obtained a Resettlement loan, with which he bought a mule, equipment, and some clothing for his family.

That summer, his wife and seven children canned over 200 cans of peaches and blackberries, which helped reduce his food bill.

Mr. Taylor did fairly well with his crop that year in spite of a late start, he said.

This year, still with the aid of his loan, he rented another farm, and planted 14 acres of cotton, 20 acres of corn, four acres of oats, five acres of peanuts, 12 acres of peas, and one-quarter acre of potatoes. He has one hog, one cow, and 200 chickens.

The bale was ginned by A. M. Bentley.

## SEVENTH ANNUAL CONVENTION

(CONTINUED FROM PAGE 1)

awarded to members for best display of farm products canning, sewing, and basket work.

Miss Nannie Burroughs, Principal Model Training School has been invited to make special address to farm women. A banquet will be given by citizens of CHARLESTON, TO delegates and visitors in attendance.

National Federation Colored Farmers was organized in 1922 and incorporation in 1930. The first annual convention was held seven years ago at Howard, Mississippi.

Governors from the 17 states have been asked to appoint and Commision some outstanding race farmers to represent the Negro farmers in their respective states.

This Convention promises the largest gathering of Negro farmers ever assembled before.

## MANY WILL HAVE OPPORTUNITY

(CONTINUED FROM PAGE 1)

They will be permitted to return to their work or assigned to other projects at the end of the cotton season.

Opportunity for permanency is offered many cotton pickers by plantation owners in many sections, who have indicated that those making good through the cotton picking season will be given chances to settle as permanent tenants, Mr. Rooksbery said.

In efforts to aid plantation owners through the season, workers are being sent or moved from all sections of the state to the cotton areas. The picking season is beginning to open up throughout eastern Arkansas and the southern section of the state.

Many workers were expected to be needed with opening of the season in Pulaski county. Enough individnals and families are expected to be supplied to care for the situation in this as in other counties without indications at present of any serious labor shortage, it was said.

Mr. Rushing is now in Forrest City directing NRS cooperation between plantation owners and cotton pickers.

---

Russellville—Stirman Love, contact clerk of the local National Reemployment Service office, received a request from the Little Rock NRS office Wednesday for cotton pickers.

Several families of Negro pickers, as well as white, are needed over the state, many of whom can get permanent work if they want to remain after the cotton harvest. Love was advised. The prevailing price of cotton picking is around 75 cents per 100 pounds, the state office reports.

Persons interested in this type of work are requested to write D. O. Rushing, Farm Placement supervisor, 202 old postoffice building, Little Rock, Ark., or contact the local employment office.

In writing, all applicants should state color, number in family, age of each member, and whether or not they have their own transportation. Mr. Love said.

## CO-OPERATION

(Continued from Page 4)

exists to give a clue. But when New York City's Department of Markets wanted to see what it could do to help farmers get a larger share of consumers' dollars and to help consumers get fruits and vegetables cheaper, it undertook this new and unique detective job.

NO IDLE play was this. For years the question as to WHO gets WHAT part of consumers' food dollars has baffled farmers, distributors, transporters, and consumers themselves. For years the charge has been made that getting goods from producers to consumers costs too much. Many studies of distribution have been made in the past, and are still being made. Major research in marketing costs is going on right now in the Bureau of Agricultural Economics in Washington. The driving force back of all such studies is the hope that producers' fortunes can be improved and that greater supplies can reach consumers, if those necessary services of distribution between the two can be made more efficient.

FACTS must come before reform. No facts on New York City's marketing costs for fruits and vegetables—recent enough, or specific enough—were available. So the Department of Markets early this year set about making its own study. The method it used was original.

STARTING with the records of a local grocery, where a sale of some fruit or vegetable had been made, the Department traced backward the route by which the food had reached the grocery. Sometimes this journey took the Department back to jobbers; sometimes to both jobbers and wholesalers. Records of each middleman through whose hands the food had passed were studied. Pursuing the route still further, the Department traced the food through the records of the railroad or trucking company which had carried it to market. Finally they located the grower and shipper who had started the food on its road to consumption. "Riding a crate of lettuce from a New York corner grocer to the shipper or grower in far-off California or Florida," is the way the Department describes its procedure, "and noting all the information and the general costs on the way."

GROCER A—to take an example—sold some California oranges last April. He reported his sale to Department investigators who took up the cue from this point and started backward through the records. This grocer happened to buy the oranges from a jobber. The jobber bought them from a wholesaler. The wholesaler bought them at auction. The auction company got the oranges from a railroad company and paid a receiving agent a small fee. The transportation company reported the price which the grower and shipper had received.

TALLYING up this record, the investigators found these facts: out of each consumer dollar spent for the particular oranges, the grocer kept 34 cents to cover his costs and profits; the jobber kept 5 cents; the wholesaler another 5 cents. The auction company's share was 1 cent; the receiving agent's, 1 cent. Transporting the oranges from California to New York cost 24 cents of each consumer dollar. The total of all these costs of distribution came to 70 cents, leaving 30 cents for the grower and shipper of the oranges.

ONLY by an accumulation of such records as this could the Department get a fair picture of marketing costs. During the 3 months in which the investigation was carried on, each commodity was surveyed an average of 17 times. In some cases as many as 39 checks were made.

INVESTIGATORS collecting data made over 5,000 calls on retailers, jobbers, wholesalers, shippers' agents, railway and trucking companies. Between February 1 and April 30, some 100 commodities from various States and in several instances from foreign countries were covered. Every method of distribution of produce in the city was studied and carefully followed. More than 800 case histories were analyzed.

FRUITS and vegetables are not all distributed through the same trade channels. Wholesalers or commission men usually are the first to handle the produce after it arrives on New York markets. Wholesalers buy in large quantities and deal directly with jobbers or retailers. Jobbers buy in less than carload lots and resell to retailers, hotels, restaurants, and purchasers of small quantities—a box of oranges, a crate of lettuce, a bag of onions. There are approximately 100,000 retailers—corner grocers, fruit and vegetable stores peddlers—who buy from middlemen and sell to consumers.

WINTER SEASONS, when the survey was made, had much to do with the fact that more than 85 percent of the commodities included in the survey came from the most distant growing centers, such as California in the West and Florida in the South. Florida led the States as a source of supply with 18 out of 35 commodities covered in the survey originating in that State. California was second with 15; Texas third with 8. Nearby regions, such as New Jersey, New York, and Long Island, supplied only a little more than 10 percent of the items studied. Less than 2 percent of the total came from foreign countries—tomatoes from Mexico, eggplant, lima beans, and tomatoes from Cuba, turnips from Canada, and grapefruit from Puerto Rico.

DISTRIBUTION of the consumers' dollar among shippers and growers, transportation companies, middlemen, and retailers is shown by the figures collected by the investigators. Growers and shippers on the average received 37 cents of each dollar spent for all foods included in the study. Growers and shippers located nearest to New York had a slight advantage over those in more distant parts of the country and those in foreign countries. Average figures show that eastern growers and shippers got 39 cents of the dollar spent for fruits and vegetables compared with 36 cents for those in southern regions, and 35 cents for western growers and shippers. Foreign growers and shippers fared least well, retaining 31 cents of each dollar spent for foods marketed by them.

ORGANIZED growers of citrus fruits, it was discovered, stood a better chance to receive a larger share of the consumers' dollars than did the growers of other fruits and vegetables.

IMPORTANT variations showed up in the share of consumers' dollars going to growers and shippers located in different States and growers and shippers of different commodities located in the same State. Florida growers and shippers who marketed cabbage in February got 29 cents, while Texas growers and shippers who marketed cabbage in April received 33 cents of the dollar spent by consumers for this vegetable. Lettuce growers and shippers in California who marketed their produce in February received 23 cents as against 46 cents received by California growers and shippers of asparagus in April.

TRANSPORTATION charges—the cost of carrying fruits and vegetables from grower to market—required an average of 18 cents of the consumer's dollar spent for commodities included in the survey. Produce shipped from Western States took 22 cents of each dollar and compares with 18 cents for shipping fruits and vegetables from Southern States and 8 cents for bringing produce from nearby eastern regions.

MIDDLEMEN took about 8 cents of each dollar spent for fruits and vegetables in New York City markets. These so-called middlemen are the wholesalers and jobbers. Both wholesalers and jobbers figured in 69 percent of the examples studied. In the balance of cases, the receiver or wholesalers sold directly to the retailer. When both wholesaler and jobber took part in the transaction, grower and shipper got a smaller part of the dollar spent for fruits and vegetables. When only a wholesaler intervened, growers and shippers received an average of 36.5 cents of each dollar spent for these foods, and 35.9 cents when both wholesalers and jobber stood between them and the retailer.

RETAILERS, last in the marketing process and who sell direct to consumers, kept on the average 37 cents of each dollar spent for these foods, the same as the average share retained by growers and shippers. Sometimes retailers swelled their share by buying direct from a wholesaler rather than through a jobber When this happened, they appeared to retain 38 cents of each dollar as against 35 cents obtained when retailers bought from jobbers. The added 3 cents kept by the retailer when no jobber is involved compares with 6-10 cent additional going to grower and shipper.

LIMITATIONS of this investigation are recognized by the officials of the Department of Public Markets. Only a small percentage of the total volume of trade in fruits and vegetables were covered. The data refers only to the 3-month period from February through April. Additional research on the fresh fruits and vegetables marketed during the remaining months of the year and research covering all foods purchased by New York families must come before suggestions can be made for cutting costs and increasing farm income.

REGARDLESS of limitations this research serves to point the way to further investigation of this major producer-consumer problem. Already officials of this municipal agency are looking to ways to reduce costs of food distribution. More direct marketing methods is one plan being explored for eliminating unnecessary handling of foodstuffs.

ELIMINATING racketeers from the food industries is another route to consumer saving. Mr. William Fellowes Morgan, Jr., of the Department of Public Markets estimates that tolls and exactions levied by racketeers upon food distributors cost consumers more than $100,000,000 a year. Recent elimination of racketeers in the New York artichoke market who levied fraudulent charges of 50 cents to $2 on every box of small artichokes illustrates what can be done to reduce consumers' food bills.

DAILY radio talks and other forms of publicity and education handled through the Consumers' Service Division of the Department of Markets help New York City housewives to get more for their money. The GUIDE for October 29, 1934, discussed at length this market news service for housewives.

## GEORGIA FARMERS STILL MAY QUALIFY FOR SOIL PAYMENTS

Georgia Farmers still have time to plant soil conserving crops and adopt practices to increase their soil building allowance under Agricultural Conservation Program, Agricultural Extension Service Officials state.

Performance under this program is being checked on farms throughout the state. Acreage on the farm in cotton, tobacco and other soil depleting crops is being classed as soil conserving. Idle crop land and orchard land not interplanted with depleting crops is beiing classed as neutral land.

Neutral crop land can be qualified as soil conserving and bigger payments gotten by terracing if land needs it, or by sowing Austrian peas, vetch and other locally adopted legumes between now and October 31.

## GOATS LOSE COATS, FARMERS HARVEST $4,000,000 CASH

Three million Angora goats were minus nearly $4,000,000 worth of mohair Thursday in Southwest Texas hill country.

All but about 2,000,000 of the annual 7,000,000 pounds Fall clip was sold at an excellent price.

Prices ranged from 55 cents a pound for grown to 65 cents for kid hair. Reports from the east that mohaid stocks were running low in textile mills brought a spurt to activity. Fifty-five and sixty-five cents a pound were five cents up from earlier purchases.

Eighty-five per cent of the annual output of mohair comes from Texas.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.

# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., OCTOBER 15, 1936 No. 9.

## VERY HEAVY ACORN CROP

### Reported To Be Creating Lively Demand For Hogs

### Range Fattened Hogs Will Thrive If Allowed To Acquire Taste

Havana—While this summer's severe drouth has taken a heavy toll throughout western Arkansas, inflicting sharp losses on corn and cotton farmers it has proved a boon to hog raisers in the Mount Magazine area and in the Onachita hills south of the Petit Jean valley, where lack of rain has been responsible for an unusually well-matured crop of acorns, upon which hogs, it is said, not only thrive, but readily fatten sufficiently to be sold on the market without the feeding of corn or other grain.

Range-fattened hogs—those allowed to roam the hills and feed upon the fallen acorns, or "mass", as the acorn crop is called by mountain folks—are said to equal corn-fattened hogs in every respect. Some of the mountain farmers assert it is impossible to tell a mass-fattened hog from one fed in the more conventional pen, except by ear marks, a method of marking common where the swine herd is allowed to roam the forest.

**Said to Equal Corn.**

When ear marking is practiced, some mark is cut in the pig's ear and serves as its owner's means of identification at round-up time. Buyers in the larger markets, seeing an ear mark, assume that the hog has been "mass" fed, and occasionally, attempt to discount the current price. This practice, however, is rapidly disappearing, according to producers, and ordinarily little or no difference is made in the price, because, they say, the acorn is wholly edible and contains practically the same food value as corn and other grains.

Scarcity of feed crops in the drouth-stricken area of western Arkansas has forced many farmers in the valleys and lower lands to dispose of a part, or in some cases, all of their herds, the majority of them going to residents of the mountain districts where there has been a steady demand for young stock. The demand has been so strong that local sales have not satisfied it, and many pigs are being purchased in nearby livestock markets and brought to the feeding grounds.

Once in the acorn-growing territory, care must be exercised to acclimate the pig, especially those brought from other sections of the country, too his new surroundings, and to accustom him to an acorn diet. This however, mountain farm-

(CONTINUED ON PAGE 3)

## AAA INVITES FARMERS TO CONFER

### Agricultural Leaders To Aid in Soil Saving Project

### Many Demonstration Agents Added to Extension Service Since 1933

Washington, D. C., Sept. 30—More than 100 Negro Farm and Home Demonstration Agents have been added to the Agricultural Extension Service since 1933, according to a recent report from the Cooperative Extension Service here. All of these workers are employed in Southern states and their appointments became necessary because of the extensive work which was initiated by the AAA and soil conversation program.

### SUCCESSFUL NEGRO FARMER PRAISES AGRICULTURAL PROGRAM

Idabel, Okla.,—Sept. 30—At a recent agricultural meeting held here, George C. Woods, successful Negro farmer in this country, said that the ninety-three tenant families on his place are "paying their debts and banking some money for the first time since the 'bottom fell out' in 1932."

Mr. Woods owns 1,300 acres of fertile land and operates his own cotton gin. He also reported at the meeting that he has already sold over $21,000.00 worth of cotton for himself and his tenants.

A. L. Holsey, Field Officer

### SOIL CONSERVATION CAMPAIGN

"Soil conservation continues to be headlined in the newspapers of the country," says Booth Mooney in an editorial in the Texas Weekly (August 22). "And it belongs in the headlines, for there is no denying that wind and water erosion of soils has cost the United States millions of dollars.....The current proposed conservation measures have not come a moment too soon. The United states, with all its wealth, cannot afford to continue to be robbed of valuable farm lands through erosion. Our soil must be conserved. So, indeed, must our other natural resources.....It is perhaps not too late for us to adopt a policy of conservation of all our natural resources, but is certainly not too early. There is nothing fantastic or far-fetched in declaring that unless this nation does adopt a policy of rigid conservation of its natural resources, the time may come when it will be far from the rich country it is today....."

## $13.00 PER WEEK FROM CHICKS

### Flock of One Hundred Fifty White Leghorn's Producers

A weekly income of over $13 from her flock of 150 White Leghorn hens during the hot summer months is the record of Mrs. Horace Rowe of Royal. Mrs. Rowe gathers from 75 to 90 eggs a day, and sends then to Hot Springs three times a week. They are sold for 27 cents a dozen.

Mrs. Rowe feeds yellow corn chow for grain, wheat shorts for mash, and gives the hens all the skimmed milk they can drink.

The Rowes also sell 50 pounds of sweet cream each week, which makes a total weekly income of about $28.50 from their cows and chickens.

## 214 EGGS

Maine and national egg-laying records were scratched off the books by a Maine hen which laid 214 eggs in 214 consecutive days at the State Experiment Station in Monnmouth, says an Augusta report in American Creamery and Poultry Produce Review (September 16). The hen is number 16-9 from the Rhode Island pen of Philip Steele and Co., of Biddeford. H. M. Tucker, state poultry specialist, said the previous national record, was set by a Rhode Island Red hen from the pen of G. E. Treadwell, of Spencer, Mass., in the 1933-34 contest. She laid 200 eggs. The Maine hen established the new record by laying the eggs from January 8 to August 8 this year.

## IMPROVE THE SOIL

The September 11 issue of Seed World announces that it is starting a new department on soil improvement and conservation. "....This subject of soil improvement and conservation," it says, "is certainly one which should be given the greatest amount of earnest thought and consideration. The government is spending millions of dollars to prevent soil erosion. This has been most helpful to seed dealers who have furnished millions of pounds of seed for planting in these government projects. Regardless of how we may feel politically, we cannot help but feel that the work which is being done by the government now to prevent soil erosion will have a lasting effect on improving our soil."

## COVER CROPS TO PRESERVE SOIL

### Walter V. Kell Division Of Agronomy and Range Writes

### Every Farmer Interested In How to Keep Land From Washing and Blowing Away

**INTRODUCTION**

COVER CROPS are sown or planted in thick stands for the purpose of protecting and enriching the soil. In some cases such crops may be maintained semipermanently or for an indefinite period, but more generally they occupy the land during the period between two main crops or are grown with wide-spaced crops seasonally or semipermanently as is the practice in orchards.

When the cover crop is perennial ond allowed to stand for a term of years it is called a permanent cover crop. Annual crops sown in the fall and occupying the land during the winter are known as winter cover crops; those that are grown during the summer are called summer cover crops.

That the use of cover crops is a most efficient means for preventing soil erosion and increasing soil fertility is well known; yet this practice is not nearly so widely extensively followed as it should be.

The kinds of covers that should be used and the method of utilizing them to the best advantage varies in different regions, according to climatic conditions but almost everywhere cover cropping in some form can be profitably followed.

In the Cotton Belt on practically every farm producing clean-cultivated crops, as corn, cotton, and tobacco, and in clean-cultivated orchards, there is an opportunity to use a winter cover crop. A loss of both soil and fertility will result if the ground is left uncovered during the winter (fig. 1). Many years of experience have demonstrated that prevention of this loss justifies a much greater expense than is required for labor and seed in growing the winter cover crop.

On erosible sloping land it has also been demonstrated that much more plant food is lost by erosion than is used by ordinary crop production for clean-tilled crops.

Aside from protection given the soil by the growing plant, cover crops add organic matter to the soil, which during the periods when field are given clean cultivation

**Nothing in my opinion, would contribute more to the welfare of the States than the proper management of lands.—Geo. Washington.**

## THE NEGRO IN BUSINESS

### Department of Commerce Has Made Available Book

### Gives List of Books, Pamphlets and Magazine Articles on Above Subject

Washington, D. C.,—The office of the Adviser on Negro Affairs, Department of Commerce has just made available "The Negro in Business—1936 (A Bibliography)."

This publication contains lists of books, pamphlets, and magazine articles dealing with various phases of Negro business and the Negro market. While the 1936 bibliography, which lists many recent books and articles, is not claimed to be exhaustive a serious effort has been made to catalogue all publications which will be helpful to persons desiring to enter business, and to persons interested in exploring the Negro market for increased sales.

Also available from the Negro Affairs Division are: (1) a study, "Negro Chambers of Commerce;" (2) a list of "Negro Newspapers and Periodicals in the United States," containing informative data on newspapers, magazines, press services, and school bulletins; (3) "Convention Dates" of Negro organizations, giving the time and place of conventions to be held during 1936 and the name and address of officials in charge of correspondence; and (4) a list of Negro licensed aviators, kept up to date with the aid of the Bureau or Air Commerce.

Persons wishing to receive the above-mentioned or future publications should make their request to the Division of Negro Affairs, Bureau of Foreign and Domestic Commerce, Department of Commerce, Washington, D. C.

### FEDERAL LAND BANK LOANS

More than 14,600 farm purchases were financed by the Federal Land Banks and the Land Bank Commissioner from October 1, 1935, through June 30, 1936, the Farm Credit Administration announced yesterday. The amount of credit extended for these purchases was $38,965,000. Twelve percent of all loans made by the Federal Land Banks and the Commissioner in the first half of 1936 was used to buy farms, compared to about 8 percent in the last half of 1935. The amount used for farm purchasing in 1933 and 1934 was less than 3 percent. Some 8,928 of the farm purchases financed in the nine months ended on June 30 were farms which the Federal Land Banks sold, extending $19,800,000 of credit to the purchasers. In addition, 5,737 farms bought by farmers from other land owners were financed in the amount of $19,165,000. (Press).

## PROTECTION

William H. Kircher, in an article in The Farmer (St. Paul, Sept. 12) says that "farmers in several sections of Minnesota are now banding together to buy fire equipment. Communities in which purchases have been made recently are Jordon, New Prague, Stillwater, Millan, Melrose and Glenwood. Other communities are being organized and it is expected will soon buy equipment ranging in cost from $1,800 to $3,300. In the purchase of equipment, there are three general methods of financing. One method commonly employed is the spreading of an assessment of about $5 per farm throughout the benefit community. That is the only payment the individual farmer ever will have to make for the equipment, the local mutual insurance company paying for keeping the equipment in repair and for any costs incurred in the actual fighting of fires. Another financing plan is one through which the township mutual insurance company, of which there are 160 in Minnesota, buys and maintains the equipment. In most cases the mutuals of two of more townships under this plan cooperate in making the purchase. The third method of financing is called the individual private subscription plan. Farmers in three or four adjoining townships subscribe to the purchase of equipment and house it in centrally located town or village Under this plan townsmen man the equipment and pay for its storage and other costs in return for having it available for fighting fires within the village or town limits. Insurance companies in some cases also provide a source of revenue for equipment on buildings they insure....."

## EGG-LAYING RECORD SHATTERED BY HENS ON FARM AT CAIRO

CAIRO, Ga., Sept. 12.—County Agent L. H. Nelson announced Saturday that five Leghorn hens at the Oakdale Farm near Cairo, had established a trapnesting record of more than 300 eggs each for the year ending September 1. One of the hens laid 325 eggs and another 319, he said.

The 409 hens at the farm that were trapped laid an average of 288 1-2 eggs. Eighty-eight hens were culled from the starting total of 497.

Commercial flocks in Grady County have increased in number and size so steadily during the last three years, Mr. Nelson states that Grady has become one of the leading poultry counties of the state.

CORN and snap bean supplies for canning are expected to be smaller than a year ago, but both crops probably will be larger than during the drought year 1934. Corn exhibited the sharpest decline due to drought and on August 1 it appeared that supplies available for canning would be 536,400 tons compared with 869,000 tons in 1935 and 498,000 tons in 1934. Part of the smaller production will be offset by a larger carry--over of canned corn than at this time a year ago. This year's snap bean crop for canning is estimated at 17 percent below 1935 with the crop amounting to 68,000 tons compared with 66,000 tons in 1934. On the basis of August 1 condition, the total supply of canned vegetables is expected to be 12 percent less than the large supply in 1935-36, but 16 percent above supplies in 1934-35. Wholesale prices of most canned vegetables rose sharply during July and are now considerably higher than a year ago.

APPLE, pear, and grape shipments increased seasonally during July and supplies of these fruits should reach their peak in September and October. Pears are the only major fruit crop (except citrus) to exhibit above average production this year and the 1936 crop is expected to be 7 percent above last year. Commercial apple production is expected to be the smallest crop since records were started in 1919, amounting to 64.5 million bushels as compared with production has been declining 94 million bushels in 1935. Apple yearly due to a decrease in the number of bearing trees, but the decline this year was accentuated by winter damage to apple trees and late spring frosts. Grapes showed some recovery during July from the effects of spring frosts, but the 1.8 million in crop indicated on August 1 was 17 percent below average. Most of the decline was in raisin and table grapes since production of California wine grapes is expected to be 6 percent above average.

## YOUR FOOD COSTS AND SUPPLIES

High temperatures and below normal rainfall during July resulted in further damage to food supplies, the August 1 crop report of the Department of Agriculture indicates. While crops in most cases are below average, there appears to be no danger of any acute food shortage. Supplies in general probably will be larger than in the year following the drought of 1934.

CORN, spring wheat, and potatoes suffered the most drought damage during July. Yields of vegetable crops growing in the late producing States also were curtailed.

Winter damage to trees coupled with late spring frosts rather than the drought are primarily responsible for the decline in production. Drought, however has decreased sizes of some fruits.

EFFECT of the short corn crop will be felt indirectly by consumers in the form of reduced meat supplies in 1937 since 90 percent of the crop is used for producing hogs and fattening cattle and lambs for market.

A short corn crop disrupts the usual marketing plans of farmers and sends more than the usual number of animals to slaughter during the fall and early winter months. Consequently, smaller supplies are available during the following spring and winter.

COMING to market earlier than usual, a larger than usual proportion of the animals are of the lower grades. The livestock situation this year probably will not be as serious as in 1934, when drought sharply reduced the number of livestock on farms, because there is a smaller number of grain-consuming animals on farms, and feed grain deficiencies will be offset partly by larger hay supplies.

SMALLER spring wheat supplies, but larger winter wheat production than in 1935, is indicated by the August 1 crop report. This year's spring wheat crop forecast of 114 million bushels is 46 million bushels below 1935.

This decline will be offset in part by a winter wheat crop 55 million bushels larger than a year ago. However, due to different types of wheat produced in the winter and spring crops, domestic supplies of durum wheat, which is used mainly in the manufacture of macaroni, and hard spring bread wheat, are expected to be below domestic requirements. About 40 percent of the winter wheat crop is soft wheat which is used mainly for cake and pastry and not suitable for bread.

OLD potato supplies this fall and winter are forecast at 75 million bushels below the 319 million bushel crop of 1935. Dry weather in the Central and Western States more than offset improved growing conditions in the New England and Pacific coast areas and consequently production estimates declined 20 million bushels from July 1 to August 1. Potatoes now coming to market are from the intermediate producing States with some small shipments of early varieties from the late producing States. The trend of wholesale potato prices during the past month has been downward as is usual at this time of the year. On the basis of conditions in earlier short crop years it appears that prices will reach their low in September or October and then advance.

TRUCK crops also have suffered from the drought. Late domestic cabbage production appears to be about 43 percent smaller than a year ago, but onion supplies from the late producing States are expected to be lightly larger than in 1935. Cabbage production was hampered by dry weather at planing time which made it difficult for plants to take root. August rains may increase production of both crops since major movement to market in each case does not occur until October.

## 45-MINUTE HAY CURING

September 8, 1936

"The age-old worry of English farmers—the curing of their hay in the brief intervals between frequent rains—is now being solved by the application of scientific methods," says Country Life in B. C. (September). "A demonstration at Fonthill, Wiltshire, England, of artificial grass drying was attended by over 2,000 people. The plant there, which cost about 1,000 pounds in all, dries a ton of grass by electricity in about 45 minutes. The finished product retains its color and food value indefinitely; and the vitamin content is unimpaired in the new curing process. There are about 20 such plants in England now."

## LOUISIANA COTTON CROP ATTRACTS SIMON WAMPOLD

Simon Wampold, chief clerk in the probate office, has returned home with glowing reports about Louisiana's cotton crop. Accompanied by his wife and brother, Ed, Mr. Wampold went by automobile last week to Monroe, La., to attend a conference of the Order of B'nai B'rith.

He said he saw hundreds of acres of cotton long the Mississippi River that would make two bales per acre. "It was the finest cotton I had seen in years, the tall stalks with long limbs filled with green bolls and open cotton," Mr. Wampold reported.

Jackson, Miss., made a great impression on the chief clerk. The city, he said, had enjoyed a remarkable growth in re cent years.

While in Monroe, Mr. Wampold was named a national director of the Home for Jewish Children at Denver, Colo., said to be one of the largest institutions of its kind in the United States.

## RABBIT BY-PRODUCT

Already one of the world's largest producers and exporters of glue, Belgium, has undertaken the manufacture of glue from shredded skins which accumulate as a by-product from its ancient rabbit fur industry, according to reports to the Commerce Department.

## POISON FOR LOCUSTS

A campaign against locusts in Argentina has proven that sodium arsenate is effective in poisioning this pest which is credited with destroying approximately 30 percent of the country's annual agricultural crop, according to a report to the Commerce Department's Chemical Division. During the past year the Minister of Agriculture Argentina has been experimenting with locust meal, as a fertilizer, the meal being made by grinding the dried bodies of locusts. It is anticipated that between 2,000 and 3,000 tons of locust meal, containing 9.66 percent nitrogen, will be available for expert during the current season, according to the Commerce Department.

## TOBACCO PRICES, CROP

Heavy offerings and brisk sales marked the opening yesterday of Georgia's annual tobacco marketing season. Prices ranged from 5 cents a pound for trash grade to 52 cents for high-grade leaf. A majority of the 15 marketing centers reported warehouse floors filled to capacity and other buildings pressed into service to handle tremendous receipts. Warehousemen predicted sales would net growers substantially more than the $13,582,912 paid for the 1935 yield. (New York Times).

A Hartford, Connecticut, report to the New York Times also says that Connecticut tobacco growers expect this season to produce a $6,500,000 crop, the first cuttings of which are being hung in the sheds a full week earlier than usual. Heavy showers yesterday afternoon greatly improved tobacco, corn and other crops in the Connecticut Valley. The tobacco acreage in this area is from 15 to 20 percent greater than last year, but less than half of the acreage in 1930.

# Face To Face

AT

# CHARLESTON, MO.

THE ANNUAL CONVENTION OF THE

***National Federation Of Colored Farmers, Inc.***

WILL BE HELD AT

**CHARLESTON, MO., OCTOBER 26, 27, 28**

**1936 The Sessions Will Be Held At 1936**

**CURRIN HALL**

**SUNDAY, OCTOBER 25th** there will be Memorial Services for the members who departed during the year. Governors from 19 States have been asked to commission some member of the Race to represent the Colored farmers of their States at this meeting.

Government officials from Washington, D. C., will speak on opening day.

**HEAR DR. HENRY ALLEN BOYD**, who will bring a special message.

**HEAR DR. J. C. AUSTIN**, Noted Divine.

Many prizes will be awarded for displays of farm products, sewing, etc.

**Low Round Trip Rates on Railroads and Bus Lines.**

## VERY HEAVY CROP

(CONTINUED FROM PAGE 1)

ers say, is not as difficult as teaching the hog to forage for himself.

**Must Acquire Taste.**

Starting early in the fall, the swine herd is driven or "tolled," to the acorn-bearing oak flats and allowed, first, to feed upon the nuts as they drop from the trees. In that manner the pig quickly learns that the acorns are edible and gets a taste for them. In some cases it may be necessary to gather handfulls of the acorns and toss them one by one among the herd until they commence feeding.

A few days of this routine is sufficient, it is said, to teach the pigs to forage upon the falling nuts. Later, after all the acorns have dropped, no trouble is experienced with the herd feeding. Brought to the hills after all the acorns have fallen, however, it is almost impossible to teach the hog to feed upon the mass, and some have been known to starve although the range was laden with oak nuts, according to experienced report.

Range-fed hogs, it is claimed frequently double their weight in the three or four months' feeding from October to December or January. During the latter month they are usually rounded up and shipped to market.

Under favorable conditions the hog farmer in the mountain areas reaps a handsome profit, but, it is pointed out, the stately oak of the mountainside, like the more domesticated field plants of the valleys and low lands, does not produce a bountiful harvest every year and in years of few acorns the mountianeer reaps little reward.

### TUSKEGEE INSTITUTE, ALABAMA, FIELD OFFICE A. L. HOLSEY, FIELD OFFICER

### FLORIDA A. and M. COLLEGE HEARS SOIL CONSERVATION TALKS

Tallahassee, Fla., Sept. 30—Florida Negro farmers assembled at the A. and M. College here yesterday to hear representatives from AAA discuss details of the 1936-37 soil conservation program.

President J. R. E. Lee extended a cordial welcome to the visiting farmers and reminded them of the great contribution made to southern agriculture by the late Booker T. Washington. He also said tribute to Secretary Wallace for his fine leadership in projecting a program for American farmers which has helped to stabilize prices of their products.

Thomas L. Ayres of Washington, several hundred Negro farmers and vocational agriculture students that the Government's program is intended to reach and help all farmers irrespective of race and thanked the farmers for their cooperation in support of the Agricultural Conservation Program.

Among the Negro farmers who talked during the meeting were, Jerry Nash, manager of a thousand-acre farm in Leon County and John Leonard, who owns a four hundred acre farm in Lloyd. Both of these farmers told of the improvement in their condition under the Triple A programs.

"Nothing has happened," said Mr. Nash, "during my twenty years as a farmer that has equalled the benefits of the Government's present program. It has been a God-sent blessing to me and to the farmers of our section."

### FINDS SHEEP PAYING ITEM OF HIS FARMING

Although sheep are not commonly grown in Arkansas county, J. N. Gunnell, near Stuttgart, finds that his flock of 75 Southdown crosses pay him a good income for the small amount of time and labor that it requires to care for them, states J. H. Dean, county agent.

This spring Mr. Gunnell sold over 60 head of lambs ranging in price from $3.50 to $4.80 each. His wool sales in January brought 25 cents per pound. He also keeps a herd of 30 head of cattle and about 10 brood sows. He has found that considering the amount of trouble involved, he realized more profit from his sheep.

Mr. Gunnell made his original purchase of sheep about 12 years ago when he brought 19 head of Southdown including 1 Buck and several lambs, for $121. Each year he sells off his best ewes for breeding purposes. The sheep are fed on soybeans hay, cottonseed hull and corn. During the winter they graze on young wheat.

### UNTENDERABLE COTTON

"According to the economic department of the Oklahoma A. and M. College, 50 percent of the 1935 Oklahoma cotton crop was untenderable on contract because it stapled less than seven-eighths inch or was otherwise disqualified," says an editorial in Farm and Ranch (September 1). "The publication of this fact should be a stimulant to Oklahoma cotton growers to enter heartily into the government plan of community selection of good cotton. The work of improving cotton by community plantings of some selected variety is making rapid progress in Georgia and other Eastern States where the industry was about to fade out, and in Texas some progress is being recorded. Both Texas and Oklahoma have, in times past, had the reputation for the high quality and character of its staple. Today cotton in these states shows rapid deterioration and no longer is in good demand. Arkansas is also in line for improving its cotton, and perhaps, when all the cotton-growing states join in the movement, foreign competition will not be so bothersome.....The Federal Government and the Extension Services of the several states state plainly that it is up to the farmers to make their own selection. All the government is interested in is to have each ginning community make a selection of good cotton of desired staple and character, and all farmers in that community plant that cotton. It is realized that a demand for American cotton cannot be created unless cotton of uniform staple in quantity can be purchased by buyers without traveling all over the state to find it. If American growers will produce a cotton desired by the trade, they will have but little trouble in selling it."

### GLYCERINE FROM RICE

"A new process for manufacturing glycerine from broken rice and rice waste has recently been perfected in Italy," says Canadian Chemistry and Metallurgy (August). "According to the statements of one of the inventors, 100 kilos of broken rice will give a yield of 30.4 kilos of glycerine, 1.8 kilos of ethyl alcohol and 7.1 kilos of vegetable casein. The cost of production including investment in plant, is not excessively high, since the equipment required is relatively simple, comprising vats with temperature control, filtering apparatus and centrifugals. The raw materials required are powdered rice, malt, sodium sulphite and brewers' yeast. Negotiations are said to be pending for the sale of the process for Italy to one of the largest saponification companies and producers of crude glycerine."

### FACTS ABOUT RICE

"HOW can I gauge the amount of cooked rice I get from a quantity of raw rice?" asks a Pennsylvania consumer. A general rule is that 1 cup of uncooked rice will equal about 3 1-2 cups of boiled rice. Use about 2 quarts of water and 2 teaspoons of salt for cooking 1 cup of rice....Guides to cooking some of the best rice dishes are given in a new Department of Agriculture leaflet called "Cooking American Varieties of Rice." It is Leaflet No. 112 and will be sent without charge as long as the supply lasts. Requests should be addressed to the Department of Agriculture, Washington, D. C.

### COLD-STORED EGGS

Cold Storage (London, September 17) says: "It is impossible, by any known test, to discover whether or not eggs have been preserved by chilling, cold storage or gas storage. This is Mr. Elliot's explanation for the fact that imported eggs are not required to be marked 'preserved' if treated in any of these ways.....Mr. Elliot declares that eggs which have been stored by any means which can be detected by chemical analysis must be marked "preserved,' but without the cooperation of the exporting country no marking of imported cold-stored eggs be effective."

### TURKEY CANNING

Experiments with the possibilities of marketing canned turkey will be made in Salt Lake City, it is announced by Herbert Byers, secretary and general manager of the Northwestern Turkey Producers Association. Last year 7,000,000 pounds of turkey were marketed for $2,100,00 and this year the crop may be doubled, and canning of the meat is being discussed. (Western Canner and Packer, September.)

### NEW PEACH VARIETIES

"Two new peach varieties have had acclaim of growers in the Yakima and Wenatchee Valleys of the Pacific Northwest this year," says the Farm Journal (October). "One is the Golden Jubilee, a college-bred peach introduced in 1926 at the New Jersey Experiment Station. This second-generation cross between Elberta and Greensboro was produced for the benefit of New Jersey housewives who didn't want to wait until September to can peaches. Golden Jubilee ripens two weeks ahead of the commonly used late varities. In shape, color, texture and flavor it is similar to Elberta. It ships well and is a good canner. The other new one is Candoka, a smooth, brilliantly colored peach originating out of the Hale variety, ripening about the same time but being more highly flavored. Its greatest asset probably is its smooth skin, because of which it is becoming known as the 'fuzzless peach.'"

A New Well-Built Pulpit Set Will Add Immensely To The Solemnity of Your Service

**A FOUR PIECE PULPIT SET**

**For $125.00**

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## FARM NOTES

Milton P. Jarnigan, head of the animal husbandry department of the University of Georgia says, forty million dollars could be added to grower's income and the best possible use of 10,000,000 acres of idle land in Georgia would be growing of feed crops to raise beef cattle.

Reduced production of livestock in heavy cattle growing areas on account of the drought affords Georgia farmeres an opportunity of establishing themselves in the cattle business on a firm basis.

Also Georgia imports 65 per cent of its beef, veal, pork and lard, Jaruagin held, "If we supplied all our needs we could add forty million dollars annually to the income of our farmers. This is about one-half the average value of our cotton crop.

A present unexampled "awakening of interest" in livestock production in Georgia he attributed to "the fact that it is now realized that cotton alone will not produce sufficient wealth to maintain our rural population at a satisfactorily high standing of living.

Unless the farmer has sufficient income to give him reasonable purchasing power, nor towns will shrivel and die so that the city dweller is indirectly as much interested in the prosperity of the shrivel and die so that the city farmer as the farmer is himself.

He lauded efforts of Chambers of Commerce and other agencies in various parts of the state to organize farmers into livestock associations. Forty counties are in the association organized here, and other movements are centered at Macon, Savannah, and Augusta.

## VETCH MADE GOOD HAY

As well as being one of the best soil improvement crops, hairy vetch is also an excellent hay crop, according to S. P. Broadway, of Cash, Craighead county. In the spring of 1934, Mr. Broadaway harvested 2 1-2 acres of vetch for hay, getting a yield of four tons. Sufficient seed was left on the ground to reseed the vetch. The cotton yield following the vetch was increased approximately 40 per cent over the yield on similar land, not previously seeded to vetch, reports John W. White, assistant county agent in Craighead county.

## STANDARD FACTS

Answers to Consumers' Questions About the Use of Government Grades on Canned Fruits and Vegetables.

Millions of dozens of cans of canned foods are now sold annually on the basis of Government grades. Huge loans are frequently supported by official certificates indicating the quality of canned foods covered by warehouse receipts. Millions upon millions of labels on canned fruits and vegetables indicate the quality of canned products in the terms of Department of Agriculture grades for the assistance of the consumer.

NEWS of the progress in A, B, C grade labeling on the cans consumers buy has frequently appeared on the pages of the CONSUMERS' GUIDE. Readers who follow the GUIDE have shown their interest in this news and in the insignificance in general grades and standards on consumer goods. This interest has expressed itself in questions on the more technical aspects of the situation: Just how this Government grading service came into being, how it operates, what is its procedure, and how it is used.

QUESTIONS reflecting this expanding interest are published here, with their answers from the Bureau of Agricultural Economics, whose experts formulate standards for canned goods and perform the grading.

**Under what authority does the Federal Government grade canned fruits and vegetables?**

Under the Farm Products Inspection Act.

**What is the Farm Product Inspection Act?**

It is the provision carried in the annual appropriation act for the United States Department of Agriculture authorizing the Secretary of Agriculture to investigate and certify to shippers and other interested parties the class, quality, or condition of certain farm products including fruits and vegetables.

**Does the law require all farm products to be graded?**

No; it is permissive—not mandatory.

**Who may make use of the service?**

Any person who is financially interested in a lot of canned fruits or vegetables may request that they be officially graded.

**Who are usually "financially interested" and entitled to the use of the grading service?**

Canners, brokers, bankers, wholesale grocers, retail grocers, and mangers and buyers of chain stores are examples.

**Are investigations made to ascertain whether applicants are entitled to service?**

Yes. The official grader of whom request is made for grading ascertains whether applicant is entitled to service before grading. Possession of canned foods usually indicates a sufficient financial interest but this is not always conclusive.

**Are the grades developed to serve the interests of any particular group?**

No. The grades are developed to serve the interests of producers and —or canners, financing agencies, distributors, and consumers.

**In what form are the results of grading reported?**

Official certificates of grade are issued by official graders.

**Of what force and effect are the certificates in court actions?**

By the terms of the law the certificates issued by the authorized agents of the Department of Agriculture are admissible in all courts of the United Sates as prima facie evidence of the truth of the statement therein contained.

**What purposes are served by certificates of grade?**

Two of the more important purposes are that they serve as documentary evidence of grade to accompany warehouse receipts in financing operations, and that they serve as proof of grade to accompany shipping documents in making delivery.

**What prepared fruits and vegetables may be graded?**

Any fruits or vegetables that are packed in hermetically sealed containers and have been sterilized by heat.

**For what canned fruits and vegetables are official or tentative standards for grades now in effect and used by the grading service?**

Apples, applesauce, red sour pitted cherries, grapefruit, grapefruit juice, peaches, and pears; asparagus, dry beans, lima beans, snap beans, beets, carrots, cream-style corn, whole-grain-style corn, mushrooms, peas, pimentos, pumpkin sauerkraut, spinach, tomatoes, tomato catchup, tomato juice, and tomato pulp.

**According to what standards are canned fruits and vegetables graded?**

On official or on tentative standards for grades, or on other standards suitable for the purpose.

**What procedure obtains in the development of grades?**

A study is made of the qualities actually being produced in typical canneries in all parts of the country. Studies are made of trade and consumer preferences and the grades so drawn that each grade represent clearly distinguishable differences in monetary value.

**Are official graders Government employees?**

Yes.

**On what basis are official certification of grade made?**

On the basis of representative samples.

**Does the Department of Agriculture prescribe how samples shall be drawn and the number to be drawn?**

Yes. For example, 24 cans of No. 2 size are drawn at random from a lot of 1,000 cases.

**Does the grader certify facts aside from grade?**

Yes. The grader will reflect any facts that are necessary to give interested parties an accurate description of quality and condition of the samples, and every factor having a bearing on the value of the lot.

**Will the grader certify to the condition of the tin containers, the labels, or the shipping containers.**

Yes. The grader will reflect in his certificate all pertinent information having a bearing on the value of the goods; for example, whether the cans, or labels, or shipping containers are damaged and, if so, to what extent.

**Is a fee charged for the service?**

Yes. The Congress requires that a fee be charged to reimburse the Government as nearly as may be for the actual cost of the service.

**If a grader draws the samples and grades the samples, what fee is charged?**

The basis is $5 per carload. Any expenses allowable by law and incurred by the inspector while absent from his official station are also charged to the applicant.

**Are provisions made for grading large quantities at reduced rates?**

Yes; under certain conditions. Since fees are to be so assessed as to cover the cost as nearly as possible, if the applicant's volume is such that, under the conditions he will offer it, the business can be handled at less expense to the Government, then grading may be done at reduced rates.

**In what way are the interests of the consumers served?**

The simple nomenclature, when shown on labels, should afford a valuable guide to the housewife in making purchases. The nomenclature employed in the grades is very simple, "Grade A" "Grade B". "Grade C", and "Off-Grade" or "Substandard." The last group in some commodities, for example, canned peaches, is divided into four additional grades, "Grade D". "Grade E", "Grade F", and "Sample Grade."

**What is the purpose of these designations?**

To provide a simple means by which the various qualities or types can be readily distinguished.

**Are these new terms?**

They are comparatively new, so far as canned foods are concerned. The trade is gradually coming to use them as the members become more familiar with the purpose of the grades.

**How do the terms compare with terms used in the trade?**

"Grade A" is synonymous with the trade term "Fancy"; "Grade B" with the trade terms "Extra Standard or "Choice"; and "Grade C" with the trade term "Standard."

**When canned fruits and vegetables have been graded, is the container in which the product is carried required to show the grade of the contents?**

No. It is entirely a matter of discretion with the canner or distributor whether the container shows the grade of the contents. The extent to which consumers demand grade labeling largely influences the extent to which labeling is used.

**Does the Department recommend that additional descriptive terms be employed to amplify grade terms?**

Yes. Information indicating style of pack, variety, color, range of count of pieces or units, the number of servings, and any other information appropriate for the product should accompany the statement of grade. For example, the labels of canned peas should accurately convey to the buyer the size to be expected in the can, if vacuum packed the label should so state, the number of servings should be indicated, and the type of peas, that is, whether of the early or late-maturing sorts. Salt and- or sugar are commonly employed in packing many commodities and frequently a statement as to their presence is distinctly helpful, particularly to consumers who must bear in mind dietetic considertaions when buying food.

**What class of product is found in "Grade C" or "Standard" grade products?**

Good wholesome food. In this grade a large percentage of all canned foods is found. The raw products used in this grade may not be so carefully selected as to size, color, and maturity as in the higher grades. Products of this grade should sell at cheaper prices than products of the higher grades, but

## STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912, State of Tennessee, County of Davidson:

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn above caption requested in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. Ferguson, N. P.

Sworn before me this 5th day of October, 1936.

My Commission expires April 4th, 1939.

# COVER CROPS TO

(CONTINUED FROM PAGE 1)

greatly reduces soil-erosion loss.

General observations through out the United States, confirmed by both detailed and reconnaissance erosion surveys, clearly indicate the havoc wrought by erosion where the humus supply has been depletel and the vegetative cover sacrificed by bad tillage practices. Soil loss due to erosion is almost entirely responsible for the nearly complete destruction of about 50 million acres of once-fertile land, and another area of nearly equal extent is in almost as bad condition. Erosion has removed the greater part of the topsoil from approximately 100 million acres more, and unless checked promptly the process will to a large extent destroy the productivity of this area. Furthermore, erosion is getting actively under way on approximately an additional 100 million acres.

Experimental evidence supports the conclusion that the soil is most susceptible to erosion when fields are bare of vegetation. It also indicates that soils low in organic matter or of low fertility are more easily eroded than those high in organic matter and humus. Further, ' evidence shows that except on very gentle slopes soil losses occasioned by water erosion are certain to occur if the soil is not held by a ground cover. This situation is especially serious as about three-fourths of all farm crops are produced on land with sufficient slope to induce erosion if not protected with adequate vegetative cover or other contro measures.

The continuous loss of soil from the cultivated lands of the the United States means reduced fertility and increased expense if crop production is to be maintained. As the fertile topsoil is washed away or becomes depleted, the plow turns up the less productive subsoil, crop yields diminish unless maintained by the use of organic matter and commercial fertilizers, tillage operations become more difficult, and farm profits dwindle.

The stupendous task of reclaiming and rebuilding these wasted acres emphasizes the importance of conserving the remaining productive areas of the United States.

### Advantages of a Cover Crop

The principal advantages of a cover crop may be summarized, briefly, as follows:

1. Reduces run-off of rain and thus conserves moisture (a rug for rain-worn soils).
2. Prevents excsssive erosion of soil.
3. Adds organic matter to the soil.
4. Prevents the leaching of available plant food, especially nitrate nitrogen.
5. When turned under, forms organic acids or other compounds which aid in the liberation of mineral plant food.
6. May provide late fall, winter, and early spring pasture.
7. Projects newly constructed terraces and other mechanical soil-erosion devices.
8. Increases yield of corn, cotton, and other regular farm crops.
9. When plowed under, improves the structure of both heavy and light soils and increases the water-absorbing capacity and the infiltration of water into the soil.

### Disadvantages of a Cover Crop

The advantages of cover crops ordinarily outweigh any reasonable objections which can be made to them; nevertheless, for the practical information of farmers the principal features which might become possible disadvantages in the use of a cover crop are listed as follows:

1. The cost of seed.
2. Cost of labor in the preparation of the seedbed and seding.
3. Uncertainly of getting a stand.
4. Possible adverse effect on the moisture condition of the soil.
5. A possible refuge for insect pests, such as cutworms, that later attack corn or other crops.

### Cover Crops Help Money-Crop Rotations

Cover cropping is not a cure-all. It represents only one of the recommended practices of a well-rounded soil-conservation program. When seed is available on the farm, cover crops can be established by the individual farmer with little extra labor and no cash outlay, and when they occupy the land during the periods between the main crops they make an efficient ground cover until plowed under.

Crops grown in wide rows with cultivation, like cotton, corn, potatoes, and tobacco, are highly conducive to soil loss. All of these crops should be grown in approved rotations and the rotatian supplemented with cover crops if soil loss is to be reduced to a minimum and crop yields maintained. Wheat and other small-grain crops, when grown on steep slopes, especially under a summer-fallow system, also need to be given special consideration if extreme soil loss and reduced yields are to be avoided.

Both experimental and practical results show that the use of winter cover crops in the Cotton Belt has given greatly increased yields, averaging for cotton about 35 percent and for corn about 75 percent, and at the same time has greatly reduced soil erosion. In many sections of the United States the use of the winter crops in orchards accomplishes similar results.

The annual lespedezas following winter-grain cash crops make an efficient and economical ground cover and soil-improving crop. Legume cash crops that are grown in thick stands reduce erosion to a minimum during the period they occupy the land and increase the yield of any crop with which they may be grown in rotations. Any close-drilled or broadcast summer crop used in rotations is a means of erosion control and increases soil fertility.

Since the growing of cover crops in conjunction with rotated cash crops is recommended for the purpose of preventing winter leaching and erosion, and not primarily for harvest, they should not under any good system of crop production ordinarily require fertilization or special soil treatment. Their plant food requirements will have been taken care of in the fertilizer application made to the cash crops in the rotation.

Many permanent cover crops, such as kudzu, perennial lespedezas, grass, various shrubs, vines, and other plants which are not commonly grown with cultivated crops and which occupy the land for a long time can be grown on poor, eroded soil that is not under cultivation. The area was fenced to keep livestock out and seeded with a bushel of barley and 20 pounds per acre of the following mixture: Kentucky bluegrass, redtop, alsike clover, red clover, Korean lespedeza, and sweetclover. About 300 pounds per acre of superphosphate was applied. There was no bank sloping or other soil or seedbed preparation; the land was seeded in its natural condition. The dominant vegetation became Korean lespedeza; there was a little sweetclover, redtop, and some barley in the gully bottoms. Erosion was effectively checked, and soil rebuilding was started.

The use of these more or less permanent forms of vegetative cover in this manner affects only indirectly the regular or money crops of the farm.

In 1929 (according to the Census of Agriculture) about 95 to 100 million acres of corn, 40 to 45 million acres of cotton, 3 to 3 1-2 million acres of potatoes and sweetpotatoes, and a little less than 2 million accres of tobacco were being grown in the United States. These figures approximate the normal acreage over a period of 15 years. Each of these crops is clean-cultivated and leaves the soil exposed to the elements and consequently subject to erosion a great part of the year.

In the cotton and tobacco region of the South a very small percentage of this acreage is seeded to winter cover crops of field peas, vetch, crimson clover, and rye. In the North, where corn, soybeans, and potatoes are largely grown, winter cover crops and close-drilled crops such as wheat, clover, etc., used in rotations must be depended on for soil improvement and erosion control, although in some cases rye, as a winter cover, may be used. Much of this crop acreage is left bare during the fall and winter months, and it is on these areas that cover crops such as close-drilled crops of clover, and grains should be grown if erosion is to be retarded and economical production improved or maintained.

### Follow Nature's Method of Protecting Soil

The seeding and growing of cover crops is an imitation of Nature's method of holding the soil. As the natural soil-forming agencies progressed throughout the ages, Nature always protected her handiwork with a varied vegetative blanket. Man cannot disregard this plan and ignore the fundamental principles of soil building and soil holding without paying the price of accelerated soil erosion and finally land adandonment.

Under natural conditions some type of vegetation occupies the soil throughout the growing season and leaves an organic residue to cover the ground during the winter. If agriculture is to be permanent, the soil must be managed so as to maintain productivity not by temporarily supplying plant food but by conserving the soil itself by using cover crops of legumes and broadcast crops in rotation or association with row crops orchard fruits and other crops that occupy the land for only a part of the growing season or form a partial soil cover.

### Cover Corps for Green Manure

The practice of using cover crops for green manure, or, turning them into the soil while yet green, is a more or less common practice in certain parts of the United States. When used in this way, they improve the soil by adding organic matter and supply plant food for succeeding crops. A green-manure crop thus provides a ground cover and prevents erosion during its growing period and subsequently adds fertility to the soil. In order to utilize such crops most efficiently, special consideration must be given to many factors; but in any case erosion or loss of soil will have been prevented during a part of the year, and if the green manure is properly utilized increased crop reproduction will result.

### Kinds of Cover Crops

The kind of cover crops to use must be determined by local conditions and needs, and the specail purpose for which they are desired. In the agricultural areas west of the one-hundredth meridian the disadvantages of cover crops may offset the advantages. In parts of this region, however, where the land when left bare is subject to severe wind erosion a cover crop of wheat or other small grain or a more permanent cover of grass is essential to soil conservation. East of the one-hundredth meridian and south of about latitude 40 percent, where the annual rainfall is from 20 over 50 inches, winter cover crops of hairy vetch, smooth vetch, Austrain Winter field peas, clovers, and Abruzzi rye, and summer crops of lespedeza, crotalaria, and cowpeas are recommended and are the crops most commonly used.

The use of cover crops will undoubtedly result in soil conservation and improvement, but sufficient information is not at hand to determine whether such practice will be profitable in Northen latitudes when used exclusively for this purpose. As a matter of fact in the northern corn belt and in other Northern areas of the United States, cover crops may be used in part as cash crops in rotations.

With orchard crops throughout the united States permanent clover crops and sometimes annual crops can be used to advantage, but with most other cash crops effective rotations supplemented with winter cover crops must be depended on for fertility maintenance and erosion control.

On lands not producing cash and where erosion is severe it is often advisable to use a mixture of locally adapted herbaceous perennial cover crops with a view to allowing best suited and most aggressive ultimately to form a permanent cover, in time may naturally or artificially be displaced by a forest cover. On cultivated lands, however, ordinary field crops such as sweetclover, alfalfa red clover, crimson clover, vetch, field peas, rye, lespedeza, etc., that are known to be locally adapted can be depended on to furnish the most economical and effective cover. When used for soil-erosion control and soil improvement these crops should be seeded and cultivated in the manner recommended locally when they are grown as forage. The time determined according to its most of seeding of any crop should be effective used as a cover crop.

### LEGUMES SWEETCLOVER

Sweetclover in broadcast stands is a good erosion-control crop and by reason of its large top and root growth adds much organic matter to the soil. Neutral or alkaline soil is necessary for its successful growth, consequently the northern Corn Belt and the western part of the United States are best suited for its use. Its most advantageous use is in rotations with wheat and corn, the sweetclover being seeded with the wheat. Less soil erosion results in such a rotation than would be the case in a wheat-corn rotation, and at the same time it greatly increases soil feritiliy.

### CRIMSON CLOVER

Crimson clover is one of the standard cover crops along the Atlantic seaboard from New Jersey in region 1 south to northern Georgia in region 2. It can also be grown farther west in regions 2, 3, and 4, where similar conditions prevail. When good stands can be obtained it makes an efficient erosion-control crop for the fall, winter, and spring seasons. The principal objection to crimson clover as a cover crop, as for any other use, is the difficulty of obtaining a stand. For best results, seed should be sown in the hull on a well-prepared seed-bed at the rate of 50 pounds an acre and the seed pressed into the soil with a corrugated or similar roller.

### BUR-CLOVER

Bur-clover can be used as winter cover crop in the northern part of region 2 on soil having more than average fertility. The feature of bur-clover that especially recommends it is the possibility of its perpetuating itself from year to year without reseeding. If encouraged by the late spring plowing or by leaving unplowed strips it will sometimes reseed and maintain itself naturally, germinating in the fall and growing throughout the winter. For the Cotton Belt, spotted bur-clover is the best-suited

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.

Nashvil'e. Tenn.

variety. In parts of California, in region 10 where bur-clovers are common, Californian bur-clover is best adapted. All kinds of bur-clover make a matted growth, prevent erosion, and they can be recommended for erosion control wherever they succeed.

### VETCHES

Vetches are excellent winter cover crops for the Cotton Belt, region 2, and the eastern half of region 4, and can be used in other parts of the United States where winter temperatures are not severe or where temperatures during the growing season are moderately cool. In the South they are seeded in the fall, generally following a cash crop of cotton or corn and occupy the land during the winter months, thus preventing erosion and conserving soil fertility. Both smooth vetch and hairy vetch are recommended for this region, in which they should be seeded from September 15 to October 15, the earlier date being for the more northern part. Late seedings, except in favorable seasons, will not make sufficient growth for the most efficient erosion control.

### AUSTRIAN WINTER FIELD PEAS

Austrian winter field peas are used as a cover crop in the same general region and in the same way as hairy vetch and smooth vetch. Field peas do not make as dense growth as the vetches but still make an efficient cover for erosion prevention. With the exception of the Austrian winter variety, the field peas commonly available comercially are not sufficiently winter-hardy for planting even in the Southern States, and even the Austrain winter variety should not be fall-seeded north of Tennessee and Maryland.

### KUDZU

Kudzu, one of the best perennial cover crops not only to check but to cure erosion, is a vigorous-growing vining plant, well adapted for use in controlling gullies and eroding banks. It not only prevents washing but rebuilds the soils, is a valuable hay and pasture crop wherever it can be successfully established. Kudzu is recommended where the soil is too poor or too badly gullied to be used for cultivated crops.

### LESPEDEZA

**Lespedeza sericea** is proving a valuable plant for erosion control on poor clayey soil throughout the Piedmont region. Being a perennial, it can be used in situations where a permanent cover crop is needed. It can be used on slopes and banks with soil too poor to support most other common cover crops and can be used on both waste and cultivated land.

The annual lespedezas, both common and Korean, make efficient cover crops. Although the plants are comparatively small they form dense stands that most effectively control erosion. In rotations with winter cereals a ground cover can be grown throughout the year, and erosion thereby controlled and fertility maintained. Since these lespedezas make growth in late summer and fall they supply a green cover at a season when most other crops are mature.

### NONLEGUMES—RYE

Rye is one of the best all-round cover crops in either the Corn Belt or the Cotton Belt and is more commonly used than any other grass or grain as a winter cover. Easy to grow, it has a very wide range of adaptability, germinates readily, and makes a complete cover quickly. Its stooling characteristic is valuable. On fertile soils, it makes a rapid, dense growth, as shown, and will produce a fairly satisfactory cover on thin soils. Rye is winter hardy, is seldon damaged by cold weather, will furnish large quantities of organic matter, absorbs some of the soil nitrates and tends to prevent leaching during the winter.

In the Cotton Belt and as far north as Virginia, Abruzzi is the best variety to use as a winter cover crop. In Tennessee, Balboa, a recent introduction from Italy, has given very satisfactory results. In the Corn Belt, especially on sandy soils, Rosen rye is considered one of the best varieties.

Rye or any other cover crop should not be pastured too closely, or its efficiency in erosion prevention will be reduced. If a cover crop is eaten to the ground in the winter when growth is retarded, the purpose of the cover is defeated, and erosion will occur. Rye can be seeded any time from August to November, although for erosion control the earlier seeding is perferable, especially on thin soils.

### WINTER OATS

Winter oats make an excellent cover in the South and in areas where winter freezes are not severe. Oats are less desirable than rye as a cover for two reasons: (1) They are subject to winter damage and (2) they are more palatable than rye and because of this there is danger of stock completely destroying the value of the cover by pasturing it to the ground. Winter oats used as a cover crop can, in an emergency, be turned into a hay or grain crop the following year. Weather conditions in the spring might necessitate a substitution of crops in the rotation, in which case the cover crop could be turned into a cash or feed crop.

### WHEAT

Wheat is a good cover crop and can be grown for this purpose throughout the areas to which it is adapted. Early seedings for erosion control should be avoided as there is danger of such seedings being infested by the Hessian fly, which might cause damage to the main wheat crop. Wheat produces a satisfactory cover, however, and should be used for this purpose on many farms.

### OATS AND BARLEY

When a temporary or rapidly growing cover crop is desirable, oats or barley can often be used to advantage, especially for the protection of newly constructed terraces, earth dams, plowed or sloped gully banks, land prepared for tree planting, etc. Oats are not winter-hardy but will hold the soil during the growing season.

### REDTOP AND ITALIAN RYEGRASS

Some of the the nonlegume crops serve a very important role not only in conserving but in improving the tobacco soils of the country. The importance of cover crops following tobacco for soil conservation cannot be overstressed. Without them, erosion and loss of soil fertility are sure to result. In those regions producing "bright tobacco" where the legumes are objectionable, redtop, Italian ryegras, or rye can be safely used as winter cover. Redtop in this region is sometimes carried over as a rotation crop alternating with tobacco

### OTHER CROPS

Other crops which are used or can be used in the same way as many of the crops discussed are sourclover (yellow annual melilot), crotalaria, cowpeas, soybeans, millet, Sudan grass, sorghum, buckwheat, alfalfa, red clover, alike clover, and many of the grasses. When used as cover crops for erosion control and soil improvement, these crops should be seeded broadcast, the same cultural practices being followed as when the crop is grown for forage. Cultural information regarding these and other crops discussed in this bulletin is available in the following publications of the United States Department of Agriculture: Technical Bulletin 367, The Use of Winter Legumes in the Southeastern States; Farmers' Bulletin 1663, Winter Legumes for Green Manure in the Cotton Belt; Farmers Bulletin 1750, Summer Crops for Green Manure and Soil Improvement; Farmers' Bulletin 1250, Green Manuring; Farmers; Bulletin 1741, Bur-Clover Cultivation and Utilization; Farmers' Bulletin 1740, Vetch Culture and Uses; Leaflet 91, Kudzu, a Forage Crop for the Southeast; Farmers' Bulletin 1254, Important Cultivated Grasses; Leaflet 23, Sweetcover.

### WHEN TO TURN UNDER

Cover crops should be turned under in the spring while there is ample moisture and before the growth reaches the point of maturity that will resist decay—usually 2 weeks before corn planting or 3 weeks before cotton planting, will be safe.

For early truck crops it is advisable to select a type of cover that will form a rapid dense growth early in the fall and serve as a winter mulch that can be turned under in February or March—Farmer Bulletin.

## NEW PRODUCTS FROM OLD CROPS

FINDING new uses for agricultural products, by-products, waste products, and surpluses is one of the main functions of the United States Department of Agriculture. Research scientists at the Department work constantly to improve products and extend their present uses.

COTTON has been on the study list for many years. Numerous projects have been completed, while others are still being worked on. The new uses for cotton are of wide and varied application. A few years ago, for example, the Department developed and introduced a special cotton fabric affording protection against rain and snow for children's outdoor winter play suits.

FRUITS and nuts are beginning to appear on the market packed in open-meshed cotton bags. These bags, as well as combination open- and close-mesh bags for packing nuts, were also developed by the Department. Further study helped to develop cotton fabrics for barrell citrus fruits, potatoes, onions, and top covers, as containers for raw and refined sugar, and as foundation for hooked rugs.

LATER experiments resulted in the use of cotton fabric for reinforcing bituminous surfaced roads. The cotton diversion program of the Agricultural Adjustment Administration is using some of the fabric for this purpose. New uses for cotton should eventually mean increased demand for the raw material and more returns for cotton farmers.

# National Jubilee Melody Song Book

America's original music. Songs from the Plantation and Slave Days. More than two hundred thousand sold in the year of 1935 More now going. Send your order.

# The Negro Farmer and the AAA

## Address by C. A. Cobb, Director, Southern Division, at a Conference of Negro Agricultural Leaders and Farmers at Prairie View, Texas. 11:00 a. m. CST, Wednesday, August 12, 1936.

Prairie View, Texas:—

This meeting gives me an opportunity to do something that I have wanted to do for a long time. And that is to express my deep appreciation of the help which the colored farmers have given in carrying out the programs developed under the Agricultural Adjustment Act and the Soil Conservation and Domestic Allotment Act.

I can truthfully say that almost without exception they have been able to see the objective which lay beyond the details and technicalities of the program. They, as all farmers, have been patient with delay, tolerant of mistakes; charitable toward the shortcomings inherent in any emergency program. I believe colored people as a whole have understood that the programs were drafted with the welfare of all agriculture in mind; that its benefits were intended for all alike. Another factor in the support given these programs by the Negro farmer is the intelligent guidance given them by leaders of their own race.

I would like to take this occasion to call attention to the remarkable progress which the Negro race has made in the very brief period since the War between the States. Born in the backwash of Civil War days myself, I know at first hand that this progress has been made in the face of heavy handicaps. Many of these handicaps remain. While the Negro is very definitely on his way up, yet the most confirmed optimist must admit that his lot is difficult in many ways. The consoling fact is that it is by no means hopeless or impossible. The situation, however, makes it easy to stir up bitterness and predjudice The task of clearing away misunderstanding is hard indeed. Yet, misunderstanding must be removed, prejudice dissipated and hitterness allayed if we are to have the mutual cooperation and dealing necessary to the best interest of all our people.

Your leaders are fortunate in having had an example of high purpose set for them in the trying days which followed Reconstruction. Booker T. Washington, truly great, saw clearly that true freedom for his race meant freedom from political dependence. He and other far-sighted, rational, and generous-hearted men have outlined the path which has led toward the betterment of thousands who were in bondage only a few generations ago. That path has led upward to a new conception of duty, responsibility and usefulness, and I believe it is wise to follow it.

And you have capable leaders today. I hope I will not embarrass some of them who are here by singling them out for mention. I have watched the work done by Dr. Banks, President of this Institution, and F. D. Patterson, President of the Tuskegee Institute, for a number of years. They have been salutary forces Dr. Carver of Tuskegee will be accorded a place in history occupied by few men.

I have known Pierce of Virginia, Tom Campbell of Alabama, Hubert of Mississippi and Waller of Texas for many years. They were among the first Negro extension agents, and they have set their own race, and the white race too for that matter, a splendid example of constructive leadership and service.

These men, and many others like them, are of the highest type. They are citizens of which any country should be proud.

Valuable as the direction which these men give their people, their own personal qualities in the last analysis constitute a tribute to the Negro race itself. The colored people have a remarkable adaptability. The extent of that adaptability is revealed hy a study of the circumstances under which they came to this country and their history since.

In earlier days it was the general belief that the victims of the slave trade were benighted savages. Instead, most of them were members of tribes with a high type of civilization. The Negroes themselves were as different as the various branches of the white race. There was wide dissimilarity between the cheerful and industrious Negroes and the keen-minded Senegalese. The Congoes were known as a sturdy, faithful, and honest people. Some of the attributes of the slave traders themselves to their victims were remarkable. There was almost universal admiration for the Coromontees, who lived on the Gold Coast of Africa. Tribal warfare and their location caused thousands upon thousands of this remarkable people to be seized and sent to this country. Men who knew their qualities sought them. Christopher Cordington, Governor of the Leeward Island, wrote in 1701 to the English Board of Trade:

"There was never a rascal or coward of that nation....No man deserved a Coromontee that would not treat him like a friend rather than a slave."

All of us know the part the Negro has played in Southern Agriculture. Before and after the Civil War, the framework of Southern civilization was built around cotton. The plantation system would have been impossible without the Negro. And in many ways the pattern which was fixed in the early days of the Republic remains, for cotton is still the South's great crop.

But you know and I know that significant changes have occurred in the 72 years since the War between the States. Slowly but steadily Negroes have been acquiring land of their own. By 1930 approximately 182,019 farms totalling 11,198,893 acres, valued at $339,242,651, were owned by Negro farmers. And 10,758,241 of these acres were here in the South. In view of all circumstances, I do not believe any other race in history has more progress than that.

Whatever the handicaps and hardships that the colored people as a race have had to endure, they have been free to acquire the ownership of land and have been better citizens as a result. And let me remind you that it is not unusual for the people of one race, even in modern times to prohibit land ownership by the people of another race. For example, there are land laws in South Africa which exclude Japanese from land ownership, and similar statutes apply in our own California. Long ago, however, the the idea of returning the colored people to Liberia or any other place in Africa was abandoned. They loved their homes and did not want to go. And what is even more significant, the whites did not want them to go.

I wish that I could tell you that the advance of the Negro farmer toward home ownership has continued uninterrupted since 1861. It has not. The best available statistics show that there were approximately 233,222 colored farm owners in 1920. The number decreased to 194,540 in 1925 and declined still further to 182,019 in 1930.

If we study the period during which these declines were registered, we will discover some interesting and revealing facts. The period from 1920 to 1930 was a period of inequality of opportunity for all farmers and of general decline for Agriculture. In reality, the movements which resulted in the AAA programs had their beginnings in that period as hard- pressed farmers, white and colored, realized their helplessness as individuals to cope with relentless world-wide economic forces. The ten years from 1920 to 1930 witnessed an increase in white tenancy just as it did an increase in Negro tenancy. They went down together and for identical reasons—profitless farming.

The years of the depression, 1929 to 1933, also marked another interval when Negro landowners were slipping back into the sharecropper and renter class. At the same time, thousands upon thousands of white farmers were slipping back, too.

With the improvement in farm conditions since 1932, however, the colored farmer's endition has improved along with that of the white farmer. The figures tell the story. In the five years between 1930 and 1935 the number of colored farm owners rose from 182,019 to 186,065. There has been a corresponding decrease in the number of colored tenants.

The brief outline of the forces which make for changes in land ownership lead us to an obvious but significant conclusion. Let me state it as simply as I can. You cannot help the white farmer without helping the colored farmer. You cannot help the colored farmer without helping the white farmer. You cannot improve the condition of agriculture as a whole without improving directly or indirectly the condition of every section, every farm group regardless of race, color or creed. In my opinion, any dispassionate and fair analysis of the events since 1932 will abundantly verify this conclusion. You see the truth of it on every hand yourselves.

As many of you know, I grew up up with cotton. I have been associated with the cotton program of the Agricultural Adjustment Administration since 1933. I feel a keen sense of pride in the progress we have made, and there is no doubt that we have made progress. We have a yardstick with which to measure the improvement that has taken place since 1933. We can place that imporovement against the sweeping statements of critics.

The increase in income from the cotton crop, from other crops in fact, in the past four years is as plain as the proverhial full moon in May. The return from the cotton crop was less than a half billion dollars in 1932. It rose to $820,000.00, in 1935, and from all indications, it will be higher in 1936 than it has been since 1929.

Or let me state the improvement in a way which will be easier for us to understand. The value of a bale of cotton, including seed was $37.40 in 1932. The value of a bale of cotton including seed and benefit payments was $90 in 1935. That is a difference of fifty-two dollars and sixty cents on one bale of cotton alone. One bale is now bringing what two and one-third bales brought in 1932. The return on a bale of cotton could not increase one hundred and forty percent without bettering the economic position of everyone connected with the production of cotton.

You know also that the programs of the Agricultural Adjustment Administration have resulted also in an amazing increase in the production of food and feed for home use in the South. We in the South have grown cotton in the past as gamblers shooting dice. Put all land into cotton. The price may be high this fall. All or nothing. The answer in many dreary years was less than nothing. Very often the cotton grower had no choice but to gamble. He had to plant every acre he could in the effort to get a little cash, for even a cotton grower has to have a little cash now and then. For our own sakes and for the sake of the nation, we must take the gamble out of this great crop.

The adjustment programs made land available for gardens for the cultivation of feed stuffs. Amazingly enough, the South has starved in the midst of plenty all these years and when I say starved I mean that literally. The basic cause of pellagra, rickets and other diseases all too prevalent in our section is a deficiency diet; lack of enough food of the right kind; lack of milk, of good meat, of butter, of eggs of the things we could produce with little effort—if we just had the land and the time. These programs have provided time and land. They have encouraged Southern farmers to raise their food and consequently their standard of living. That is a very real accomplishment.

The blanket accusation that AAA has hurt colored farmers more than it has helped them has frequently been accompanied by a more specific indictment. You have heard quite frequently, no doubt, the charge that the adjustment programs have forced thousands upon thousands of Negroes off the land.

That an unscrupulous landlord here and there has taken advantage of his tenauts, just as a few unscrupulous tenants have taken advantage of their landlords, cannot be denied. But the charge that AAA has been responsible for any appreciable displacement of tenants, whether white or colored, isn't true.

I think it necessary to cite only one authority: the Brookings Institution. As you know, that institution is a research agency that has no connection with the government and no one has ever said that it was biased in favor of any Federal program. The Brookings Institution's study of the cotton program from the beginning through 1935 was issued only a few months ago. Let me quote a part of its report:

"Any appreciable displacement of croppers or tenants would tend to create a surplus of labor, work stock and equipment. If there were a net displacement of share, cash, or standing rent tenants, there would tend to be a corresponding amount of displaced work stock and equipment.....Any appreciable net displacement of tenants should, therefore, be accompanied by relatively low wages and a surplus of work stock and equipment.

"So far as the evidence goes, it points toward the conclusion that there was no considerable displacement of tenants or reduction in their status to that of laborers in the Cotton Belt."

I am not attempting to tell you that hhese programs are perfect. The programs of the Agricultural Adjustment Administration were the ontgrowth of a long period of distress ending in an emergency which put a premium upon action. A gigantic carryover of cotton had smashed the price of cotton and had just about crushed the economic life out of the South. That has been changed and we are in a much better position today. The supply is still larger than normal but it is six million bales less than it was at the peak. Consumption has increased. So have exports. The price is more than twice what it was in 1932. The acute stage of the emergency is over. We have reached a time when we can reflect a bit and make a few inquiries.

What is the objective of this program which is costing the taxpayers of this country around a half billion dollars a year? It is equality of opportunity for the 30 percent of our population which lives on the farms of the nation. Is the objective sought worth what we are paying for it? Are we making progress toward its attainment? These are questions which should interest not only the farmers but every person in the United States. Just in passing I might say that there have been few times in our history when the future seemed brighter for both white and colored citizens. The economic situtation is better, but an added reason for optimism is that we have really begun to cooperate; to work together.

The premise upon which the doctrine of equality of opportunity for agriculture rests is that the country cannot be prosperous unless agriculture is prosperous.

This was the word preached by Secretary, Wallace, Chester Davis, H. R. Tolley and other leaders during the 1920's. Events both before, during and after the depression have proved them right. The betterment in agricultural conditions has been paralleled by a betterment in conditions in industry. You not only help all farmers when

you help agriculture as a whole but you help the country as a whole. There weren't any dinner pails at all, to say nothing of full dinner pails, until the up-turn in agriculture sent workmen back to the jobs the depression forced them to leave.

We might ask ourselves, however, just what constitutes farm prosperity. A stable and adequate income for agriculture is the first essential and viewed from a broad standpoint, tho only comprehensive one. A stable and adequate income for agriculture, however, means even more than a return for farm products that, taken as a whole, seems fair. An adequate income for agriculture means an adequate income for the rank and file of farmers, white and colored.

Such an income for farmers cannot but have far-reaching consequences. It is the answer to many of our most difficult social problems, and definitely the only answer to the problem of tenancy.

The past four years has brought the nation to a clearer realization of that problem and its implications than ever before. If I had not known better I might have thought that the share-croppers came into being along with the AAA and that the AAA was somehow responsible for the fact that there are tenants. A lot of people have discovered the share-cropper in the past four year. We have known them all our lives Some of us have been share-croppers Most, if not all, have kinfolks who are share-croppers. And all of us have tried o do something about them; to help them. We have succeeded in a measure. In a measure we have failed, partly because of conditions imposed upon all agriculture; conditions that must be removed. We know that the tenant problems was acute long before the AAA was even an idea—much less an organization.

I cannot help but resent the attempt to lead uninformed people to believe that these programs have either been responsible for tenancy or that they have made the condition of Southern tenants worse than it was.

I resent efforts to use the tenant problem as a loud speaker for any particular set of political beliefs. I do not question the sincerity of some people who cherish the childlike belief that violent agitation will turn tenants into landlords overnight. I do question their knowledge of conditions in the South and have little respect for their common sense. Any informed person knows that Southern Agriculture has had almost insurmountable obstacles to overcome ever since the Civil War. A man not long ago was telling me about a visit to a section of Georgia that I know well. He knew very little about the South and he was very much impressed

"I am," he sad very earnestly, "for anything, any program, which will help those poor tenants. The country depressed me. Ramshackle houses without paint; everywhere evidences of poverty. Something should be done to help thoe share croppers."

I happened to know that he had visited a section where there were no share-croppers and where almost every citizen owns his own home. A visit to any cotton growing section of the South, the fertile Delta included, will confirm the fact that the living standards of all Southern cotton growers are far from what they should be. The need for an adequate income is not confined to share-croppers or any other class of tenants, or even to the South. It is nation wide.

The first essential of an adequate return for the cotton grower is, of course, a fair return for his crop. Over a period of years such a return would go far toward making home ownership possible to all who have the capacity to own homes We must make this possible.

This country must have a prosperous and a stable agriculture. Otherwise our entire political and economic structure will rest upon an insecure foundation, a foundation that is certain to crumble under the stress that the future will bring. A prerequisite to agricultural prosperity and stability is widespread owership of farm land.

I read not long ago a discription by Dr. O. E. Baker, senior agricultural economist of the Department of Agriculture, of a trip to Germany. He found the farmer or "bauer" a man "proud of his ancestors, proud to be a farmer, and who generally possessed a sense of superiority over city people." Dr Baker found also homes and material comforts which would do credit to the romanticist's idea of a Southern plantation home. One farm, Dr. Baker said, had been in a family since the Eleventh Century. I cannot improve upon the conclusions that he drew from this fact. Let me quote his language:

"As I considered what nad happened during these centuries—wars economic crises, periods of inflation and deflation, political revolutions—the thought come to me, how many times would this family have lost its wealth had it been invested in anything else than land.

"This concept of the farm as the hereditary home of the family has profound consequences. I saw practically no soil erosion in Germany, except in the vineyards on the steep slopes of the Rhine Valley. This absence of erosion is owing partly to the crops grown, but partly also, and perhaps primarily, to the conviction that the land is the foundation of the family, the heritage from the past to be handed on to the next generation undiminished in fertility, and, if possible, with its productivity increased. I could sense among the German farmers, or "bauern," as they are called, the feeling that a man who lets his land erode away not only dishonoring his ancestors but also depriving his son of the proper heritage. The German farmer is keeping faith with the past and with the future. He is conserving both the natural and the human resources. He has a philosophy of life which I wish were more common in the United States today."

We have made a start toward conserving those natural and human resources which Dr. Baker speaks about. We must decrease tenancy land ownership if we are to keep the gains we have made.

We mignt as well recognize the fact, however, that there are tenants, both white and colored, who are incapable of managing their own farms. In most cases that is due to lack of opportunity. But any attempt at indiscriminate or wholesale changes in land tenure would only confuse an already badly confused situation. We must go forward but we must be sure of our ground before we move.

The measure of our agricultural programs in the years to come will be their conservation of human as well as natural resources. The fact that the income from cotton rose sharply in this year are that year will mean little unless it was accompanied by the clearing of debts, increase in land ownership by farmers generally, and better care of the soil.

The present program has made conservation of the soil its primary object. That was natural once the emergency caused by the depression had passed. It is natural also that we have come to put increasing emphasis upon the conservation of human resources.

The problems of the white farmer and the colored farmer are the same problems. A policy which helps one helps the other. There is no place for race prejudice in any national program for the welfare of agriculture.

I am confident there will be the same tolerance of delays and mistakes that there has been in the past—if the objective is for their best interests. Adversity has taught the colored race some of the philosophic wisdom of the sages and a patience that as in it both strength and good humor.

I am confident also that any sound national program for agriculture will have the support and protection of the Negro race. Certainly it will have the support and protection of those who understand the problem.

## STANDARD FACTS

(Continued from Page 4)

in many commodities the food is just as nutritious.

**What class of product is found in "Grade B" or "extra Standard" grade products?**

In this grade will be found vegetables that are more succulent than those in "Grade C"; moreover, the fruit is better selected as to color, size, and maturity. Consumers find products of this grade to be very satisfactory for general household purposes.

**In brief, what does the term "Grade A" imply?**

Only the finest products may bear this term. The fruits and vegetables are very carefully selected as to size, color, and maturity. Incidentally, not a large proportion of canned products are fitted for this grade.

**What factors are considered in ascertaining grade?**

Different factors are involved for each commodity. For example, the grade of peas is ascertained chiefly by considering five factors: Clearness of liquor surrounding the peas, uniformity of size and color of the peas, freedom from defects, tenderness and maturity, and flavor. In grading fruits the usual considerations are color, uniformity of size, freedom from defects, character of fruit, and flavor. An interesting difference in grading fruits and vegetables exists in that the young, tender, most succulent, immature vegetables usually grade highest, while the fully mature but not over-ripe fruits are usually most desirable.

**When canned fruits and vegetables bear such grade designation as "Grade A" or "Fancy" what guarantee is there that the merchandise is of the grade claimed?**

The guarantee of the party under whose name the goods are sold. The responsibility is thus placed under existing law. If goods are not of the grade claimed, the goods are subject to seizure for misbranding under the United States Food and Drugs Act.

**Are canned fruits and vegetables now being labeled as "Grade A", "Grade B", and "Grade C"?**

Yes, and in increasing quantities.

**Can municipal county, and State purchasing agencies use the grading services of the Bureau?**

Yes, and some are already doing so.

**Will the Bureau grade delivery samples to ascertain whether proper delivery has been made?**

Yes.

**Will the Bureau grade "bid" samples for such organizations to ascertain whether samples meet the specifications on which bids were invited?**

Yes.

**Will the Bureau assist such purchasing agencies in drafting specifications to meet their peculiar needs?**

Yes, under certain conditions.

READERS whose interest goes into more technical details and beyond the immediate concerns of the consumer may send for the more detailed leaflet published by the Bureau of Agricultural Economics of the Department of Agriculture called "GOVERNMENT GRADING OF CANNED FRUITS AND VEGETABLES: QUESTIONS AND ANSWERS." As long as the supply lasts, this leaflet is free on request.

COMING in an early issue is a similar compilation of the facts behind meat grading.

## MELON USE URGED IN SUMMER DIETS

### Helps Keep Body Moisture at Correct Point

By Kathleen M. Quinland

All summer long we are conscious of a greater thirst than is felt at any other season of the year, and this we know to be a quite natural demand of the body. The rapid evaporation of moisture from the body during the warm weather makes it imperative to replenish these liquids regularly and sufficiently for health's sake as well as for comfort.

Beauty, too—especially summer beauty—depends upon the consumption of generous amounts of liquid. Just contrast the soft, moist texture of a skin that is amply supplied with liquid from within with skin that is parched and shrunken for want of it, and you will at once realize the tremendous importance of including regular and liberal quantities of liquid in the dict, and of cating plenty of fresh, juicy foods.

As I have explained before, at least half the moisture required by the body should be given in the form of juicy fruits and vegetables, for in addition to furnishing liquids, they also give the best form of roughage or fiber which is necessary to keep the liquids moving in the body.

During the hottest weather in July and August, come our best juicy fruits, the melons, cantalope, honey dew, watermelon; the latter blessed with elements which act directly on the kidneys in a most beneficial way. All three of these fruits are cooling and refreshing and contain their share of vitamins. Hence their use in conjunction with liquid thirst-quenchers such as cold water, fruit ades and other drinks is of great advantage.

Melons are at their lowest prices now and at their highest point of perfection. They are, therefore, the most economical and most sensible fruits you can buy. Eat them chilled and plain as often as you like, and then for variation try these simple ways of serving them.

In a rather large, flat sherbet glass place alternate rows of honey dew melon balls and balls of orange colored cantalope, sprinkle with lemon juice and garnish with a sprig of fresh mint. Chill thoroughly and serve.

Ice cold cantalope served with a ball of orange water ice is doubly refreshing. A pretty service is made with cantalope halved and filled as a nest with small balls of vanilla ice cream or fresh lemon mousse.

## INCOME FROM MEAT ANIMALS

"For the last twelve years as a whole, meat animals have produced approximately 23 1-2 percent of the American farmer's total cash income—or more than half again as much as he has received from grains, or from cotton, or from fruits and vegetables," said William Whitefield Woods of Chicago, president of the Institute of American Meat Packers, in addressing the National Association of Retail Meat Dealers convention at Cleveland yesterday. "Half of the farm land of the United States, and a large majority of its 7,000,000 farm operators are partly or wholly occupied with producing the country's meat," he said. "Nearly 4,000,000 American farmers grow hogs, almost 5,500,000 own cattle, and nearly 666,667 raise sheep and even so highly industrial a state as Ohio still boasts more hogs than Nebraska, more beef cattle than North Dakota and more sheep and lambs than Idaho or Utah."

## COTTON PICKER TO BE TESTED

Eight mechanical "cotton pickers" stood in front of a small factory yesterday, awaiting field tests when the fleecy crop ripens. John and Mack Rust, inventors, exhibited them to friends as the finished products of ten years of work. Within a month, the Rust brothers said, the machines will be eating their way down cotton rows, twirling white fibers off the plants and spewing cotton from their twisted sleeves as fast as a hundred pairs of hands could pick it.

## COTTON SHARE CROPPERS

The Federal Government moved yesterday to take before a grand jury the evidence it has gathered through months of investigation into widespread charges that peonage flourishes among the cotton share croppers of eastern Arkansas. Federal investigation had followed representations made to Washington that plantation owners were working men at gun point, that cotton workers were being held as vagrants" and forced to work out their fines or made to remain at their jobs through a system which kept them in debt. Announcement of its decision to act came from Homer S. Cummings, Attorney-General. (Baltimore Sun.)

# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., NOVEMBER 15, 1936 No. 10.

## NEED OF SOIL-BUILDING FOR GOOD CROPS

## PULASKI COUNTY PLANTER GROWS COVER CROPS YEARLY

### Crop Rotation Must Be Used to Build up the Soil Says Agent

Stating that the soil conservation program fits in with this type of farming, Lewis Gaston, Pulaski county planter, says the time has come when more cover crops, soil building crops and crop rotation must be used to build up the soil.

Mr. Gaston has 865 acres in cultivation, and produces the feed for his work stock, for 20 head of Hereford cattle and an average of 50 hogs, related Carroll S. Morrow, Pulaski agent. Tenants on the plantation are given garden space and encouraged to produce livestock for their winter meat.

**All Cotton After Vetch.**

Of the 865 acres cultivated, Mr Gaston will have cover crops, including legumes, on 615 acres this fall and winter," said the county agent. "He had legumes in every crop except cotton this year, and the cotton was on land where winter vetch had been turned under last spring.

"Mr. Gaston has found that there is a decided difference between vetch planted early and late in the fall. He has planted it at various dates between September 2 and November 10, and says his best results were from vetch planted from September 15 to October 15. This fall Mr. Gaston sowed 550 acres of vetch, sowing oats with it on 140 acres, for the purpose of harvesing the vetch seed for future planting. He tried harvesting vetch seed this year with a combine on vetch with oats and vetch alone, and discovered that vetch must have a nurse crop such as oats planted with it to hold it up when seed are to be harvested."

## The Daily Digest Says:

**TULAREMIA VACCINATION**

Conquest of tularemia is near at hand, says a Science Service report. This is promised by successful vaccination experience reported by Drs. Howard J. Shaughnessy and Thomas C. Grubb and Albert C. Fauth of the Illinois State Health Department to the American Public Health Association. Two of these Illinois health workers vaccinated themselves against tularemia by a method devised by Dr. Lee Foshay of Cincinnati. They did not get the disease although they made post-mortem examinations of some 300 tularemia-infected rabbits in a period of over a year. The reported experience is an excellent record in view of the fact that over a score of laboratory workers, in spite of all pre-

## FACTS FOR HOUSEWIVES

### Various Subjects Discussed Below That Will Aid in Housekeeping

FROM an Iowa consumer: "I had a strange experience lately. I had been getting milk from my son's Jersey cow. I churned some of the cream and kept myself in excellent butter. When his cow failed I planned to buy whipping cream and churn it. But no, it would not makee butter. I treated it just as I had all the different cows from which I had churned, but it simply would not change into butter. I decided, since I know few consumers churn in these days, that the dairymen had found a secret to please—and were pleasing—their customers who wanted not churning cream but whipping cream. Could the answer lie in the homogenizing process reported in the GUIDE as being used on cream nowadays?"

HOMOGENIZING would prevent cream from churning into butter, say the experts of the Bureau of Dairy Industry, but dairymen are not likely to homogenize whipping cream. The process consists of subjecting the cream to high pressures, breaking the fat globules into tinier particles so that they do not rise to the surface. Since it prevents the cream from bubbling up and foaming into increased volume, it is not suitablee for whipping cream.

Since a dry feed diet of the dairy cows could influence the churnability of their cream, there is a possibility that the drought situation might play its part in this particular problem.

"WHEN I BUY sweetened grapefruit juice," asks an eastern city consumer, "am I buying as potent a product as unsweetened juice?" What is to prevent a canner from sweetening his juice, not with sugar, but with a watery sugar sirup which would result in my spending more of my juice money for water?"

UP TO July 1, there was nothing specific in Federal regulations to prevent this dilution, and some cans of fruit juice were diluted as much as 25 percent by the addition of sugar syrup. They were labeled in such a way that this dilution was not obvious to the label-reading consumer.

FOOD AND DRUG officials ruled that under the necessity of maintaining the identity of such basic food products as fruit juice as distinguished from fruit sirups, fruit type beverages, and the like, these juices if sweetened must be sweetened with dry sugar, and conspicuously labeled to show the addition of sugar.

"FRENCH FRIED POTATOES," writes a New York consumer, "are

## BETTER PLANTS AND ANIMALS

### Nature Has Been Subjecting Above to Many And Varied Changes

"SINCE life began, nature has been "breeding" plants and animals. She crossed them. She inbred them. She subjected them to mysterious forces powerful enough to bring about changes in the germ stuff that determines their characteristics. She put them through hardships that only the fit could survive. Out of these processes, carried on over millions of year, myriad of forms of living things developed.

"FOR a long time after man came on the scene, he took what nature gave him. But being observant and determined, he eventually began to gather seeds from the fields and plant them for his own use, and to capture young animals and tame them. This was more handy than hunting and it gave him a more certain food supply. As he gained experience, he became dissatisfied with what he got from nature and began making improvements. He picked out the plants that seemed to yield the most and to be the more palatable and increased them, gradually discarding the others. He shrewdly selected the best animals for mating whenever he could. It was a slow, crude business, but there was plenty of time. Long before the dawn of history, these generations of picking and choosing resulted in most of the major types of agricultural plants and domestic animals we have today.

"DURING this time the men who knew most about the processes of nature, or thought they did, were the magicians. Eventually the scientists appeared. They were the natural heirs, the seventh sons of the seventh sons of the magicians, and they put the latter out of business because their ideas turned out to be more practical and effective. These scientists were natural-born meddlers; nothing was safe from their curiosity; they were driven by an experimental itch that would not let them leave anything alone. Some of the biologists among them saw possibilities for further improvement in plants and animals, and slowly and painstakingly they worked out more exact methods to bring it about.

"AS TIME is measured in the age of the earth or of man, the scientists who deal with heredity came on the scene only a few minutes ago, but already they have managed to do a great deal. In the case of plants, especially, they have developed out of the old stock a large number of new forms with better quality, more productiveness, and greater resistance to disease and adversity. But they would be the first to say that they have hardly scratched the surface, and looking into the future, they

## GOOD FARMING FURTHERED BY SOIL PROGRAM

## QUALITY IN WHAT YOU EAT

### Housewives Consume More Fruit and Vegetables Now Than Ever Before

HOUSEWIVES today carry home more fruits and vegetables than ever before. If you can compare the food purchased on your trip to market yesterday with a similar shopping trip made 20 years ago, you will notice the change that has taken place. Twenty years ago you were hard

(CONTINUED ON PAGE 5)

## ALFALFA PAYS

That alfalfa is an exceptionally desirable hay crop for sections where favorable soil and climatic conditions prevail, was well demonstrated again at Hampton Institute this past summer.

From a fertile 12 acre field which was seeded four years ago, the college farm has already harvested four large cuttings this season with good prospects of securing a fifth within a few weeks. The first cutting this year yielded approximately 20 tons; the second, 15 tons; the third, 12 tons; the fourth, ten tons; and the fifth cutting will probably result in at least six more tons. This makes a total yield of 63 tons, or an average of 5.25 tons per acre for the year.

With good leguminous hay selling at $35 per ton, a successful crop of alfalfa can do much to help to make farming a profitable business—Agricultural News

## LOSS OF VITAMINS

"SPINACH tastes so much better right out of the garden," writes a reader from a middle-sized Iowa town, "that I wondered if the food value might be different too. Are there more vitamins in spinach just picked than spinach which has been kept long enough to make the average trip through commercial channels?"

SOME VITAMINS do disappear when greenery stands. The main loses is of Vitamin C. but some Vitamin B is lost too. How much of their potency stays and how much goes depends on how long the spinach is held and probably on how it is held, what its storage temperature was. Not enough studies have been done to justify any more definite statement than that, other things being equal, the longer the storage the greater the vitamin loss.

## COTTON SHOWED PROFIT IN WINTER COVER CROPS

### Cash Benefits Not Only Benefit Derived by Energetic Proven Plan

About 120,000 Arkansas farmers who are taking part in the agricultural conservation program will receive benefits of over $11,000,000, an average of between $90 and $100 per farm, according to L. C. Barber, district agent for the southwestern counties of the state.

"And cash benefits will not be the only return," Mr. Barber commented. "To many farmers, stricken by drouth, the payments will be an insurance of much value, while all who participated in the program have made progress in land improvement and better cropping systems."

Many farmers in the Barber's southwest district sowed vetch last fall on land kept from production under the AAA program, he said. The vetch was turned under green and followed by corn or cotton last spring. During the hot, dry days of August, a great contrast could be seen between crops on this land and that treated in the usual way, Mr. Barber observed.

**Vetch Acreage to Expand**

As a result of these demonstrations and the benefit payments received under the agricultural conservation program, thousands of acres will be planted to vetch and other winter legumes this fall, the district agent declared, while crop rotation and terracing have been adopted on many farms.

"Farmers have learned a great deal in recent years concerning the suitability of land for different crops," Mr. Barber said. "Previously, many farmers on the poorer uplands, especially in the drouth areas, have tried to produce their grain needs in the form of corn. Often, under the most favorable conditions, a yield of 10 bushels per acre was considered good.

But grain sorghums commonly produce from three to five times as much as corn, and are now being substituted for it on thin lands in many instances. Sorghums not only out-yield corn, but stand drouth much better.

Thousands of acres of oats are being planted this fall in southwest Arkansas which will furnish winter grazing and solve the early feed problems of many farms next spring, the district agent reported.

**Fire Screens Easily Made**

Unusual fire screens were made

(CONTINUED ON PAGE 6)

**Nothing in my opinion, would contribute more to the welfare of the States than the proper management of lands.—Geo. Washington.**

## FACTS FOR HOUSE WIVES

(CONTINUED FROM PAGE 1)

a gamble in our house. Sometimes they have the light, golden brown color they should have, and taste delicious. Then again, the next time they may be off in color and taste and texture. I buy carefully, and if I have room in my refrigerator I even give potatoes the extra care I give green vegetables —keep them in the ice box between buying and using. I've tired several kinds of potatoes and it doesn't seem to help."

REFRIGERATION may be the secret of the trouble. Potatoes should be kept out of the refrigerator for best cooking quality. Scientists in the Bureau of Plant Industry, in seeking the solution to a similar problem troubling potato-chip manufacturerers, found that potatoes stored at temperatures of 60 degrees to 70 degrees yield good chips, while those stored at lower temperatures were unsatisfactory. These results hold good for French fried and baked potatoes as well as potato chips. Good practice for consumers is to store potatoes at room tempera ture, avoiding extermes of hot and cold.

## FOURTEEN TRADE AGREEMENTS AID PEAR GROWERS OF UNITED STATES

### One-Sixth of Domestic Production Goes to World Markets

American pear growers have obtained consessions of direct benefit in each of the fourteen trade agreements so far concluded by the United States. These consessions are of tangible mportance in view of the fact that one-sixth of the 30 million dollar annual crop is exported.

With the exception of Nicaragua, each country has granted more favorable treatment for the importation of fresh pears, and with the exception of France each country has given consessions on canned pears and canned salad fruits, according to a survey by the National Committee for Reciprocal Trade released today.

Dried pears were benefited in ten out of the fourteen agreements: Cuba, Belgium, Sweden, Canada, Colombia, Honduras, Nicaragua, Guatemala, France, and Finland.

While some 25 states produce a commercial pear crop, the states of California, Washington, Oregon, New York, Colcrado, Illinois, Michigan and Texas account for more than two-thirds of this production.

The advantages gained by pear growers from the negotiation of reciprocal trade agreements is even more apparent when the following analysis is examined, country by country.

Cuba bound the present duty on fresh pears, reduced the duty on dried pears 12.5 per cent and on canned pears and canned fruits for salad 16.7 per cent, and agreed not to increase these new rates during the life of the agreement.

Brazil agreed not to levy a duty on fresh pears during the life of the agreement and reduced the duty on canned pears and canned fruits for salad by 20 per cent.

Belgium reduced the duty on fresh pears by 50 per cent, and on both dried and canned pears and on canned fruits for salad by 27.5 per cent.

Haiti agreed to a reduction of 35 per cent in the duty on canned pears and canned fruit for salad and to a 40 per cent reduction in the specific rate of duty on fresh pears.

Sweden extended the low duty season for imports of fresh pears, reducing the duty by 50 per cent for the months of January and December; bound dried pears and dried fruits for salad on the free list; and reduced the duty on canned pears and canned fruits for salad by 33 1-3 per cent.

Canada waived the minimum specific duty and reduced the ad-valorem duty on fresh pears by 25 per cent binding this lower rate against increase during the life of the agreement. The duty on dried pears was reduced by 10 per cent, and on canned pears and canned fruits for salad by 20 per cent, this latter rate being bound against increase during the life of the agreement.

The Netherlands bound against increase the import duties and monopoly fees on fresh and canned pears and on canned fruits for salad, and futhermore agree to more iiberal seasonal treatment with respect to the import monopoly fee on fresh pears.

Switzerland agreed to maintain the present quota allotment on fresh pears, and reduced the duty on canned pears and canned fruits for salad by 18.2 per cent.

Colombia reduced by 50 per cent the present duty on pears, whether fresh, dried or canned; and granted a 50 per cent reduction in the duty on canned fruits for salad.

Honduras agreed not to increase during the life of the agreement the duty on fresh pears, reduced the duty on canned pears and on canned fruits for salad by 73 per cent, and provided for a reduction in the duty on dried pears.

Nicaragua agreed to reduce the duty on canned pears and on canned fruits for salad by 33 per cent, and on dried pears by 40 per cent.

Guatemala agreed not to change during the life of the agreement the present treatment accorded imports of canned fruits for salad and imports of pears, whether fresh, dried or canned.

France has increased by more than 50 per cent the annual quota allotment for the importation of fresh pears from the United States. Protection was obtained in this agreement against increase in the quota license tax on fresh pears and against increases in duties on fresh or dried pears.

Finland has ageed not to increase the present duty on fresh pears, has reduced the duty on dried pears and dried mixed fruits by 50 per cent, and has reduced the duty on canned pears and canned fruits for salads by 35 per cent.

## ONION THIRD TRUCK CROP

The onion, one of the most ancient vegetables, it is said, having been known in the dimly ancient days of Egypt and India, is the country's third most valuable truck crop. Plant scientists tell us the onion is member of the lily family, kin to the gentle lily of the valley, the flaming tiger lily, and others of that fair clan. In Spain, travelers say, people eat onions as we do apples here and bread and onions are often the workingman's dinner.

## GCT NET OF $65 FROM ONE ACRE OF TOMATOES

Luther Nichols, 4-H Club members of Wilmar, Drew county, reports a net profit of $65.19 from one acre of tomatoes. He prepared the land last spring, flat breaking it to a depth of six inches. He then disked, harrowed, ond prepared it for planting, enriching it with eight loads of barnyard manure and 700 pounds of commercial fertilizer. Gulf state variety of plants were used. The planting was made on April 18.

The cost of producing the acre of tomatoes was $87.26 and the crop was sold through the Drew County Truck Growers Association as green wraps for $152.45 Luther estimates his labor at 238 hours, which he charge against the crop at the rate of 15c per hour, said C. A. Vints county agent of Drew county.

## TURKEYS PAY PROFITS.

Turkeys are returning substantial profits to many Fulton county farm women. Mrs. Dora Estes of Pleasant Grove, made $35 on her flock this year. Last year Mrs. W. H. Benton of South Fork, made $168 from the sale of turkey. In 1934, Mrs. Leona Mosey, of St. Joe community, realized a profit of $31.73 and this year increased her earnings to $81.34. Mrs. Benton is using the money earned from the sale of the turkeys to install a water system in her home.

## SYRUP FROM ACRE OF SORGHUM BROUGHT $87

An acre of Wacona "Honey Drip" sorghum, planted as a demonstration by R. G. Ruffin, Dewitt, made 135 gallons of syrup that netted him $87.75, selling at 65 cents a gallon, reports J. H. Dean, Arkansas county agent.

The sorghum was planted on light, dry soil along a creek in order to get the best quality and a good tonnage, Mr. Dean said. It was stripped a few days early to reduce the evaporation from the stalks in the hot dry weather, and to keep the juice from souring, the syrup was made immediately after harvesting.

## SORGHUM AND PEANUTS ARE USEFUL FOODS

A more liberal use of sorghum molasses and peanuts in the farm family diet is recommended by Miss Gertrude E. Conant, extension nutritionist.

"Calcium phosphorus, and iron, most often lacking in the average diet, are found in liberal amounts in sorghum molasses," the specialist said. "While the peanut has the same food characteristics as the bean or pea. Both articles of food are inexpensive, and molasses is valnable for its energy and bone-building properties."

Most children like molasses cake or cookies, Miss Conant observed, and these foods are exceptionally good for school lunch. Also many palatable confections may be made from molasses and peanuts, she added.

Miss Conant gave a recipe for a pudding made from sorghum molasses and corn meal known as "Indian Pudding." Scald five cups of sweet milk in a double boiler and pour slowly over 1-3 cup of corn meal. Return to the double boiler and cook 20 minutes. Then beat in 1-2 cup sorghum syrup, one teaspoonsalt and one teaspoon giniar. Mix well and pour into a baking dish. Set in a pan of hot water and bake slowly two hours. The oven temperature should be 250 to 275 degrees Fahrendeit. The pudding may be served with cream.

This confection is best when made with home-made and home ground corn meal, according to Miss Conant..

Peanuts may be used in combination with rice in a peanut loaf as the main dish in place of meat, the food specialist suggested.

Other articles of low-cost food whose use should not be neglected, Miss Conant said, are milk, dried beans and peas.

## USE HOME-MADE STAIN

Walnuts gathered on the farm have enabled a number of Little River county farm women to make much needed improvements in their homes, says Mrs. Beatrice S. Bryson, home demonstration agent. A walnut stain made of one peck of walnut hulls, one gallon of water, and one to two teaspoons of permanganate of potash transformed the floors in the home of Mrs. Guy Foster, member of the Richmond Home Demonstration Club, from a rough dingy finish to an even glossy one. A home-made filler was used to fill in the cracks in the floor before the stain was applied. Home-made wax was applied with a home-made floor polisher to give the floors a glossy appearance. Several club women after seeing the result of Mrs. Foster's demonstration, have improved the floors in their homes with this method.

## SHORT-GRAIN RICE RESISTS STEM ROT

Fayetteville—Results of four years' experimentation, reported in Arkansas Experiment Station bulletin 329, "Resistance of Rice Varieties to Stem Rot," just published by the college of agriculture, offer further evidence that rice varieties differ in their relatives susceptibility to stem rot.

Dr. E. M. Cralley, author, states, in the general the short-grain varieties are less susceptible than the medium and long-grain varieties. Also early-maturing varieties are less susceptible than late-maturing types. However, resistance or light susceptibility is apparently a variety characteristic which is only indirectly associated with the time of maturity.

Since the short-grain varieties are not grown on an extensive commercial basis in Arkansas, the results of this work suggest the possibility of using short-grain resistant varieties as parents for crossing with some of the medium and long-grain varieties, with the view of developing suitable medium and long-grain resistant types, the investigator says.

This bulletin, which deals with the symptoms of stem rot, experimental methods employed in the greenhouse and at the Rich Branch Erperiment Station, and effects of dates of planting on sèverity of stem rot, may be had free by writing the dean of the Arkansas College of Agriculture, Fayetteville.

## QUILT MAKERS DISPLAY ART

Quilt makers from 39 states exhibited their handiwork at the recent Eastern States Exposition, one of the number being a retired school janitor 80 years old, who for 20 years has given quilts of his own make to pupils as graduation gifts. Among the wide variety of quilts brought from near and far to the show was one with 12,876 pieces, the girls and another for the boys, of five generations, one color, for still another had on it the official flowers and birds of all the states. Another represented a family tree.

## NEW CROP OUTLET IN COTTON PAVING

### Highway Construction in South Turns to Fleecy Staple to Reinforce Road Surface.

### IN EXPERIMENTAL STAGE

### But More Than 500 Miles of Pikes in 24 States Are Planned by Agriculture Department

BIRMINGHAM, Ala. (Science Service).—Down in Alabama recently dusky cotton pickers, pulling long cotton sacks bulging with the fleecy staple, paused long enough at the end of their rows to watch highway construction near by. Their attention was attracted by the laying of a canvas-like material between the layers of sand, slag and asphalt.

The Negro farm hands didn't know it, but the same substance they were picking, except in different form, was being used to build up the road. No one took the trouble to tell them, but they were seeing history in the making. Now traffic is moving over this first "cotton highway," a small part of an extended program being fostered by the United States Department of Agriculture, in which some 6,167,000 square yards of cotton fabric are being provided for the building of over 500 miles of roads in twenty-four States.

Advocates of "cotton paving" contend that it not only reinforces the bituminous surfacing of the highway but also prevents it from cracking and improves its resistance to water. In a broader sense it is hoped that a great new domestic market will be provided for the chief product of the Southern farm.

But the cotton fabric must prove its case before being widely used in highway construction. Six bales of cotton per mile are required for the usual "farm to market" highway and its use increases construction costs about $1,000 per mile. A year or more will be required for an adequate test.

The rolls of cotton fabric as they come from the mill are eighty-two inches wide, three rolls being required after allowing for lapping to cover twenty feet of the usual twenty-two-foot roadway. It is laid on a coating of hot tar, then more tar applied, with other layers of slang and asphalt coming on top.

Alabama proposes to build 119 miles of cotton fabric highways, using 1,206,094 square yards of the material, or more than any other State. North Carolina comes next with plans for 105 miles. Twenty-two other States will use varying amounts.

## ARKANSAS LEADS IN PRODUCTION OF STRAWBERRIES

Strawberry production in the United States amounted to 253,719,183 quarts in 1934, 23 percent below the 1929 production. The greatest reduction in harvest occured in several of the late producing states where the drought of that year made its appearance before the berry crop was made. Missouri the leading producer in 1929 with more than 27 1-2 million quarts dropped to 12th ranking in 1934 with a little more than eight million quarts. Declines were recorded in Oregon, Iowa, Maryland, and Illinois.

Eleven states reported nearly two-thirds of the total United States production in 1934. These States ranked according to production were Arkansas, Louisiana, Tennessee, California, Florida, Virginia, North Carolina, Kentucky, Maryland, Washington and Oregon. Production in these states ranged from nearly 26 million quarts in Arkansas to a little more than 10 million quarts in Oregon. The largest production increases were reported in Kentucky, Florida, Texas, and Connecticut.

Acreage of strawberries in 1934 was reported as 226,996 acres, or 6.5 per cent below the acreage in 1929. The largest acreages recorded were in Arkansas, Tennessee, Louisiana, Michigan, and Missouri. The greatest decline in acreage took place in Michigan while Michigan showed the greatest acreage increase within the five-year period. The acreage production per acre based on the total strawberry acreage was 1,118 quarts in 1934 and 1,363 in 1939.

Strawberries were produced on considerably fewer farms in 1934 than 1929. Farms reported in 1934 was 198,977 representing a decline of a little more than 44 percent. Acreage reporting was 1.14 acres in 1932 and .68 acres in 1929, this increase being due to complete failure on farms which were mostly non-Commercial planting.

## STRAWBERRY FACTS INCREASE IN ANNUAL LEGUMES

Recent figures released from Bureau Census reveal following:

A six million acre increase in annual legumes planted alone in addition to a gain of nearly 3,000,000 acres in those planted with other crops is shown in a Farm Census report made today by Director William L. Austin of the Bureau of the Census, Department of Commerce. This is one of the major changes in American agriculture in the five-year period.

The total harvested acreage of these crops planted alone rose from about 6,400,000 acres in 1929 to over 12,560,000 in 1934, and the acres grown with other crops from 3,854,000 to more than 6,700,000 phenomenal increases between 1929 and 1934 were indicated in the acreages planted to soybeans and cowpeas as a substantial increase was reported in peanuts.

All legumes fit well into a soil improvement program as they gather atmospheric nitrogen, thus enriching the soil, they are valuable for forage purposes, and for green manure, their seed can be used for human food, and for livestock, and the seeds or the oil processed therefrom, have many possible uses in industry. In the drought year 1934 , they were used widely as catch or late season crops after other crops had failed. The soy bean, in particular, has all these manifold uses. They have increased not only thru the demand for the bean or the oil for food, feed and industrial uses, but also because of immunity to many insect pests and of resistance to drought.

Extensive use is made of annual legumes for planting with other crops. Because of different planting practices, the interplanted acreages cannot be satisfactorily reduced to an equivalant solid acreage to obtain a total acreage for any particular legume. For example, cow peas are grown in fields with corn, with both corn and velvet-beans, or with corn and Soybeans. In each case a different acreage might need to be allocated to cowpeas. In the use of statistics for legumes, an additional caution must be observed because the production figures for nuts, beans peas, or seed may not be closely related to the number of farms reporting nor closely comparable with the acreage grown alone, as many farms produce annual legumes for hay or for grazing or for hogging off and not for actual harvesting of the seed as grain. On the other hand, some of the interplanted acreage usually produces, some nuts, beans, peas, or seeds.

### Soybeans Becomes a Major Crop—Illinois Leads

In 1934, soybeans we either harvested for beans, hay, grazed or hogged off on 694,834 farms. The acreage grown alone amounted to 5,692,236 acres, making it a major crop, while the acreage in combination with other crops was 885,243 acres, and the production of grain was 23,051,703 bushels. These figures represent an increase of 129 per cent in farms, an increase of 190 per cent grown along in acres, a decline of 7 per cent of the interplanted acreage, an increase of 166 per cent in production of grain. The leading states in acreage grown alone were Illinois, with 29 per cent of the United States total, Iowa with 15 per cent, Missouri with 12 per cent and Indiana with 11 per cent. These four states maintain the the same ranking in acreage increase during the five years. Production of soybeans for grain is more localized with Illinois having 60 per cent of the United States total. Other states in order were Indiana with 13 per cents Iowa, with 9 per cent, and North Carolina with 5 per cent.

### South Carolina First in Production of Cowpeas

The cowpea, has found greatest favor in the south, though grown to a considerable extend as far north as central Illinois. Three times as many farms grew these in 1934 as in 1929 and the acreage grown alone and that in combination with other crops each were more than four times as great. In 1934, this crop was harvested on 830,671 farms on which 2,711,369 acres were planted alone and 2,490,776 acres were grown with corn or other crops. South Carolina occupied first place in 1934 in acreage of cowpeas and production of peas having reported 13 per cent of the cowpea acreage grown alone, 30 per cent of the interplanted acreage, and 17 per cent of the production of peas. Other leading states, in order of rank, in acreage grown alone were, Arkansas, Illinois, Tennessee, and Texas; in acreage grown with other crops were Georgia, Arkansas, Mississippi, and Louisiana; and in production of peas were Alabama, Georgia, Mississippi, and Texas.

### Georgia Greatest Goober Grower

Farms growing peanuts for harvest in 1934 numbered 576,985, an increase of 77 per cent over 1929. The acreage grown alone was 2,016.292 acres or 29 per cent greater. The acreage with other crops was 1,223,235 acres, or 38 per cent greater, and the production of nuts was 44,259,977 bushels, or 21 per cent greater. Georgia was the leading state in acreage grown alone and in acreage with other crops the percentages of United States total being 28 and 50 respectively. North Carolina was first in production with 27 per cent of the United States total.

### Michigan Harvests Most Edible Beans

Navy, pinto, kidney, lima, and other ripe field beans, were reported harvested on 139,753 farms in 1934, total acreage grown alone was 1,488,376 acres, and the production of beans was 18,696,615 bushels. Michigan, California, Colorado, and New York were the leading states in acreage and Michigan, California, Idaho, and New York, were the leading states in production. Both acreage and production of dry beans were severely curtailed in some areas by the drought of 1934.

Another catchall class of annual legumes is made up of velvet beans, vetches, Canada, and other ripe field peas. In 1934 one or more of these crops were grown on 211,294 farms with 651,769 acres grown alone and 2,098,204 acres, mostly velvet beans in combination with other crops, and a production of 10,253,725 bushels of beans, peas, or seed.

## HOW CANS COMPARE

PACKING fruits and vegetables in cans of 200 different sizes used to be common practice among American canners. A canner who wanted some distinctive size or shape found, if his innovation became a good seller, that it was only a question of weeks before imitators would come rolling in with similar stock. Then the smart canner turned to and invented still newer sizes and shapes. That's what led to the 200.

EXPENSE to the canner, confusion to the consumer—these were the costs of the race for individual and distinctive cans. Each different sized can required additional costly machinery to manufacture. Each different can demanded a special size label. Great variety in can sizes meant also that shipping carton and box sizes had to be multiplied many times over. Packers and distributors all the way along the line felt the effects of this great waste and increased operating cost. Consumers, confronted in the grocery by a bewildering number of different-sized cans, were at a loss to tell how much food they were getting for their money. So many of the cans looked exactly alike but weren't. Sometimes one contained several ounces more or less than another very similar, often apparently identical, can.

SIMPLIFICATION of containers, with a voice in the simplification proceedings for all interested parties, to many manufacturers has seemed to be a very necessary move. Looking over in Canada, the canning trade saw the effects of simplification in actual practice. In our neighbor country fruits and vegetables come packed in cans of only 11 different sizes. Canadian packers realize the economic benefits of mass production and Canadian consumers are protected from the losses that come from buying one size of can thinking it is another size. Regulations governing the sizes of containers for canned fruits and vegetables have been on the Canadian statue book since 1929.

HERE in America the canning trade some years ago invited the Division of Simplified Practice of the National Bureau of Standards to cooperate in developing a simplified practice recommendation. A cooperative survey among 2,800 canners throughout the country brought forth a wealth of data. Leading producers of cans supplied still further information. After considering the data, the canning trade association's own committee on simplification recommended the adoption of only 27 sizes of cans for fruits and vegetables to replace the 200.

CONFERENCES of canners and canned food distributors considered the recommendation for approval. On September 1, 1934, the program calling for only 27 sizes was made effective. At present writing, hundreds of producers, packers, distributors, and users of cans for fruits and vegetables have signified in writing their acceptance of the simplified practice recommendation. The Federal Government, as the country's largest purchaser, now buys its canned goods in accordance with the simplified line. Many other purchasers, large and small, buy the same way, although the program is entirely voluntary.

RESPONSIBILITY for enforcing the simplification recommendations rests entirely with the canning trade itself. A standing committee representative of food packers and distributors attemps to keep the industry in line. But people who agree voluntarily to abide by simplied practice are in no way legally bound to do so. As a matter of fact, a number of can sizes not among the 27 have already cropped up in American grocery stores. New trade conferences may soon be under way to consider this problem.

NO LAWS exist which restrict the fancies of can manufacturers, provided that when sold in interstate commerce filled cans bear labels which clearly show the net weight of their contents. Laws have been passed regulating the sizes and, in some instances, the shapes of baskets, hampers, and barrels. As a result there is today such clear differentiation between basket sizes that no consumer would mistake one size of basket for a larger one.

BACK now to cans, the question of can sizes from the consumer's point of view divides itself into two parts. Total number of can sizes used should not be so large as to large as to confuse the careful consumer in his efforts to find out what quality of food he gets for his money. Next, consumers want each can size to be so distinct from every other can size as to lock out all possibility of mistaking one for another. When the trade decided to reduce the number of sizes to 27, it took a long step toward meeting consumer needs on the first phase of the problem. But when it made so small a figure as 1-32-inch the minimum allowable difference between can dimensions, it stopped short on the second phase.

INCLUDED AMONG the 27 recommended can sizes, for example, are some that are still very near together in size and in capacity. Overall dimensions of the No. 2 can, and the "No. 2 special" can are exactly alike, except that No. 2 can is 1-16 inch taller than the other, and consequently has a larger capacity. Side by side the cans look so much like identical twins that reading the label for net weight information becomes compulsory for the consumer who wants to pay only for what he gets.

FAMILY RELATIONSHIP exists also among the No. 1 1-4 cans. Dimensions of the regular No. 1 1-4 can are 4-1-16 by 2-6-16 inches. The "No. 1, 1-4 special" has the same diameter but is only 2-5-16 inches high, and contains about one-half ounce less. These cans, frequently used for sliced pineapple, are generally sold at identical prices.

SOME CANNERS have considered eliminating the 2 "special" cans from the list, but to date the suggestion has not been carried out. Canners in favor of retaining the "special" cans say that they are selling too well to be drawn out of circulation. If and when the trade agrees to reduce the list, however, machinery exists for smoothing the way. Many of the simplified practice recommendations of the bureau of Standards undergo frequent revisions in accordance with changing practice and needs.

COMMONEST can sizes in everyday use in the United States are No. 1 Tall, No. 1 Eastern, No. 2, No. 2 1-2, and No. 303. Institutional buyers often use No. 10, a can 6-3-16 by 7 inches, containing almost 7 pounds. But here, too, there is room for a word of caution, because a "No. 10 special" is now on the market, only 6-15-16 inches tall. It takes measuring with a ruler to tell these cans apart.

CONSUMERS' INTEREST in the question of can sizes is more than academic, especially where mistaken identity plays its subtile part. In Canada this villian is foiled because no two cans among their 11 are confusingly close in dimensions or in capacity, and the "special" cans, along with No. 303, have been eliminated. A very tricky pair, widely used in America, are No. 303 and No. 2. These cans look so much alike that from a distance it is hard for the consumer to tell them apart. Yet No. 303 is so much the smaller that it will fit snugly inside of No. 2. You have to open 5 cans of No. 303 to get the amount of food you could get in 4 cans of No. 2. A No. 303 can of string beans bought for a cent less than a No.

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

**"OUR SLOGAN"**

**STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.**

**OUR PLATFORM**

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**

4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

## NATIONAL FEDERATION OF COLORED FARMERS INCORPORATED

2937 S. Michigan Avenue, Chicago, Illinois,—The Negro farmer as a whole has to some extent always been penalized by inexperience, coupled with an unfriendly environment. The depression of 1932 has brought about many changes, and while we have suffered more than any other race, in my opinion, has been of material benefit to us as a group for the reason, it has brought about a better understanding between the races, and reduced the rates of interest.

The price of cotton over a period of 100 years has average 13c. per pound, and for this period of time cotton has been the nation's largest export farm crop. Cotton grown in southern states and exported has brought to this country billions of dollars. If the south can, and will grow its own food and feed, and sell its cotton as a cash crop, it will be by far the richest section ef the world.

Children should be your first consideration; not only their health, education, welfare now, but what will become of them when they grow up. Machinery is fast taking the place of man-power, both in industrial centers and on the farm. Farm mothers and fathers must make provisions for the welfare of their children.

Millions of people go on year after year renting land. You plow the land, plant the crop, work it, harvest it, and when you carry it to market, what becomes of the proceeds? You pay the "furnish man," the store man, the gin man, but above all you pay the landlord because he has a lein on your crop. You continue this and in a period of fifteen or twenty years you move fifteen times, spending around one thousand dollars which would pay for the land you till. You keep this up the whole of your lifetime and leave your children with nothing except knowing how to farm.

The government is now considering plans by which sharecroppers can own the soil they till. Farm lands are gradually advancing in price. Consider the idea of buying a small farm now. Automobiles are bought-not rented. Furniture is bought—not rented.

Hogs: The market is continuing in strong position, and with high priced corn, meat, and lard, we believe will not decline in price. Save your hogs, and if you have a surplus crop, then buy more hogs.

Vegetables: Due to increased demand for fresh vegetables, and drought in some sections of the country, there is great demand. Sell what you cannot eat, and can that which you do not sell. Plant fall gardens now.

Cotton: The market is in good position at this time and we look for favorable prices during harvest period.

Corn: By all means save your corn. The crop is short, which means high prices this winter.

Forage: Save all the hay, both wild and tame. Forage will sell high this winter.

Church loans: Church loans now available from Federal Fund. National Housing Act permitting extension of modernization funds to churches in amounts up to $50,000 under terms of modernization plan. These funds must be used for property improvement covering repairs, alterations, additions, and installation of heating, lighting, and plumbing system. They may cover laying of walks, or driveways, installation kitchen equipments, and installation of eligible machinery. When the amount for this purpose exceeds $2,000, Loans must be repaid in monthly installments over a period up to five years,.....For further information write this office.

Subsidy payments: If you have not received your subsidy payment on cotton write this office.

The New Soil Conservation Program: To enjoy the rights and privileges afforded by this administration, we must participate in the New Soil Conservation Program.

## OLDEST TREE

Dr. A. D. Herbert of the University of Queensland and 200 volworkers are endeavoring to save the life of Great Grandfather Peter, repute to be 15,000 years old. the oldest living thing on earth, says a Brisbane, Australia, report by the Canadian Press. Great Grandfather Peter, an Australian Macrozamia palm, on Tambourine Mountain, Queensland, and several of his companions were cut down recently by an unknown vandal. Although the giant had been cut down for three months it was still alive when found by Dr. Herbert, lecturer in botany, and replanted after the cut end had been coated with malachite green to prevent underground decay. Herbert and his workers dug a large hole in the rich volcanic soil close to the stump and placed the heavy trunk in three upright sections into it. He believes the tree has a chance of surviving.

## SOIL CONSERVATION DEMONSTRATION

"In the soil erosion areas, the Erosion Service is cooperating with farm owners and operators in working out and following farming practices that will check erosion and build up fertility and, at the same time, allow the operator a reasonable use of the land. This is going to be a real demonstration of what can be done by good management. It is surprising to see the effects year by year of following such practices as strip cropping and contour farming. We take up practices so much more quickly when we see them operate. When those of us who are now farming had to meet the dust storms that cut off so much of our corn in northern Iowa a few years ago, we were without a method, but soon the idea of strip cultivation spread in checking the damage. "Seeing is believing' holds true in farm practice."

## LONGEVITY OF TICKS

A starvation record has fallen as 12 Texas ticks got their first meal in five years, blood sucked from a monkey, says a Science News Letter report (October 31). A record for longevity in the tick world was broken at the same time in the laboratories of Dr. Edward Francis of the U. S. Public Health Service's National Institute of Health. The 12 ticks on their diet of what Dr. Francis terms "thin air" have been able to nourish in their starved bodies the spiral germs that cause relapsing fever. There are 36 of them living in his laboratory where they are kept in 2-inch square pine boxes covered with tightly fitting cork stoppers. The boxes are kept in trays of slightly moistened sand and a very little of the moisture makes its way through the walls of the pine box to the space occupied by the ticks. One dozen of the surviving 36 had a meal of monkey blood after three years. Another dozen were fed after four years. The last 12 got their first meal in 5 years recently. The monkey is now sick relapsing fever, showing that the spirochetes of this disease were able to stay alive five years in the starved ticks' bodies. Dr. Francis thinks the ticks and the spirochetes can live indefinitely. He has put them in his will, so that if they survive him, some other scientist will be entrusted with the job of keeping them and studying their longevity.

## AGRICULTURAL PROGRESS

"....During the first 100 years of our national existence.....the efficiency of the average farmer increased probably fivefold," says an editorial (Southern Agriculturist November). "During the last fifty years his efficiency has about doubled. With the aid of the scientist, the agricultural leadership and the Federal Government, it is possible again to double the efficiency of the average farmer in the United States, probably in the next 25 years. As agricultural science progresses, opportunities for the profitable employment of capital in agriculture increase. The result is to favor the landowner as against the tenant, the man with capital as against the man without capital, to encourage a corporate type of farming and to discourage they family size type of farming. The trend away from the family farm, owned by the man who operates it, has already gone far enough to demand immediate action....."

## FEDERAL CREDIT UNIONS

Figures on the distribution of federally chartered credit unions, by states and by type of membership, have compiled by the Credit Union Section of the farm Credit Administration. The data show that on September 30 last there were 1,674 of these associations. Increasing at the rate of about 100 a month, federal unions are now to be found in every state of the union, as well as in the District of Columbia and Hawaii. The figures do not cover state credit unions. The FCA compliation places these cooperative associations for saving and borrowing in three main groups; associational of which there were 120 federally chartered units at the ond of September; occupational, numbering 1,507; and residential, which accounted for the remaining 47. Of wider interest, however, is the breakdown of these figures. Under associational, the FCA reports the existence of 28 cooperatives, 53 fraternal and professional credit unions, 28 religious and 11 under the labor unions classification. In the occupational division, the largest number of credit associations functioning with federal charters are under the subheading "government", 203 being federal, 71 local and 36 state. (Banking, November.)

## FARM BANKRUPTCIES IN 1935 DROP FROM PREVIOUS LEVEL

The Agricultural Department reported today the number of farmers who sought financial relief in bankruptcy proceedings dropped in 31 states last year as compared with 1934.

The number of farmers bankruptcy cases was greater in 15 states and same as preceding year in two others. Last year cases concluded was about seven per cent greater than in 1931, low point in recent years.

In 1935 bankruptcies numbered 4,311 and in 1934 4,716. In 1925 they reached 7,872, and declined 4,023 in 1931, advanced 5,917 in 1933.

In Ilinois 356 bankruptcies reported more than any other state for 1935 but showed a decline from 1934 when it led the list with 527. In Nevada no farmer bankruptcy cases were listed last year, and only one the year before.

Cases reported by states in 1934 and 1935:

| | | |
|---|---|---|
| North Carolina | 162 and | 207 |
| Virginia | 154 and | 159 |
| South Carolina | 29 and | 16 |
| Georgia | 196 and | 171 |
| Florida | 10 and | 15 |
| Kentucky | 154 and | 134 |
| Tennessee | 99 and | 98 |
| Alabama | 100 and | 150 |
| Mississippi | 46 and | 40 |
| Arkansas | 50 and | 39 |
| Louisiana | 74 and | 66 |

## LONG-MILKING COW

A cow that is still milking though her last calf is five years old, was reported by its owners, Mr. and Mrs. John Morgan, Somerville, Texas., to the state extension service. They wrote: "We have a cow 18 years old last June which has been giving milk since 1919 with just short periods of rest between calves. Her last calf was five years old last February, but she continues to give about 10 to 12 pounds of milk per day. She is a Jersey and milk Durham, and will mother any calf that she can get."

## REGISTERED HOGS ARE PROFITABLE

L. E. Spicer, of Bono, Craighead county, believes that raising registered hogs is a profitable farm enterprise, according to John W. White, county agent.

Mr. Spicer purchased a registered Poland China gilt last January, for $47.75. The gilt farrowed eight pigs, five females and three males, on, February 21. He sold five pigs for $120. On September 9, the sow farrowed seven pigs. These pigs are valued at $10 each, the three remaining gilts from the first litter at $25 each, and the sow at $50.

Mr. Spicer bought a registered Poland China boar in September for $60. This boar placed third at the Mid-South Fair in the junior-yearling class.

To date, Mr. Spicer has invested $107.75 in his herd, sold $120 worth of hogs and has hogs on hand valued at $255. He is well satisfied with his results, and believes he can obtain even better results by careful work and following the advice and practice of expert hog breeders, Mr. White said.

## NEGRO FARM D EVELOPMENT

The National Negro Memorial in James City County, Virginia, has announced plans to develop a co-operative colored farming community, on a 1,000-acre, bordering the James River, near Jamestown Island. The plans call for the setting aside of 400 acres to be divided into 5-acre tracts on which 5-room cottages would be built for 80 colored families. These will be under supervision of supervisors selected from Hampton Normal an Industrial School and Tuskegee Institute.

## VIRGINIA STATISTICS NEGRO FARMERS

| Value Land Operated | $43,154,526 |
| Value Land Owned | 23,125,248 |
| Value Land Buildings | 28,567,875 |
| Value Land Buildings Owned | 18,618,179 |

## BETTER PLANTS

(Continued from Page 1)

can see far richer possibilities as their science pushes forward with its exploration and experimenting.

"MODERN SCIENCE.....enables agriculture to stride instead of having to creep. Even at that, it has to keep striding fast. Diseases that were not serious before, devastate modern close-pack-plant communities as the Black Plague devastated crowded cities, and new varieties of plants have to be bred to resist each one. But then the disease organism may become adapted to the new plant, and it is necessary to develop still another one. In the case of animals, scientists do not yet agree on the extent of hereditary disease resistance; but the same necessity exists as with plants, and there is increasing pressure to find out what are the limits of inheritance in this direction. In addition the pressure of competition, new technological developments, and changes in ways of living make it imperative to keep on the job increasing efficiency and improving quality.

"THERE is scarcely time to congratulate ourselves on the achievement of today because we have to hustle to produce something better for tomorrow. The task of the breeder and the geneticist has become never-ending.

"LOOKING back over this third century, four things stand out strikingly:

"SCIENTIFIC breeding both with plants and animals has become a powerful and an indispensable tool for making agriculture more efficient and more flexible in meeting new demands and supplying the needs of men for food and raw materials. It has become a major branch of the science of life, taking its place beside modern chemistry and medicine as a means of conquering some of the chief difficulties and dangers that beset man, and giving him greater abundance.

"BUT it has hardly begun to do what it should do in this direction. The average hen in the flocks of the United States produces 80 eggs a year. There are flocks of well-bred birds that produce over 200 eggs per bird per year. Average butterfat production is 165 pounds per cow per year; the herds surveyed for this Year-book average 450 pounds per cow per year. But of 4,000 dairy sires, representing what are considered to be the best herds in the country, surveyed for the Yearbook, only 300, or less than 10 percent, are listed as excellent from the standpoint of transmitting high production. Obviously the production of both eggs and dairy products in the United States could be greatly increased with no more hens or cows than farmers now have to feed and care for. In other words, costs of production could be greatly reduced by a wider application of scientific breeding. The basic significance of this that neither egg consumption nor milk consumption is what it should be, especially in the lower income groups who make up so large a percentage of the population, because not enough people can afford enough eggs or enough milk for the best nutrition. Fundamental economic considerations, including the distribution of income, are involved here, but in any case scientific breeding should be a dynamic factor in producing the necessities of life at less cost, and putting them within the reach of more people.

....."THERE is a close interdependence between practical breeding work and the theoretical science of genetics. The practical breeder can accomplish a great deal by dint of long experience, close observation, and a genuine feeling for his material; but the knowledge of how inheritance works, built up by theoretical research in genetics, enables him to go farther and faster, with fewer mistakes.

....."LIKE every other science, the modern science of heredity is international, not only in its theoretical findings, but in its practical applications in agriculture. Some of the most valuable of our present-day varieties of plants in the United States, for example, trace their parentage back to far and obscure places. Scientists search the earth for breeding material that will be useful in improving the products grown in their own country. They exchange this material, and the results of their own work, freely between one country and another.

....."THE FIELD of breeding and genetics has become so large, it is so dependent on progress in basic research, and it requires such continuous effort on projects running over many years or even more than one generation, that it obviously becomes a function of governmental institutions capable of devoting the necessary money and time to the work and doing it with a sufficiently disinterest attitude. This is especially true because the results are for the benefit of all people rather than any one group. In the future, the well-being of a nation will depend more and more on the vigor and adequacy with which it carries on this task of improving the forms of life on which it depends to feed, clothe, and house its people and also on the vigor and adequacy with which it makes the improvements available to all its citizens.

...."GENETICS is not less vital to the welfare of the human race than the science of nutrition though probably the public in general knows a good deal less about it, since genes have received less publicity than vitamins. No field is more fascinating, and as far as practical breeding is concerned, those who work carefully can achieve interesting and worthwhile results even without scientific training.....Farmers and others who perhaps never saw the inside of a laboratory have developed valuable plants and animals that have been widely used.

....."WHETHER he is a professional of an amateur, the enthusiastic breeder of plants or animals is likely to have certain peculiarities, and there are certain requirements for success.

"HE MUST, above all, have a genuine love of his material and become so thoroughly identified with it that he knows its minute characteristics and can readily distinguish small differences in appearance, quality, and behavior that would be unnoticed by the casual observer.

If he is working with wheat, for example, he must be able to go over a nursery containing many thousands of superior plants and select those that have traits for which he is searching; he may find only a single strain different from the rest, like a nugget of gold in a waste of rocks. Again, he must be able to classify many plants of each progeny in accordance with their characters, and sow it rapidly and surely. This requires not only a trained eye but also something that almost becomes instinctive, like the feeling of an artist for his raw materiel based on painfully acquired knowledge that eventually passes into the subconscious. This kind of observation and judgment, of course, is supplemented by scientific tests and precise measurements but the feeling for the material must come first.

"AGAIN, the breeder who works with plants must be able to carry on many delicate manipulations with rapidity and precision. Some of his work is of the order of that done by a jeweler making filigres with fine wires, or peering into a watch and putting together little wheels and springs under a magnifying glass. This demands not only a nice touch but a kind of patience that not everybody possesses.

"THE ANIMAL breeder, for the most part, does not have to do this kind of work. Nevertheless he, too, must have a genuine love for his material and the ability to select from thousands of available animals the ones whose germ plasm will produce the traits desired. Patience is a prime requisite with him also, since, like the plant breeder, he undertakes projects that may not be completed for many years, and many of which will turn out wrong and have to be abandoned or started all over again. But in addition, the animal breeder needs to have boldness mixed with his patience. The timid soul has no place in this work."

## QUALITY IN WHAT?

(CONTINUED FROM PAGE 1)

put to buy oranges in the summer, spinach in the winter. Since then better transportation, preservation and distribution methods have spread the perishable food calendar around the year for consumers even in markets remote from producers.

CHANCES are, however, that you select fruits and vegetables much the same way you did 20 years ago—by punching, smelling, snapping, or on the advice of the retailer's clerk. This sounds like blind buying compared with selecting meats, poultry butter, canned fruits and vegetables on the basis of U. S. grades.

U. S. GRADES for fruits and vegetables, developed within the last 20 years, are designed primarily for use by the wholesale trade. Packers and dealers may or may not use the U. S. grades as they see fit, yet much of the wholesale trading is done on the basis of these grades. The economical buyer who makes purchases under the U. S. grade knows that if he buys fruits or vegetables of the U. S. No. 1 grade, or any other grade, his purchases will not be below a certain minimum quality. Markings for size and grade often appear on the shipping container. Thus few housewives, other than those who purchase in relatively large quantities—100—pounds bags of potatoes, a crate of oranges, a box of apples—actually, buy these products by grades.

UNLIKE grades for meats or canned fruits and vegetables, grade labels for fresh fruits and vegetables can seldom be placed upon the retail unit. Marking each potato, each orange, or carrot with a U. S. grade might give work to half the population of the country, but would cost more than is was worth.

PERISHABILITY is another factor restricting the use of grades Sudden injury, perhaps freezing, might reduce a fruit or vegetable from highest grade to no grade within a few hours.

CONSUMERS nevertheless can benefit by the use of U. S. grades for fruits and vegetables in the wholesale trade since they enable the retailer to obtain products of nearly uniform quality.

GRADING and inspecting fruits and vegetables are services supervised by the Bureau of Agricultural Economics to facilitate all stages of marketing from the grower to consumer. Grading means sorting fruits and vegetables as they come from the orchard or field into groups which differs from each other in quality. Inspecting involves an examination of fruit and vegetable shipments, either at the shipping point or receiving market, to make certain that the produce meets the requirements of a specified grade. Wax models demonstrate the defects permitted within the grades, and serve to promote a uniform use of the grade throughout the country.

OFFICES for grading and inspecting in 47 large cities are maintained throughout the country. Use of these services is optional, and inspections to certify grade are made only at the request of a financially-interested party—shippers, dealers, railroads. Fees charged for making each inspection—over 300,000 cars annually—including inspections made at shipping points, help to make this service nearly self-supporting.

FRESH PRODUCE TRADE annually directs the movement of more than a million cars of fresh fruits and vegetables on their journey from producers to consumers. Speed is essential, for delayed delivery of so perishable commodities might well mean complete loss of shipment. Delays, due to disputes and misunderstandings over the terms of sale, must be settled quickly.

NEED OF a common language for use in trading, in settling disputes, and for reporting market prices gave rise to urgent requests in 1915 that the Government begin a grading and inspection service. The World War and the necessity of an economical distribution and utilization of food focused attention on this demand.

SHIPPERS—in pregrading days—were at the mercy of buyers, who, for varied reasons, frequently rejected shipments on arrival, or asked for discounts. Rejections meant delay tying up railroad cars, allowing foodstuffs to spoil. A slump in the market, alleged lower quality than ordered, deterioration and decay in transit, were possible reasons. Shippers, perhaps 2,000 miles away, were in no position to tell whether the rejection was justified; whether the discount asked for was fair. Buyers were also at a disadvantage—seldom seeing what they were buying until arrival of the shipment, because wholesalers complete many transactions with distant shippers by telephone and wire. An unbiased inspection, certifying the quality and condition of the shipment, based on a common language was necessary.

U. S. STANDARDS for 54 fruits and vegetables provide this common language, and are the basis for grading and inspection. Buyers placing orders on the basis of these standards know what they will get when delivery is made. A buyer orders a car-load of U. S. No. 1 tomatoes. Allowing for small variation, he knows that the tomatoes, when delivered will have similar varietal characteristics, be mature but not over-ripe or soft; fairly smooth and well-formed; free from decay, freezing injury, or other damage; and free from visible disease at the shipping point. The grade reads "not more than 10 percent, by count, of the tomatoes in any container may be below the requirements for this grade." If the tomatoes do not come up to this grade when inspected, the buyer has a valid reason for either rejecting of asking for a discount.

A SELLER, in filling the order for U. S. No. 1 tomatoes, loads the tomatoes for shipment, and then calls in an official inspector, trained and licensed by the Department of Agriculture, to certify that the tomatoes meet the U. S. standards. Growers or packers did the actual grading.

ASSUME that the buyer was dissatisfied when the tomatoes arrived in the receiving market. Perhaps he thought they were overripe and soft and would not sell to retailers as first-class tomatoes. Perhaps the market price for to-

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1 50 per dozen.
Y W. A. Guides and Combined Junior Mission Society @ 15c each or $1 50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1 00
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.
No supplies sent free. Remittance requested with each order.

Please send all orders to the

**NATIONAL BAPTIST PUBLISHING BOARD**
**523 2nd Avenue, North**

## QUALITY IN WHAT

(Continued from Page 5)

matoes had stepped down after he placed his order and that by rejecting this carlot, he could buy cheaper from another shipper. So he rejects the shipment. The seller then wires the inspector in the receiving market to reinspect the tomatoes. The inspector repeats the process, using the same methods, the same standards, and issues another certificate. If the shipment met the standard, the buyer would have to accept shipment or stand the chance of being sued by the shipper, or of having complaint filed against him for violation of the Perishable Agricultural Commodities Act and possibly losing his license. If the tomatoes graded No. 2 rather than No. 1, the seller would no doubt offer the tomatoes to the buyer at a discount.

INSPECTORS do not not arbi trate disputes or make adjustments. They simply make an accu rate report to be used by the ap plicant whenever dependable evi dence of quality is necessary. The certificate of grade or condition made out by the inspector is ac ceptable evidence of grade in any United States court, and is the basis for the settlement of disputes and misunderstandings that may arise, as well as the basis for trade between buyers and sellers. The educational value of this grade certificate is also of importance to the producer since it makes him aware of the qualities in produce that are essential to bring him the greatest possible returns.

A WASHING JOBBER recently bought 150 bags of U. S. No. 1 Irish Cobbler potatoes from a shipper in New Jersey, and on examining the delivery thought that the potatoes were below grade. Many appeared to be smaller than 1 7-8 inches in diameter, the minimum size for U. S. No. 1's, and the jobber wanted to reject the shipment.

DISPUTES like this are common. An official fruit and vegetable inspector of the Department of Agriculture stepped in at the jobber's request, and quickly settled the matter. He inspected the potatoes by sample, taking 30 pounds from each of 10 sacks scattered throughout the truck, measuring each potato in sample with a steel gag. Potatoes which dropped through a hole 1 7-8 inches in diameter without forcing were too small to make the No. 1 grade and were set aside in one pile. In another pile he threw the diseased or injured potatoes.

THE INSPECTOR computed the percentage of undersized potatoes by weighing. Three percent were below the minimum size, but they met the standard because the law allows 5 percent to be under the 1 7-8 inches minimum. The diseased and injured potatoes were weighed and found to average 2 percent of the sample. The tolerance for defects on U. S. No. 1 potatoes is 6 percent, so the potatoes met the grade in every respect. A certificate mailed to the jobber stated that the potatoes were U. S. No. 1, in good condition. The jobbed had no fair reason for rejecting the shipment. The incident was closed without undue delay with a total cost of $2.50 to the jobber.

SETTING UP the standards for grading fruits and vegetables and for inspecting and certifying concerning grade is the job of one section in the Division of Fruits and Vegetables of the Bureau of Agricultural Economics. Standards are the yardsticks which define the grade and which establish the permanency of grades—Meaning that a grade shall be of like quality from day to day, month to month, and year to year, or until a change in the standard is necessary. Making these standards to meet the needs of the trade involves continuous research and interviews.

TERMINOLOGY used in fruit and vegetable standards is numerical with the exception of a certain premium grade provided for products of exceptional quality, designated as U. S. Fancy.

METHODS of grading differ, depending among other things upon the size of the product. Apples furnish an illustration of how fruit is sized and graded. In large commercial packing houses apples are sized by machinery. Where sized by hand, grading and sizing constitute one operation. Sizing can easily be done by machinery but only the human eye can pick out defects. Graders know the requirements of the grade being packed, and grading is carefully supervised

GRADING or sorting tables are used almost exclusively when fruit is graded in orchards and to some extent in packing houses. The bottom of this table is slatted so that trash falls through, and inclined so that fruit as it is graded rolls to the lower end where it can be packed in boxes or baskets. Graders must sort out both defective and undersized fruit, and the actual sorting takes place as the fruit is pushed or rolled along to the end of the table. Since shippers do the grading and stamping, some regulation to prevent flagrant missuse of the grades is necessary. Fruits and vegetables moving in interstate commerce are subject to possible inspection under the Food and Drugs Act.

COPIES of the standard grades are furnished free on request to the Department of Agriculture. Studying these grades gives you an idea of quality as defined by experts, and the defects considered serious.

## FIRE SCREENS EASILY MADE

(CONTINUED FROM PAGE 1)

for her home by Mrs. John H. Holliday of the Rock Hill community, Howard county, according to Hazel Craig, home demonstration agent. Feed sacks, laundered several times, were stretched over a frame. The design to be used was cut from paper and pinned onto the material. Using an old comb and brush, ink was then sprayed on the screen. The design, protected by the paper, was left white or cream colored, the sprayed ink giving it a grayed background. Mrs. Holliday said if she uses India ink the material may be laundered without damaging the appearance of the screen.

## THE DAILY DIGEST SAYS TULAREMIA VACCINATION

(Continued from Page 1)

cautions, have contracted the disease in the course of their work. Dr. Foshay himself previously reported successful vaccination of a hundred persons.

### SHRIVELING OF STORAGE APPLES

Why apples shrivel up and lose their taste and appearance after being removed from cold storage is shown to have a relation to the washing methods used, according, to a bulletin issued by the Washington Experiment Station. All washing treatments tested in the experiment resulted in an increased loss of moisture after removal to "living room" temperature and humidity and hastened the drying up process. The apples were washed in the fall and removed from storage late in February. The rates of moisture losses, it is said, were not serious where the apples had been washed in hydrochloric acid, sodium silicate, soda ash or aluminum chloride solution at temperatures of 110 degrees F. or less. The investigators found that the addition of mineral oil to a solution of hydrocholric acid increased the moisture loss over that of the same acid without mineral oil. Apples which had been washed in acid and oil at higher temperatures, up to 120 degrees, showed the effect of this by losing their appetizing appearance even more rapidly. (Better Fruit, October).

### DRIED FRUIT SALES RECORD

Figures just compiled by Western Canner and Packer (October) indicate that during the year ending July 1, 1936, packers of dried fruits in Washington, Oregen and California shipped a total of 551, 113 net tons, the largest movement so far recorded and what is believed to be one of the three heaviest shipping tonnages in the history of the industry. Prunes led the parade. Northwest and California operators moving 265,000 tons during the 1935-36 year. Raisins were second, with 183,969 tons, and apricots were third, with 26,029 tons. This sales record is truly remarkable, especially when it is considered that the 1935-36 pack did not enjoy anything like its usual market in Germany.

### VITAMIN C IN CERTIFIED MILK

W. H. Riddell and C. H. Whitnah, of Kansas State College, in an address printed in October Milk Plant Monthly, say in part: "Since pasteurization of certified milk has recently been approved it is worth noting that important differences exist depending on the method of pasteurization followed. At the Kansas station the 30—minute holding process of pasteurization as demonstrated in five different types of commercial pasteurizers was found not to be well adapted to the preservation of vitamin C in milk. On the other hand, the short time temperature process involving the use of stainless steel equipment was found to be well suited to this purpose. There was no significant destruction of the vitamin during the pasteurizing process and very little loss after the milk had been stored for 24 hours. Another important consideration in the loss of Vitamin C is the aging which the milk undergoes before it reached the consumer.....Milk produced under approximately certified conditions in the Kansas State College herd showed 22 percent loss of vitamin C at the end of 24 hours. This loss was accounted for in part by exposure to air in the straining and cooling processes, since milk which was taken directly from the pail and stored at 40 degrees showed a loss of only 8 percent. Preliminary studies also indicate that exposure of sunlight may be destructive of vitamin C....."

### COUNTY SEED SCHOOLS

"The Idaho agricultural extension division has devised the county seed school as the answer to the question of how to provide the proper safeguards in seed purchasing," says O. A. Fitzgerald, agricultural editor, University of Idaho, in Country Gentleman (November). "In explaining the background which inspired these schools, H. L. Spence, Jr., Idaho extension agronomist, stresses three things: the use of low-quality, impure seed has been one of the main contributing factors in the spread of weeds; in many cases low-quality seed is purchased through ignorance rather than in an attempt to save a few cents a pound; and Idaho, in common with other states, saw in the past few years a sharp rise in farm-to-farm trading in seeds, which generally means low quality, due to the fact that few farms are equipped to clean seed properly. Although this type of transaction is illegal under the state seed law, it is almost impossible to police and check. The Idahoans hoped that the seed schools would counteract all three. Full-day schools were held in each of the northern counties. Exhibits showed all grades of seed, prices, germination, purity and weed content. Representatives of the experiment station and extension division urged seed action early enough to allow for purity and germination analysis before planting. On each sample of seed a card indicated the ultimate cost to the purchaser, which clearly brought out that cheap seeds often turn out to be the most expensive."

### VEGETABLE DISTRIBUTION

"One of the notable addresses at the annual meeting of the American Vegetable Growers' Association at Cleveland, was delivered by Dr. Frank App, of New Jersey, manager of the Seabrook Farms with its thousands of acres in fruits and vegetables," says Pennsylvania Farmer (September 26). "His experience and his prophecies are of interest to all farmers though specially to those who produce crops which may be handled by this new process. Dr. App says: 'Quick freezing is the fourth milestone in the distribution of vegetables. Freezing will not make poor quality vegetables good. But quick frozen vegetables are delivered to the consumer with the quality harvested and frozen. Approximately one-third of our vegetables in the future will be processed in cans one-third shipped as fresh to market and one-third quick frozen. This last third will represent expansion in the vegetable industry instead of substitution and will tend to stabilize the fresh vegetable market....."

### COTTON CLASSING

The Progressive Farmer (October) says in an editorial on learning grade and staple of cotton: "....

The government is offering many growers a knowledge of the exact quality of whatever cotton lint or cotton seed they have to sell. Another agency which has taught growers the importance of knowing grade and staple before selling is the cooperative marketing association. The combined work of government classing and the cooperatives has greatly reduced the cotton sold under the old system of a level 7-8 inch middling or 'hog round' price, but there is yet too much cotton sold by this unfair and inefficient system. All cotton should be officially classed before it leaves the producer. We are told this is too big a job to be undertaken now. That is always the argument of the standpat reactionary. All cotton is now classed, much of it several times. One official classing from samples taken at the gin would not only be of great value to the growers, but would lessen many of the abuses which now disgrace the handling of cotton. Farmers should keep fighting for official grading of all lint and seed...."

### COTTON PICKER

George Wolf, Jr., writing on the Rust cotton picker, in American Cotton Grower (October) says in part: "Yet to be settled are the following objections: (1) the machine did not pick all the cotton; even after the raw had been gone over twice some opened bolls remained; (2) the machine left some cotton scattered on the ground between the rows and straggling on the plants (3) the machine gathered more trash and leaf than careful hand picking would have; (4) the machine picked green leaf....In my mind, the most serious problem is that of the green leaf. The action of the spindles in addition to mixing the leaf with the picked lint also bruises it, and especially if the cotton is damp, leaves a green stain. The coloring matter in green plants, chlorophyll, may or may not take dyes. What the reaction of mills will be is not known, as the problem has never before come up..No one who saw the demonstration with an open mind will condemn the machine entirely. On the other hand, no one will say that it cannot be improved. Practically everyone admits that the Rust brothers have gone farther than any other toward the goal. If the present drawbacks are found not too serious, or if the machino can be improved to overcome them, it is possible for other branches of cotton production to adapt themselves to lower the cost of machine picking. For instance, it is not impossible for breeders to develop a type of cotton that will give a satisfactory yield and at the same time not require more than two pickings. Ginners should be able to devise

cleaners that will take out most of the trash."

### WAX-DRESSED POULTRY

N. H. Grace reports on studies in comparisons of semi-scalding and dry roughing of wax-dressed poultry, in Scientific Agriculture (Ottawa, September). The summary says: "Semi-scalding and dry roughing of poultry before waxing have been compared. It has been shown that semi-scalding removes most of the scale which prevents good contact of wax to quill in some cases, and thereby promotes a better wax-to-pin-feather bond, with greatly improved plucking. However, this is not the only action of the semi-scald as it actually loosens the pin feather and permits its removal with one-third less force than that trequired following dry roughing. If the bird is waxed within an hour of killing, there is little variation in the force required to remove the pin. With longer times between killing and waxing there is a slight decrease in the pull required; this is particularly noticeable in the case of semi-scalded pins. In view of this twofold action of the semi-scald in increasing the ease of removing the pins, it is not surprising that special difficulties were encountered in developing a wax and method of use suitable for dry-plucked birds. It must be emphasized that the semi-scalding of birds which would otherwise give poor results on wax dressing is an exact operation. Temperature control is exceedingly important."

### CORN BELT SOIL CONSERVATION

"The hot winds which seared the Corn Belt last summer may have blown some permanent good that is not now readily recognized," says Toland M. Jones in an Omaha report to the New York Times. "They have put many farmers in a mood to listen to agents of Soil Conservation Service explain alterations in tillage methods which represent the difference between conserving and wasting an insufficient moisture supply.....Since the close of the summer representatives of serivce have been conducting demonstrations of its work and of the value of following practices advised by it. Invariably they have had attentive and interest also has come a new wrinkle in galleries.....Out of the drought cultivation which seems to have promise. It was developed by Charles T. Peacock, of Colorado. It is called chiseling. The chisel is a lister with a slender shovel substituted for the mold board. It reaches more deeply into the subsoil, loosening it so water penetrates more easily. Supplementing the chisel is an attachment that throws a dam across the furrow at regular intervals. Thus none of the rain which falls on the wheat land escapes. It all soaks into the ground....."

### ALFALFA SILAGE

W. B. Nevens and A. F. Kuhlman, University of Illinios, report on methods of preserving alfalfa as silage, in the Journal od Dairy Science (September) Their summary says: "Alfalfa was ensiled in 23 small metal silos and 3 wooden tanks. It was found that small cylindrical metal containers may be used satisfactorily in experimental studies of silage. Whey powder mixed with the alfalfa at the time of ensiling at the rates of 1, 2, 3, 4, and 5 percent, respectively, of the weights of the alfalfa caused an increase in the acid content of the silage over that of alfalfa ensiled alone, and in most cases the larger amounts of powder produced a more acid silage. Blackstrap cane feeding molasses, lactic acid starter and Bulgarlac culture incorporated with the alfalfa at the time of ensiling also caused some increase in the acidity of the silage. The whey powder seemed to be the most effective of the preservatives used in causing an increase in the acid content. A good quality of silage resulted from the mixing of chopped green corn harvested at an early silage stage with chopped alfalfa. Alfalfa ensiled whole (unchopped) did not keep as well as chopped alfalfa, but it is believed that when ensiled under suitable conditions, whole alfalfa may readily be preserved as silage. Different lots of alfalfa having dry matter contents at the time of ensiling of 23 percent, 25 percent, 27 percent, 32 percent, and 39 percent, respectively, which were ensiled without preservatives except for a very small amount of water, yielded silage having good keeping qualities. It is concluded that a dry matter content of 39 percent is about the upper limit for the successful ensiling of alfalfa alone. Alfalfa silage is a very palatable feed for dairy cows and when fed in limited amounts has a feeding value compared with that of corn silage, but has a laxative effect greater than that of corn silage."

### VOCATIONAL EDUCATION

Agricultural Leaders Digest (September) says: "In the passage of the George-Deen act by the session of congress just closed there is an emphatic expression of approval of the vocational type of education. It is safe to predict that all three phases of vocational education, agriculture, home economics and industrial arts will double their number of youth participants within the next two or three years. The increase in vocational leaders to supervise and direct the vocational educational project will be provided not only by federal but by state or local funds. One of the best proofs that the people like this type of education is to be gathered from the 1935 Report of the U. S. Office of Education. When the Smith-Hughes act was passed in 1917 the basis of the fund matching was fifty-fifty. That was to be the minimum. But in 1935 for every dollar of federal funds put into the work the state or local people have shown their approval by putting up $2.13."

### FEEDING OF DRIED GRASS

"The number of grass-drying plants that have been in operation during the past season," says Country Life (London, September 19), "will have provided a substantial amount of material for useful experimental work during the coming winter. From preliminary work that has already been done in this country an attempt has been made to regard the dried grass as a suitable alternative to the concentrated part of the ration..The results in terms of effect on milk yield, butterfat and solids showed no difference between the two systems of feeding, but those cows receiving dried grass produced a butter that was definitely of a deeper yellow colour. This is explained by the fact that dried grass is rich in carotene; but it is interesting to point out that some breeds have a better capacity for utilizing this material than others. and the Channel Islands cattle are particularly useful in this respect. In an experiment now proceeding in the Midlands, young cattle of from six to twelve months old are being successfully fed on dried grass as a total substitute for the concentrates that are normally fed. The young cattle are gaining at a faster rate in weight, while they show a general superiority in bloom of hair....."

### OIL IN CORN

"Visitors to the crop plots at the University of Illinois Experiment Station always find it interesting to see the progress being made through selection in influencing the proportion of oil and protein in corn," says H. H. Biggars in Capper's Farmer (November). "Through continuous selection for 37 years, that oil content of the corn kernel has more than doubled. A high oil strain has been developed which contains an average of 11.97 percent oil or 6.7 pounds of oil a bushel. During the same time, a low oil strain has been developed which contains an average of 11.97 percent oil or 6.7 pounds of oil a bushel. Duing the same time, a low oil strain has been developed with only 1.27 percent oil or .71 pounds a bushel. The Illinois agronomists point out that there would be 895,000 tons more.

### AYRSHIRE WORLD RECORD

The Dairy Farmer (London, November) says: "The Ayrshire cow, Nether Craig Janet, owned and bred by Alexander Cochrane, of Nether Craig Farm, Kilmarnock, has beaten the previous world record for her breed by yielding 3,091 gallons of milk at 3.79 fat in 50 weeks. She thus becomes the first 3,000-gallon Ayrshire cow. The previous record, held by the Canadian cow, Nellie Osborne of Elm Shade 16th, was 2,719 gallons at 4,62 fat in 365 days. Janet commenced her lactation record when she calved on November 9 last. She is due to calve again on Nov. 10, 1936. Her highest daily yield was 102 1-2 pounds averaging 3.4 fat on January 8, 1936. On October 12, when the record given above was completed, she was still giving 79 pounds at 3.9 fat. She was born December 7, 1929....."

### MOLTING STUDIES

The South Carolina Experiment Station has completed a molting study in which the laying mash was removed from pens of yearling hens for periods of three and six weeks beginning July 1. A third pen was allowed access to the mash all of the time. For the period from June 1 to the following February 28, the check pen receiving mash continuously laid an average of 107 eggs per hen. The pen deprived of mash for three weeks in July to induce a 'forced molt' laid an average of 116 eggs. The pen deprived of mash for the six-week period beginning July 1, laid 110 eggs per pen. Although the pen deprived of mash for the sixweek period laid only three more eggs per hen to the end of the following February than the check pen, the early forced molt' reduced the late summer lay and increased the fall and winter lay. As a result, the eggs from this pen sold for 30 cents more per hen than the eggs from the check pen. Similary the pen deprived of mash for three weeks in July averaged only six more eggs per hen to February 28, but the induced earlier molting caused enough of the eggs to be produced in late fall and winter when egg prices were higher to yield 49 cents more per hen from the sale of eggs from this pen than from the check pen. All night lights were used on all pens after September 15 and the authors of the bulletin raise the question as to whether or not positive results would have been obtained without the use of lights. Forced molting might work out well and then again it might not, the odds being fifty-fifty. (Nulaid)

## APPLESAUCE IS ONE WAY TO UTILIZE CULLS OF CROP

### Conservation of Windfalls and Others Important, Say Illinois U. Extension Worker.

URBANA, Ill., Oct. 10,—Conservation of fruit in every way possible is in order this fall as even the apple crop falls short of its usual output, says the University of Illinois College of Agriculture. Windfalls and culls, which are usually discarded, are put to an excellent purpose at this time in canned applesauce, says Miss Glenna Henderson, home economics extension worker.

Some of the apples now selling on the market are not certain of keeping for any length of time and any spoilage may be prevented by canning the fruit at the start, Miss Henderson points out.

The usual rule for canning applesauce is to remove all the bad spots on the apples, cutting the fruit into quarters or eighths. The skins are left on not only to save time and labor, but also to increase the mineral content, food value and flavor of the sauce, although the color may not be as desirable. The slices are put into a weak brine until all are ready.

The apples are drained on cheesecloth or a freshly laundered towel. They are then dropped into just enough boiling water to keep them from burning, the pan covered and the apples allowed to come to a boil and cook until soft. The length of time will vary with different kinds of apples. When soft, the apples are removed from the water and put through a find colander or seived to remove skins. Sugar is added to taste, after apples have been seived.

One teaspoon of lemon juice to one quart of sauce and a pinch of salt will dismiss the flat flavor so common to canned applesauce. The sauce is then put into sterilized jars and processed for five minutes in boiling water.

### LATE SWEET POTATOES

Sweet potato plants set out July 4 from vines by Talmage Body, Negro, who lives at 2100 East Eighth Street, produced potatoes weighing 2 3-4 pounds. Some of them were brought to the Gazette office yesterday. Body said he took the potatoes from the ground several days ago. Usually the plants are set out about May 15 and mature in late August or early September, Body said. The potatoes are of the running Puerto Rican variety.

—Arkansas Gazette

## KUDZU VINE BINDS SOIL

### Japanese Plant Controls Gullying in Southern Conservation Plan.

Kudzu, a vigorous legume vine that came out of Japan—used for some time as a forage crop in the South—is now being used by the Soil Conservation Service in thousands of places to control gullying and soil washing on Soil Conservation Service demonstration projects all through the Southeastern States, according to R. Y. Bailey, in charge of Soil Conservation Service operations in Alabama.

While kudzu is a good forage plant, Mr. Bailey is more interested in its soil-building value, says the Department of Agriculture. "It literally rope land down and checks that destructive washing and gully wasting which have ruined so much once rich farm land in the Southern States, he says.

### CORNHUSKING CHAMPION

The cornhusking championship was won by Carl Carlson of Audubon, Iowa. He broke the record that was set a year ago by his brother. Carl Carlson shucked 2,664.4 pounds or 38 bushels in 80 minutes alloted him, this mark bettered by nearly a bushel set last year by his brother who did not compete this year.

### LAREDO SOYS ON THIN LAND MADE 24 BUSHELS

A six-acre field of Laredo soybeans was harvested for seed by A. B. Wylie, Marion, Critenden county, and he stated that his yield was 24 1-3 bushel per acre with sufficient beans shattered on the ground for reseeding the land to a volunteer crop in 1937. The beans were harvested by a neighbor using a small tractor drawn combine.

Since this crop was grown on thin land that had been in cotton continuously for a long period, Mr. Wylie thinks the bean crop paid better than cotton, in addition to building up the land. Though he rents a large part of the land he farms, he is taking advantage of the agricultural conservation program for soil building, having planted over 100 acres to soil building crops this year, according to W. B. Vinzant, Crittenden county agent.

### ACRE HALF AND HALF PAID PROFIT OF $56

A profit of $56.30 from one acres or Half and Half cotton is the record of Odel Jones, Valley View 4-H Club member. Seventeen hundred and seventy-five pounds of seed cotton, with a gin turn-out of 609 pounds of lint, was produced in Odel's cotton project, states John W. White, Craighead county agent.

Receipts from the crop totaled $89.90. Expenses amounted to $32.60 which were distributed as follows: man hours, $6.45; horse hours $3.40; picking, $17.75, land rent $5.

### HOW CANS COMPARE

(Continued from Page 3)

2 can, still keeps the price of string beans 15 to 20 percent higher per pound than it would be in the No. 2 can. This percentage increases when, as sometimes happens, both cans are sold at the same price. And not infrequently, the No. 303 cans sells at a even higher price than the No. 2.

PRACTICAL ILLUSTRATION of these points came 3 weeks ago, when a Washington consumer went on a shopping trip for canned peas. Stepping into a corner grocery, she bought 3 different cans, each a well-known brand. One No. 2 can cost 15 cents; another No. 2 can cost 18 cents; the third, a No. 303, also cost 18 cents.

TAKING the cans to the laboratory of the Bureau of Agricultural Economics, the consumer asked that they be officially graded. Government graders then opened the cans and graded the peas for clearness of liquor, absence of defects, uniformity of size and color, tenderness and maturity, and flavor. They found slight differences in quality, but all 3 cans fell within the limits of grade "B". Data obtained by weighing the food in each can and by comparing the price showed that the peas in the 18—cent No. 303 can cost 50 percent more per pound than the peas in the 15—cent No. 2 can, though the quality was about the same. These are facts to remember on shopping trips.

WISE CONSUMERS who want to make a real selection of values for money spent no longer ask at the grocery for "large," "medium," or "small" sized cans. The pertinent question is "How large is large?" and "How small is small?" If you really want to know how much food is in a can, you have to read the label. Net weight in ounces appears on practically every can of food sold in America. If the can says so, you can be sure it contains 20 ounces of spinach, of 10 1-2 ounces of vegetable soup. Otherwise the goods would be subject to seizure under the Federal Food and Drugs Act. The label will guide you better than a guess in revealing how much is in a can.

### SALE OF AMERICAN PRUNES FOSTERED BY ALL TRADE AGREEMENTS

**One-half of American Prune Production is Sold Abroad; Substantial Increase in Foreign Sales Volume Expected**

American prune growers are directly benefited by concessions obtained in every one of the fourteen reciprocal trade agreements so far concluded by the United States, according to a survey by the National Committee for Reciprocal Trade released today. Dried prunes are benefited in twelve agreements and in the remaining two canned prunes are given reduced rates for the period of the agreements.

In normal years the prune production of the United States amounts to approximately 33 million dollars, about fifty per cent of which is sold in foreign markets. Like so many other products of the American farm, the foreign market is essential to the disposal of the crop and the prosperity of the growers. Between 1929 and 1933 the value of prune production in the United States was cut in half. However, with every effort being made in connection with the negotiation of trade agreements to increase the foreign market, total sales should materially increase.

The specific advantages accuring to American prune producers from the trade agreements program are shown in the following resume:

Cuba reduced the duty on dried prunes by 12.5 per cent and on canned prunes by 16.7 per cent, and agreed not to increase these new rates during the life of the agreement.

Brazil reduced the duty on canned prunes by 20 per cent.

Belgium lowered the duty on dried prunes by 25 per cent, and on canned prunes by 27.5 per cent.

Haiti agreed to a reduction of 36 per cent in the specific rate of duty on dried prunes and to a reduction of 35 per cent on the duty on canned prunes.

Sweden bound dried prunes on the free list.

Canada reduced the duty on canned prunes by 20 per cent and bound the new rate against increase during the life of the agreement.

The Netherlands bound the import duty and monopoly fee on canned prunes, and on dried prunes bound the import duty and reduced the import monopoly fee by 50 per cent.

Switzerland increased the annual quota allotment for the importation of American dried prunes from 3,307,000 pounds to 5,447,000 pounds, reduced by 33 1-3 per cent the duty on prunes in containers of all kinds weighing less than 40 kilograms (1110 pounds), and agreed not to increase the present duty on prunes in containers weighing 50 kilograms or more.

Colombia reduced by 50 per cent the import duty on prunes whether dried or canned.

Honduras reduced the duty on canned prunes by 73 per cent and provided for a reduction in the duty on dried prunes.

Nicaragua agreed to a reduction of 33 per cent in the duty on canned prunes and to a reduction of 40 per cent in the duty on dried prunes.

Guatemala guaranteed not to increase the present duty on dried or canned prunes.

France reduced slightly the two rates of duty on dried prunes, thus assuring tariff stability to this important commodity, for which duty increases have been repeatedly urged upon the French Government by French prune growers, and in addition, reduced the import turn-over tax from 6 per cent to 2 per cent of the duty-paid value in respect of this and other American products.

Finland agreed to reduce the duty on dried prunes by 49 per cent.

### SAYS SOYBEANS YIELD MORE FEED THAN CORN WHILE ENRICHING SOIL

Soybeans are proving a valuable feed crop on the farm of Ben McCullouch in Faulkner county, according to E. D. Bell, county agent.

Mr. McCullough met his diverted cotton acreage requirements by seeding 50 acres of soybeans. The beans were harvested for hay and yields and average of three tons high quality hay per acre. Mr. McCulloch said ho has fed his work stock no other feed than soybean hay since he finished cultivating his crop, and that they are all fat. He plans to continue the work stock throughout the winter on soybean hay.

It is Mr. McCulloch's belief that in a normal crop year he can prodnce three times as much feed per acre by raising soybeans as by raising corn and have in addition to the increased feed the beneficial effects of building up his land.

### CABBAGE NEEDS AIR

Cabbage requires considerable oxygen, so should not be stored in deep piles, says Seth T. Shaw of the Missouri College of Agriculture. It can be stored most successfully when the heads are laid one deep on shelves in the same room with the root crops and potatoes, he advises. A temperature from freezing to about 40 degrees F. and a relative hnmidity just below saturation are ideal, he has found.

### CABBAGE

The first odorless cabbage was placed on the New York market this fall by William Koschara, who grew a small planting of the new, odorless Savoy. He reports it beats anything in cabbage he has ever grown, since it has remarkable resistance to drought. It will stand long in the field without bursting and is of an especially high quality.

### IRISH POTATOES PAY WELL FOR FERTILIZER, PULASKI GROWER SAYS

A small crop of Irish potatoes which has grown every year has paid S. C. Ford, Pulaski county farmer, even though the price was low some seasons, he told Carroll S. Morrow, county agent. His farm is upland and requires fertilization for potatoes, but he thinks the fertilizer has returned a good profit

An application of 800 to 1,000 pounds per acre of a 5-10-5 or 4-8-6 complete fertilizer has given Mr. Ford good results, and every increase of the amount used up to 1,000 pounds per acre has paid, according to the county agent who said:

"This year Mr. Ford planted one-fourth of an acre of Irish potatoes, applying 250 pounds of 4-8-4 fertilizer, and getting 40 bushels of potatoes which brought an average of $1 a bushel. The fertilizer cost $4.38. Last year he put only 100 pounds of fertilizer on one-fourth of an acre and got 30 bushels of potatoes. Thus, this season, figuring he fertilize at $1.75 per 100 pounds he got 10 bushels more potatotes, worth $10, for $2.63 worth more fertilizer."

Mr. Ford has also found that it pays to use good northern grown seed, the county agent noted.

### FATTENED 22 CATTLE ON 40 ACRES OF LESPEDEZA AND CUT 27 TONS HAY

Fred Harold, of Corning, Clay county, has fattened 22 head of cattle and two horses on 40 acres of lespedeza and cut 27 tons of hay from it besides, according to George F. Metzler, county agent.

Some of the cattle have been sold brought $1 a hundred weight above grass fed cattle on the market, the county agent said. The two horses were valued by Mr. Harold at $25 last spring. This fall he sold one for $65, and the other is fat and slick even though she is 20-years-old.

A good cutting of bright clean hay was harvested on half of the land which was not pastured. The seed will be harvested with a combine. Seed crop prospects are favorable, Mr. Maezler reported.

# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., DECEMBER 15, 1936 No. 11.

# Big Folks Attended Charleston, Mo. Session Nat'l. Federation Colored Farmers

## GLIMPSE BY A CHICAGO REPORTER OF PERSONNEL

### Resume of and Report From Last Convention Of Tillers of the Soil

Charleston, Mo.—For years I have been wanting to attend a convention of the National Federation of Colored Farmers, Inc. To my way of thinking, the fact that the colored farmers were organized in a national body, and were meeting annually to discusse the many questions and problems of their business, was to say the least, interesting. It proved that some one had seen a vision—some sure-enough race leader had stepped out from among the mass of would-be-leaders, and had started something badly needed and very worthwhile. For I know the biggest business carried on by our race in the nation is the business of farming, and this big business can never be carried on successfully unless it is an organized business. Who are these personages who stand out above the crowd?

Well, I met some of them at the Charleston convention. I want all the members of this great organization in the 21 states to meet them also. Not all of these I mention here in this brief article are officers or leaders of the N. F. C. F. But these folks were all at the convention—they played their part. I am giving all of them boquets. If some of them deserve brickbats, the other fellow must toss them. First of all, meet

**James P. Davis**

One of the early founders and until this year, the active president of the N. F. C. F. Mr. Davis is a wise, courageous, faithful leader. His talks to the farmer-delegates were so practical and so full of ordinary commonsense it was simply impossible for any to misunderstand or misinterpret them. I believe he knows more about the Negro farmer and his problems than any man in the United States. and he seems to never tire of doing good. Farmers seek his advice as though he was a father and they seem to expect him to know everything. It was indeed interesting to hear the questions he was asked. He is loved by the members of the organization, probably because, as I heard one member say, "He hasn't failed us yet and I know he won't." They know he is dependable and they can trust him. When a man can be always trusted by the members of such an organization as the National Federation of Colored Farmers I call him a "big man"

**Hon. E. A. Miller**

Mr. Miller is assistant director, southern region, soil conservation, and came down from Washington to make the principal address. He is more than a high government official in the department of agriculture. He is the farmer's friend. He

## PRACTICE OF HOME CANNING

### Reserve Stock Bought at Low Levels Good Economy

By Edith Shapscott
(Commercial Appeal)

To the home economist with very practical ideas about budgeting by methods which permit saying without scrimping nothing seems more fortunate than the recent interest in home canning which has swept over the land.

A reserve stock of fine healthful foods, accumulated when prices are down and pre-cooked in large quantiites, using only one heat unit, most of the time is indeed economizing with good judgment. And it makes us doubly happy to know that—regardless of cuts in wages or lost jobs—there will be in this winter's cupboard not only ample nourishing food for our own use, but enough to share with other families who may need it.

Just now fruits and vegetables are cheap and abundant. Sugar is way down in price and there are special sales of the best containers. Good reasons all for preserving. But the best reason in my judgement is that emphasized by doctors and dieticians who remind us that fruits and green vegetables, with mineral salts, and sugar with its high energy value, are so vitally important in maintaining health and strength that we should not for even one day be without our full share of them.

Preserved and canned fruits and vegetables are rich in the vitamins and minerals; in addition to their own properties, they contribute a good percentage of energy through the sugar used in them, and all winter long they will make it possible to provide the family with a well-balanced diet at a saving. Sweet preserved fruits are so generally one's first thoughts when "putting up" that for the time being I shall pass by them and try

## TWO BALES OF COTTON FOR 300 POUNDS OF POTASH

Applying about 50 pounds an acre of potash on six acres badly infected with cotton rust, is figured by N. P. May, near Marmaduke, Greene county, to have been worth two bales of cotton to him.

Last year the cotton on this land was very poor, due to rust, related Otis T. Osgood, Greene county agent, and Mr. May, after seeing a demonstration in rust control with potash on a neighboring farm, decided to try it himself. He is well pleased with his crop of four bales in a season poorer than last year, he said, The potash was put on before the cotton was planted.

## FRUIT DARKENING PREVENTED

### Mr. A. K. Ball and W. S. Hale's Recommendation

The tendency of many fruits and vegetables to darken at freshly cut surfaces is well known. Slices of apples, for example, by the time they have been left in the air long enough to dry, are usually a deep brown. This is a serious loss to the fruit drier, because such dark colored products are not received well on the market. It is impossible to prepare from them an article of food which even remotely resembles the original fruit in respect to color.

Only one method has ever been applied which satisfactorily prevented this discoloration of the cut fruit while they were being dried. This consists of treating the freshly-cut fruit with sulphur dioxide (the gas evolved from burning sulphur). The fruit dried after sulphuring has a good color, but retains considerable amounts of gas. Its export to foreign coun-

(Continued on Page 16)

## CONVINCED IT PAYS TO USE PURE COTTON SEED

J. L. Schooley, Nashville, Ark., has picked and ginned seven bales of cotton off of eight acres, said J. F. Tompkins, Jr., Howard county agent.

Mr. Schooley planted his cotton April 2, using Stonville No. 5 seed. He attributes his high yield to the pure bred cotton seed he used.

No fertilizer was applied to the eight acres, and the yield was 438 pounds per acre, while land in the same community of similar productivity produced from 350 to 400 pounds per acre.

## SHEEP PAYING GOOD RETURNS IN RANDOLPH

Little Rock, Ark—

Five hundred farmers of Randolph county have found the production of sheep to be a profitable enterprise, said Lovard Davis, county agent.

In 1932 when almost every farm activity was losing money, the sheep growers in Randolph county made a profit on early lambs for market, the county agent continued.

In 1933 there were only three purebred registered rams in the county. Today there are 52. This increase was largely the result of the profit made in sheep and to the efforts of the agricultural extension service, Mr. Davis observed.

The Resettlement Administration, seeing the results secured by county farmers from sheep produc-

(CONTINUED ON PAGE 16)

## COTTON GINNING BELOW RECORD

### Total Report For Number Of Bales By Associated Press

Cotton of this year's growth ginned prior to August 16 was reported by the Census Bureau today to have totaled 208,327 running bales, counting 452 round bales as half bales.

Ginning a year ago totaled 317,139 running bales, including 892 round bales and two years ago, 354,724 running bales, including 4,424 round bales.

Ginning by States prior to August 16 were:

Alabama, 5,699; Arizona, 972; Florida, 1,200; Georgia, 18,724; Louisiana, 22,657; Mississippi, 4,689; Texas, 153,668; all other States 748.

Census Bureau statisticians said today July cotton spinning activity, reported last week at 119.8 per cent of capacity, was the highest for any July since spinning records were started in 1921.

In June this year it was 111.0 per cent and in July last year, 73.5 per cent.

The only month showing greater activity in recent years was in June, 1933, when 128.9 per cent of capacity was recorded.

## PRIZE CATTLE AUCTIONED; 70 AVERAGE $605 A BALE

### Half of Elmwood Farm Herd Sold; One Bull Sells for $3500.

CHICAGO, Nov. 10,—Thirty-two buyers from 10 states, Canada and Puerto Rico paid a total of $42,340 for 70 head of pure bred Holstein cattle yesterday as the first half of the Elmwood Farm herd, winners of many national awards, went on the auction block at the farm in suburbon Lake Forest.

The auctioneers estimated the sales averaged $605 a head, which they said was the highest average paid for Holstein cattle in years. Nine head sold from $1,000 to $3,500 each and 19 others brought from $500 to $900 each.

The herd, winner of the premier breeders' and Exhibitors' award at the National Dairy Show at Dallas, Tex., is owned by Robert V. Ras-

## SEC'Y WALLACE'S CONGRATULATIONS

### Member of Pres. Roosevelt's Cabinet Feliciated Farmers

Charleston, Mo.—This little city in southeastern Missouri, the center of a race farm population of more than thirty thousand, has been host to one of the most interesting conventions ever held and perhaps the largest that ever met in a farm community. Approximately five hundred delegates and visitors from fourteen states arrived Monday to attend the annual meeting of the National Federation of Colored Farmers, Inc.

The sessions were held in Currin Hall, erected and owned by Marshall Currin, prominent race business man of Charleston. The meeting was opened at noon, Leon R. Harris, of Moline, Ill., secretary and acting president of the organization, presiding. Invocation was offered by the Rev. S. V. Brooks, pastor of King's Chapel Baptist church of Bridges, Mo. After lustily singing the national "Farmers' Hymn," Mayor E. E. Oliver welcomed the delegates and visitors to the city. The mayor's address was well received. Mr. J. A. Jackon of New York, representative of the Standard Oil Co., and a sincere friend of organized farmers, responded. Welcome address in behalf of race citizens was delivered by Prof. E. W. Emery, principal of Lincoln High School. Mr. Walter Riley, prominent dirt farmer of Lexington, Miss., responded.

Some of the most noted agricultural leaders of the nation were present and addressed the convention. These included Hon. E. A. Miller, assistant director, southern Region, Soil Conservation, Washington, D. C.; Mr. Thad Snow, prominent planter of southern Missouri; W. O. Hill, commissioned by Gov. Futrell as offifficial representa-

## CREAM FROM ONE COW PAYS $13 PER MONTH

Little Rock, Ark.,—

Robert Howard, 4-H club member of the Johnstown club, has found that one good dairy cow is more profitable than two poor ones, said Jack Carter, assistant county agent in Jackson.

In 1935 Robert joined the dairy calf club and bought a Jersey heifer for $40, Mr. Carter explained. She now has her second calf and Robert reports that she gives four and one-half to five gallons of milk a day, more than his father's two cows, and eats practically the same feed as one of them. He sells an average of $13 worth of cream and butter a month.

Robert also has eight Duroc pigs that are turning the skim-milk into profit, the county agent said.

THE ARKANSAS GAZETTE, LITTLE ROCK, WEDNESDAY, NOVEMBER 25, 1936

## UNIQUE SYSTEM OF JUSTICE AT EARLE DETAILED

## NEGROES FORCED TO WORK FOR PEACHER

By Inez Hale, MacDuff.
(Staff Correspondent of the Gazette.)

Jonesboro, Nov. 24.—The ancient and elemental right of an accused person to fair trial, rooted in English common law, rose in relief here today against the simple, human background of a story of primitive, childlike people and their way of living among spreading cotton fields and towering forests of a fertile eastern Arkansas lowland of the delta country.

Trial in federal court of Paul D. Peacher, town marshal of Earle, who is accused of falsely arresting eight Negroes and holding them in servitude on land that he was clearing under contract, resolved itself into presentation by government and defense witnesses of conflicting evidence as to events taking place in the jail and nearby office of the mayor of Earle on the morning of May 20.

**Peacher Defends Sentences Imposed by Mayor Mitchell.**

Peacher, called as the last witness in his own defense, testified that trial of the eight Negroes was conducted before Mayor T. S. Mitchell of Earle, who presided as a justice of the peace. He said that it was conducted in the same manner "as any other court trial," and that each Negro was tried separately on a vagrancy charge, with the entire procedure taking about an hour and a half. He declared that he was sworn in by Mitchell as the prosecuting witness in the presence of the Negroes.

Mitchell, recalled as a government witness late this afternoon, said that the trial was completed in a few minutes, that he does not recall having put Peacher under oath, and that he relied solely on Peacher's testimony in convicting and sentencing the Negroes. No one was present except Mitchell Peacher and the Negroes.

Seven of the Negroes previously had given similar testimony as to conduct of the trial before Mayor Mitchell. They said that they were taken from the jail into the mayor's office and asked whether they wanted to plead guilty.

Mose Dunn said that he first offered to plead guilty because he "wanted to get a low term and get out and go back home," but that he hastily withdrew his plea when Mayor Mitchell started to fine him $25 and sentence him to 30 days at hard labor. Several others said they were taken back to jail when they asked for a trial, but that they were returned to the mayor's office almost immediately by Peacher and sentenced to serve 30 days on the "sixteenth section," a tract of land that Peacher was clearing.

The government contends that Peacher used his office as town marshal for personal profit and gain by arresting the Negroes on spurious charges of vagrancy and having them committed to his custody to work out their fines, although no written contract for use of leased convict labor had been made between Peacher and Crittenden county officials.

Preacher denied that there was anything irregular about the transaction and said a verbal agreement was made with the county through Sheriff Howard Curlin, under whom he had served as a deputy for use of the prisoners. No payment ever was made to the county for the 17 days labor of the men, he said, "because the agreement was not carried out," The Negroes were pardoned by Governor Futrell and liberated as soon as the circumstances were brought to his attention after the men had served 17 days of the 30-day sentence.

**Witnesses Describe Economic Conditions at Earle.**

But far more than the story of a single morning's events in the small, cramped "calaboose" of a country town centering a farming community, and far more than the status of a few men as vagrants or as day laborers was told in the slowly unfolded tale that came, sentence by sentence, from the lips of 14 government witnesses and five called to testify for the defense.

Delineated more deeply hour by hour behind the mass of oral evidence brought out in the ponderous, unwieldy methods of court procedure there grew a word picture that overshadowed the long file of witnesses who came and went quietly from the single chair where they sat to face the jury.

It was a picture of a fertile, sparsely settled farming country gripped by the stress of a changing national economy. It was a picture of shifting prices for cotton and lumber, of mills that shut down when no one built houses, of compresses that were silent and fields that lay idle when cotton wasn't worth much. Restlessness and dissatisfaction, to some extent appeared in testimony of employe and employer, but for the most part conditions were accepted as they were and endured for lack of a better solution.

**Arrested Negroes Shown As Being Willing to Work.**

There were the Negroes who chopped cotton, picked cotton, cleared "new ground," did "sawmilling," chopped corn, "run the "ekalizer" at the compress whenever they could "catch a day."

There was L. J. Machen, white mill operator of Earle, who formerly had two mills but had been "shut down" a lot since the beginning of the depression. He ran the mill only when he had orders for lumber, but he testified that one of the Negroes arrested for vagrancy had worked for him whenever he was needed since 1916, and that he was a good worker.

There was Ike Coates, Negro farmer who hired one of the arrested Negroes on a part-time basis to help with work on land that he rented. There was Bill Stephens, Negro foreman for J. O. Anderson, white plantation operator, who said that he paid one of the accused Negroes $3.75 for five day work during the week before the arrest of the group by Peacher.

There was Mark Love, 42, Negro who has "followed day labor" at Earle since 1934, who works at "whatsomever I can get to do whensomever I can find something." He said that he was "fixing to go to work when Mistuh Peachers come along and told me to get in his car."

**Slipshod Methods Of Crittenden Officials Revealed.**

There was another picture revealing possible laxity in business methods of county officials. Deputy County Clerk A. B. Carter of Crittenden County testified that bonds filed by Peacher to insure payment to the county for use of convict labor bore no date because they were mislaid in the office and forgotten for some time, and the person who had received them could not remember when they were filed.

The government charges that the bonds, which name individually the Negroes involved in the arrests were filed after government investigation into the case had begun.

Crittenden County Judge J. C. Johnson testified that contracts for use of county prisoners under the convict leasing system were verbal and that many other transactions made by him in an official capacity were on a verbal basis.

**Negroes Have No Admiration For White Man's System**

Strongly marked in the undercurrent of the day's proceedings was the baffling, impalpable question of racial psychology which every listener recognizes and no one ever is quite able to put in words. During the morning session, when a succession of Negro witnesses appeared the audience was silenced more than once by baliffs when laughter followed some revealing comment of a Negro witness who worked, he said, when he could get anything to do, but liked to sit aroond in the sun at home or work his "little gyarden." Obviously and frankly, the white man's standard of working all the time is not admired by some of the Negroes.

## Alabama Farmers Hold Conference

Andalusia, Ala., Nov. 3—(ANP)—Plans are completed by Principal Samuel L. Younge for the first Negro Farmers' Conference to be held at the New County Training School for the benefit of the farmers of Covington County. Exhibits of farm and home will occupy most of the building. The conference plans are well received by all as this is the first of its kind ever held in this section of the county which is made up of a large percentage of Negro farmers.

The conference will last for three days, December 10, 11 and 12. On the first two days the program will be carried to the rural communities with the Tuskegee Movable school as sponsors of the activities. December 12 will conclude the conference with a general county wide meeting in Andalusia. Speakers will include members of the Movable School, Professor Younge, E. B. Norton, Superintendent of Education and J. S. Lambert, Director of Negro Education for the State of Alabama.

The Tuskegee Movable School will be available to the public at the Bradley School and Welfare Community on December 10 and 11. This will mark the beginning of a wider field of education for Negroes in this section. Recently a school bus was put into operation for the benefit of the people in these communities which marks the beginning of the first bus for Negroes in Covington county.

## SOIL CONSERVATION—ITS PLACE IN NATIONAL AGRICULTURAL POLICY

Throughout much of American history, natural resources have been so abundant that neither public nor private agencies have felt any responsibility for their conservation. But during the years since the Civil War, as the Nation has approached maturity, a national conservation policy has been gradually taking form.

After more than a century of indifference with respect to all natural resources, public interest in conservation was first aroused by

**Pastor's Guide**
**By Boyd**

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Pulpit Bibles**
**At Low Cost**

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Baptismal Garments For $30.50**

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The Best Book For The Ministers**
**Theological Kernels**
*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

the decline of fisheries and forests. The office of Commissioner of Fish and Fisheries was established in 1871; and 2 years later, a memorial of the American Association for the Advancement of Science started the movement which led ultimately to the establishment of the United States Forest Service. In 1886, there was created in the Department of Agriculture a Division of Economic Ornithology and Mammalogy, which later became the Bureau of Biological Survey. An act of Congress in 1891 empowered the President to proclaim public lands as national forests; and in 1899 the Soil Survey was begun.

These represent the beginnings of conservation in the United States; but the first real driving force back of the movement developed only 30 years ago. An act to protect the Alaskan fisheries was passed in 1906. The Inland Waterways Commission was established in 1907, and the National Conservation Commission in 1908.

Interest in mineral conservation also resulted in the creation in 1907 of the mining technology branch of the United States Geological Survey, which became the Bureau of Mines in 1910. At about the same time some of the unappropriated mineral lands in the public domain were withdrawn from settlement, and a decade later (1920) Congress passed the Mineral Leasing Act and the Federal Water Power Act.

At various intervals from 1904 to 1909 Theodore Roosevelt issued proclamations setting apart for national forests much of the unappropriated forest lands of the public domain. Later, under the Week laws in 1911 and the Clark-McNary law in 1923, the Federal Government was authorized to acquire additional forest areas by purchase. In setting up national forests, forest conservation was justified not only by prospective shortage of timber, but also by the beneficial effects of forestry upon water conservation, stream flow and flood control.

## PUBLIC NOW IS AROUSED TO SAVE THE SOIL

The soil is the last of the Nation's important natural resources to become the object of popular conservation interest. With recent dust storms in the West and floods in the East the Nation is becoming increasingly conscious of the harmful effects of soil erosion. The usefulness of large dams constructed for irrigation and the development of electric power is threatened by silting. The choking of stream channels with silt is interfering with navigation, and excessively muddy water prevents the preservation and propagation of game fish and other desirable forms of wildlife. Thus, the advocates of flood control and conservation of power, water, and wildlife find the control of soil erosion necessary for accomplishing their objectives; and soil conservationists find forestry an effective means for saving the soil.

Since the Michigan land economic survey was started in 1922, a very few other States, notably Wisconsin and New York, have begun the development of land programs which deal definitely with forest and wildlife conservation. But not until the last 2 or 3 years has public interest been thoroughly aroused concerning the need for conservation of the land itself. National agencies, such as the Tennessee Valley Authority and others, are now vigorously attacking the land-use problem in all of its ramifications. The Soil Erosion Service was established in the Department of the Interior in 1933, and in 1935 was transferred by executive order to the Department of Agriculture as the Soil Conservation Service. Also in the interest of soil conservation, the Taylor Grazing Act was enacted in 1934 to regulate grazing on a large part of the remaining public domain; and land conservation is one of the reasons for establishment of the Resettlement Administration. The last congressional action was the passage of the Soil Conservation and Domestic Allottment Act in 1936, replacing parts of the Agricultural adjustment Act.

Present misuse of the Nation's land is in part the outgrowth of its traditional land policy. Until comparatively recent years, that policy has been one of getting the land into private ownership as rapidly as possible, without much regard to the character of the land or the use to which it was best adapted. Under the homestead laws, areas ill adapted to continuous cropping were homesteaded in the same manner as those less subject to destruction by wind and water. This has resulted in the cultivation of millions of acres in the Great Plains, and elsewhere, which should have been plowed.

Private property right in land have been, and still are, virtually unlimited so far as soil conservation is concerned. No limitations are imposed upon individual action, either because of the relatives abundance of the resource or because it is assumed that in the matter of land management public and private interests are necessarily identical, which is a false assumption.

The soil is the Nation's most valuable resource. Over large areas, loss of irreplaceable topsoil through erosion has been increasing recently at a very great rate, and depletion of replaceable fertility by unwise cropping systems has seriously affected other large areas not damaged appreciably by erosion. Thus, soil conservation means both the control of erosion and the maintenance of fertility. Though erosion is a major cause of fertility losses, it is not the only cause. Nor can the problem be dealt with adequately by individual action alone. Public action is imperative. It is the purpose of this bulletin to describe the national interest in the problem and its place in national agricultural policy.

### I. Extent and Nature of Soil Losses

"Recent survey of the extent of soil erosion in this country indicate that approximately 50,000,000 acres of once fertile land have been essentially ruined for practical cultivation have been seriously impoverished by the loss of soil; and about 100,000,000 acres more of cultivated land are being depleted of productive soil at an alarming rate."

Altogether, there are approximately a billion acres of land in farms, about one-third of which are normally in harvested crops. Thus, at the end of hardly more than a century of cultivation for most of the country, and area equivalent to the total now in harvested crops, or to 30 percent of all land in farms, is either destroyed, seriously damaged, or threatened. In time, nature might rebuild a part of the land already abandoned because of erosion—if given a chance; but in some cases centuries will be required. As a practical matter, therefore, effort should be directed to reduce the losses, or threatened losses, on an area equivalent to about two-thirds of the Nation's total cropland. In doing so, there is no reason for imagining that the whole country is on the verge of washing away; for at least a third of the cropland and 70 percent of the land in farms is not threatened by erosion.

The fact remains, however, that the Nation can ill afford to remain indifferent to the possible consequences of erosion. In terms of national existence, a century is a short span of time. Unless effective measures are adopted we might reasonably expect to lose within the next 200 years all the land now threatened by erosion. And if this should happen, vastly larger areas would then be threatened. While present interest in the problem, as well as recent and prospective action concerning it, are indications that no such dire calamites will occur, the extent to which they are avoided depends directly upon the vigor with which preventive measures are carried out.

### Some Local Conditions More Serious

From the standpoint of local interests, the reasons for preventing soil losses are even more impelling. National averages conceal more serious local conditions. For example, it is estimated that 85 percent of the drainage area of the Dan River in Virginia was once cleared, and that 40 percent of it has been allowed to revert to forest because of erosion. For description of numerous other local situations, the terms "ghost communities" and "ghost farms" are entirely appropriate. Like the "ghost towns" which were adandoned because of depletion of forest resources, these communities and farms are monuments to a disgraceful lack of national foresight. Some of the land suffered the greatest erosion after being abandoned because of inferiority for profitable cultivation, but much of it was abandoned because of erosion.

Recent spectacular dust storms and floods have been effective in calling public attention to the dangers of erosion, and the traveler is often impressed by the scars in the landscape caused by gullying. But unspectacular sheet erosion is the most insidious and destructive of all forms of erosion, and even less visible are the enormous losses of soil fertility due to overcropping and improper rotations. While this country's exploitative agriculture has caused the loss of great quantities of irreplaceable topsoil, it has at the same time mined other soil of its replaceable fertility. Even though the soil itself is held in place, its fertility must be maintained; otherwise its productivity will decline. Iowa is one of the more level and fertile States. Yet, a recent study by the Iowa State College of Agriculture, in cooperation with the United States Department of Agriculture, shows that under present cultural practices Iowa cannot maintain fertility and control erosion unless corn acreage is reduced by 20 per cent. This study is a part of the Department of Agriculture's regional adjustment project, which is Nation-wide in scope. Results from other States are fully as striking as those found in Iowa and they all point in one direction. The Nation cannot maintain its farm plant unless it alters its system of farming radically.

### How Soil Fertility is Lost

Adjustments in farming systems are necessary not only as a means of reducing erosion losses of both soil and fertility, but also for the purpose of reducing fertility losses due to other causes. Fertility or plant nutrients may be lost or removed from the soil in four distinctly different ways: (1) By erosion, either by surface washing or by wind action, (2) by removal of crops, (3) by leaching, and (4) by volatilization. Generally speaking, erosion and crop removal cause the greatest losses. Because cropping requires cultivation and cultivation increases erosion losses, the two causes are manifestly inter-related, and both are of major importance throughout most of the country. To the extent that the control of erosion maintains fertility, the two problems are one; but, quite apart from the effects of erosion, continuous removal of crops without replacing the chemical elements they extract from the soil has been an important influence impairing soil productivity. The important elements most readily removed by cropping are nitrogen, phosphorus, calcium, and potassium. And humus, the carrier of nitrogen which is vastly important for many other reasons, is another soil constituent often destroyed by overcropping as well as by erosion.

### Supplies of Phosphorus Are Limited

Of all these constituents, phosphorus is the: "crucial" one. Nitrogen can be replaced by the growth of legumes and by other means, and world supplies of lime and potash are so abundant that they can be applied to most soils at reasonable cost for an indefinite future. Though an expensive and often a long-time process, humus can be replaced by such cultural practices as applying barnyard manure and plowing under growing crops. But because of the distinctly limited world supply of recoverable phosphorus, the outlook is that this element will become increasingly dear. At present most of this country's commercial phosphate is mined in Tennessee and Florida, where the available supplies are being rapidly reduced. Eventually, it will be necessary to make use of deposits in some of the Western States on Islands in the public domain which were withdrawn from settlement during the administration of Theodore Roosevelt. The amount of phosphate rock in the West is large compared with measured supplies in other parts of the world, though not very great compared with probable reserves in Africa. They represent, however, "aside from coal and iron the most precious mineral heritage of the Nation."

However, "it is not certain that the total supply of phosphate rock in the southern and western States together is sufficient to restore the lands of the United States to their original fertility in phosphorus, to say nothing of providing for the great annual loss through our present methods of handling fertilizers produced on the farms, and disposal of sewage." More than 30 years ago it was reported that "during the past half century in Wisconsin one-third of the original phosphorus of the soil has been lost in the cropped fields. What has been proved for Ohio, Illinois, and Wisconsin, and other States where tests have been made is unquestionably true for the other States in the country which have been settled for some time." It is probable that today the surface soils of the country as a whole have less than half their original phosphorous content.

To control erosion is to conserve this vital soil constituent, because in most virgin soils it is concentrated in the upper 8 inches, having been drawn from the lower strata by plants and deposited in the surface layer by their decay. Soils like those of the Blue Grass Region of Kentucky are underlain by phosphatic limestone, but these are exceptions to the general rule. Where phosphorous supplies in the surface soils have been depleted but are abundant in the lower layers, this element is not a limiting factor in the growth of such deep-rooted plants as alfalfa and sweetclover, once they are established.

In emphasizing the importance of phosphorus, there is no intention of minimizing the importance of other plant nutrients. From the standpoint of an individual farmer, it is now frequently a much less costly and more rapid operation to remedy phosphorous deficiencies by applying phophate fertilizer than to build up humus requirements also, on some soils and for a number of crops such as tobacco there is greater need for potash than phosphorous.....

In summary, it is clear that the most serious of all soil losses is the loss of the soil itself through the action of water and wind. Where this happens fertility goes also.

## WORRY? NOW DOCTORS OPERATE ON BRAIN TO PUT AN END TO THAT

Baltimore, (ANP)—A new form of brain surgery, which has given noteworthy relief in a few cases of abnormal worry, sleeplessness and nervous tension, was announced today at the closing session of the Southern Medical Association.

Dr. Walter Freeman and Dr. James W. Watts of the George Washington University Medical School, Washington, D. C., described the operation, performed on six patients, all materially improved, they declared.

The first operation was only two months ago and they stressed the fact that they have no data yet on permanent effects of the operation or the ability of the patients to return to work.

The symptoms of extreme nervousness, worry, and sleeplessness seem to constitute a "common denominator" in several mental diseases, the Washington scientists said, but they declined to classify their cases on the basis of any definite psychoses, or mental arrangements.

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

To You, your family and friends:

May you hear the song the Farmer-Shepherds heard. May peace be yours. May the Good Will of your fellowmen encourage you. For you may the New Year be crowned with His Goodness.

The Editor and Publisher.

Ring out, wild bells, to the wild sky,
The flying cloud; the frosty light:
The year is dying in the night;
Ring out, wild bells, and let him die.

Ring out a slowly dying cause,
And ancient forms of party strife;
Ring in the nobler modes of life,
With sweeter manners, purer laws.
—Alfred (Lord) Tennyson.

## THE GOVERNMENT CAN'T GIVE YOU CHARACTER

The angels are not to be laughed at. Every Christmas Eve that comes as the years go by brings again to our ears their heavenly song. We listen—we have to listen to their song. But few of us are interested in the singers,—in the angels.

Men and women who are lovers of peace and bearers of good will to their fellows are angels walking on the earth. They are the people who are doing good and not evil. They are people who are honest and generous and grateful. They are people of character.

Character is something the government cannot give. We must obtain it for ourselves. It is more valuable than anything the government can give. Character is what makes us hold up our heads. It makes us sleep well. It gives us a clear conscience. It gives us courage. We do right for right's sake if we have character.

Let us examine ourselves this Christmas time and find out just how good our characters are. Do we hate anybody? Are we dodging our honest debts? Are we providing as we should for our loved ones? Are we keeping our homes and our bodies healthy and clean? Is our word worth anything? Are we building up the community in which we live? Are we improving or destroying the farm we cultivate?

We may not be able to sing a heavenly song but we can live a heavenly life—if we have a good character.

## LET EASTERN ARKANSAS CELEBRATE

One Paul D. Peacher, city marshal of Earle, Ark., was convicted of violating the anti-slave statutes and last week was fined $3,500 and sentenced to two years in the federal prison by federal Judge John E. Martineau. It was proven in court that Peacher arrested Negroes and compelled them to work on his farm. They were paid nothing and fed little. They were enslaved.

Eastern Arkansas and the South may now celebrate another Emancipation. Debt-slavery has been struck a hard blow. Many more Peachers on plantations in southern states had better take to cover. For one thing is certain. The slaves now will not be afraid to demand their freedom and their demands will be heard. There is now a government in Washington that has good ears.

We advise our readers who know of similar cases to communicate with the department of justice in Washington.

## CLARK HOWELL IS DEAD

Georgia and the South lost a great man when Death claimed the editor of the Atlanta Constitution. All who read his paper must have felt as though they knew him personally and all who loved his paper must have loved him.

The farmer could speak to Mr. Howell and he would listen. The tenant and sharecropper were as welcome to his door as the wealthiest planter. Years ago, when he was making the Constitution the great paper it is, he would have been encouraged so much could he have visited some of the crowds who congregated at the general stores or mills on rainy days and discussed what they had read in his paper. For every nook and corner of the South were brightened by the Constitution.

A great Georgian has departed but his spirit keeps trav'lin' on.

## AFTER THE CONVENTION, WHAT?

Delegates who attended the recent convention of the National Federation of Colored Farmers departed from Charleston encouraged and hopeful. In some ways it was the best convention we have ever had. There seemed to be exhibited more sincerity, more faith in the organization, and a greater determination to work harder for a larger membership.

The convention is over and a new year is here. The days are brighter for American agriculture and for colored farmers than they were a year ago. Every unit of the organization should plan to make this year our best year. Begin the year right by immediately calling a special meeting in your community. Persuade those not yet enlisted under the banner of the N. F. C. F. to unite with you. Build up your membership. Talk cooperative buying, producing and marketing. Talk farm ownership. Make your unit amount to something.

This year the officers are expecting the loyalty of every member.

## RIGHT THINKING WHITE WOMEN

Several years ago when a group of white women of the South condemned lynching, leaders of the South and North declared that a great advance had been made in war on lynching. That white women are still on the firing line against lynching is shown by resolution drawn up by 22 Methodist women comprising the executive committee of the Women's Missionary Society of North Georgia in a meeting in Atlanta.

When lynchers are so thirsty for blood that they will kill because a woman was touched it is high time that all right thinking people of the nation join forces with citizens opposed to lynching.

The protests of the North Georgia white women is significant for lynchers have contended that their acts were motivated by a desire "to protect white women." Protection for every American citizen is needed and lynchers and mob makers cannot be the instruments for the development of respect for law and order. Public opinion and laws should make them realize this.

## THE NATIONAL GRANGE SPEAKS

On occasion of its 70th meeting, the National Grange, oldest farm organization, adopted a report on principles, in part as follows:

"Farming involves all of the people indirectly and about one-fourth directly. We should not ask for special privileges and we should not permit special privileges to others. When subsides are used we believe they should be limited to family sized farms and not paid to corporations or nonresident owners.

"We do believe in equality with industry and that justice and fair treatment should be metered out to all alike. For a long time permanent program we are convinced that agriculture as well as industry must stand on its own feet".

The agriculture committee suggested ten remedies for curing some of the farmer's ills:

1. We must keep the American market for the American farmer.
2. We must pay agriculture a parity price for the products raised
3. We must encourage farmers to conserve their soil.
4. We must seek new uses for agricultural products.
5. We must encourage the family sized farm and discourage coporation or very large scale farming.
6. Only bring new lands into production as it becomes economically sound to do so.
7. Make agriculture a gainful occupation instead of just a way of living.
8. We must continue to help ourselves through the process of growth, realizing that in organization there is strength.
9. Farmers should have the moral, corporal, and legal advantages given to industry.
10. Make the farm home truly a home so that it will be an attractive place in which to live.

The foreign relations committee report urged that if the reciprocal trade agreement act is extended, then senate ratification of all such treaties should be made mandatory. The report also asked that the "most favored nation" clauses be withdrawn from foreign trade agreements if they are continued after the June, 1937, expiration date.

The organization expressed its approval of over-centralization of government, pointing out that the tendency has been in progress for many years.

The resolution said: "We are opposed to any constitutional changes which should abridge the rights of the states to control their own affairs within proper limits, or that would impair....local self-government."

This is a sound set of resolves, to which no class reasonably can take exception. As a matter of public policy, effect should be given to the declaration that nations participating in treaties under the "most favored nation" tariff provision should not be given the benefit of all lateral trade agreements.

That situation gives ground to the charges made against trade agreements with Canada and other particular nations. Trade channels were not merely opened up between the two participating nations; walls were broken down to let all nations in under the guaranty that each shall have the tariff rates granted to the "most favored nation."

The National Grange is warranted in its stand against that method of trading off the American farmer.

Furthermore, if the members of the Grange will stand back of their leaders in the declaration against constitutional changes that may abridge the rights of states to control their own affairs or that impair local self-government, they will be engaged in a work worthy of their efforts in his age when too few persons have been able to keep their feet upon the ground.

## Citizens Must Act Says Editor

New York, Nov. 27.—Action on a federal anti-lynching bill in the next congress will depend upon pressure brought to bear upon congressmen by the voters in each congressional district, according to an editorial in the New York Age.

The Age editorial, while commending the N. A. A. C. P. for securing pledges from congressmen to support anti-lynching legislation, points out that the securing of such pledges is only a beginning.

"All of us know," says the editorial, "that pledges are easily made but more easily broken and that in a tight spot candidates will make pledges before election which they have no intention of keeping after they have reached their goal. It remains for the electorate at large now to see that these pledges are kept.

"Appeals should be made to President Roosevelt to place passage of an anti-lynching bill on his list of "must legislation" and demands should be made of the signers of the N. A. A. C. P. pledge to live up to their words."

# ROLAND HAYES SINGS IN GREAT CONCERT AT LOS ANGELES

## Famed Tenor Gets Big Ovation At Philharmonic Auditorium

Los Angeles, Dec. 3—(By Bob Baker for ANP) Los Angeles paid tribute to the sublime artistry of Roland Hayes, Friday, November 20, when music lovers packed spacious Philharmonic Auditorium, to hear this world-famed tenor. A tremendous ovation greeted the singer even before he appeared on the stage, and from the first appearance, encore after encore spoke more eloquently than words of the sincere appreciation music patrons hold for Hayes.

"Alma del Core," a delightful 17th century pastorale by Caldara, opened the program which included numbers by Bach, Beethoven, Wagner, Debussy, Helen Hopekirk, Coleridge-Taylor, and several very fine arrangements by Percival Parham, Mr. Hayes' very able accompanist.

Langston Hughes' poem, "This Life to Me Ain't Been No Crystal Stair," which has been arranged by Parham, was very effectively done by Mr. Hayes, and proved to be one of the highlights of the concert. "Litt'l Boy, How Ole Are You?" and "Round 'Bout de Mountain," a dignified processional, both arranged by Percival Parham, were two new spirituals of the Hayes repertoire which were enthusiastically received.

At the conclusion of the program, Hayes sang four encores, and took six curtain calls before the audience made any effort to leave the auditorium. A chorus of demands from all over the auditorium for "Water Boy" was answered as Hayes used this number as his final encore, and as the lights flared up, the audience reluctantly filed out, and Roland Hayes still holds first place in the hearts of Los Angeles music lovers as being—the world's greatest tenor.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.
No supplies sent free. Remittance requested with each order.

Please send all orders to the

NATIONAL BAPTIST PUBLISHING BOARD
523 2nd Avenue, North
Henry Allen Boyd, Sec.
Nashville, Tenn.

## WASTE OF SOIL DECLARED SERIOUS

Stuttgart, Sept. 3—Neglect of farm soil is becoming a serious menace to farm properties, and waste of America's farm structure, and if not curbed will ultimately affect all society, agricultural authorities told several hundred farmers at the rice branch experiment station's 10th annual Visitors Day meeting today.

Speaking of the problem, and outlining its causes, T. Roy Reid, regional director of the Resettlement Administration, said: "It is only recently that the federal government has noted the pronounced tendency of farmers to allow their land to deteriorate and their properties to waste away. The situation was brought about by a sense of impermanency and insecurity among farmers. Mostly they are tenant farmers, with one, two and three-year leases. They take all they can from the soil knowing that they will not be on the farm later to suffer the consequences. It is only human nature to exploit the land in this manner under the circumstances. Our problem is not to reform the tenant, but to combat the causes of the condition—the tenant's sense of uncertainty, insecurity and impermanence."

Reid cited English laws, which recompence tenant farmers for all planted and growing crops, whether he completes the year or not. Since 1930 he said there had been a decline of 146 privately-owned farms in Arkansas county with an increase of 231 tenant farms. Sixty per cent of the state's 153,000 farmers are tenants, as compared with 50 per cent 10 years ago, he said.

The future of agriculture in Arkansas," he said, "depends upon the development of a stable farm population."

**Rice Fertilizing Described**

Dr. M. B. Sturgis of the Louisiana State University Soil Department outlined work being done in the rice growing sections of Louisiana. Fertilizing rice has been tried, he said, with only fair results. He suggested that rice farmers continue practices of crop rotation, adequate drainage and rebuilding organic matter in the soil with legumes.

"Fertilizers have helped most in ground having an adequate supply of organic matter.' he said. "On depleted soils, our experiments show the chemical fertilizers remain insoluble, and are not taken up by the rice. Cover crops have proved the most effective rice land rebuilders."

**Rice Advertising Described**

Mrs. Beth Bailey McLean, home economics director of Southern Rice industries, Inc., gave a report on the rice advertising campaign inaugurated by the organization two years ago.

"In the North," she said, "most people, when they think of rice visualize a Chinaman and a water buffalo. We are doing our best, through modern, all-American pictures, and demonstration lectures, to dispell the idea." Funds for advertising rice and appropriated by milling members, including mills in all three of the Southern producing states.

"Most of our advertising work is being concentrated in the thickly populated areas of the Northeast," Mrs. McLean said, "The areas—include 80 per cent of our population."

Advertising is being carried on in newspapers, magazines, demonstrations, cooking schools and grocery store displays, Mrs. McLean said.

**Farmers Urged to Organize.**

J. F. Thompkins of Burdette, president of the Arkansas Farm Bureau Federation, urged farmers to organize for the fight for an adequate farm program, and in order to keep their problems before the public."

**Soy Bean Resists Drouth**

The program began about 9:30 a. m., with a tour of the station grounds. Considerable interest was shown in the many varieties of soy beans and rice.

"The soy bean has adequately demonstrated its ability to withstand the drough this year," G. H. Banks, assistant director in charge of the station, said. The plants had an unusually hardy appearance, despite dry weather.

Luncheon was served on the grounds by the Almyra Parent-Teacher Association. The speakers program follower.—Arkansas Gazette.

## SMALL CORN CROP

The Chicago Board of Trade indicated the smallest corn crop in 25 years, and a domestic corn crop of 1,416,000,000 bushels, 23,000,000 bushels below the latest government figures.

Contrary to the expectations of many traders crop estimates showed a general decrease in corn prospects during August from drought despite reports that recent rains had benefitted the crop in some sections.

The Average of the five estimates actually was 156,000,000 bushels below the average of the same authorities just a month ago.

## CRATES AFFECT EGG FLAVOR

Eggs taste of the crates they are stored in, says an Associated Press report from Ithaca, New York. The crate flavors, announced recently after three years investigation by the Cornell University Experiment Station, are "newspulp." strawboard," "spruce," "excelsior," "willow," "jackpine" and "aspen." The conclusions, published by Cornell University, are that "spruce fillers impart the least flavor to the eggs propaganda. Mr. Ransom emphatical and strawboard fillers impart the most.' But this was not true in all cases. Sometimes strawboard was just as good as spruce. The same packing material maue by the same manufacturer might differ in its taste producing results from year to year. Humidity speeds up the crate flavor for some materials and slows it down for others. To impart a flavor to an egg, the report states, the packing material must contain a compound which readily evaporates into the air. This compound permeates the shell of the egg to develop a new taste by setting up a chemical reaction in the egg. Sometimes the compound itself gives the new flavor to the egg.

## HARDY FRUIT CYCLOPEDIA

"U. P. Hedrick, vice director and horticulturist of the New York Agricultural Experiment Station, has compiled a Cyclopedia of Hardy Fruits which makes a helpful addition to the library of any botanist," says Nature (October). "The book was written to aid in the identification of varieties, to serve as a guide in the choice of them, to state in what region they grow best and to stimulate the desire to grow better fruits. It is a volume intended primarily for fruit growers, nurserymen, county agricultural agents and students in colleges and high schools.'

## SELLING EGGS AT AUCTION

"19 country eggs, auctions in six northeastern states handle about one-twelfth of the eggs sold from 350,000 farms in those states," says F. E. Perkins in the Farm Journal (October). "Their egg sales for 1935 run close to $5,000,000, with probably 93 per cent of more of this gross return going directly into the pockets of the producers. This impressive record follows less than six years of auction selling in New Jersey, Pennsylvania, New York, Connecticut, Massachusetts and New Hampshire. In addition to building huge volumes at a premium to their producer patrons, these new egg outlets have reflected other benefits. They have fixed spot local prices, which serve to stabilize all markets in these states. By broadcasting price information they have saved farmers from sacrificing to independent buyers. In Connecticut, for instance they have helped to jack rates on top quality above. New York City quotations. They have lessened the likelihood of price demoralization in small cities and towns since surplus eggs now move to the auctions and not at a cut price on local markets. Especially significant is the fact that the egg-auctions have kindled with spot cash the incentive for vast improvement in egg quality....."

## CELERY STRINGS

Experts at Cornell University Agricultural College, have found that a string in celery is capable of holding the weight of a half gallon of water. A breeding plan to eliminate the strings was described recently by Denzel Curtis of the college. Crossing various strains of celery, he said, already has proved that undersirable qualities can be replaced by those more toothsome, but he predicts that it will take a long time to soften up the strings. (A. P.)

## HYBIRD SEED CORN CROP

Hybird seed corn, the latest step in corn improvement, will be about five times as plentiful in Illinois in 1937 as in 1936, according to W. J. Mumm, associate in plant breeding, Illinois College of Agriculture. Approximately 6,000 acres of hybird seed corn are being produced in the state this year as compared with only 1,800 acres last year, Mumm reported. The hybird seed corn crop is turning out satisfactorily despite the drought, especially in the northern and eastern parts of the state, owing in part to the corn's ability to withstand severe conditions. Hybird seed production this year is expected to run between 150,000 and 200,000 bushels, or enough to plant one million acres, about 15 per cent of the entire corn acreage of the state. Last year's supply of seed was sufficient to plant 200,000 acres, (Seed World, September 25.)

## BOXED PEACHES

Georgia peach growers introduced an innovation this season when they shipped some of the early Hales to northern markets packed in a box similar to the New England apple box. Wholesale dealers in the terminal markets stated that the fruit thus packed moved better than similar fruit in bushel baskets. The box holds about 48 pounds not quite a bushel. Colored liners were used, giving the pack a neat, attractive appearance. Only a few growers and shippers in the Georgia peach sections used this type of pack this year but from the acceptance received by the package in the larger markets, it is expected that many will be using the new pack next year.

## MAKING THE MOST OF THE HOME MARKET

**Adapted from an address by Secretary of Agriculture Henry A. Wallace before a meeting of farmers at the University of Nebraska. Lincoln, Nebraska.**

Highlights.—While industry has looked almost entirely to the domestic market, agriculture has had to look in considerable part to the forcign market. Industry has asked and obtained high protection for its goods in the home market, while agriculture could get very little benefit from such protection except temporarily and after a year of unusually bad weather.

The peak of imports caused by the unprecedented drought of 1934 was reached in 1935. Imports of oats have been negligible since May 1935. Imports of corn have receded rapidly since November. Imports of rye have been insignificant since August. Imports of butter reached their peak in April 1935, and since July have been below the 10-year average. Only wheat imports have continued in unusual amounts, because the 1935 crop was badly damaged by rust disease.

The real question is, Are farmers going to accept the high tariff idea as a cure-all for agriculture? All through the twenties farmers asked for a real program for agriculture that would enable them to meet the situation of surplus acres, and they got high tariffs. Agriculture was not helped, but harmed.

To sell abroad we must buy abroad, particularly more industrial products. But tariffs on such products are now so high as virtually to create domestic monopolies.

While time and money spent by industrialists in opening up new uses for agricultural products are a fine contribution to the general welfare, this industrial-use program in itself does not seem to be a solution to the farm problem.

For agriculture, the real hope of making the most of the home market does not lie in cutting off a few imports, but in building up the purchasing power of city consumers, Agriculture benefits from increased industrial activity and from measures designed to put purchasing power into the hands of the large numbers of people who still have almost none. This is agriculture's great stake in the national welfare.

## WHITES STUNNED BY COLORED GOLF CLUB IN NEW YORK COUNTY

### PLAN LEGAL ACTION IN EFFORT TO KEEP CONCERN FROM OPENING

New York, Dec. 3— Rich white owners of big estates in the Millwood section of Westchester county were stunned last week when it was revealed that one of the district's most exclusive country clubs in pre-depression days—the Pines Bridge—has been sold to a corporation that will admit 1,000 metropolitan area Negroes to membership.

These owners, aroused to a fighting pitch by this pending invasion, have sent in complaints by the bundles and are desperately hunting some way to avert what they consider a calamity, but have learned there is apparently no legal way to stop it.

A 60-acre strip taken from the golf course is to be developed into a summer colony. It will be developed by the Rising Sun Holding Corp. and plans to sell 1,000 memberships at $200 each to residents of Harlem, the Bronx and Westchester. Membership rolls have already been opened and by summer this area widely bounded by Ossining, New Castle and Kitchewan is expected to be occupied.

Bordering the area are white estates valued at from $100,000 upward. Near neighbors include Giward Swope, head of the General Electric Co., and Major Edward Bowes, of radio amateur hour fame.

Protest meetings are forming by residents of this high hat area. Robert T. Wood, a member of the New Castle town council, said he had so many-complaints he had not had time to count them. These complainants want to have the town authorities do something to stop this development, but Wood said he believed the town was powerless unless the club operates a cabaret, sells liquor or engages in some other enterprise subjecting it to municipal regulation.

No restrictions were placed on the property in its sale by foreclosure to a George Wade Hampton, white, of St. Peterburg, Fla., who tranferred it to the Rising Sun. Hampton is understood to have reserved the 60 arce tract and is intending to develop the real estate phase of the club.

Mrs. George W. Still, wife of a wealthy silk manufacturer who owns a 220 acre estate adjoining the club, declared that "action will be taken to prevent occupancy' but did not reveal what form this action would take. E. H. Rodgers, an executive of the New York Telephone Co., and Magistrate H. Stanley Renuad, residents of the district, will be asked to aid the fight against the "invasion."

## PICKET LAFAYETTE THEATRE

New York— (C) —Dropping of actors from the Federal Theatre project caused a picketing of the Lafayette in Harlem Friday afternoon.

## TWO TEACHERS SPEAK AT A. & T.

Greensboro, N. C.—(C)—Prof. D. L. Boger of the Dudley High School, a teacher of French who has done advanced work at McGill University of Montreal, Canada, and Prof. K. K. Parker, assistant coach and professor of physical education, addressed the student body of A. and T. College last week. Prof. Boger spoke on the Province of Quebec where the French influence is most pronounced, and Prof. Parker said in his address, that participation in sports develop the personality.

## High School Teacher 400,000th Visitor

Dallas, Dec. 17—(ANP)—Mrs. Ella Walls Montgomery, graduate of Fisk University, second person to be given a fellowship by the National Urban League, a teacher in the Jack Yates High school, Houston, Texas, was the 400,000th visitor to the Hall of Negro Life at the Texas Centennial Exposition. Mrs. Montgomery was in Dallas in attendance upon the 52nd annual meeting of the State Teachers' Association. The total number of visitors in the building, according to officials at the close of the Centennial, Sunday night, was 403,227. According to record, this is the largest number of persons ever to visit any building to inspect exhibits on display which represent the Negro's contribution to American culture.

# Secretary Wallace Addresses Tillers Of Soil

Tuskegee Inst., Ala., Sept. 10—Coming direct from a visit to the drought area, Secretary of Agriculture Henry A. Wallace turned his attention today to the problems of soil conservation and rehabilitation as it affects the South and the Negro.

Between four and five thousand farmers and leaders in agriculture, the church, fraternities and education from nine southern states assembled to hear messages from Secretary Wallace, Governor Bibb Graves of Alabama, Dr. J. C. Austin, pastor of Pilgrim Baptist church of Chicago, Dr. L. N. Duncan, president of Alabama Polytechnic Institute, Hon. C. A. Cobb, Director, Southern Division Agricultural Adjustment Administration, Dr. George W. Carver, the Tuskegee Institute Scientist, R. W. Hudgins, Regional Director, Resettlement Administration and Dr. F. D. Patterson, president of Tuskegee Institute, who presided.

In his address of greetings to the farmers and workers and to the distinguished guests, Dr. Patterson reminded his audience that their coming to Tuskegee freshened "the rich heritage of fundamental human service initiated more than half a century ago by Booker T. Washington."

"Seventy years after the abolition of slavery," continued Dr. Patterson, "we find that the Negro people have worn well the responsibilities of freedmen, they have participated with courage and with enthusiasm in all of the measures looking to human betterment in proportion as they have been accorded the privilege."

R. W. Hudgens, Regional Director of the Resettlement Administration praised the Resettlement project which is being conducted under the leadership of Tuskegee Institute and which involves the transfer of several hundred Negro families in this county from submarginal to more productive lands. Planned plantings, credit and supervision are the three major activities of the Resettlement program.

In reviewing the development of the Soil Conservation program, Hon. C. A. Cobb reminded the farmers that two years ago he had spoken at Tuskegee Institute and had come today to report that the things promised at that time have been accomplished. "Three years under the triple A" said Mr. Cobb, have seen cotton advance in price frof five and a half cents to twelve and a half cents per pound." Applause accompanied by "Yes, Yes" "Thank God" and other exclamtions of joy greeted Mr. Cobb's reference to the advanced price of cotton.

"Your loyalty, patience and understanding of the program" continued Mr. Cobb, have been a most important cooperating factor in the development of our program here in the South, and I wish you to know that President Roosevelt not only knows what you have done to help but he deeply appreciates it."

**Dr. Carver Reminiscent**

"Before he was ten years old, little Henry Wallace, now the U. S. Secretary of Agriculture was a most inquisitive youngster" and Dr. Carver, as he related amid frequent applause, how during his years at Ames nearly half a century aga, he accompanied young Wallace on botanical explorations.

Governor Bibb Graves was presented by Dr. L. N. Duncan, President of the Alabama Polytechnic Institute who referred to the Governor as "Alabama's great exponent of the new philosophy of human welfare which has been so successfully crystalized by President Roosevelt."

In presenting Secretary Wallace, Governor Graves, whose eloquence has brought signal honors to himself and to his state, continued the thought of the human side of the present agricultural program nad extolled its leadership.

"Mr. Secretary," said the Governor, "on this occasion it is fitting that you should come to this campus which has been made famous by its great founder Booker T Washington. I hope you will always think of Tuskegee Institute a a sign-board which points not only Negro people but all people away from the poor house and the penitentary to the higher and nobler life."

**Secretary Wallace's Address**

In opening his address, Secretary Wallace first paid a tribute to Dr. Carver which brought thunderous applause.

"Because of his friendship for my father" said Mr. Wallace, "and perhaps his interest in children, George Carver often took me with him on his botany expeditions, although I was then only six years old. He told my parents that I was able to identify different species of grasses. He made so much of it that I am certain now that George Carver, out of the goodness of his heart, greatly exaggerated my botanical ability. But his faith in me aroused my natural interest and kindled an ambition to excel in as praise of a child often does, and this field. His praise did me good, I believe my later interest and work in corn breeding was largely due to him.

"Tuskegee Institute," continued the Secretary, "is a symbol of the wisdom which sees that knowledge means little unless it helps man to fill his wants and needs. The man who founded this school had little respect for abstract facts and abstruse theories as such. But he did have a higher regard for knowledge which could be useful to his fellow man.

To my mind, Booker T. Washington's willingness to face reality was a primary reason for his greatness. He wasted little time in brooding over the situation confronting himself or his people. He concentrated on attempts to make that situation better. Few of us realize the patience and understanding that he brought to his task. He was the spokesman for the Negro during a trying period. The bitterness aroused by the Reconstruction had crystalized. Every attempt to improve the status of the Negro met strong opposition. No diplomat ever represented his country better than Booker T. Washington represented his race."

After recounting many phases of Negro progress since Emancipation, Secretary Wallace assured his audience that "all handicaps have not been removed from the Negro's path. Your lot is not an easy one. But beyond question your condition has improved. It will continue to improve if the nation itself goes forward. Progress for any group depends upon national progress.

"It is evident now that Booker T. Washington's attitude was a common sense one. It was none the less remarkable for all that. It requires intelligence and self discipline to act sensibly where deep seated prejudices and emotions are concerned. But man like the founder of Tuskegee; his successor, Dr. Moton, and Dr. Patterson, and other colored and white leaders have taught us that race discrimination and race hatred hurt us all. I am confident their sane attitude will prevail."

In discussing the rise and fall in the ration of farm tenance, the Secretary warned of the dangers of machinery which may replace the labor of tenants. Citing as an example the recent experiments with a cotton picking machine which he doubts can successfuly serve the small farmer, he said that if such a machine is perfected it will "behoove us to do some serious thinking about the human consequences of its extensive use."

The Secretary favors the transfer of farm tenants to farm owners only when the tenant has demonstrated his ability to manage his farm and hold it."

Before the conclusion of his address in which he stresses the "heart-element" and "joy-element" now so necessary in any agricultural program, the Secretary ably defended the soil Conservation program when he said:

"Critics say the soil program pays farmers for doing things they should do as a matter of course. They overlook the fact that farming is a commercial venture. A farmer must make enough to carry his debts and plant his crops or he will be forced out of the business. He must make a certain amount of profit. Hut immediate profit and wise use of the land often do not go together. The only way to stay out of bankruptcy may lie in ruthless exploitation of soil, just as unlimited competition caused ruthless exploitation of the forests. Most of you probably have planted a cash crop to the injury of your land. You did it because your immediate need for cash outweighed the long time need for soil conservation.

Our farming methods have exploited our land and in many cases have ruined it. A program which stops this waste of our soil is worth what it costs."

**Dr. Austin Responds**

Tuskegee Institute has rarely heard a more brilliant and inspired address than Dr. Austin's response to Secretary Wallace. Both wit, humor and philosophy were interspersed with a challenging and subtle appeal to the several hundred white people in the audience for justice and a square deal for the Negro. He said:

"My deepest concern today is not primarily the Negro race, the black citizens of America, but America in her entirety—MY COUNTRY—OUR COUNTRY. It is true that I tremble with nervous anxiety as I think of my race group as the weak and often neglected link in the national chain. I know that America tomorrow will be but the unfolding, and if you please, the harvesting of America today, for, what we sow today we must reap tomorrow. I know that our cities cannot be truly beautiful until all streets and all sections have received the touch of modern improvements. I know that the nation will not be, in truth, strong and mighty until all of her citizens enjoy the sunshine of opportunity to live and labor in keeping with the rich promise of our Constitution, which secures our inalienable rights.

"Looking ahead, as we must today, we can fully realize from conditions about us, and experiences of the past that there are hills to climb and Rubicons to cross. We do not falter, however, for our hope rests in the living God, and in our white friends who know the truth which has made them free to llaud the strength of their influence, money, and mind to our steady advancement.

## MEAT PIES WILL CUT DOWN YOUR BILLS AT THE GROCER'S

Does the amount of your food bill keep you awake at night? Do you turn this way and that, trying to devise a means whereby it may be reduced? Have you thought of meat pie?

Served in the form of a steaming, fragrant pie, left over roast, stew, steak, chop, boiled meat, ham, lamb, veal or beef becomes more tempting. Of course, you will have to use imagination in the making of it, taking care that the pie is deep and generous, that the meat is juicy and not dry, that the gravy and sauce over the meat furnishes flavor and that the crust will be dry and flaky and not soggy.

There are so many forms of the meat pie that you need never worry over lack of variety. The crust may be a simple mashed potato crust or a rich biscuit or pastry dough. The inside mixture may be a combination of beef and vegetables such as carrots, potatoes and peas, or liver and vegetables. I know one good cook who makes an excellent meat pie from beef heart. You can have a very good one from a combination of veal and pork or ham.

If you wish to use fluffy mashed poato for a crust, brush it over with milk or a little slightly beaten egg just before putting into the oven. This will cause it to brown nicely.

**Plain Pastry Crust**

1 1-2 cup flour.
1-4 teaspoon baking powder.
4 tablespoons cold water.
1-4 teaspoon salt.
1-2 cup shortening.

Combine the ingredients and bake according to general directions for pastry, cutting in it plenty of vent holes. It may be used for lining the dish also.

**Batter Crust**

2 cups pastry flour.
2 teaspoons baking powder.
1 egg, well beaten.
1 teaspoon salt.
2 tablespoons shortening.
1 cup of milk.

Cut the shortening into the dry ingredients, first sifted together. Add the egg and milk and mix to a smooth batter, spread over the pie and bake to a light brown.

## SAYS BILLIONS SPENT FAIL TO ADVANCE RACE

Buffalo, N. Y.—That a wise use of the buying power of the Colored people of America is the panacea for the greatest problems now confronting the race, was the contention of Att'y F. B. Ransom, general manager of the Mme. C. J. Walker Co., of Indianapolis, Ind., in an address delivered at the Michigan Avenue Baptist church last Sunday morning in which he scored the careless, indifferent habit of colored people in spending their hard earned money without thought of its economic value.

"I have traveled extensively in the United States,' he said, "and everywhere I have gone I have found just as I find here in Buffalo, fine, intelligent looking groups of our people who compare favorably in appearance with other racial groups. But everywhere I've found the same handicaps, the same careless, indifferent habits of spending money, the same lack of opportunity; and it's all because we have not learned the economic value of the dollar.

I do not want to say that we should boycott anybody, but I do mean to convey the thought that we should learn the power of the almighty dollar and use it to our advantage by spending it wisely where we may have the chance of getting some of it back.

"In this we may well follow the example of the Jew, who spends his money so that it always circulates back to him; who never spends a dollar until he feels sure that it will benefit some other Jew. Hundreds of our boys and girls right here in Buffalo, and every other city where our people live, could be gainfully employed if we could only open our eyes to the opportunities that we are throwing away by making richer and richer the people who will not employ us. We will not get very far in this country until we can reach out and measure arms with the other fellow economically.

"We must think in terms of our own economic security; of using the power we have for building and lifting ourselves."

**Cities Need of Race Newspapers**

Mr. Ransom paid a glowing tribute to newspapers of the race which he said, have made a large contribution to the race's progress. No institution conducted by people of our group, he said, is more worthy of support than our newspapers. "They fight our battles and contend for our rights and disseminate among us valuable information; they give us the uncolored truth about things of vital interest to our group.

"We find in the columns of our own press things that we never see in other newspapers, and we all appreciate them. But too few of us give the kind of support that we should to our newspapers."

**Denies Jewish Ownership**

It has been rumored in many sections of the country that the Mme. C. J. Walker Company is owned and operated by Jewish capital. Branding the rumor as absolutely false propaganda, Mr. Ransom emphatically stated that every dollar invested in the company represented the capital of colored people and that none but colored people are employed by the company.

# Postpone African Editor's Case For 16th Time

Accra, Gold Coast, West Africa, Dec. 10—(ANP)—The sedition charge made by British officials against Ben Nnamdi Azikiwe, editor of the Morning Post, published here, has been postponed again. The charge against Editor Azikiwe who was educated in the United States, graduating from Lincoln University, Pa., where he also taught until three years ago, was the publishing of an article which stated that Africans ought to select a new God. The actual writer, Wallace Johnson, was tried and found guilty and fined heavily. Azikiwe's case has been called 16 times, the government taking an adjournment each time. It will be heard next on December 16.

## THAT GROWING COLOR LINE

(Negro Journal of Religion)

Some years ago an enterprising white writer wrote under the caption "The Crumbling Color Line." Many people read this work with a great deal of hope and delight, for it seemed to presage what was apparently going on in our social order about us.

But what of today? That was such a short while ago, yet it seems centuries, miserably trudging centuries. So many changes are taking place that evaluation becomes difficult, so difficult one must wonder whether things really were better when the optimistic author wrote or whether confused, by the tangle of our social relations, the writer drew conclusions from inadequate data.

For instance we are told that things are improving for Negroes in America. "Behold," says the critics, "the beautiful municipal parks built by thoughtful city fathers." But on the same day that this is pronounced a hungry Negro wanders into this same town where there are no Negro restaurants and is told by the keeper of a white hostelry that he cannot be served. Well, what is a park without food?

Again, it is said that white and colored work better together today. If this is true why are so few whites found visiting colored meetings? Negro gatherings, a half century ago were the mecca of white people who did not attend for sport, but quite often were convicted of their sins under the preaching of their black brethren. Is it possible that the estrangement of the races means improvement? Funny logic indeed.

There is a bit of subtle propaganda in the land. The Black Legion kills two Negroes to see how they would die. The Klan seeks the extermination of blacks. Another crowd agitates for the crowding of Negroes into a specially made state, to be cut out of an unpopulated block of Texas land. Still another crowd asks what is wrong with deportation or starvation?

North and South, East and West the line grows larger and tighter. The writer visited a northern town a few nights ago, and was told that no Negro could sleep there over night. Sun-down was the limit for Negroes in that environ. When this advice was given the last train had gone for the evening. Consider the plight. In another northern town, during the same week a movie house refused the writer admission. "Why' the agent was asked. The answer was "Negroes are not allowed."

Negro waiters, bell-hops, bootblacks and personal servants are disappearing from many public places. This means empty stomachs for many members of this race. Even the Methodist Church proposes the segregation of its Negro constituents. Can that be called an improvement? Honest men must not be deceived by a few apparent patronages, for there is an unchristian spirit abroad in the land.

## NOT UNAVOIDABLE

Lynchburg (Va.) Press: In an automobile accident near Union, S. C., six persons were fatally injured. A coroner's jury investigated and reported that the deaths were the result of "an unavoidable accident."

It has been so reported by other coroner's juries, grand juries, magistrates and juries before and in many places. Yet the fact remains that the report is false. Deaths and injuries nowhere are the result of unavoidable accidents. Every such accident could have been avoided. Somebody in everyone of them did something he had no business doing or failed to do something he should have done. And in most cases it is possible to find out what that something was and who was to blame.

Until the people of this country stop looking upon automobile crashes as accidents they will continue to pay the price in lives.

**Standard university has an 8,800-acre campus.**

H. M. Taylor, extension swine specialist at North Carolina State college, says sows for spring farrowing should be bred by the early part of November.

Fifty Washington county (N. C.) farmers say, they will grow cucumbers for the commercial pickle market next season.

Topaz is the most popular yellow-colored gem.

## RED CROSS NURSES COMBAT DISEASE ON WIDE FRONT

At the close of the fiscal year ended June 30, there were 673 Red Cross nurses bettering health conditions and caring for the sick in 604 communities. These Red Cross public health nurses cared for a total of 233,616 persons during the year and made more than a million visits on their behalf.

The annual report of the American Red Cross states further that these nurses cooperated with doctors in examining 671,057 school and pre-school children, with 342,861 physical defects found and curative treatment arranged in 209,080 cases.

In 979 Red Cross chapters 1,733 gradnate nurses taught Red Cross home hygiene and care of the sick, issuing certificates to 53,126 persons completng the courses. In addton, 1,777 Red Cross reserve nurses were called upon during the year for disaster and epidemic control work.

## HOG PRICE OUTLOOK

As a result of the short corn crop, market receipts of hogs are expected to expand more than seasonally during November. Further declines in prices are expected, and the seasonal low point which normally occurs in late December, may occur in late November this year.

In view of the expected rise in hog prices following November or December, there seems to be justification for feeding hogs to heavy weights for the winter markets rather than sacrificing them at light weights this fall. Buying feeder pigs for winter feeding also seems safe, in spite of high feed prices—D. C. Wood, Extension Economist, Missouri College of Agriculture.

## VEGETABLE? MAKE THEM TEMPTING

Vegetables were regarded as healthful foods even in Cato's time—he spoke in high praise of garden cabbages as food. Modern science substantiates this theory advocating vegetables as a part of every well-balanced diet.

Besides supplying roughage, vegetables contain mineral salts and vitamins. And when they are made delicious with butter cream, milk or cheese, they are especially appetizing.

New ways of serving vegetables when introduced with the correct psychology are welcomed by the school child. It is important, however, that his first association with the new dish be pleasant.

The following are a few tips for wise mothers to follow in serving a vegetable which is foreign to the child's eating experience. Serve small amounts. This will stimulate the appetite for more. Make the serving attractive in appearance. Introduce only one new vegetable at a time. And serve it with others that the child likes.

Then serve them in a variety of ways: sliced and creamed, or with a butter sauce. Vegetable cream soups. Vegetable juices as clear soups. Vegetable salads with simple dressings. Jellied vegetables. Vegetable meat loaf.

**Spinach Souffle**

3 tablespoons butter.
3 tablespoons flour.
1-4 teaspoon salt.
1-8 teaspoon pepper.
1 cup milk.
1 cup cooked spinach.
3 eggs.
1-2 cup grated cheese.
1-2 teaspoon onion juice.

Melt butter, add flour and seasoning and gradually the milk. Cook until thickened. Add spinach, pressed dry and put through colander, and the well-beaten egg yolks.

Fold in the grated cheese and the stiffly beaten egg whites. Pour into buttered cups and place cups in pan of water. Bake about 30 minutes in moderate oven, 350 degrees F.

## WHAT IS NEW FOR THE KITCHEN

Cooking utensils are becoming more decorative, and more useful every day. We show them proudly to our friends because they are so handsome, and because their new features make them a joy to use.

A new enamel cooking pot which looks like fine old English pottery, with sealed rims and handles, straight sides and flat bottoms, and tight fitting covers are now being shown in the housewares sections of your department stores Furthermore, on the inside of the pot there is a graduated measuring chart for liquids so that you will not need to use outside measuring cups. The colors are lovely; bright red, ivory, white with covers and handles in contrast.

Stainless steel with a superior keenness of blade, and one that will hold an edge IS something! This is possible because of a new steel formula. The handles are made in one piece of hard black rubber, designed to fit the hand perfectly. Those are also available at your favorite stores.

## PEG-LEGGED CANARY EXHIBITED WITH HUNDREDS OF OTHERS

Hundreds of pets of Chicago bird lovers are to be exhibited in the fifth annual Greater Chicago Cage Bird Club show which opened at the Hotel Sherman today and will continue until Sunday evening.

Among the unusual pets to be shown is John Silver, the only canary in the country, and probably in the world, who hops about his cage on an artificial leg. John, his owner, Fred E. Daw of Oak Park, said, was injured when a nestling so that his leg had to be amputated. But he was saved from being a hopeless cripple when William A. Welty, 912 Wilson avenue, another bird lover, fashioned him a wooden leg. John Silver now hops about his cage with the fire and alacrity attributed to his daring namesake.

Hundreds of other canaries, in all colors of the rainbow, among them many famous singers, competing in solos and groups for prizes, as well as birds of many other types, will also be displayed. Another feature of the show will be a clinic where bird experts will be on hand to give advice to visitors on the care and treatment of birds.

## NEW TYPE HOG NEEDED

Prof. S. Bull associated chief in meals of State College Agriculture at Urbana, Illinois, says the American farmer must produce a new type hog, due to the fact that the sale of lard is steadily declining both in America and foreign countries.

Prof. Bull advocates the production of hogs that will produce more bacon and less lard, or the hog with a lean back bacon selling from 35 to 40 cents, the farmer would be better off with the bacon hog.

## THE DAILY DIGEST SAYS:

**Farm Reform in South**

Karl Brandt writes on "Potentialities of Agricultual Reform in the South" in Social Research (November). He says in part: 'At present an increasing use of fertilizer is being considered as a method of soil conservation, but Dutch and German experience and research have proved that the indispensable 'humus' content of soils may not only be used but also easily exhausted by heavy mechanical cultivation combined with intensive use of commercial fertilizers. On sterile soils without bacteria-flora plants are unable to make any use of fertilizer. A mixed farming system with large manure production has the capacity to enrich the soil continuously, but with monoculture and extensive use of commercial fertilizers only a cautious humus economy with green manure and legumes can avoid the improverishment of soils. With due appreciation for the great and successful efforts of the U. S. Department of Agriculture in its latest soil conservation policy, I cannot but doubt that the effects of a long history of soil depletion can be reversed within a few years. Decades of reforestation and adjustments in farming will be needed before the threat of further destruction of soil resources is definitely conquered. But it would also be one sided to draw from these considerations the conclusion that the United States has lost much of its natural resources in the Southeast. The situation would be desperate if the South had to go on as before, producing cotton on these eroded soils, but this is by no means neccessary. A shift to mixed farming will make possible not only a utilization of these soils but their gradual repair. Switzerland, Germany and Denmark offer many examples of how under similar conditions the destructive natural forces can be checked in large territories and how adequate methods of farming can slowly build up depleted soils. Thus in the hillside patches that carry a major part of agriculture in the South mixed farming means increasing assets in soil fertility, the main means of of production."

## THREE ACRES, HEGARI EQUALLED 10 OF CORN

Roy Barns, Camden, Ark., Route 3, grew grain sorghum in 1936 for the first time, planting three acres of regari. He says it made more feed than any 10 acres of corn he had on his place, related Paul Carruth, Onachita county agent.

Mr. Barnes is now convinced that half of his gain crop should be grain sorghum, the county agent said. He estimated that the hegari yielded 45 bushels per acre and that the stalks made seven tons per acre. His stock relished the stalks as well as the heads, he reported.

Jail visitor—Isn't prison life pretty hard?

Convict—Naw, it ain't so bad. The warden never drags me out to bridge parties or to the movies in the evening.

## CHICKENS TO CANARIES, SHE HAS THEM ALL

Little Rock, Ark—

Chicken, turkey, pigeons, guineas, canaries, Mrs. John McWhirter, president of the Organ Flat Home Demonstration club, has them all, and her varied assortment of feathered life is a hobby that pays, according to Miss Helen Thompson, assistant home demonstration agent in Boone county.

The interesting medley of fowls and birds in Mrs. McWhirter's collection includes 635 chickens, 69 turkey, 30 ducks, 39 guineas, 50 squabs, 14 pigeons and 34 song birds, Miss Thompson said. Sales from the flocks for the year amounted to $449.12, with a profit of $275, she added.

Mrs. McWhirter further increases her income in the spring by hatching chickens for neighbors, the demonstration agent related, having sold 400 baby chicks this year for $24. She now has 80 putlets ready to lay, 15 song birds to sell 69 turkeys, and 14 drakes for the Thanksgiving and Christmas markets. Fifty squabs are being raised for home use. Next year Mrs. McWhirter plans to raise squabs for the hotel trade.

## Reservation Telegram, Another Low-Rate Service Begins Soon

NEW YORK,—Telegrams to hotels or transportation companies and agencies requesting the reservation of hotel or travel accommodation, and the replies to such messages, will become a new class of Western Union service at a low rate, effective December 7th.

Such messages, according to a tariff filed with the Federal Communications Commission, will take a flat rate between any two Western Union points in the United States of thirty-five cents for fifteen words or less, and two and a half cents for each additional word.

This is an extension of the service provided by the Tourate telegrams inaugurated about a year ago which are special telegrams for travelers at the same rate, reporting arrival and other details of the trip.

### FARM LAND DEMAND HELD BEST SINCE 1928

Columbus. O., (ANP)—Demand for farm land is at the highest level in eight years as a result of rising agricultural commodity priees and loans have inereased aecordingly, Gov. W. I. Myers of the Farm Credit Administration told the seventieth annual meeting of the National Grange today. He said:

"An 80 per cent increase in farm income since 1932 and more advantageous farm eredit terms have set a premium on farm ownership. Voluntary transfers of farm land are now at the highest level since 1928.'

### SLEEPS 32 YEARS, SHE MARKS 75th BIRTHDAY

Stockholm (By Universal Serviee) —A woman who had slept for thirty two years celebrated her seventy-fifth birthday, but insisted that she is only 43 years old. Miss Karoline Karlson ordered her birthday cake be lit with forty-three eandles. A skating accident when she was 15 caused Miss Karlson to sleep until she was 47.

### "SEA ISLAND" COTTON COMES BACK

Washington, (C)—The Sea Island cotton industry, destroyed ten years ago by the boll weevil, is coming back, according to agricultural experts. The demand for this long staple cotton is great in European cities by manufacurers of fine goods.

### TUSKEGEE FARMERS CONFERENCE ENDS SIGNIFICANT SESSION

Tuskegee Institute, Ala., Dec. 10—"More than four thousand loans have been made to Negro farmers through our office without a single foreclosure and I am glad to say that every dollar they borrowed has been paid back.'

Thus spoke Judge J. M. Thomas, General Counsel of the Farm Credit Administration, New Orleans, La., when he addressed the Tuskegee Negro Farmers Conference at the close of its forty-sixth annual session here yesterday.

Judge Thomas also told the audience of fifteen hundred Negro farmers, and agricultural leaders that Negro applicants for loans are just as welcome and receive the same consideration as is given other applicants."

The Conference, this year, actually began on December 2, and offered a week's intensive training in problems of farm and home management for farmers and their wives. Yesterday's public meeting was the climax of that training period.

In his address opening the final session, Dr. F. D. Patterson, president of Tuskegee Institute, commended Negro farmers for their particpaion in the various Government programs and reminded his audience that farming "is an important and complicated business which requires brains, skill and hard work."

With "farm and Home Ownership" as the general theme of the Conference, a significant address was delivered by Miss Mary Mims, Extension Sociologist, Louisiana University who told the Negro farm women that "the foundation of character-building is in the home.'

Mrs. R. R. Moton, who has recently joined the staff of the A. A. A. to contact Negro farm woman of the South, brought greetings from Dr. Moton and urged Negro farmers to cooperate with the various agricultural programs.

Other features of the program included the presentation of the "Certificate of Merit" to Mr. and Mrs. R. E. Chisholm of Hayneville, Ala., for "conspicuous contributions to the science of farming" as reflected in improved methods of production, successful marketing and the erection of a model rural home.

Tributes were paid to Professor George W. Carver who has completed forty years of service at Tukegee and J. R. Otis, Agricultural Director for Tuskegee Institute and leader of the Conference offered suggestions for a "practical continuance of the fine work done by the farmers in attendance."

Resolutions adopted stressed the importance of the Soil Conservation Program and urged the necessity for farm and home ownership among Negroes.

## SCANDINAVIANS GET FINE RESULTS WITH COOPERATIVE PLAN

### Success of Idea Proves Embarrassing to Dictators Says M. E. Bishop

New York—The chances of cooperation outlasting fascism as a workable economic philosophy in Europe are extremely good, Bishop Raymond J. Wade declared on his return to New York from Stockholm after eight years residence abroad directing the work of the Metnodist Episcopal Church in the Scandinavian and Central European countries.

He does not feel that democratically controlled cooperative enterprises, such as those shaping the economic life of Sweden and Denmark today, will be permanently eclipsed, or localized, by the more spectacular political forces which are monopolizing the European stage now.

"I suppose you want me to say that there is going to be a general European war," Bishop Wade said. "Well, I can't say that, because I don't think it is the truth."

Asked whether the Cooperative Movement is playing any part in the present tense international situation, he replied: "Not officially. But as private citizens the large body of people associated with the movement are expecting a far greater influence for peace and stability than is generally realized. This is the case not only in the Scandinavian countries but in England.

"My opinion is that no government will be able to ignore indefinitely the practical achievements that cooperative enterprises have piled up to their credit. Even in Italy and Germany, where I travelled last year, I felt that the fascist dictatorships had not suceeeded in winning the sincere support of the majority of the people.

"At the same time the way in which the Scandinavian countries through cooperation have met the demands of their populations for higher standards of living, and peaceful conditions under which to enjoy them, has set an example that puts an inescapable pressure on the other nations.

"I think this example is going to prove increasingly embarrassing to the rulers of the more militant European States."

Turning to a comparison between American and European cooperative undertakings, Bishop Wade remarked that he was continually impressed by the collaboration between private and cooperative business in Sweden.

"For example," he said, "when a cooperative store is established in a new community, this store does not set out to cut prices. Also, cooperatively manufactured goods and privately manufactured goods are sold side by side in Swedish cooperative stores.

"Cooperatives will always fail as a business proposition unless they can produce the very best. But I am afraid that here in America,' he continued, "the emphasis is too largely on the commercial side and that not enough attention is being paid to the development of the spirit of brotherhood which is the real foundation for any permanent cooperative organization.

"I am much pleased on this visit to the United States to see the progress that the credit unions and the farmers' cooperatives have made. But I think the shifting populations of our big cities present a serious problem to cooperative organization.

"I hope that the leaders of cooperative gronps in metropolitan centers will not rnsh into new experiments too rapidly, that they will adhere closely to the policy of one vote for every shareholder in an enterprise, and that they will see that an understanding of the social ideals of cooperation keeps abreast of its business development."

## VETERAN BARBER OF MONTGOMERY, ALA., DIES, WAS EX-SLAVE

**Montgomery,** Ala., Dec. 3—(ANP) Both races mourned at the bier today Friday of Warren Davenport, 79 year old ex-slave who had barbered here for 50 years, who died at his home Wednesday of an illness that forced his retirement in April of 1935.

Davenport was a native of Montgomery, and came in contact with the public as a youth when he became a bootblack in the barbershop of Alf Billingsley, also colored, 60 years ago. He learned the barber trade, and practiced. Until 1905, there were no white barbers here, and Davenport served the more fashionable white citizens of the city. During his illness, many called at his humble home.

During late years, he operated a chair in a barber shop next door to the Montgomery Advertiser, white daily, which praised him in a speeial editorial after his death.

### BUSINESS LEAGUE OFFICERS HOLD SUCCESSFUL MEETING

Tuskegee Institute, Ala., Dec. 10.—Twenty-nine representatives of Negro business interests met here yesterday nad initiated a vigorous program to revitalize the National Negro Business League, which includes plans for a 1937 convention to be held in Atlanta, Ga., in August

Following an address of welcome by Dr. F. D. Patterson, president of Tuskegee Institute, three committees which had been previously appointed submitted recommendations for long-range future activities, for coordinated efforts to promote the Atlanta convention and for a Negro Trade Journal and general publicity covering the progress of Negro business.

The conference discussion covered such subjects as Negro participation in Government programs, employment of Negroes by non-Negro owners of enterprises located in Negro communities, Negroes and Trade-Unions, Negro farmers and the Agricultural Conservation Program, Consumer Cooperatives, the Housewives League and some form of direct helpful service to local trade and civic groups among Negroes.

A fund of $2,000 was subscribed to meet the immediate expenses of promotion and centralized effort. Dr. Patterson was continued as Chairman of the Steering Committee which will actively serve in an advisory and coordinating capacity with the President, Secretary and other administrative officers. Other members of the Steering Committee are: J. B. Blayton, C. P. A. and President of the Atlanta Negro Chamber of Commerce, Don A. Davis, Assistant Treasurer of Hampton Institute and Auditor of the National Negro Business League, Mrs. F. V. Smoot, representing the National Negro Housewives League, James P. Davis, representing the National Federation of Negro Farmers, B. J. Olive, Vice President, Universal Life Insurance Company, Memphis, Tenn., and George W. Cox, Agency Director, North Carolina Mutual Life Insurance Company, Durham, North Carolina.

W. R. Maynard, Cashier of The Tuskegee Institute Savings Bank was elected Assistant Auditor and the following replacements made on the Executive committee:

James P. Davis, Chicago, Ill.

R. H. Harris, Local Merchant, Tuskegee Institute.

B. J. Olive, Memphis, Tenn.

J. E. Walker, President, Universal Life Insurance Company, Memphis, Tenn.

Edward Simmons, Proprietor Ocean Fish Company, Charleston, S. C.

Roderick B. Harris, Secretary Good Samaritans, Athens, Ga.

J. B. Blayton, Alanta, Ga.

A resolution commending the Fiftieth Anniversary celebration of the founding of Mound Bayou, Mississppi was passed. This celebration will be held in July 1937.

Others in attendance in addition to those named on Committees Were:

C. C. Spualding, President, North Carolina Mutual Life Insurance Company, Durham, North Carolina.

Dean B. R. Brazeal, Morehouse College, Atlanta, Ga.

Hollis B. Price, Instruetor, Economics, Tuskegee Institute.

J. A. Johnson, Head, Business School, Tuskegee Institute.

J. R. E. Lee, Jr., Business Mgr. A. and M. College, Tallahassee, Fla.

Joseph H. B. Evans, Resettlement Administration, Washington, D. C.

A. F. Bradley, Cashier, Tuskegee Institute.

T. J. Ferguson, President, Pioneer Savings Association, Atlanta, Ga.

T. M. Campbell, Supervisor, U. S. Agricultural Extension Service, Tuskegee Institute.

M. N. Work, Director, Records and Research, Editor Negro Year Book, Tuskegee Institute.

Lloyd Isaacs, Treasurer, Tuskegee Institute.

W. A. Shields, Clerk-Instructor, Tuskegee Institute.

W. S. Hornsby, General Manager Pilgrim Health and Life Insurance Company; President, National Negro Insurance Association, Augusta, Ga.

S. W. Walker, President Pilgrim Health and Life Insurance Company, Atlanta, Ga.

Dr. I. A. Derbigny, Dean Administration, Tuskegee Institute.

A. L. Holsey, Executive Secretary National Negro Business League, Tuskegee Institute.

## JACKSON CITIZENS SEEK NEW SITE FOR CORRECTION SCHOOL

### Will Ask Removal of Institution From Domain To Madison County

**Jackson,** Tenn., Dec. 3—(By P. L Harden for ANP) As a direct result of the recent investigation by a committee of prominent citizens of conditions at the Herbert Domain Reformatory for colored boys, interest has been renewed in the movement begun five years ago to move the reformatory to Madison County in West Tennessee, where the County Court has already pledged its aid in donating a site for the school. The court appointed Magistrates L. E. Mathis, T. C. Long, and G. I. Gunter to work with the State legislature and Rep. Bert Neely to get legislation passed authorizing a new site for the school.

The committee inspecting Domain Reformatory was composed by Dr. I. L. Hildreth, chairman; Atty. P. L. Harden, director, and Messrs. Walter Sharp, Lee Whitlow, Melvoid Estes, Jesse Parker, J. W. Lane, and F. E. Phillips. Domain, which at present is located in the mountains of East Tennessee, touches three counties—Van Buren, Bledsoe, and White—and is a branch of the Agricultural and Training School for boys at Nashville.

In its tour of inspection at Domain, the committee found that the reformatory is located in a section where there are no colored residents; that the living conditions are bad; that they have about five or six old frame buildings which are nothing more than fire traps; that at the time of the committee's visit, oil lamps were used for illumination, but since then a lighting plant has been installed; that no trades are taught the inmates, and it is the committee's conclusion that when a delinquent or incorrigible boy is sent there he comes away worse than at the time of his committment and a good candidate for the penitentiary.

## Mussolini Begs For Aid In Abyssinia

**London,** Dec. 3—(ANP)—Mussolini, fresh from his conquest of Ethiopia and the foundation of the Italian "empire," is already trying to persuade Austria and Hungary to help him colonize his newly acquired territory, it became known here last week.

This action on the part of Il Duce indieated that Italy's need for an outlet for her "surplus population" are apparently not so urgent as the world has been led to believe.

Mussolini's foreign minister, Count Ciano, who met recently in Vienna with Austrian statesmen, made it clear that Italy was eager for Austrian unemployed to go to Abyssinia.

It has been known for some time that Haile Selassie's flight from Addis Ababa upset Mussolini's plans. Originally, he had hoped to leave a certain amount of Ethiopia under Selassie's jurisdiction while Italy enjoyed the best of the territory at the least possible expense.

As things stand now, Italy has to keep an army in Addis Ababa and continue with the task of "pacifying" the western areas.

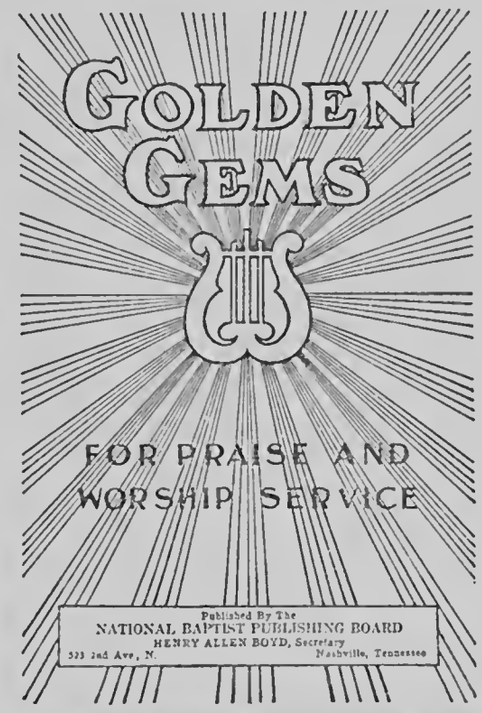
## CALVIN TO NAME SCHOOL IN HIS OLD HOME TOWN

Little Rock, Ark. (C)—Prof. R. C. Childress of the Department of Education has announced receipt of a letter from C. C. Sampson, secretary of the local school board at Clow, Ark., advising the board has unanimously voted to permit Floyd J. Calvin of New York City to name the new school which was built with the aid of the PWA. The school was formerly opened on Oct. 16, with educators from throughout the state being present, among them Prof. Childress and Mrs. Anna M. P. Strong of the State Department of Education. Prof. R. D. Johnson is principal. The school is located at the home of Mr. Calvin, head of the news service in New York, and Joseph E. Calvin, his father, is a member of the board and was largely responsible for securing funds with which to erect the building.

### FLORIDA A. & M. REPRESENTED AT INAUGURATION OF CATHOLIC U., PRESIDENT

Tallahassee, Fla., Dec. 10—(ANP) Florida A. & M. College was the only Negro institution to have a representative in the line of march at the inauguration of Bishop Joseph Moran Corrigan as rector of Catholic University of America on November 18, it was learned here last week. Dr. Elias G. Evans, gradnate of Florida who lives in Washington, represented the Negro school along with whites representing 300 white schools.

## OUR NEWEST AND MOST POPULAR SONG BOOK



**Contains such Popular Songs as:**

*He is Coming Soon* — *Is He Yours*
*Singing as We Go* — *Only Give Me Jesus*
*He's My Everything* — *Over in the Glory Land*
*He Understands,* — *The Unseen King*
*He'll say well Done* — *I'm Out on the Battle-field*
*Gospel Waves*

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

# SUPER ORGANIZATION OF WOMEN IS DREAM OF MRS. M. BETHUNE

## Director of NYA and College President Pushes Work of NCNW

Washington, Dec. 3—(ANP) With the presidential campaign in the background and immersed up to her elbows in the stirring work of the NYA, Mrs. Mary McLeod Bethune still finds time to push toward her dream of a super organization of women.

Pausing a moment in her office here Friday, the eloquent educator and club woman poured forth sonorous and enthusiastic phrases as she described the place in Negro and American life which the National Council of Negro Women is destined to fill.

"There is today a most intense need," said Mrs. Bethune, "for the Negro women of America to stand shoulder to shoulder in solid phalanx to fight the battle of the Negro masses and promote their integration into the fabric of the American democracy. As I work at my desk in Washington in the shadow of the nation's capitol and look down through the channels of the 48 states, I am vividly aware of the great need for the strength of organization and of the great opportunity for constructive work and leadership.

"The National Council of Negro women, comprising the membership of the national organizations of the women of America for the purpose of collective coordination to function in thought and action for the entire race and nation, has a field of service today that has never been heretofore offered," he continued. "Under sincere and competent generalship, our national life has awakened to an alert social consciousness and the first challenging streaks of a new day for the underprivileged masses break across the horizon.

"Late in December we plan a conference dinner in New York City, the date of which will be later given, where we hope the flower of American Negro womanhood will dine and think together, will plan, discuss, and finally adopt a workable constitution, and go out to work together in the highways and the byways for our race and for our nation.

"Courageous hearts and the joining of many hands in combined strength are vitally necessary today as we face the many complex problems in coping with modern civilization. There is 'big business' ahead for the National Council of Negro Women, giving a chance to all national bodies of women, young and old, to pool their thinking and all together speak as one voice and one mind for the highest good of the race.

"There never was a time in our history when thoughtful and courageous leadership among our women was more needed. As founder and president, I am calling on all national bodies to be in New York to help plan how we may more effectively integrate ourselves into the program of the country."

## What We Mean By "Black Man's Burden"

Travel with me to the dressing room of IOWA UNIVERSITY'S Football team for an example in point of what we are eternally harping upon as....."The Black Man's burden".

Coach Solem has all of his squad varsity and scrub, gathered around him in awed suspense. He doesn't keep them waiting very long, neither does he disappoint more than half of them in what he has to say. HEY SIMMONS..... stand up! I want every man in this room to hear what I've got to say to you. We lost to MINNESOTA by the unbelievable score of 52 to zero. Can you picture in your minds. I MEAN EVERY MOTHER'S SON OF YE, what the other Conferenees coaches and Alumni Associations are sayng about COACH SOLEM OF IOWA? ? ? ? ?. Now os for you SIMMONS, YOU PLAYED LOUSY FOOTBALL in there against the "Gophers", and it looked to me like, YOU PURPOSELY LAID DOWN OUT THERE THIS AFTERNOON. (Simmons in partial rebuttal).... "Why COACH, I never played harder in my life, I don't know what it means to "lay down" as you just said before all of my teammates, I don't think you're being being fair to me.....(interruption at this point). "YOU'VE SAID JUST ABOUT TOO MUCH SIMMONS.....GET OUT OF THIS ROOM AND DON'T SHOW YOUR FACE AGAIN ON THE PRACTISE FIELD UNTIL YOU'RE READY TO PUBLICLY APOLIGIZE TO ME BEFORE THE ENTIRE TEAM." Like the disciplinarian, scholar and splendid gentleman that he is, the powerfully built black boy, takes his leave.

No one will ever know unless "Ozzie" chooses to give a special story on it, just what took place in his mind as he stood there..THE OUTSTANDING PLAYER FOR 3 YEARS ON IOWA'S FOOTBALL TEAM, listening with ears that refused to believe themselves, to the cowardly, blast of an official who knew he possessed the authority to take the stand that he elected to. If you're interested in knowing, WHAT I THOUGHT TOOK PLACE IN THE BRONZED GIANT'S MIND, I'll tell you.

I know that thre is hardly A SINGLE PLAYER under the sound of his voice who would have taken the unjustifiable lacing that he stuck under me today, but I can't afford to be hotheaded in the matter, my entire college future is in the balance here. What if he (Coach Solem) were to use his influence in forcing me out of the lowly position I have here that helps to pay my college tuition ? ? ? ? ?

What would my brother (also an Iowa youth student suffer in subsequent persecution that would follow my act on? ? ? ? ?

Would they take my friend, "DUKE" SLATER'S coaching assignment from him in reaction to all of my group and race?

SATAN, YOU KNOW THE RULES OF THE GAME STACKED UP AGAINST ME BY A DASTARDLY UNWRITTEN CODE.

The curtain falls on act one, and as we go into the anti-climax, Solem, gets his apology, and OZZIE SIMMONS, often referred too as "THE ENTIRE IOWA TEAM," is left to reflect on just what they expect of the AMERICAN NEGRO at our supposedly better universities.

If SOLEM can explain a 52 to 0 lacing to the Alumni Association by subjecting a boy whom he knew couldn't afford to strike back in like manner for a million and one reasons then he should still be Iowa's football coach in 1990.

What's hurting a guy's feeling before his fellow-workers compared to SAVING ONE'S JOB? ? ? ?? For few will gainsay the fact that a real job (Coach Solem has a swell one), is worth fifty of the type politicians throw in your face these days.

Our only fault with Coach Solem lies in the fact that he either by design or sheer stupidity, BAWLED OUT THE WRONG GUY! !

## *Business Group Inspects TVA*

Knoxville, Tenn., Dec.—(By O. B. Taylor for ANP)—C. C. Spaulding, president of the North Carolina Mutual Life Insurance Company of Durham, George W. Cox, vice president and J. L. Wheeler of Atlanta where he heads a division of the company were visitors in Knoxville Tuesday. The occasion of their coming into eastern Tennessee was the observance of the 15th anniversary of the company's advent into the state of Tennessee and R. J. Olden, resident manager had the aid of the leading men and women of the city in developing elaborate entertainment for the occasion. What proved to be a principal point of interest during the visit, however, was the inspection of the Tennessee Valley Administration project.

After inspecting the TVA general offices here, a trip to Norris dam followed. Dr. Max Bond, the only race man holding an executive position with the TVA was in charge of the motorcade which was piloted to the city limits by a traffic policeman. After a general inspection of the dam, the magnitude of which can be appreciated only by close observation, Dr. Bond, in a government official car, led the party back to Knoxville.

The public turned out in large numbers to hear the visitors speak at 7:30 in Local Temple A. M. E. Zion church, of which Rev. S. H. Marion is pastor. One of the large daily papers here, not only published in a creditable way these activities, but ran Mr. Spaulding's cut in its columns.

The social phase of this affair reached its climax in the form of an elaborate banquet at the Monterey Inn, following the church program. Dr. H. M. Green, local leader, served as toastmaster.

The party, loud in its praise for Knoxville hospitality, left Wednesday morning for Chattanooga, after having visited several of the city schools.

## Prosperity Is Back Says C. C. Spaulding

Durham, N. C.—(C)President C. C. Spaulding of the North Carolina Mutual Life Insurance Company and the Mechanics and Farmers Banks says in his monthly message in "The Whetstone" that prosperity is back. Commenting on the question, "How's Business?" Dr. Spaulding says: "Now that the sun of prosperity has topped the horizon its rays of encouragement beckoning us onward with renewed hope and activity, we ask ourselves the question: 'How's Business?' The pessimist will answer—bad. The skeptic—fair. The hustler—never better. To which class do you belong

## Robert L. Vann To Tell Mr. Roosevelt

New York—(C)—Robert L. Vann of Pittsburg will take his pen in hand for Opportunity Magazine in the January number, according to announcement by Editor Elmer Anderson Carter. Vann will write on "What the Negro Expects from the Administration", meaning President Roosevelt and his New Deal. Meantime speculation is rife as to whether Vann will move back into the Washington spotlight where he basked from July, 1933, until last January 1, when he quietly resigned as special assistant to the Attorney General.

## Chisholm Promoted

New York—(C)—Sergeant Louis E. Chisholm was promoted to Acting Lieutenant at the 32nd Precinct last Tuesday by Police Commissioner Valentine. Officer Chisholm has been in charge of the Crime Prevention Bureau since February.

## "Dillard Day" Big Success

New Orleans, La.—(C)—Celebration of "Dillard Day" in the churches here on last Sunday was a success, according to Dr. William Stuart Nelson, president of the University, who was the principal speaker.

## BREEDS MILK OF GOATS

Now and then the County Agent has a caller interested in getting information about the best breeds of milk goats. While the Agents has not had occasion to entirely familiarize himself with this subject, we do have some bulletins on the subject for those interested and also have some information from Mr. C. W. Turner of the Animal Husbandry Department of the Missouri College of Agriculture.

"So far as I can tell," says Mr. Turner, "the four most popular breeds are the Toggenburg, Saanen, Nebian, and Alpine. I have had all of these breeds except the Alpine and can say from personal experience think that they are all good breeds.

## CONVENTION NOTES

Charleston, Missouri, may be a small city as far as size and population goes, but it should be known as "the city with the big heart." Its progressive happy citizens know how to entertain and make visitors welcome and comfortable. Delegates and visitors, one and all were loud in praising Charleston and she deserved it.

More congratulatory messages and expressions of good will were received than ever before. The people of America and the leaders of America know the N. F. C. F. program is essential to the welfare of American Negro farmers and must be carried on. Good Americans, of all colors and creeds have faith in the N. F. C. F. and in its leaders.

Even the weather man rolled his clouds away Sunday night, and treated the Convention royally the three days of the session. Weather never hinders good farmers anyway.

Music rendered by the chorus of the Lincoln High School was deeply appreciated by all. The youngsters can sing and have a very competent and likable instructress. They sang the "Farmers Hymn" better than the farmers sang it.

Nearly all the ministers of the various churches in the Charleston territory attended and were ever ready to lead the devotionals when called upon. The territory is blessed with a group of active, God-fearing, useful ministers.

Currin Hall where the Convention sessions were held, has lately been erected by Marshall Currin, prominent Race business man and farmer. There was plenty of room and everybody was comfortable. Mr. Currin and his excellent wife are to be commended.

More farm women attended this Convention than any ever held. Perhaps colored farmers are beginning to realize that the wife can be benefited by attending the annual session as well as the husband. We hope the good start made continues.

At all times, the exhibit room was crowded with visitors. Cotton and canned fruit and vegetables were especially excellent. There was also placed on exhibit the best selection of fresh fall garden produce ever shown at a Convention.

Chicago made a good bid for the 1937 meeting. The Board of Directors is sure to carry on plenty of squabbling when it meets to settle this important question next spring.

## TIMOTHY HAY FOR CATTLE

".....The New Hampshire Experiment Station has for many years carried on experiments with Timothy,' says an editorial in Hoard's Diaryman (August 10). "Recent investigations by the station have shown rather conclusively that by cutting timothy hay early and raising it on a soil rich in fertility, its crude protein contents will be 10 percent or more while cut as late as July 30, the protein content will be as wol as 5 percent. It was found that by cutting hay June 10 it yielded 1.-880 pounds per acre; when cut July 30, about 2,800 pounds. Before it was generally known that the digestibility of hay varied with the time it is cut, it was but natural to cut hay when it would yield the greatest tonnage. Research has revealed that early cut timothy will provide about 212 pounds of crude protein per acre and when cut late 153 pounds. It is valuable to know that a crop that yields as well as timothy can be made equal in feeding value to medium red clover if the proper method of raising this crop are followed and it is cut early."

## ELEVEN SHORT-LEGGED TURKEYS IMPORTED BY NEW DEAL BROUGHT FROM ENGLAND TO BREED NEW "STREAMLINE" BIRD

Pursuing its aim to develop a streamlined turkey that looks like a duck, the Department of Agriculture today announced importation of some new blood from England.

The shipment consisted of 11 plump short-legged white turkeys known as Austrians. Each weighed about 10 pounds and just about right for the average American family.

Dr. Hugh C. McPhie explained that must turkeys in this country grow too large for the modern roasting pan. Well finished young domestic turkeys usually weigh from 11 to 21 pounds dressed.

The smaller turkeys from England will be placed at Government experiment stations and probably crossed with domestic breeds.

## NEGROES ADVISED TO "BUY BLACK"

### Speakers Urge Colored People to Spend Money With Their Own Race

The faculty, students and many delegates and visitors at Lincoln High School during the Annual Convention of the National Federation of Colored Farmers, Inc., were treated to an interesting and very instructive address delivered by Mr. James A. Jackson of New York City. The comment on the address, here published, is taken from the Charleston Democrat, leading newspaper of the City of Charleston, Mo.

"Buy Black," was the advice given the Negro students at the Charleston Lincoln School Tuesday afternoon by J. A. Jackson, a well known Negro from New York City, who is a member of the administrative board of the Standard Oil Co. The address was listened to attentively by all the children and teachers of the school and a group of visitors here in attendance on the annual meeting of the National Federation of Colored Farmers.

Jackson is a very interesting speaker, a college graduate and for many years was associated with leading newspapers of the United States as an editorial and feature writer. The first part of his address was largely biographical from the time he graduated from a high school in Pennsylvania and marked his course in life from his first job as driver of a delivery truck to his life in college, experience as a soldier in the Spanish-American War, service on a railroad dining car and final evolution into a journalist. The story was not told boastfully but was used to illustrate his point that a Negro can distinguish himself in any line of endeavor if he is properly equipped mentally, morally and spiritually to fight the battle of life.

The second section of Jackson's address was devoted to telling about the many Negroes who have made conspicuous places for themselves in almost every profession and business in the country. "As a matter of fact," said the speaker, "there are only two kinds of business not owned by a Negro; so far as known, no Negro owns a railroad in the United States, and none own a circus."

It was at the conclusion of this part of his address that Jackson strongly urged his hearers to "Buy Black," in order to improve their condition in life and standing in society. Unless Negroes patronize Negro business and professional men, he said, there is no incentive for Negroes to enter business or professional life. He estimated that the "buying power" of the Negroes in Mississippi county is more than three-quarters of a million dollars a year, and from that estimate he told how many business and professional men could be sustained in this community if the Negroes would concentrate their buying power. One of his conclusions was that while everybody likes music, the sweetest music to most ears is the tinkle of the bell on the cash register.

## WHAT THEY SAY:— ABOUT THE N. F. C. F. AND MODERN FARMER

"I am writing to you first to tell you what I think of the N. F. C. F. I wish to say that it is not one of the greatest, but it is the greatest in the history of the world for the black man and the only one that I ever knew that would help a black man to make a living and give him a chance to own a home. I wish I had words to express how I feel towards your great work in regards to uplifting the colored race. I sometimes think that it is too wonderful to be true, but when I think of the many good things I heard from you and other wonderful speakers we had tos peak to us at Charleston, Mo., it revived and gave me a new determination in life.

Rev. H. L. Humphrey, Farmer-Minister Route 6, Box 72, Hickman, Ky.

"Your organization saved my farm for me aiter I had been ordered to move. My farm has been in my family here in the north for fifty years. There is nothing I can say too good for your organization and its officials.

Mrs. Lucy Ross, R. F. D.
Niles, Michigan.

"Membership in the National Federation of Colored Farmers is worth fifty dollars a year to anyone. You saved my property for me and I know your advice and assistance has been of service to many others.'

Mrs. Vassie Lee Pettis,
3716 S. Wabash, Chicago,
(Farm property in Ark.)

## WORKMEN IN BUILDING FIND ANCIENT SHOE

Point Pleasant, W. Va..—Workmen digging in an old basement found a shoe—still well preserved—which they believe is more than 100 years old.

The brogan is an old piece of leather, cut to form the side and with a heel tacked on with wooden pegs.

## AT THE '36 CONVENTION IN CHARLESTON

### More News of Interest

The judges for the exhibits on display in Currin Hall were announced as follows:—J. W. Washington, Illinois, Chairman, Mrs. Anna Chambers, Illinois, Mrs. Legora Sanders, Missouri, Mr. E. A. Thompson, Mississippi, and Mrs. Gertrude B. Harris, Illinois.

The Committee on Resolutions was composed of R. H. Sanders, Indiana, Chairman, Walter Riley, Mississippi, L. W. Winston, Alabama, J. H. Washington, Illinois, and Marshall Currin, Missouri.

Telegrams and messages of congratulation were received from Hon. Henry A. Wallace, Sec., of Agriculture, Mr. Robert S. Abbott, Editor of The Chicago Defender, Hon. C. A. Cobb, Director, Southern Division, Soil Conservation, Hon. G. B. Thorne Director, North Central Division "Amos 'n Andy," Mr. John T. Stinson, Director, Agriculture Development, Missouri Pacific Railroad Co., H. J. Schwietert, Gen. Agr. Agent, Illinois Central R. R.

Donors of prizes won by exhibitors included the following: Wrigley's:—Jucy Fruit Chewing Gum, Mrs. Irene Castle McLaughlin, Lake Forest, Ill., a ladies' brooch and purse,—R. J. Reynolds, Tobacco Co., Winston Salem, N. C., Brown Mule Chewing Tobacco,—Hardwood Charcoal Co., Memphis, Tenn., Lead Pencils,—The Hubinger Co., Keokuk, Iowa,— Elastic Quick Starch,—The Mantle Lamp Co., Alexandria, Indiana, Aladdin Whip-olite Lamp,—General Foods Co., St. , Louis, Mo., Jello,—T. M. Sayman, Products, Co., St. Louis, Mo., Sayman's soap and salve,—S. L. Allen and Co., Philadelphia, Pa., Planet, Jr., plow, Sears, Roebuck and Co., Chicago, Radio,—Amos 'n Andy, pair registered Hampshire pigs.

Prize winners included the following:—Fred Burnley, N. Little Rock, Ark..—First cotton,—pair of registered pigs— Mrs. David Burnett, Wyatt, Mo., lamp,—A. H Hamilton, Eden, Miss., second cotton,— radio, —R. D. Davenport, Lexington, Miss., Preston, Stanbeck, Benton, Mo., William Hodge, Charleston, Mo., Mrs. K. O. Adams, Wyatt, Mo., A. W. Watkins, Lexington, Miss., Andrew Davenport, Lexington, Miss., Louise Kennedy, Mo., Geneva Spencer, Mo., Walter Riley, Tchula, Miss., Gussie Law, Bird's Point, Mo., Surely Tate Quincy Rivers, Lena Fair, Ark., Sam Easley, Ark., Caroline Spencer, Mo., Mamie Peneman, Fannie Crosby, Pearl Pickens, Lexington, Miss., Jessie Patterson, Wm Broach, Marshall Currin, and Mrs. Marshall Currin.

## FRANK M. DAVIS TO PUBLISH NEW VOLUME OF POETRY

Chicago, Dec. 3—(ANP)—Written by Frank Marshall Davis, brilliant poet, a new volume of verse entitled "I Am the American Negro,' has been set for publication Feb. 12 1937, the Black Cat Press, Chicago publishing Firm, announced last week.

Mr. Davis' new volume will follow the style of "Black Man's Verse," his first book of poetry published by the Black Cat Press in September of 1935, and which won an unexpected amount of praise from the nation's leading critics, both colored and white. Black Man's Verse has gone through two editions.

The 30 year old author is feature editor of the Associated Negro Press, Chicago, and is a nationally known columnist whose articles appear currently in Negro newspapers.

## TENANTS' UNION CALLS VERDICT GREAT VICTORY

Memphis, Dec. 3—(ANP)—H. L. Mitchell, secretary of the Southern Tenant Farmers Union, said after the Peacher conviction he considered it "a victory for the cause of the union. The conviction, it is hoped marks the end of violence and terrorism."

## THE ARKANSAS GAZETTE, LITTLE ROCK, WEDNESDAY NOVEMBER 25, 1936

### Southern Farmers Plan 1937 Program

Washington, Nov. 24 (AP)—Farmers representing nine state Agricultural Conservation committees began work today on the 1937 agricultural conservation program to be recommended for the Southern region.

Their recommendations, AAA officials said, together with recommendations of farmers representing the other four regions will be the basis upon which the national program will be developed.

The farmers had before them detailed reports of county and community meetings of farmers in summary prepared by Agricultural Extension Service workers who were charged with administering the 1936 program.

### Few Changes Expected

AAA spokesmen said there was little sentiment among the Southern farm representatives for a change in the 1936 program, except for simplification wherever possible.

Farmer representatives who will be here for the rest of the week include: Howard Stovall, Stovall, Miss.; C. D. Walker, Altus, Okla.; J. J. Love, Quincy, Fla.; W. M. Agnew, Donalds, C. C.; Harold A. Young, Galloway, Ark.; Mike Scanlin, Eunice, La.; J. F. Flukker, Livingston, Ala.; A. H. Montgomery, Darouzett, Texas, and George Slaughter, Wharton, Tex.

## University of South Africa Gives Ph. D.

Johannesburg, South Africa, Dec. 17—(ANP)—For the first time in its history, the University of South Africa has awarded an honorary doctor of philosophy degree to a Bantu native.

The recipients is Dr. John Dube, founder and principal of the Ohlange institution, Natal, grandson of a Zulu chief and son of one of the first native missionaries among the tribe.

Dr. Dube was educated in the

## GLYMPSE BY A CHICAGO REPORTER

(Continued from Page 1)

wants to see the southern farmer prosperous and happy and believes the administration is on the right road. He is patient and knows that many necessary changes cannot be made immediately. His fine address was appreciated by all who heard it. And he drove home this point—that the colored farmer must realize that he has a part to play and must organize and do his part. That he must do more for himself and stop depending on the other fellow to do for him. Mr. Miller was one of the biggest men I met at Charleston.

**Prof. M. M. Hubbard**

Prof. Hubbard is president of the State Normal School, Forsythe, Ga., and was commissioned by Gov. Talmage to represent the farmers of this great state at the convention. I heard him deliver two addresses and in spite of the fact that I heard hundreds of addresses every year, I will not soon forget the two I heard from Prof. Hubbard. He has done a remarkable work for his school and community and I don't believe Georgia has a bigger man. I envy the boys who are studying agriculture at his school. They will be the modern farmers of the future and will bring honor and glory to Georgia and to their race. Prof. Hubbard invited the convention to Forsythe and to his school next year and I believe the officials will make a mistake if they don't take it there.

**Hon. E. E. Oliver**

Mayor of Charleston, and a first class Christian gentleman, Mr. Oliver welcomed the delegates to his city and, in doing so, said something extremely complimentary. He said that the meeting of the convention there two years previously, had brought more real good to the colored citizens of the community than any meeting that had ever been held in Charleston. He mentioned by name some of his friends of our group and said he was proud to have them as friends. This interracial friendliness is spreading throughout that territory and big men like Mayor Oliver deserve all credit for this.

**Mr. James A. Jackson**

It was my pleasure to meet this gentleman who knows more about Negro business than any other man in the nation and, I believe is doing more for Negro business than any other man living. He is indeed an inspiration to all who meet him and he is one of the easiest big men to meet I have ever seen. His friends must be legion. He came all the way from New York as the representative of the Standard Oil Co., if all the representatives of Standard Oil are big men like Jackson, no wonder Standard Oil is a big company. He made one of the best addresses to young people I have ever heard and the farmers will not forget what he told them, for every time he opened his mouth he said something. The convention was fortunate in having him present.

**James W. Washington**

Mr. Washington is president of the United Cooperative League of America, headquarters in Chicago. His organization is a first cousin to the N. F. C. F. He is a fountain of energy, a well of enthusiasm and an ocean of optimism all in one. I don't believe the man was ever discouraged in his life. He was indeed an asset to the convention and if there was anyone there he did not meet and make friends with I cannot conceive who it was. He is a strong man of vision and some of the policies for the farmer's benefit which he is advocating today are bound to be adopted, and ten years from now the nation will know just how big a man he is.

**Leon R. Harris**

Secretary of the organization, and now its acting-president, Mr. Harris was the busiest man at the convention but was never too busy to shake the hand of a brother-farmer and inquire about his welfare. One of the founders of the N. F. C. F., he has faithfully served as secretary for fourteen years. He has travelled extensively and is recognized as an authority on Negro rural life. His motto is "Service." The farmers know his value, accept his advice and profit by his endeavors. Colored farmers have no better friend.

**Mr. Thad Snow**

Mr. Snow is a prosperous, progressive planter, and of the new school. He believes his tenants should be real farmers and is doing all he can for their welfare. He has the courage of his convictions. He sees no reason why there should be any racial friction among farmers of the South. Mr. Snow was a big planter attending a convention of the N. F. C. F., enjoying himself and doing all the good he could do. His kind is badly needed. When I met him I met one of the finest all-round farmers in the nation. He thinks more of his fellow-men than he does of his cotton and hogs.

**Marshall Currin**

Industrious, affable, and always ready to do some good when he can, Currin is a young race business man who is going places and doing things far above the average. I am of the opinion that he goes ahead and does things while the average business man would be thinking about doing something. He had a big job on his hands heading the local committee in Charleston, but the job was done well. Some men are born for big jobs and Currin is one of them. He is bound to succeed.

**Editor C. L. Blanton**

Editor Blanton of the Sikeston (Mo.) Standard is known as "the Golden Rule Man" of his territory and has done more than anyone else to bring about the era of good feeling that exists among the races in his section. He brought to the convention the greetings of the people of his community—the greetings of all the people. His address was timely, interesting and appreciated. The nation could use a few hundred more editors like Blanton.

**Prof. C. A. Waller**

State leader of Negro Farm Extension work of the great state of Texas, and a leader who surely knows his farmers. He delivered an address that made some of the farmers want to cuss him but made all of them love him. He is forceful, plain-spoken, and what he says makes you think. A first-class leader and Texas had better keep him in the agricultural harness for she needs a man of his calibre.

**Mrs. Anna Chambers**

Leader of our group in a rural community in southern Illinois, a friendly, wise and good woman who is doing all she can do for the uplift of her neighbors. Her message to the convention was inspiring and showed a remarkable faith and loyalty to the cause of organization among colored farmers. She should be persuaded to join the official staff of the N. F. C. F.

I met many other big men and women at this convention and I am only sorry that space will not permit me to tell about them and their activities. There was W. O. Hill, of Arkansas, whom Gov. Futrelle commissioned to represent the farmers of his state, and who made a mighty fine speech. Walter Riley, of Mississippi, who headed the delegation from his state and brought a big sackfull of encouragement and good wishes with him. There was Winston, of Alabama, who got so enthused he wanted to shout and made the convention want to shout with him. Sanders, of Indiana. Boler of Missouri, Prof. Emery, principal of the Lincoln High School, of Charleton, a genial gentleman and a fine leader. And there were others. May the good Lord bless all of them and their work and let them live long to help their fellowmen. Big folks, yes, every one of them.

## HOWARD PRESIDENT'S LOGIC MAY COOL OFF STRIKING STUDENTS

**Washington,** D. C., Dec. 3—(ANP) Following a conference last week between President Mordecai Johnson of Howard university and a committee representing the disgruntled students, it appeared the students would reconsider their intention to strike in support of the demands of the football players for more abundant rations.

Dr. Johnson, it is said, convinced the committee that the university could not award working scholarships to the players because if it did, the team would not be recognized by the Colored Intercollegiate Athletic association and the Middle States association. It is thought the students will revise their demands for presentation to the school's trustees at the Spring meeting.

## SHEEP PAYING GOOD

(Continued from Page 1)

tion, set up 18 low-income farmers in the sheep business.

Randolph county farmers in 1936 marketed 5,155 spring lambs that averaged 70 pounds and sold at $5.60 per head. The lamb crop returned a gross income of $28,644.

One of the outstanding farmers in sheep production is Elijah Honeycutt of Ravenden, who has a herd of 48 high grade Hampshire ewes and a purebred ram, said Mr. Davis. He bought his purebred ram in the fall of 1934. His profit inceased 62 per cent.

This year Mr. Honeycutt sold 44 head for $396 with a cost of production of $125, leaving a profit of $271. His sales included 12 spring bucks for breeding purposes at an average of $12 a head.

Mr. Honeycutt purchased two purebred Hampshire ewes this fall and is planning to produce breeding stock which is now in demand, said the county agent.

## HIGH SCHOOL STUDENT

(Continued from Page 1)

writes the best paper on the subject: "What Soil Conservation Means to the Negro Farmer."

The contest closes January 30th. The students of this progressive school are already showing keen interest in the contest and Mr. Davis is expecting the receipt of some good papers.

## PRIZE CATTLE AUCTIONED

(CONTINUED FROM FAGE 1)

mussen and the estate of George Rasmussen, president of the National Tea Co. Rasmussen died in August and this part of the estate is being liquidated.

Top animal of the sale was the eight-month-old bull, King Bessie Forbes Geraldines, a full brother of two all-American champions of 1935, which was sold to J. D. Allen of Libertyville, Ill., for $3500.

## Writer Talks To Mixed Group On "Problems Of The Negro Child"

**Anaheim,** Calif., Dec. 3—(ANP) Ruby Berkley Goodwin, writer and lecturer, addressed the Fourth District P. T. A. Convention on "The Problems of the Negro Child." Mrs. Goodwin asked that "Race be looked upon merely as a distinction, rather than a handicap, or barrier." In closing, the writer said, "P. T. A. has a great mission, not only in helping to build a great program of education in America, but in unifying and helping to bring about a great national solidity among the youth of our country." The entire address by Mrs. Goodwin is used in the current issue of the Fourth District News as an editorial.

## SEC'Y WALLACE

(Continued from Page 1)

tive of the race formers of Arkansas C. A. Waller, State Leader Negro Extension Work, Prairie View Texas; J. A. Jackson, Standard Oil Co., New York City; James P. Davis, one of the founders and former president of the N. F. C. F.; Prof. M. M. Hubbard, president of the State Normal School, Forsythe, Ga., who was commissioned by Gov. Talmadge to represent the race farmers of Georgia; Mrs. Anna Chambers, prominent farm woman of Tamms, Ill.; Editor C. L. Blanton of the Sikeston (Mo.) Standard and many others.

Interesting telegrams and congratulatory messages sent by prominent friends of the organization were read by the secretary. Hon. Henry O. Wallace, Secretary of Agriculture wired: "The colored farmers have cooperated in the 1936 agricultural conservation program as well as agricultural programs in 1935, 1934 and 1933. These programs would not have been successful without such whole-hearted cooperation. Such cooperative efforts for the common good deserve the commendation of all who are interested in the welfare of agriculture."

Hon. Robert S. Abbott, editor of The Chicago Defender, sent this sincere message: "Greetings, best wishes for successful convention southern farmers, especially those of your membership are congratulated on your steadfast labor in soil fertility created by Omnipotent Power and cultivated by those having faith in that power. May your numbers and harvest increase to your own benefit and that of a great posterity yet to come."

Other messages received from prominent individuals included those from Hon. C. A. Cobb, Director Southern Division, Soil Conservation, Washington, D. C.; Hon. G. B. Thorne, Director North-Central Division, Washington, D. C.; Freeman F. Gosden and Chas. J. Correll, better known as "Amos 'n Andy," Mr. H. J. Schwietert, Gen. Agr. Agent, Illinois Central Lines, and Mr. John T. Stinson, Director Agricultural Development, Missouri Pacific Lines, and many others.

Although on account of weather conditions farm and garden exhibits were not as large as in former years, there were some of excellent quality, especially cotton and canned fruit. The first prize for cotton was awarded to Mr. Fred Burnley of North Little Rock, Ark. The prize was a pair of pedigreed registered pigs donated by "Amos 'n Andy. As usual, Mississippi farmers won the lion's share of the prizes but some were also won by farmers of Missouri, Illinois, Indiana, Alabama and Arkansas. Prizes awarded were valued at more than a thousand dollars.

The convention went on record as favoring the federal soil conservation program and rural resettlement plans. Tenantry and the sharecropping system were condemned and members were urged to purchase farms and to build better homes.

Chicago and Forsythe, Ga., made bids for the 1937 meeting. Leon R. Harris, of Moline, Ill., was chosen to serve as acting president of the organization and will retain the ofvce of secretary. Others re-elected were Maj. R. A. Byrd, vice-president, S. B. Wilson, Tenn., treasurer and C. R. Richardson, Indiana, chairman of the board of directors.

## PICKENS ON VISIT TO WHITE COLLEGES

**Wilson,** N. C., Dec. 3—(ANP) William Pickens of the N. A. A. C. P. was a guest at another white college in the state this week when he gave lectures to students at Atlantic Christian College here. He spoke to classes in Ancient History and those studying current and present European History. When he left, the faculty invited him to make further appointments when next he was in the state.

## WILSON AND TOLLEY MAY BE PROMOTED

Washington, Nov. 24 (AP)—Appointment of M. L. Wilson, veteran Montana farm planner, as successor to Rexford G. Tugwell in the post of under-secretary of agriculture, was forecast today.

Promotion of Howard R. Tolley, chief of the AAA, to fill Wilson's position as assistant secretary, was said to be likely. Tolley would retain his present post.

**Alexander's Fate Uncertain**

W. W. Alexander, deputy administrator of the Resettlement Administration, has been chosen by Tugwell to succeed him as chief of that agency. But officials said today that whether he would become permanent administrator might depend upon the outcome of plans to shift the RA to the Agriculture Department.

Selection of new assistances to Secretary Wallace in the Agriculture Department will be made by President Roosevelt, subject to approval by the Senate. It was believed Wallace would recommend Wilson and Tolley to the president.

## 2,000 Farmers Attend Meeting

Lorman, Miss.—(C)—About 2,000 farmers from ten communities in two counties cooperated in organizing and holding a fair here on Thanksgiving Day. Alcorn College had a demonstration on soil conservation and the making of syrup.

## MISSOURI TOTAL CCC ENROLLMENT NUMBERS 54,958

### And Boy Oh Boy, What an Appetite those Boys in the Camps do have.

St. Louis, Mo., Oct. 29,—A total of 54,958 Missouri men had been given employment in the Civilian Conservation Crops, up to Oct. 15, according to an announcement by Robert K. Ryland, state director of the National Emergency Council. This included 49,957 enrollees and 5,001 non-enrollees, such as officers and supervisors.

From Oct. 1 to Oct. 15, there were enrolled 4,776 white junior selectees, 202 Negro juniors, 106 white veterans and 29 Negro veterans.

Of the 5,113, all the Negro juniors and veterans were used to bring existing Missouri companies to full strength; 1,506 white juniors were sent to Missouri companies located on, or near, the West Coast; 1,632 white juniors were organized into twelve new Missouri Companies, and sent to camps also on, or near, the West Coast. The balance of the white juniors were used to bring existing Missouri Companies in Missouri to full strength. Boys were not sent out of the State against their will, and no boy, who is an eligible voter, was sent out of the State except upon his own written request, Ryland explained, adding that the Missouri-Kansas district of the Corps was now under direction of Charles M. Bundel, Brigadier General, U. S. A., Fort Leavenworth, Kan.

#### Inspect All Foods

A virtually unknown activity is that of the Veterinary Corps Reserve Officers, on duty with the CCC, and who inspect all meat, meat food products, milk and milk products, which are produced, handled and delivered under sanitary conditions, and meet the standards of quality specified in the Federal Specifications under which they are purchased, Ryland continued.

The work of this organization in dairy inspection began a year ago. At that time a comparatively small number of pasteurizing plants and dairy farms in Missouri were under the supervision of an inspecting agency. In some localities a source of pasteurized milk was not even present, Ryland added.

Missouri Civilian Conservation Corps camps consume between 20,000 and 25,000 pounds of butter monthly. Meat and meat products consumed monthly by camps in Missouri approximate 130,000 pounds. In addition to this, the average monthly consumption of eggs is approximately 15,000 dozen and 5,000 pounds of cheese.

## THE DAILY DIGEST SAYS

### Urges Federal Farm Control

Sen. George McGill, of Kansas, said yesterday that it was "wholly impracticable" for each state to set up its own farm control program and predicted that the next Congress would amend the soil conservation act to continue federal control. "The agricultural program necessarily should be national in scope," he said. "The problem cannot be dealt with in any other manner. It is hardly conceivable that each state would enact uniform laws pertaining to agriculture." (A. P.)

### Cotton for Road Shoulders.

"In trying out cotton cloth as a stabilizer of thin bituminous road surfacing, the highway department of Rhode Island offers a new use of the process for firming up soft shoulders" reports Engineering News-Record (November 26). "The shoulder surfacing was on Ten-Rod road in Exeter.....Ten-Rod road completed last year is gravel, surface-treated with tar. The shoulders were left untreated and being very sandy have been a serious traffic hazard and this year it was planned to give them a bituminous surface treatment....The thought occurred of using cloth-reinforced construction on the soft shoulders. In general the cloth-covered only the ordinary shoulder width but on certain sections it was carried out to the toe of the slope to prevent erosion. The method of treatment was to apply 1-2 gallon per square yard of M. C. 2 (cutback asphalt) to the sand and then to lay the cloth, after which the cloth was given a sprinkling of 1-4 gallon per square yard of the same. M. C. 2 oil and a liberal coating of sand. A second 1-4-gallon treatment and sand blotter treatment has kept all vehicles from stalling although there was at first some rutting by trucks which had to be ironed out by rolling. It is believed that such trouble will disappear as the asphal sets up hard....."

### Strip Farming Benefits

"What would you do if you had six children to educate and your farm was washing away?" asks the Prairie Farmer editorially "That is the problem that confronted Frank M. Griffin of Bellaire, Ohio. There was only one way to do it and that was to anchor the topsoil. The most practical plan on his rough farm seemed to be strip farming. Strips of sod were left in the plowed fields to stop the wash. So effective was the plan that the Griffin farm, which in 1907 would only produce feed for 12 cattle and 3 horses now supports 38 cattle and 3 horses. Griffin says: "I only plow a strip once in a rotation. Our rotation is corn, oats and two or three years of alfalfa. If the alfalfa stand is good, we sometimes leave it an extra year. The plowed strips are kept narrow and the sod strips follow the contours. The top soil is longer washing away and the childrens are getting their education. So soil conservation and family conservation go together. The man who does a good job of both qualifies as a No. 1 citizen."

### Vitamin D in Eggs

Poultry Tribune (November) contains "New Vitamin Facts" by Dr. J. E. Hunter, Pennsylvania State College. He says in an introductory note: "It is easy to figure the value of supplying ample quantities of Vitamin D. The studies at the Pennsylvania State College have shown that hens require twice as much Vitamin D. as chicks. The additional cost of supplying the extra Vitamin D. is approximately 2 1-2 cents per hen per year.. Each hen receiving the extra amount of Vitamin D. ate slightly more feed and stepped up her average yearly production by 28 eggs. With eggs at 30 cents per dozen the farmer received an additional income of 58 cents for an added investment of 2 1-2 cents. In these days of intensive competition that is an excellent investment."

### Hybrid Seed Corn

L. F. Arnott, Indiana Farm Bureau Cooperative Association, reporting in the Hoosier Farmer (November) on hybrid corn in Indiana, says in part: "Experiments prove that the average yield of all hybrids tested exceeded the average yield of all varieties tested by approximately nine bushels per acre or about sixteen percent. But what is more important is this: are the best hybrids superior to the best open-pollinated varieties? The results at the Ohio Experiment Station, conducted during the same period of years, showed that the best hybrids exceeded the best open-pollinated varieties by approximately 13 bushels or 20 per cent. Since new hybrids are being developed each year, it is evident that the best hybrids in 1935 and 1936 are superior to the leaders in 1930. Naturally corn breeders and seedsmen, however small they may be, are pleased to have their forecast of improvement and performance so well confirmed by leading agricultural experiment stations in the Corn Belt States. Sceptical farmers may say that these results do not represent actual farm performance. Several hundred experiments, conducted on farms other than those of our experiment stations of the Central West show as the result of comparative records taken from open pollinated corn and hybrid corn that the average increase for the hybrids was 14 bushels per acre or 20 percent. These data adequately support the forecast that good adapted hybrids may be expected to outyield open pollinated varieties by 15 to 25 percent."

### Thornless Rose

The thornless rose, dream of flower lovers for centuries, has been developed at Attica, New York, from a single chance plant which "just happened to grow that way," Edward C. Stroh, horticulturist, said recently. He grew 3,000 thornless rose bushes this season, asserting that he had worked for years to develop such a rose, until he came upon the single plant three years ago. "It just happened to grow that way," he said. "From the single plant we developed three more the first year. Last year we grew fifty and this summer 3,000." The thornless rose is a large double flower. (A. P.)

### Vitaminized Egg Factory

"A city egg factory in which 'vitamined' eggs are produced and sold at a price 10 to 15 cents a dozen above the current market rates is attracting great interest in the poultry world," says The forecast (October). This 5-story factory, situated not far south of Chicago's loop, is the inspiration of a Chicago business man.....He heard of the battery system of egg production, investigated and studied it and engaged an expert poultryman to equip the building for hatching and brooding of chicks, for the rearing and developing of pullets and for housing over 20,000 laying hens. The working schedule at this egg factory is figured upon a 13-hour day for growing pullets and laying hens. The managing poultryman is putting Vitamin into the eggs by means of concentrated ration pellets and a special wet mash that is fed to the chickens at noon each day."

**B. Y. P. U.**

**Guide, Manual and Quarterlies**

The Baptist Young People's Union Forces of the nation can be supplied with B. Y. P. U. Guides, B. Y. P. U. Manuals, B. Y. P. U. Quarterlies and Magazines, Object and Pledge Charts, Gold-filled Pins. Celluloid Pins and other supplies for the young people, such as B. Y. P. U. Pennants and Arm Bands. Equip your Union with the necessary books, literature and paraphernalia.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The SUNDAY SCHOOL LESSON Commentary For 1937**

Once more the National Baptist Sunday School Lesson Commentary is on the market for 1937. The price is $1.00 per copy, postage paid. It contains all the lessons for 1937, with the authorized and revised versions; it has helps for many departments in the Sunday School. It should be in the hands of every pastor, superintendent and teacher. Bible students would do well to get one. It contains the subject and text of all the lessons for 1938.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Woman's Missionary Society LITERATURE**

**The Woman's Home Mission Guide,** price 15 cents; **Y. W. A. Guide,** 15 cents; **Shepherd Boy's League Guide** and **Girl's Auxiliary** combined, 15 cents; **Starlight Band,** 15 cents, with other literature for every department of the Woman's Mission Societies and Circles, are now ready. These include Missionary Society Buttons and Badges.

Send all orders for Woman's Missionary Literature to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Hope Magazine**

PUBLISHED MONTHLY

No better publication can be placed in the hands of women who are doing mission work and interested in the Fireside School development than Hope Magazine, published every month in the year, price 50 cents a year. It contains helps for every department of Woman's Mission Society Organizations, as well as suggestions for religious entertainments. For more than fifty years this Magazine has been an invaluable help. It was founded by the late Miss Joanna P. Moore.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

### New Meat Coating

"An effective new coating for preventing cuts of fresh meat from becoming dried out was patented recently at Washington," says The Forecast (September.) "The formula for this coating includes 57 percent water, 25 percent glycerine, 18 per cent gelatin and O.1 percent essential oil....While such coatings have been used on smoked meats for many years, the new patent extends the method to fresh meats. Butchers, hotel stewards and all who are responsible for the storage of large amounts of cut meat will appreciate the importance of such a protective coating.....The glycerine in the new formula absorbs moisture and keeps the gelatin in a flexible condition which prevents it from cracking. Thus the gelatin casing acts as a hermetic seal to keep out air, dust and germs. The essential oils, furthermore, exercise a germicidal action and retard spoilage to a marked degree.

Still another feature recommending the use of this coating is the fact that it may easily be removed by washing."

### Pumpkin-Squash Hybrid

"For nearly a hundred years research men have been trying to cross pumpkins with squash," says an editorial in American Agriculturist (October 10). "Now the State Experiment Station at Geneva announces that at last it has succeeded and has a dozen hybrid fruits. Maybe pies from the new hybrids will be better than the good old 'punkin' pie, but they'll have to go some if they are. Another interesting development in the vegetable work is the 'stinkless' or orderless Savoy cabbage developed by Prof. C. H. Myers of Cornell. The first of these new cabbages was recently placed on sale and seems to be rousing enthusiasm. In addition to its quality of being cooked without driving you out of the house, it also withstands drought well and produces good saleable heads of high quality."

### FARM POWER PROGRAM

Under impetus of a Government financed farm power program and intense activity by private utilities, there will be 1,000,000 highline-electrified farms in the country at the start of next year, the Rural Electrification Administration has estimated. Although the REA has given at least preliminary approval to about $25,000,000 in loans for extension of rural lines, officials admitted this figure was negligible when compared to rural lines financed by power companies themselves. They claim credit, however, for "starting the ball rolling." Figures made public by the Edison Electric Institute show that in the first six months of 1936 more farms were connected to electric lines than in any 12-month period since 1929. The E. E. I. estimated 71,243 farms were given electric service from January to June of this year, bringing the total of electrically connected farms to 860,000. Officials said the $25,000,000 in loans approved by the Rural Electrification Administration will supply power to 75,000 rural users in 35 states. (Press.)

### NEW BEET HARVESTER

"Table beets (where the top has to be pinched off without injury to the beet) have been harvested mechanically for several years and a main problem has been the development of a like machine for harvesting sugar beets (with an area of leaf scar above the ground which must be sliced off with the top)," says Business Week (September 26). "Big news to sugar beet growers is the success of Urschel Laboratories, Indiana, in perfecting such a machine.....The machine is manufactured under Urschel patents by Scott Viner Company of Columbus, Ohio (not by University of California engineers as erroneously stated in Business Week) and is not commercially available as yet....."

### ASPARAGUS STORAGE

"Experiments have recently been conducted in Germany," says Cold Storage (London, September 17), "in lonnection with the cold storage asparagus, with or without special wrappers, and also in regard to the keeping quality and sales value of asparagus after removal from storage. Asparagus in ordinary packing or already unwrapped after eight days storage showed withering, particularly in the upper and lower layers....Asparagus packed in cellophane remained fresh for a much longer period and was more readily saleable. Mould attack did not commence prior to two or three weeks storage and only when the asparagus was subjected to mishandling and damage. Washed asparagus was attachek by moulds sooner than unwashed asparagus, but when packed in cellophane, washed asparagus retained its whiteness and was easier to sell than the unwashed asparagus which turned bluish pink in its wrapping. The moisture given off by wrapped asparagus prevented loss evaporation but was often the cause of complaint. After cold storage, even for a period of two to three weeks, good quality asparagus withstood further transport without harm, provided the wrapping was in good order and the journey did not take longer than one night or half a day. After storage for two to three weeks, samples had a tendency to become brittle but the keeping quality was not lessened even after three weeks storage....."

### FROZEN FRUIT JUICES

Vernon L. S. Charley discusses the concentration of fruit juices by freezing (reprinted from the annual report of the Agricultural and Horticultural Research Station, Long Ashton, Bristol, England) in the Fruit Products Journal (Sept.) He summarizes as follows: "(1) concentrated apple juices have been produced by means of freezing and subsequent removal of ice; sugar contents in the concentrates have ranged between 45 and 55 percent; (2) the flavor of concentrates produced in this manner has been shown to be more attractive than that of vacuum evaporated samples; (3) three ciders have been concentrated by the cold process; the alcohol contents have been nearly doubled by this means."

### DRY ICE AND CEMENT

"Dry ice threatens to become important to the Portland Cement industry," says Business Week (Sept. 26). "Cement men are watching an experiment now on in Oklahoma where a company at Ada is shipping from 10 to 15 tons of dry ice a day as a byproduct.....The Ada plant installed apparatus with a capacity of about 15 tons a day and are now producing it at a cost of about $7 a ton. This they deliver within a radius of 60 miles using insulated trucks and handling the dry ice in large blocks with ice tongs. The delivery loss by evaporation is held to about 1 percent. They sell it for $30 a ton to the ice cream and carbonated beverage people, so that this by-product produces a revenue of from $300 to $450 a day. They could dispose of more if they had the dry ice capacity....."

### CATALASE RESEARCH

Catalose, an enzyme or chemical substance of vital importance in the processes of digestion and fermentation, has been actually observed at work for the first time, providing experimental proof for a theory held for more than half a century, according to a recent announcement at Yale University. Dr. Kurt G. Stern, visiting lecturer in physiological chemistry at Yale, in reporting on the results of the work, asserted that it give new approach to the study of digestion. Dr. Stern's work is regarded as a direct proof of the concept, held in the more modern theories of enzyme action, that direct chemical participation of the enzyme takes place at some stage in the process of transformation of foodstuffs. Isolating catalase and determining its constitution as his first research, Dr. Stern, basing his experiment upon knowledge that this enzyme is composed of a colorless protein and a pigment which gives it its color, separated the pigment from the protein, purified the pigment to a crystalline form and found it to be identical with the pigment, or hemin group, of the blood. He was able to transform this enyzme into hemoglobin by merely exchanging the protein of the enyzme for the globin or protein of the blood pigment, thereby showing the identity of the two hermones. (New York Times.)

### THE ARKANSAS GAZETTE, LITTLE ROCK,

(Continued from Page 2)

**Justice the Only Issue, Rules Judge Martineau.**

Efforts of Peacher's lawyers to show that there was a great demand for labor in Crittenden county last spring and that many Negroes who lived in the "quarters" in Earle "south of the railroad tracks" were idle, were ruled out by Judge Martineau.

"It wouldn't make any difference if everybody in Arkansas needed help," he said. "Violation of the law is not justified by the need for labor, and excess of idle labor, even if proved, would have no bearing on the question here. This jury is not called on to try the guilt or innocence of these men as vagrants. The question at issue here is whether or not they received a fair trial when they were arrested and convicted on the vagrancy charge and whether Peacher arrested them and took them to court for the purpose of securing their services illegally."

**Peacher, on Witness Stand Defends His Actions.**

Peacher, called to the stand late this afternoon, testified that he had been marshal since 1930, that he had known the Negroes whom he arrested for a number of years, that all habitually loafed about the streets and frequented gambling joints and "honkytonks."

He denied that he cursed the Negroes when he brought them into Mayor Mitchell's office.

Testimony of the Negroes that they were not fed by Peacher during the 48 hours that they remained in jail was denied by the marshal, who said that he sent food from a restaurant to them in addition to food which their relatives supplied.

He also said that they were well cared for at the stockade on the tract that he was clearing, and that a doctor attended two of them during that time. The Negroes were not held there under armed guard, he said. "Some of them got away, and we didn't try to get them back," he continued. "All of them could walk off if they wanted to. I was glad to get rid of them."

Peacher said that two of the Negroes came to Earle on short furloughs while they were in his custody. He said that J. B. Dulaney, chairman of the board of Earle Special School District, came to him last February with a proposition to clear land belonging to district in the Sixteenth section in return for wood and for use of the land for two years. He said that subsequently he arranged for use of convict labor with County Judge Johnson through Sheriff Howard Curlin. Both Curlin and Johnson had given similar testimony.

"The jail was filled up most of the time with prisoners, and the city and county had to feed them," Peacher said, "If there wasn't any other way I had to feed them out of my own pocket. We figured we had better get them to work."

Asked by government lawyers why he had not arrested the accused Negroes for gambling, which he charges was their principal occupation, Peacher replied: "We don't arrest anybody for gambling over in our country."

He said the Negroes were searched when they were put in jail, and that none had money. All had testified that they had money when arrested.

Warrants for arrest of the Negroes were not secured until the day after they were arrested and jailed, he said. The Negroes knew their rights in court at the trial before Mayor Mitchell, Peacher said, but did not offer evidence.

Peacher's demeanor in the courtroom was confident, and he frequently appeared amused. On the witness stand he was defiant and arrogant, particularly under cross-examination.

**Others Testify in Support Of Peachers' Story.**

Everett Hood, deputy sheriff of Crittenden county, testified that he had been in Earle almost daily for the past six years and that all of the Negroes were habitual loafers, but under cross-examination admitted that he had known some of them only a short time.

Dulaney, chairman of the School Board, who farms between 1,200 and 11,500 acres of rented land, identified a lease contract between the School Board and Peacher dated May 5, shortly before arrest of the eight Negroes, giving Peacher all timber and use of the land for two years in return for clearing it. He said that the school district financed construction of a stockade and two other buildings on the land immediately afterward. Efforts to introduce testimony as to the impoverished condition of the school district and need for funds were overruled.

John Clay, Negro, who worked at the "Sixteenth Section" during construction of the buildings, testified that the last one was finished a few days before the arrests for vagrancy

Aubrey Lancaster, living near Earle, said that he told Peacher that if he "would get the loafers off the streets people on the farms can get some work done," and added that others had told Peacher the same.

**All Arrested Negroes Deny They Were Vagrants.**

The government did not present evidence supporting one count of the indictment relating to arrest of a Negro named Wesley Millender, Negroes named in the other seven counts and called as witnesses today were Wingfield Anderson, 51; John Curtis, 22; Powell Willis, 22; Moses Dunn, 52; Charles Dean, 62; Lewis Fredick, 36 and Mark Love, 42.

Anderson testified that Peacher took him from the porch of his home in Earle. He said that he had been drawing workmen's compensation of $10 per week from the Natalbany Lumber Company of Baton Rouge, La., for some months pending final settlement for damages for an injury received while in the employ of the concern, and that $1,700 settlement was made.

Ashton L. Stewart, Baton Rouge lawyers, who represented Anderson in a suit against the company, corrobrated this and produced receipts for funds sent Anderson shortly before and after his arrest by Peacher.

The other six Negroes testified that they were working at the time of their arrest or had been working, and all said that they had some funds, had food in the houses where they lived, and were not in danger of becoming public charges.

### LARGER COTTON CROP PREDICTED

Federal Crop Reporting Board says this year's crop (fore cast) as of November 9th will total 12,400,000 bales. The average yield for the United Satets is 199.7 pounds lint per acre. Ginnings of this season's crop to beginning of Nov. 1st., is as follows:

| | |
|---|---|
| Alabama | 1,050,722 |
| Arkansas | 1,061,452 |
| Florida | 26,881 |
| Georgia | 926,366 |
| Louisiana | 713,732 |
| Mississippi | 1,701,997 |
| Missouri | 25,1925 |
| N. C. | 348,024 |
| Oklahoma | 224,640 |
| S. C. | 558,798 |
| Tennessee | 340,713 |
| Texas | 2,302,841 |
| Virginia | 17,992 |

## FRUIT DARKENING CAN Bt PREVENTED BY NEW PROCESS

(Continued from Page 1)

tries is restricted, since the food laws of many European nations do not permit food to be sold, which contains more than a very small amount of sulphur dioxide.

Research was begun recently by the Bureau of Chemistry and Soils with the object of finding a satisfactory method of preventing the discoloration of the cut fruit (while it was kept or being) which could replace the sulphuring process. The investigation started with a study of the enzyme reactions that caused the darkening of cut fruits. It was successful in test tube where they could be injected, and as a result it appeared that several classes of substances ought to possess the property of inhibiting the discoloration. Of these the great majority were poisonous, but one class seems to be harmless, because it occurs in many foods. This is the class of sulphydryl-containing amimo acids and peptides, typified by glutathione and cysteine.

Experiments with these substances were made on apples of a variety which darken rapidly when cut (Paragon). The results showed that only very small amounts of these substances were necessary to completely inhibit the darkening of the apples.

The application was simple; sliced apples were sprayed with a very dilute solution (O. 1. to O.25 percent) of the chemical and then placed in a drier where they were handled as in an apple-drying plant.

In technology these chemicals are as yet rare, although if there were any great demand for them they could probably be made cheaply enough. The investigators knew, however, that a substance related to whose with which they had experimented is often found in pineapple juice. The next step was therefore to spray the fruit with pineapple juice which contained the substance. The effect of the pineapple juice was weaker than that of the chemicals, but the result was quite satisfactory.

Fruit dried after spraying with pineapple juice is, of course, covered with a thin film of dry residue from the juice. This does not seem objectionable but it may be avoided by first fermenting the juice, removing the yeast and alcohol, and using the greatly purified liquid in the spraying process.

Another application of this finding is that cut-up fruit, such as apples, apricots, bananas, (if they are not too ripe) peaches, and probably many others can be stored in the cold for as long as 24 hours without turning dark if they are immersed in pineapple juice or if a small amount of one of the chemicals mentioned is added to the juice which covers them. In the event that the pineapple juice is not already acid a little lemon juice should be added to it, since the darkening is more easily prevented in acid solutions.

## PRACTICE OF HOME CANNING SERVES TO FILL UP LARDER

(CONTINUED FROM PAGE 1)

to interest you in canning vegetables which are least expensive at the moment.

Peas, beans, tomatoes and corn . . . are the staples one always thinks of when canning. Just now they are one-half or less than one-half of their cost during the winter months. If you buy them by the bushel, from the wholesale market, you can even better those figures, so putting them up now is a real saving.

This year why not go a little farther with corn than you usually do and instead of canning it plain, include green peppers, okra, tomatoes and onions, so you will have all ready to serve jars of delicious Spanish corn which need no preparation but reheating and a big piece of butter when you want to serve them. Here is an excellent recipe:

### Spanish Corn

Select tender ears of sweet corn, clean well and cut from cobs until you have two quarts of cut corn. To this add two quarts of fresh okra, sliced very thin; eight green peppers (seeded) and six small onions, both chopped very fine, Scald and peel tomatoes and cut them in rather small pieces, discarding the seed pulp. Add four quarts of tomatoes to the other vegetables and mix all together. Add eight teaspoons salt, one teaspoon pepper, eight tablespoons sugar. Cook over a slow fire for 30 minutes, stirring frequently.

Have ready the hot sterilized jars; pour the corn mixture into them, put rubbers and covers on loosely and cook for one and three-quarters hours in a kettle or boiler filled with hot water that comes within an inch from the tops of the jars. Tighten the jar tops as soon as you have finished processing and this canning job is completed.

You may can fruits and vegetables with nothing more than a saucepan and your jars for equipment, so let no one make the excuse that to accumulate the proper canning equipment would require the expenditure of more money than would be saved by doing the work. It is of course, wonderful to have all the latest implements and gadgets . . . but if economy is the watchword, the deed can be done without extra cost.

When selecting fruit for preserving or canning, remember that it is best just before it is perfectly ripe, as then it holds both its shape and full flavor. For jelly making under ripe fruit is even better than that which is thoroughly ripe, because the pectin which is the jelly making substance diminishes as fruit ripens.

## REDUCED MEAT SUPPLY FORECAST FOR NEXT YEAR

### Agriculture Department Predicts Pork and Better Grades of Beef Will Be Scarce.

WASHINGTON, Nov. 10.—"The smallest supply of meats in more than 15 years" is forcast in a Department of Agriculture report on "Meat Animals and Meats in 1937."

"The reduction will be most pronounced in pork and in the better grades of beef," the survey said.

Another department report predicted a rise in dairy prices in 1937.

Discussing the fact that Southern state last year produced 2,000,000 more hogs than in 1930, while the corn belt's output was 20,000,000 fewer than in 1930, the deparment said the Agricultural Adjustment Administration program had been a contributing factor. The trend was attributed "very largely," however, to drouth in the corn belt. The AAA program in the South, shifting much acreage from cotton and tobacco to feed crops, was described as an aid to pig production in that section.

## Flight Okay "If Successful" Says Patterson

Tuskegee, Ala., Dec. 3—(ANP) Dr. F. D. Patterson, president of Tuskegee, said his only communication with Col. Hubert Julian regarding his proposed 7,000 mile flight was a letter in which he told the flyer that the aerial jaunt would have "a favorable effect if it is successful."

## Continue Suit of Flogging Victims

Jonesboro, Ark., Dec. 3—(ANP)—Three civil cases in which Miss Willie Sue Blagden and Eliza Nolden, both of Memphis, and J. M. Reese, of Bolivar county, Miss., all three white, are asking $15,000 each for damages resulting from floggings by Earle and Crittenden county residents last summer were continued last week pending the outcome of the Peacher slavery trial.

## LAWYER DIES

Jacksonville, Fla. (C)—Hon. W. W. Parker, one of the most able lawyers of the state, died of a stroke last Monday after one day's illness. Mr. Parker, who had lived here for thirty years, was a native of the Bahamas and founded the Citizens Industrial Life Insurance Company several years ago.

## FLORIDA LIFTS VOLUME CONTROL OF GRAPEFRUIT

Lakeland, Fla., (UP)—The volume prorate control of Florida grapefruit interstate shipments has been lifted by the Florida citrus control commission when it was advised there was no immediate prospect of regulation of Texas citrus marketing.

The commission has held grapefruit shipment to 600 cars a week in order to sustain the grapefruit market. Hereafter shipments will be regulated only by grade of fruit.

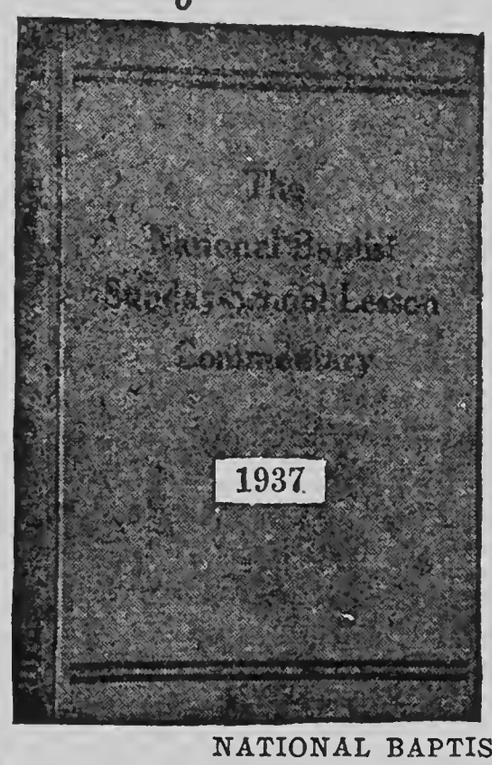
The commission ordered a volume prorate on orange shipment for the first time this year. Only 600 cars of oranges will be shipped from the state next week. It was not determined whether volume restrictions on orange shipments would be continued after that time.

Grapefruit shipments were limited to first and second grade fruit with second grade sizes ranging from 36 to 80 inclusive and the second grade fruit to be only 30 per cent of the total shipped. Tangerine shipments were limited to first and second grades, size 168 and larger.

## "FLYING BOXCARS"

"Flying boxcars" will start in national all-freight air-express in September under plans which the Transcontinental and Western Air, Inc., is reported to be developing, says an Associated Press report. Tests still being conducted by the air line have demonstrated that Ford tri-motored planes, with all seats stripped out and special doors replacing passenger entrances, can function economically as air-freight carries. The rated load for such a ship is 3,500 ponnds. Cargoes are now being developed in various communities where high speed for freight shipments would be an impelling consideration. Two planeloads of flowers weekly from Los Angeles is one prospect getting attention. These would go to New York and Chicago. Radio parts, automobile parts, food products and clothing would move westward in return.

# Sunday School Lesson Commentary



**1937**

**PRICE $1 PER SINGLE COPY**

**Six Reasons Why You Should Use It:**

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theories leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

# THE MODERN FARMER

Vol. IX. NASHVILLE, TENN., JANUARY 15, 1937 No. 12.

# Agriculture as a Nat'l Problem By Mastin G. White, Solicitor

## ADDRESS DELIVERED AT FT. WORTH, TEXAS

### Official of U. S. Department of Agriculture Spoke to Texas Agriculturists

Ft. Worth, Texas—This is a very happy occasion for me. In the first place, it affords me an opportunity to return to my native State of Texas; that is, if one who was born in the Free State of Van Zandt can claim to be a native Texan. Second—and this is the more important reason—I am delighted to bring a word of greeting to the Texas Agricultural Association a farm organization which is very highly esteemed by the Department of Agriculture. Your wholehearted cooperation in the previous triple-A crop adjustment program and in the present agricultural conservation program is greatly appreciated by the Department.

Since January 6, 1936, the date of the triple-A decision by the Supreme Court, there has been much discussion throughout the country as to whether agriculture is, in fact, a purely local problem and, therefore, outside the scope of the powers conferred upon the Federal Government by the Constitution, or whether the interests of agriculture are of such vital importance to the general welfare of the country as a whole that agriculture can be characterized as a national problem and, therefore, one which is a proper concern of the Federal Government.

Nationwide discussion of this question seems very strange indeed to persons who are familiar with the history of the relationship in this country between the Federal Government and agriculture. The fact is that, throughout the history of the nation, the Congress, the several Presidents and the people have always regarded the general interests of agriculture as proper subjects for the aid of the Federal Government. For example, in his Eighth Annual Message President Washington said: "It will not be doubted that with reference either to individual or national welfare agriculture is of primary importance. In proportion as nations advance in population and other circumstances of maturity, this truth becomes more apparent, and renders the cultivation of the soil more and more an object of public patronage. Institutions for promoting it grow up, supported by the public purse; and to what object can it be dedicated with greater propriety?"

A few years later, in a Congressional report dated February 2, 1817, the statement was made that: "The interests of agriculture must, therefore, be primarily important to the people of the United States, and must at all times deserve the warm support and liberal patronage of Government."

Beginning with the Act of March

## WILL AID NEGRO FARMERS

### Nineteen Thirty-seven Conservation Program As Outlined

Washington, D. C.—Negro farmers who were benefited by the Soil Conservation program of 1936 will be encouraged by the recent announcement of Secretary of Agriculture Henry A. Wallace that the program will be continued in 1937 with increased payments for growing vegetables and fruits and a more extended opportunity for planting soil building and conserving crops.

"For the 1937 program" says secretary Wallace, "additional emphasis has been placed on soil building and more money will be available for soil building practices."

As in 1936, payments will be divided into two classes: Class I. for diversion from soil depleting crops and Class II. for soil building.

Concerning the diversion payments, the statement says that in these two payments are combined "most states of the Southern Region into one payment of $9.00 pe racre with a deduction of $3.00 per acre for failure to match the diversion with an increased acreage of soil conserving crops."

For cotton, the maximum diversion allowed will be 35 percent of the total average acreage of the farm and the diversion rate will be 5 cents per pound based upon the average lint yield for the paticular community in which the farm is located.

"The rates for approved soil building practices such as liming, terracing, reforestration and seeding some soil building crops," the statement continues, "will be established for sates and regions and will be in line with those of 1936."

## Kudzu Stopped Gullies And Yields Good Feed

E. H. Lazenby, Atkins, Ark., has found a good remedy to stop a bad wash in a field, related W. R. Daniel, Pope County agent. Several years ago Mr. Lazenby found that a three-acre field on the lower side of his farm was terraced, and the three acres were set with kudzu plants in four-foot checks and worked in corn for two years until the plants were fully established.

The kudsu was allowed to run till 1934, when hay was cut, yielding more than a ton to the acre the first year, said Mr. Daniel. A hay crop has been harvested each year since, and Mr. Lazenby stated that while the hay is a little coarse, the stock seem to like it and feed freely on both the hay and the green plants.

This year about half and acre of the original patch was put back in cultivation and no difficulty was ex-

(Continued on Page 7)

## FRESH VEGETABLES STORED

### Frozen Stocks to be Reported Monthly According to Bureau of Ag.

Washington, D. C.—Cold storage holdings of frozen fresh vegetables will be reported monthly by the Bureau of Agricultural Economics beginning January 1, 1937. The foods are peas, cut beans, lima beans, corn on the cob, and spinach.

Bureau officials said there has been a large increase in the handling of frozen fresh foods in recent years. Decision to issue monthly cold storage reports on some of these products was made in response to requests by the Association of Refrigerated Warehouses.

The Bureau has been issuing monthly cold storage reports on a long list of products since 1916. These products include fruits, vegetables, butter, cheese, eggs, poultry, meats, lard, fish, and more than 30 other foods.

For the past 13 years, the Bureau has been reporting holdings of frozen and preserved fruits as a group. Now it will report separately on strawberries, blueberries and cherries in this classification.

The Bureau's cold storage reports are used by warehousemen, dealers, farm organizations, and many other agencies interested in the buying and selling of foods. The reports are released about the twelfth of each month from Washington and from the various market news offices of the Bureau. They are published also in most of the leading food trade journals.

## Farmers Farthest Down To Have Wallace Aid

Washington, D. C.—In consideration of the plight of that farm labor group in which Negroes are most conspicuous, Secretary of Agriculture Henry A. Wallace, in an address delivered during the recent annual meeting of the American Farm Bureau Federation which was held in Passadena, California, said that "increased opportunity" must be provided "for those farm people whose standard of living is now barely on a subsistence basis."

Other measures necessary to attain "agricultural security in its broadest sense," as enumerated by Secretary Wallace, included: opportunities for farmers to organize in their own interests; fair and stable prices for farm products; farm production in keeping with domestic and foreign needs; extension of foreign markets; conservation of soil fertility; retirement of sub-marginal lands; crop insurance and better opportunities for tenants to become land owners.

"Conservation of soil is the last line of defense against national suicide," said the Secretary in this notable address. And he was equally as emphatic on the subject of crop insurance when he said that "without such insurance the enterprise of farming has been the most speculative in the world."

## WHAT THE DAILY DIGEST SAYS

### Discourse on Seedless Fruits, Canned Rabbits And Fertilizer Tanks

"Sooner or later you wil be building a fertilizer tank," says an article from the Pacific Rural Press, printed in condensed form in Farm News Digest (November). "They are coming on the tenant farms, as well as where the farm is operated by the owner. At Arcata, California, W. E. Tonini is operating a leased dairy farm where a fertilizer tank is a part of the equipment. The tank is built beside the barn and is an integral part of the wooden corral which is quite typical where dry footage calls for something better than dirt for winter yardage of dairy cows. This tank is 60 feet long, 16 feet wide and 6 feet deep. Mr. Tonini has a fine herd of about 40 cows and he empties the tank twice a year, getting about 90 loads of liquid manure at an emptying and covering about 8 acres of land with the liquid manure. He says that the tank is large enough to take care of 50 cows. The tank is emptied with Swiss-made pumps. There is practically no odor from this liquid manure and practically no loss of fertility. W. D. Pine, farm advisor, who introduced the fertilizer tank of Humboldt County says that the average tank probably represents a cost of pretty close to $500 by the time you build the tank, make a tank wagon and buy a pump. During the past year something like 50,000 acres have been irrigated and fertilized in Cailfornia by dissolving compressed ammonia gas in the irrigation water. You can buy gas

(Continued on Page 8)

## Gardens Brought In $926 And Supplied Household of Seven

Mrs. J. W. Worrell, member of the Midway Home Demonstration Club, marketed $926.84 worth of garden products from her 22 varities, said Miss Esther Tennyson, St. Francis county home demonstration agent. Besides this she grew enough products to feed her family of seven and to can for the winter food supply.

The vegetables were sold on the local market in Forrest City, through both stores and private customers, Miss Tennyson related. She said this garden was a year 'round producer, and that Mrs. Worrell grows her own plants in hot-beds and cold frames.

## FARM INCOME GAINS REPORTED

### All Regions Show Improvements Over Previous Year Is Stated

Washington, D. C.,—Gains in cash receipts from the sale of principal farm products during October over those of October last year were recorded in each of the six major regions of the United States, the Bureau of Agricultural Economics reported today.

The largest gains of 15 and 12 percent, respectively, occurred in the East North Central and the South Central States, while fairly uniform increases ranging from 6 to 9 percent took place in the other four regions. Cash receipts were smaller than in October 1935 in 11 States, with one or more of these States located in each of the regions other than the North Atlantic States.

For the entire country cash income from farm marketings this October amounted to $886,000,000 a gain of 10 percent over October 1935.

Receipts from marketings of principal crops alone were larger this October than a year ago in every region except the West North Central States, and receipts from livestock and livestock products were larger in all regions other than the South Central and Western States. Gains in income from crop items in the various regions resulted mainly from the larger receipts from potatoes, corn, and barley in the North Atlantic and East North Central States, from cotton in the two Southern regions, and from sugar beets, cotton, and some miscellaneous crops in the Western States. Income from apples and wheat was less than in October a year ago in every region.

The gains in income from livestock and livestock products reflected chiefly the higher prices received for dairy products and the larger marketings of hogs. In the South Central and Western States, smaller marketings of cattle and calves, together with somewhat lower prices, offset the gains from dairy products.

North Dakota and South Dakota were two of the States to show substantial decreases in October receipts from the sale of principal farm products as compared with a year ago. These decreases were the result of very small marketings of wheat and flaxseed following short crops this year. In Virginia where income from apples, tobacco, and meat animals was considerably less than in October, 1935, receipts from farm marketings were down 29 percent. Small marketings of cotton from Oklahoma and wheat from Montana, together with the smaller receipts from cattle and calves in both of these States, reduced their cash receipts from farm marketings by 38 and 33 percent, respectively, from those of October a year ago.

(Continued on Page 8)

## ADDRESS DELIVERED

(CONTINUED FROM FAGE 1)

3, 1839, countless approcpriations have been made by the Congress, at the behest of the people and with the approval of the various Presidents, for the protection and promotion of agriculture on a national scale. These appropriations have included provisions for the collection and analysis of agricultural statistics; for the distribution of seeds; for agricultural education; for the study and suppression of plant diseases and insect pests; for inspection and quarantine work in connection with livestock and poultry and for the study and eradication of animal diseases; for experiments in animal feeding and breeding; for studies in the fields of soil bacteriology, plant nutrition and soil fertility; and for many other agricultural purposes.

In addition to the expenditure of money during the period from 1839 to 1936 to foster and promote agriculture in the United States, the Federal Government, in response to the demand of the people, has also made frequent use of its regulatory powers in order to protect the interests of agricultural producers. Under the Animal and Plant Quarantine Acts the Federal Government has used its powers of compulsion to protect the livestock and crops of farmers from the spread of animal and plant diseases and insect pests. In order to prevent manipulation of the prices of agricultural commodities and to secure for farmers honest returns for their products, the Govenment in various statutes has provided for the regulation of certain middlemen who handle or deal in agricultural commodities. Among those who have been regulated in the interest of the farmers might be mentioned the packers, the large stockyards of the country, and the commission men and dealers who operate at the stockyards; the commission merchants, dealers and brokers who handle fresh fruits and vegetables in the current of interstate commerce; and the futures exchanges and the commission merchants and brokers who deal in futures contracts covering cotton, grain and other important agricultural commodities.

This conception of agriculture as a national problem was especially prevalent in the Congress and in the executive branch of the Govenment in March of 1933. You will recall that, during the World War, the farmers of the United States had greatly expanded their acreages of the so-called basic agricultural commodities, such as cotton and wheat. This was because of the clamor for these products upon the part of European nations, their own man-power being withdrawn from agriculture and engaged in the conduct of the war. This expansion of agricultural production in the United States was directly stimulated by the Federal Government after this country entered the war. Following the close of the war, the European countries began to resume their production of agricultural commodities. By 1925 Europe had generally restored agriculture to its prewar status and diligent efforts were made further to increase agricultural production because of a desire for salf-sufficiency in the event of a future armed conflict. Surpluses of agricultural commodities began to accumulate in this country as European nations resumed their agricultural production and as the foreign demand for American farm products declined as a consequence. Furthermore, the policy of extreme tariff protectionism in this country after the war resulted in the retaliatory erection of trade barriers in Europe aimed at protecting their domestic agriculture and limiting the use of American products. These European tariffs, import quotas and embargoes greatly restricted the export market for our agricultural com modities.

While export markets for American farm products were curtailed because of the factors just mentioned and while purchasing power in this country declined with the beginning of the industrial depression in the fall of 1929, the production of agricultural commodities continued on a high level and even increased. Because of the fixed charges on his land, the farmer had no choice but to continue production at an excessive rate in a vain attempt to meet expenses. The result was that the towering surpluses which accumulated drove the prices of farm products to their lowest level in many years. For example, we Texans will recall that the world carryover of United States cotton at the beginning of the 1932-33 season was 12,560,000 bales and that Texas farmers in December of 1932 received about 5 cents per pound for their cotton. That the farmers of the country were more severely affected by the depression than other portions of the population is demonstrated by the fact that the ratio of the prices of agricultural commodities to the prices of nonagricultural products was the lowest in 1932 that it had been since the Civil War and the farmers' share of the national income was the lowest in our history.

By March of 1933 the farmers of the country, as a group, and all of the allied industries depending upon the farm market, upon the value of farm land and upon the prices of farm products, were practically upon the verge of financial ruin. This deplorable situation brought home to the people of the United States, as never before, the realization that agriculture was indeed a national problem and that it was incumbent upon the Federal Government to exert its most diligent efforts in order to avert the impending disaster. In the emergency, Congress passed and the President approved the crop adjustment provisions of the Agricultural Adjustment Act. The primary task of the triple-A program in 1933 was to elimiante or reduce the surpluses of agricultural commodities and to restore farm prices to their prewar level of purchasing power and thereby to promote national recovery. Programs to adjust the poduction of cotton, wheat, corn-hogs and tobacco were launched as rapidly as possible.

The AAA crop adjustment programs were carried on for a period of three years, and I might add that the farmers of Texas played a very important part in the success of the program. A total of 907,424 crop adjustment contracts were signed by Texas farmers and accepted by the Agricultural Adjustment Administration. While it is impossible mathematically to evaluate the results of the triple-A adjusment programs, it is significant to note that, for the United States as a whole, chiefly as a result of the administration's AAA. monetary and other activities, the yearly average price of all farm products increased 66 per cent between 1932 and 1935, the last year of the adjustment program. The whole cash income from farm production in the United States rose from $4,377,000,000 in 1932 to $7,201,000,000 in 1935. In Texas, the cash income from farm products increased from $294.358,000 in 1932 to $461,030,000 in 1935.

With the increase in the purchasing power of the farmers, industrial prosperity began to return to the nation. Factories which had been still became once more scenes of busy activity; unemployed workers found jobs in industry; wages were increased; dividends were declared; industrial production, car loadings, bank clearings, building activity—all increased. It has been estimated that increased agricultural purchasing power contributed about 40 per cent to the rise in industrial activity between 1932 and 1935. Consequently, it would seem that, in fact, the Congress and the President were correct in March of 1933 when they proceeded upon the belief that the expenditure of Federal funds to adjust the production of agricultural commodities and thus restore farm purchasing power would, in the words of the Constitution, "provide for the * * * general welfare."

It is still the belief of the people, I am sure, that agriculture is a national problem and that the general welfare of the country as a whole requires that the interests of agriculture be protected and fostered. The cessation of the adjustment programs under the Agricultural Adjustment Act, and the disappearance in large measure of the 1932 surplus problems, have afforded an opportunity to develop the present phase of agricultural policy—one that deals with the more fundamental problems of soil conservation, heretofore largely neglected. The conservation of our natural resources, the maintenance of the fertility of the soil, and the promotion of sound farm management practices are recognized as matters of national concern.

It is upon this theory that the present agricultural conservation program, under the Soil Conservation and Domestic Allotment Act is being conducted. The Secretary of Agriculture endeavors to accomplish the objectives of the act through the 1936 agricultural conservation program by offering payments to producers (1) who carry out such soil-building practices as the Secretary has determined will restore or conserve the soil or prevent its erosion, (2) who change the use of a part of their land by shifting from the growing of soil-depleting crops to the growing of soil-conserving crops or the maintenance of soil-conserving practices, and (3) who match the growing of certain soil-depleting deficit crops with the growing of certain soil-conserving crops. The performance for which any payment is offered, and the rate of payment offered for a particular performance, is, of course, varied throughout the country to facilitate the adaptation of the program to conditions existing in the different regions involved.

The 1937 agricultural conservation program, which is now being developed with the aid of farmers throughout the country, will in all probability be of the same general character as the 1936 program. However, with more time in which to develop the 1937 program than was available for the formulation of the 1936 program, and with the experience gained from the operation of the 1936 program, it is anticipated that the Secretary of Agriculture will be able to develop a new program which will better effectuate the purposes of the act during the calendar year 1937.

In accordance with the present law, the administration of the agricultural conservation program, beginning January 1, 1938, is scheduled to be transferred from the Secretary of Agriculture to the 48 states. Thus far, only the legislatures of five States have enacted legislation looking toward the inauguration of State programs. Consequently, in order to be in a position to cooperate under the law as it stands, it will be necessary for the remaining forty-three State legislatures to pass appropriate legislation during 1937 and for each of the forty-eight States to designate an agency to conduct the State program. Furthermore ,assuming they wish to parti-

cipate, each of these State agencies will have to devise a plan for carrying out the program and this plan must be submitted to and approved by the Secretary of Agriculture.

The conception of agriculture as a national problem is also the motivating force behind the program which the Department of Agriculture, under the authorization of Congress, is carrying on at the present time for the control of soil erosion throughout the country. As a nation, we have become acutely conscious of the problem of soil erosion within the last three years The floods which occurred in that period, and especially the dust storms which spread their black pall over half the area of the United States, reaching out from the Great Plains area even to New York and New England, have served to make every American conscious of the importance of controlling erosion.

I am sure that you are all familiar with the far-flung program of erosion control which has been instituted. More than 150 demonstration areas have been marked out within the United States. Within each of these demonstration areas one or more erosion control demonstration projects have been established. As you know, the Department of Agriculture enters into agreements with the individual farmers whose lands lie within the project boundaries. Under these agreements the Department cooperates with the landowner in doing everything necessary to prevent and control erosion. The farm is intensively surveyed and a plan of operations is mapped out. Thereafter gullies are dammed and filled; steep slopes are put into grass and timber; cropping programs and tillage practices are revised; sloping fields are terraced, contour furrowed and listed; dirt hummocks are leveled; farm management practices are revised—all in the interest of utilizing fully the resources of the farm as part of a balanced agricultural program which will conserve the soil and its resources. The Department contributes materials, labor and technical supervision to these operations on private lands.

Fifteen of these projects have been established in Texas, with headquarters located in Fort Worth, Amarillo, Temple, Lindale, Dalhart, Lockhart, Garland, San Angelo, Nacogdoches, Dublin, Mount Pleasant, Vega, Hereford, Channing and Stratford. Incidentally, this is a larger number of projects than has been established in any other single State.

As we face the future it is with a confident belief that the foundation upon which the Department of Agriculture was erected—namely, the principle that agriculture is a national problem—will become firmer and more deeply imbedded in the political structure of the nation as the years go by. It is anticipated that further expressions of the principle in action will be worked out by the Government and the people.

At the present time, one proposal in this direction which is receiving wide consideration is the matter of crop insurance. While crop insurance has received consideration in the Department of Agriculture over a rather long period of time, the present nationwide discussion of crop insurance can be attributed, no doubt, to the devastating droughts of 1934 and 1936 and to Secretary Wallace's interest in what he has termed the "ever-normal granary" method of bridging years of crop surpluses to years of crop failure in order to protect the interests of both producers and consumers. When these droughts wiped out in some cases and in others greatly reduced farmers incomes over wide areas of the country, this directly affected all business activity in the particular areas and also effected to some extent the business interests throughout the country. Also, it was necessary for the Government to provide great sums of money for drought relief. In 1934, for example, an emergency fund of more than $500,000,000 was set up. These pecuniary considerations, quite apart from the question of the welfare of the farmers themselves in the drought-stricken areas, emphasized the need for some plan of insurance which would absorb the shock of devastating droughts.

As you know, some time ago the President appointed a committee, with the Secretary of Agriculture as chairman, to determine whether a practical program of crop insurance could be worked out. According to recent announcements, the committee does not contemplate action on more than one or two crops at first. The committee has studied the possibility of working out a program in connection with wheat, corn and cotton, but producer interest has been expressed chiefly in wheat. The matter of providing for a system of payments in kind, rather than the payment of money premiums, has been considered. It has been said that such a plan would be beneficial both to producers and consumers because it would result in the storing of food products in time of plenty, to be available in time of want. Under such a plan, it might be arranged for farmers to pay their premiums only in years of bountiful crops. In a good crop year, the farmer would not only pay his premium for that particular year, but also for any preceding years when crops were poor and, as a consequence, no premiums were collected.

Another long-time program which is now under consideration relates to the problem of farm tenancy. This is a matter which is of especial interest to Texans and to people throughout the South. In 1880, tenant farmers constituted 36 per cent of all the farmers in the South. The percentage of tenant farmers had increased to 47 per cent in 1900, to 50 per cent in 1920, and to 54 per cent in 1935 In Texas, tenant farmers represented 38 per cent of all farmers in 1880; 50 per cent in 1900 53 per cent in 1920; and 57 per cent in 1935.

The insecure and uncertain tenure enjoyed by farm tenants has been very disadvantageous to the country as a whole. Moving frequently from place to place, as they have in the past, tenants could have but little interest in the conservation of the soil. As a consequence, the progressive depletion of soil fertility has been especially noticeable in those sections of the country where farm tenancy has been prevalent. Believing that active steps should be taken to relieve the situation, the President recently appointed a commission, headed by the Secretary of Agriculture, to study the problem of farm tenancy and to make recommendations concerning it. While I cannot speak for the committee, I am sure that the members have a realistic approach to the problem and that no drastic or revolutionary program will be recommended. It is probable that the committee will endeavor to devise means whereby tenants, or at least some of them, who have an appreciation of their own responsibilities in the relationship of landlord and tenant may be afforded an opportunity to enjoy a secure tenure upon land suitable for the making of a better living. Also, a plan will doubtless be worked out whereby, as these tenants acquire and demonstrate ability to manage their own affairs, they can acquire and own their land. It is likely that the committee will recommend experimentation in order that solutions suitable to the different aspects of the tenancy problem in different parts of the country may be achieved. Many factors bear upon the problem and these factors vary in the different parts of the United States. Consequently, it is not to be anticipated that a single solution for the tenancy problem can be discovered.

Recent newspaper accounts have carried the information that farm leaders, especially in the South and Middle West, are concerned over the matter of maintaining with respect to export crops the balanced production which has been achieved during the past three years. The ruinous financial effects of surpluses for which there is no market and the necessity for a balanced production of those agricultural commodities which are sold on the world market, had long been recognized pior to 1933. As early as 1922, Secretary of Agriculture Henry C. Wallace, father of the present Secretary, stated that: "Both the farmers and the consuming public would be benefited through more stable production and therefore more stable prices." And in 1928, Secretary of Agriculture Jardine said: "When production outruns consumption the producer suffers materially, but it does not follow that the consumer benefits. Studies made by the department show that overproduction results in ruinously low returns to growers without necessarily affecting retail prices proportionately."

The necessity for maintaining a proper balance between the production and consumption of agricultural commodities would seem to be as important today as it was in 1922 and in 1928, when Secretaries Wallace and Jardine, respectively, commented upon the situation, or in 1933 when active steps were taken to alleviate the distressing condition brought about by the gigantic surpluses of agricultural commodities which had accumulated. It might be otherwise if the products which the farmers of the country buy were sold on a free world market and under conditions of unlimited production irrespective of price. However, we know that practically all the products which farmers buy are protected from foreign competition by the tariff, and that, when there is a decline in the demand for these products, the manufacturers immediately adjust their production to the declining market. There does not seem to be any logic in the position taken by some people that the farmers of the United States should produce to the limit of their capacity and crowd their products on the market regardless of price, but that the manufacturing and industrial interests, whenever prices begin to decline, are justified in restricting the production of the commodities which farmers buy.

I shall not undertake to discuss the technicalities involved in determining what would constitute a proper balance with respect to the cotton crop, about which I know there has been much controversy. However, I believe that, if the farmers desire it, the Federal and State govenments are warranted in taking appropriate action within their respective spheres of influence to enable the farmers of the South, as well as those of other areas, to maintain such a balance between production and consumption as will maintain fair returns for their products. However, farmers should not, and I am sure will not, ask for anything more than the maintenance of a just and

# Preacher's Text and Topic Book

## WITH ONE HUNDRED ORDINATION QUESTIONS AND RELIGIOUS THOUGHTS

### By Rev. H. M. Williams, D. D.

This book contains texts from Annual Sermons, Anniversaries, Baccalaureate, Business, Christmas, Easter, Educational, Funerals, Missions, Revivals and almost every occasion the minister has need for. The texts are carefully chosen with Bible references given. You only have to build your sermon to suit the occasion being celebrated and the audience you are to address. There is a part of this book called "Common Sense" that gives more direct, wholesome instruction than could be gotten from other books that sell for twice the price of TEXT AND TOPIC.

**PRICE ONLY 15c**

**Send all orders to**

**NATIONAL BAPTIST PUBLISHING BOARD**

**523 Second Avenue, North Nashville, Tenn.**

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

**"OUR SLOGAN"**

**STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.**

**OUR PLATFORM**

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

## EDITORIALS

### FROM THE BIBLE

"In the sweat of thy face shalt thou eat bread, till thou return unto the ground; for out of it wast thou taken; for dust thou art, and unto dust shalt thou return."—Genesis 3:19.

"We live in deeds, not years; in thoughts, not breaths;
In feelings, not in figures on a dial.
We should count time by heart-throbs. He most lives
Who thinks most, feels the nobles, acts the best."
—From "A Country Town," by P. J. Bailey.

### TACKLING THE TENANCY PROBLEM

Congress, during this session, will in all possibility, tackle the farm tenancy problem, although it is reported that a group of law-makers, led by Representative James P. Buchanan of Texas, who is chairman of the powerful appropriations committee, believes that little or nothing should be done about it at all. Two plans have been pushed forward for consideration. Senator Bankhead, of Alabama, has presented a plan to authorize the Federal Government to purchase farms for tenants and sharecroppers and allow the latter to pay for these farms over a long period of years. Another group would concentrate on an effort to make farming profitable, believing that if the tenant could make some profit from his farming operations, he would soon cease to be a tenant and become an owner.

We believe it wise for Congress to consider both plans. The Bankhead plan should be put into effect immediately. This plan, at any rate, would stop the increase of tenancy. The other plan, to make farming profitable for all who engage in the business—all who know how to farm right—would result in ambitious tenants eventually becoming owners, although the road would be rough, the struggle hard and the risk great. For who knows yet how any government can make and keep farming profitable permanently?

In our opinion, those who would do nothing at all about the problem, show a poor grade of statesmanship. They are on a par with the shiftless tenants and sharecroppers they condemn.

Ambitious colored tenants should keep their eyes and ears open and be ready to take advantage of any opportunity that may come that will enable them to begin paying for a farm they can call their own.

### OPPORTUNITY TO ORGANIZE

The first of the ten points of the program Secretary Wallace has outlined for American agriculture for 1937 is "FREE OPPORTUNITY FOR FARMERS TO ORGANIZE." And this means all farmers—all who cultivate the soil—whether they own the soil they cultivate or do not own it.

The first thing the colored farmer who wants to better his condition should do this year is to get into a farm organization. The farmer who joins a good farm organization not only shows that he wants to do something for himself, he shows too that he wants to do something for the benefit of his brother-farmers, for the business of farming and for all and everything this big business influences. He shows that he wants to be A SOMEBODY. He shows that he wants to be useful—that he want to cooperate, that he wants to bear his share of the burden. He shows that he wants to be a leading farmer in his community—not a "carried" or a "led-by-others" farmer.

The National Federation of Colored Farmers, Inc., is an organiation of, by and for colored farmers. The opportunity to join it is free no matter where you are or what kind of farmer you are. When you join the Unit in your community or become the organizer of a Unit, you have no need to fear any opposition that may develop. You are assured of protection. And you will reeeive information, adviee and assistance you can obtain from no other organization.

Join the National Federation of Colored Farmers NOW. The organization needs you and you need the organization.

### A GREAT RECORD

Judge J. M. Thomas, general counsel of the Farm Credit Administration, told the farmers and visitors attending the Tuskegee Farmers' Conference that more than four thousand loans had been made to colored farmers through the New Orleans office and that there had not been a single foreclosure. He also said that every dollar borrowed had been repaid.

This is a record colored farmers should be proud of and one of which the entire Race should be proud. As many of these farmers were tenants and sharecroppers, it should also silence the mouths of those who are always saying that the Race tenant and sharecropper is shiftless and untrustworthy. People who pay their debts 100 per cent are a pretty high class folk.

We know the Farm Credit Administration appreciates this honesty and will not forget it. These colored farm-borrowers have done something which will react to the welfare of the entire Race.

### THE "LOWER LEARNING" SCHOOLS

We have a right to be proud of our schools of higher learning, numbering 800, according to one authority, with a property valuation of a hundred million dollars. But what about our schools of "lower learning," located off the railroads and the "big roads", the schools that seldom entertain distinguished visitors, the schools where humble, faithful teachers are the only light and law and hope of thousands of Negro boys and girls?

Not long ago the teacher of one of these schools wrote to the N. A. A. C. P. for assistance. Her letter is published elsewhere in this paper. Read it. Help her a little if you are able. If you can't spare a dime, pray for her and the 125 children.

She says: "The people here are very poor. They are farmers on other folks' land. They don't ever have any cash money." But she informs us that these farmers are very anxious to have a decent school building and are trying to sell some of their produce to help build a decent schoolhouse.

These farmers and this good, faithful teacher will get the new school becausc they want it bad enough to struggle for it. Probably the men will get together and plant and cultivate four or five acres of cotton during their spare time and use the proceeds for he school. The women may organize a club and raise a flock of chickens or a couple of hogs for their school. Of course there is always a way to get what you want if you want it badly enough.

Race farmers must take more interest in their neighborhood schools. Instead of letting them run down, keep making them bigger and better. We must do more ourselves and stop depending on friends and the county and the state to do for us. Many of these counties are poor, very poor. They should not be but they are. We can't help it. But we can help our schools and our own children to obtain a decent education..

Julius Rosenwald helped us much. But he is dead and in heaven. He helped our schools because he knew we needed help and believed we were worthy. Don't let him look down on you and be ashamed of you. You do something too..

### CO-OPERATIVE SELLING

Melon growers of northeast Arkansas and southwest Missouri are organizing a cooperative melon association this year. There is a reason. Last year they sold melons for fifty thousand dollars which should have brought three times that much money into the territory. They didn't get it because they sold to track buyers as individuals. Had they been organized and sold their produce in carload lots they would have gotten what their melons were worth.

Experience is a good teacher but an expensive one. These melon growers lost two dollars out of every three they had earned because they failed to cooperate. Units of the N. F. C. F. should get a lesson from this and resolve this year to buy, produce and sell cooperatively. The farmer who won't save a dollar when he can is as foolish as one would be who would toss a dollar into the river.

Get some life into your Units, Brother Farmers. Meet often this winter and spring. Plan well. Purchase your seed and fertilizer cooperatively. And whether peanuts or sweet potatoes, corn or hay, sorghum or peas, beans or hogs, produce together. And produce enough so you can sell together in carload lots and get what your produce is worth.

### OUR REPRESENTATIVES

We have two representatives on the President's Committee on Farm Tenancy which is to report to the President on a tenancy program by February 1st.

Charles S. Johnson, Professor of Sociology, Fisk University, understands the tenant problem as it affects us as well as any man in the United States. He is an analyst, a fact-finder who always knows what he talks about and his knowledge should be of inestimable value to the Committee.

Frederick Douglass Patterson, President of Tuskegee, is a trained agriculturist, and has been at Tuskegee long enough to imbibe the spirit of that great institution. During the deliberations he will always have in mind the interests of the man most in need of help.

Our representatives can be trusted and the Race will have a plenty to thank them for when the report is completed and published.

Some folks will always be poor and backward but most of us don't have to be "some folks."

The Modern Farmer wishes all its subscribers and readers a Happy New Year. And if you like your paper tell your friends about it.

If you are going to gossip any this winter gossip about the plans you are making to be a better farmer and a better man than you have ever been in your life.

The seed catalogs are arriving. Don't forget to plant plenty of flowers.

Have you called that special rally of your N. F. C. F. Unit for new memberships and payment of past dues?

"Let there be LIGHT." Don't ruin your children's eyes by forcing them to get their lessons these early winter nights under smoking lamps or by the firelight.

If you want the government to help you become a farm owner you had better be a mighty darned good tenant or sharecropper this year. The government is not going to help any "has beens" or "won't be's".

### TENANCY BOARD TO PROPOSE NEW LEASE SYSTEM

Washington—Marked changes in the present system of leasing farm land probably will be recommended to President Roosevelt by his National Commission on Farm Tenancy. Possible methods by Secretary Wallace, Resettlement officials and by experiments abroad.

Wallace has advocated long-time leases to encourage tenants to repair buildings and improve the soil. He also suggested that tenants might be compensated for such improvements, instead of facing the prospect of "having the rent raised" as he said they do when they improve property under present leases. Wallace advised the commission these changes might be accomplished by individual action, with "state and federal legislation" also a possibility.

Lease agreements worked out by L. C. Gray, federal land expert and secretary of the Tenancy Commission, for experiments under the Resettlement Administration may be used as an example in this field. These provide a minimum five-year period for tenants to demonstrate ability to carry out supervised programs. Gray has reported that the five-year leases are about twice as long as the average private lease.

After the five-year trial, under his plan, the tenant is offered a 40-year purchase contract or a 20-year lease that can be renewed. Annual rentals are held to three per cent of appraised value of the farm. The reason given officially for this is to prevent "mining" of soil fertility by the tenant in an effort to meet rental costs.

The Tenancy Commission was informed that several foreign nations, notably in England and Scotland have improved tenant conditions by long-term leases which carry a provision, enforced by law, for compensating tenants for any improvements they make.

### GIVE RAILROAD CROSSING WIDE BERTH

Bloomington Pantagraph: Many motorists who are ordinarily careful about driving over a railroad when a train is in sight, even miles away, may fondly imagine that they are exercising due caution by keeping their own car off the tracks when a booming locomotive is approaching.

A Springfield paper, however, quotes the chief engineer of the Illinois commerce commission to prove that a motorist may be in danger at a railroad crossing although he has used every personal rule of safety for his own car.

Some instances to illustrate the engineer's contention may be cited. A light coupe had cleared the track safely when a train was coming. But a truck which followed was not so lucky; the train hit the truck, throwing it against the coupe and seriously injuring its two occupants.

Another instance: A woman stopped her car near a crossing when she saw a train coming. Another auto coming up behind, skidded into the woman's car and hurled it onto the tracks just as the engine reached the crossing. Result, another serious injury.

A man stopped his car to let a freight train pass. On the other side of the railroad, two trucks drove headlong into the train, tipped over a freight car onto the auto driven by the man on the opposite side.

The only safe rule, it seems, is for drivers to stop their cars far enough from a railroad crossing to prevent some less careful motorist from pushing them onto the track or pushing a train onto the auto.

### WIFELY WISDOM

Houghton Line: A wise wife always lets her husband have her own way.

### MOTORIST'S PRAYER

The following prayer, written by Dr. Frederic S. Fleming, rector of Trinity Church, New York, should prove valuable for all motorists: "Grant me a steady hand and watchful eye, that no man shall be hurt when I pass by. Thou gavest life, and I pray no act of mine may take away or mar that gift of Thine. Shelter those, dear Lord, who bear me company from the evils of fire and calamity. Teach me to use my car for others' need, nor miss through love of speed the beauties of Thy world; that thus I may with joy and courtesy go on my way."

### PEACHER PAYS FINE, FRAMES HIS RECEIPT

Jonesboro, Ark.—With but one day of grace remaining, Paul D. Peacher, marshal of Earle, Crittendon county, walked into the office of the clerk of the United States District Court here today and paid a fine of $3,500 imposed for having subjected seven Negroes to slavery.

Had he not paid the fine by tomorrow he would have been subpected to a two-year sentence in a federal prison. As it is, he will be on probation for the next two years.

Securing his receipts from the clerk, Peacher went to a nearby art shop and had it framed and took it home with him.

He paid the fine with six cashier's checks. Admitting that residents of Crittendon county contributed something to a fund to pay the fine, Peacher insisted that he himself paid most of the amount.

He said that he had hoped to postpone payment until after Christmas but had found that impossible.

"I guess there won't be much Christmas at our house but I'm still dc law," he said, referring to the fact that he remains marshal of Earlc."

**Feels Bitter, Says Friend.**

Peacher maintains his usual hostility toward newspaper men, but a close friend of the marshal said that Peacher is extremely bitter about the affair and repeatedly has said that he was "the fall guy."

This friend said that Peacher had been promised, or at least believed that he had been promised, the wholehearted support of the big Crittendon county planters in a campaign to break up the Tenant Farmers Union. Peacher was to make examples of Negroes who were members of the union or who were suspected of being sympathetic to it. In selecting the examples, he was to arrest Negroes who were willing to work and not those of the lazy shiftless type. The idea was that all the Negroes would understand that the prisoners were being punished for their union affiliations or sympathies.

This friend said that the landowners did not come to Peacher's support as he had anticipated that they would. He said that he believed it true that Peacher paid the larger part of the fine personally and had been compelled to go into debt to do so.

### 4-H BOYS AVERAGE $198 PER ACRE ON THEIR COTTON PLOTS

Four Chicot county boys have qualified for membership in the "Two-Bale Club," according to S. W. Houston, county agent. To be eligible for this club two or more bales of cotton must be produced on an acre of land. All of the boys are members of the St. Mary's 4-H Club.

Italo Mazzanti produced 1,131 pounds of lint; John Mazzanti, 1,005 pounds of lint. Sam Sampolesi 1,005 pounds, and Joe Mazzanti 1,010 pounds. The value of the four turn per acres of $198.82.

A small quantity of barnyard crops was $795.27. an average remanure was used on two of the crops, Austrian winter peas were plowed under on the other two. No other fertilizer was used.

Mike Mazzanti, local leader, advised the boys and encouraged them in the project. "This record sets a new high standard of achievement for profitable cotton production in Chicot county," said County Agent S. W. Houston.

### SEES COW AS BEST FRIEND IN ADVERSITY

R. G. Thompson, Melbourne, Izard county, has decided that the dairy cow is the farmer's best friend in times of adversity, said G. I. Gilmore, Izard county agent.

This year Mr. Thompson milked nine cows, and in spite of the drouth destruction of pasturage, he got a weekly cream check averagin about $7.50, in addition to having plenty of milk and butter for home use and for a tenant family.

The skim milk, fed to hogs, has also showed a profit. And three heifers of the best quality, raised this year, are a further credit item on Mr. Thompson's dairying.

"In all," the county agent said, "Mr. Thompson would have had a very profitable year on his cows if the drouth had not reduced his pasture to almost nothing. He expects to do well next year, if the season is normal. He thinks that a farmer who has a few cows, and looks after them properly, need never have to ask the relief agencies for help".

### INTERESTING NEWS AND NOTES

Nebraska, Florida, Ohio and Wisconsin are the only states out of debt. Nebraska has a balance of over twenty-one million dollars in the Treasury.

18 of our national parks remain open throughout the year.

Of the eleven and a half million Baptists in the world more than ten million are in North America.

There are nearly twenty-one million of the Roman Catholic faith in the United States.

Tornadoes have taken over five thousand lives in the United States in the last twenty years.

Peacock feathers are considered unlucky by some people.

Prof. Bartow of Iowa University has discovered a process for making an explosive more powerful than dynamite from a waste product in the manufacture of cornstarch.

The President's Committee on Farm Tenancy is conducting five regional meetings this month. At the Indianapolis, Ind., meeting the following topics were suggested for discussion:

1. What can states do to improve present rental contracts?
2. How should tenants be recompensed for improvements made on the farm, or penalized for depletion of land?
3. What are the chief difficulties facing tenants who wish to become owners?
4. How can the federal government help tenants acquire farms?
5. What are the possibilities of co-operative farming by tenants?
6. What interest rates and amortization plans should be applied to governments loans to tenant farmers?
7. What type of education is needed to help tenants become successful owner-operators?
8. Can the present policies of the government in regard to farm credit, AAA benefits, etc., be shaped to favor farm ownership.

### ASKS HELP FOR SCHOOL

**Using Old Church for School in Furman, Alabama, Teacher Writes**

New York—A pathetic appeal from the Little Zion School at Furman, Alabama, has come to the N. A. A. C. P., illustrating the crying need for carrying on the association's fight for educational equality.

Miss Lucy P. Johnson, teacher at the Little Zion School, writes as follows:

"On October 13 I was sent here to take charge of the Little Zion School. Upon my arrival, I found that the school building which was owned by the colored people of this section had been destroyed by fire two years ago, and that they were now using an old church for teaching purposes. Now this church is in very bad condition, being propped up on both sides, liable to fall at any time; it is very large, with 14 windows in it but there are no window panes. We cannot do good work in such a place; it is awful. The people here are very poor. They are farmers on other folks' land, and don't get any cash money. They are very anxious for a decent school building and are selling or trying to sell some of their produce to help build a schoolhouse. We have enough money to buy the land as we are trying to put it near the center where it will be convenient for all. Will you please give us a donation to help in this worthy cause? We need $600 to complete the building. We have in this section about 125 children that belong to this school. We are about twelve miles from the railroad and we do not have any rural route through here. Be assured that any amount you may give will be most highly appreciated."

### FARM FIRES TAKES AN AVERAGE TOLL OF 3,500 LIVES

Rural fires in recent years have taken annually an average toll of 3,500 lives and piled up a property loss estimated. at $100,000,000, according to reports of the United States department of agriculture. However, noticeable reduction in losses have been brought about in communities where rural firemen have made a systematic study of fire hazards and conducted campaigns for their elimination.

**Pastor's Guide**
**By Boyd**

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Pulpit Bibles**
**At Low Cost**

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Baptismal Garments For $30.50**

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The Best Book For The Ministers**

**Theological Kernels**

*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## NATIONAL FEDERATION OF COLORED FARMERS, INC.

2937 S. Michigan Avenue, Chicago, Illinois

### NEWS BULLETIN
### THE BIGGEST NEWS

The most important news for colored farmers concerns the work now being done by President Roosevelt's Commission on Farm Tenancy. This Commission is in session in Washington, D. C. Farm tenancy and its evils will be discussed and recommendations made to the President for a program seeking to abolish the evils of farm tenancy and to improve the condition of the tenant and the sharecropper. Doubtless these recommendations will include (1) granting of long-time leases to tenants—at least five years; (2) payments to tenants for the improvements they make on the property they rent, both land and buildings; (3) abolishing speculation in land, which now is an evil that causes farms to increase in price far beyond their real value; (4) a resettlement program seeking to place tenants on farms which they can obtain a decent living, and (5) appropriation by the government of a fund to purchase farms to re-sell to selected tenants and sharecroppers who want to be farm owners and who possess the character and ability to own and manage farms of their own.

Our members should know that the work of this Commission will benefit them more than anything that has ever been done before in this country. This is big news and good news. In a later bulletin you will be told what you should do to obtain your benefits from the work of this Commission.

### LEASES AND CONTRACTS

If you are a sharecropper, renter or tenant farmer we suggest that you do not sign any lease or contract until the Federal Government announces and publishes its new form of contract for 1937, which should be ready in two weeks. Changes in this coming form of contract will benefit you. Wait for it and for our advice to you before signing a contract for this year.

### THE CHARLESTON CONVENTION

Your delegate has informed you of the great and helpful annual convention of our organization recently held in Charleston, Missouri. Big things took place there and if your Unit was not represented it should have been. Fourteen states sent delegates. Governors of some of our leading states sent special Washington, and many prominent corporations and individuals sent messages of greeting to us. Our organization has stood the storm and stress, we have more friends than we have ever had before, we are progressing. Every member must do his duty and help his organization carry on.

Now we want you to know of one of the most important acts of the Convention. This act concerns YOU. Our convention passed a resolution saying that EVERY UNIT MUST HOLD A SPECIAL RALLY as soon as possible for the purpose of raising at least a part of the back membership dues owed and to assist in obtaining as many new members as possible. Your organizaiton has a note to meet and we have no other way of paying this note unless our members pay their dues. This is important and necessary. Call your meeting and start your special rally. Get new members and get those who owe to pay up. We shall expect every member and unit to comply with this resolution. Don't remain silent. You have been silent too long now. We must pay our honest debts which were made during the dark days when your officers and leaders were spending every cent they could to help you. Don't let us down. PAY UP WHAT YOU OWE AND PAY NOW.

It is against the law for your officers to allow you to hold a charter as a Unit of the N. F. C. F. unless you pay your dues and support your organization, and we will be compelled to call in all charters of Units which fail to heed this warning and neglect to let us hear from them at once. So if you want to keep your charter and remain an organized farmer and continue to receive the benefits organized farmers receive, it's all up to you. Pay your organization what you owe or as much as you can.

### THE WASHINGTON MEETING

A meeting has been called for Washington, D. C., to consider different phases of the new farm program for 1937 and a representative of the N. F. C. F. will be present to speak for the members of our organization. A bulletin will be issued as soon as all details have been worked out.

### COTTON DAMAGE

W. A. Parker, author of "Country Damage to Cotton" in Carolina Cooperator (December) says: "Few farmers realize the damage to cotton left out in the open or under a leaky roof amounts to an estimated average of $5 per bale.... A prominent warehouseman told a farmer who last year had difficulty in selling his cotton due to country damage. He grew twenty-five bales, eight of which he stored in a good dry building, but the other seventeen he left on the ground out in the open, subject to the ravages of the elements, rain, snow and sunshine. A few months later, when he tried to sell this cotton, it was found to be so rotten that buyers would not bid on it until it was reconditioned. Originally the twenty-five bales weighed 12,200 pounds, 2,000 pounds were lost in reconditioning. He sold the entire lot, including the eight bales of good cotton, as one lump and at a flat price, as it had not been graded and stapled and he had no way of knowing what he had or if he was getting full value. The buyer deducted one-half cent per pound from the entire lot as was afraid he might run into some damaged cotton that may have been overlooked. This amounted to $51.00; the labor cost was $41.40; 2,000 pound of rotten cotton at 12 cents amounted to $240.00, or the equivalent of six 460-pound bales of cotton at twelve cents a pound To put it another way, where he could have gotten twelve cents for his crop at the time of ginning, the loss he sustained by not taking proper care of his botton brought it down to the equivalent of about nine and one-fourth cents or a loss of almost three cents per pound. Another thing that must be taken into consideration is that it took abont a month to recondition this cotton since it was wet and could not be rebaled until thoroughly dry....."

### HOMOGENIZED MILK

"The experience of those who first homogenized pasteurized milk in Canada and then later in the United States indicates that milk consumers preferred it to regular milk," says S. V. Layson, Illinois Department of Public Health, in Milk Plant Month (December). ".....All health authorities have not welcomed or encouraged the introduction of homogenized milk into their territories. Some have even prohibited the product. They have given as the reason for prohibiting its sale that it meant the addition of another piece of equipment which was very difficult to maintain in a desirable sanitary condition. This is undeniably true but not sufficient reason to bar a promising dairy product. Adequate sanitary precautions on the part of the plant operators and competent supervision on the part of those charged with the sanitation of milk supplies will prevent and overcome this difficulty. It has been stated that it was more difficult to check the butterfat of the homogenized milk. The ether extraction method of testing overcomes this objection....."

### TOBACCO MARKETS

The second week of the burley tobacco market season was the largest in history, says a Lexington report by the United Press. The week's sales were 8,293,872 pounds for $3,965,641.35, an average of $47.78. The average last year was $21.48. The season's sales were 14,382,532 pounds or $5,928,493.74. The average was $41.22.

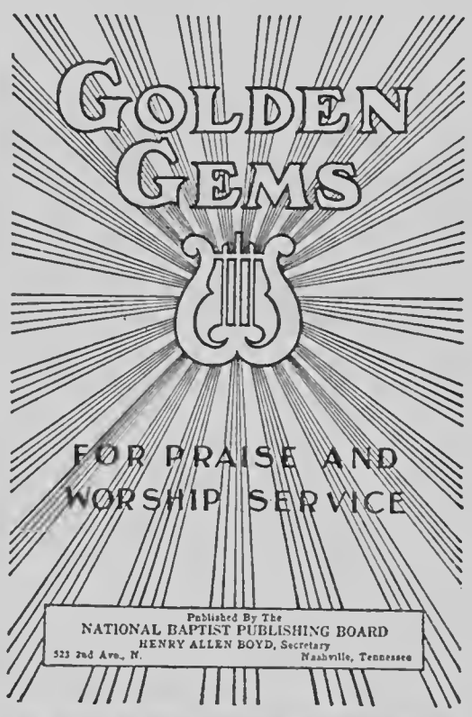
### PERENNIAL WHEAT

A perennial wheat, a plant with the seed of ordinary wheat and the long-lived roots of grass, has been developed by plant breeders of Canadian experimental farms, it was announced at Ottawa Saturday. Dr. L. E. Kirk, Dominion agrostologist, said the new wheat is unlikely to replace annual wheats for bread making but may prove valuable forage plant to restore to productive use large areas of drought ravaged land in western Canada. Plant breeders developed the plant by breeding ordinary strains of wheat with agropyron, a perennial grass closely akin to the common couch grass of eastern Canada and the crested wheat grass of western Canada. (A. P.)

Mrs. Bivens—I don't believe this milk is up to standard. It looks suspiciously blue.

Milkman—You're wrong, madam. This is our best grade milk. You see, our cows are pastured on blue grass.

## OUR NEWEST AND MOST POPULAR SONG BOOK



**Contains such Popular Songs as:**

*He is Coming Soon* — *Is He Yours*
*Singing as We Go* — *Only Give Me Jesus*
*He's My Everything* — *Over in the Glory Land*
*He Understands,* — *The Unseen King*
*He'll say well Done* — *I'm Out on the Battle-field*
*Gospel Waves*

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.
No supplies sent free. Remittance requested with each order.

Please send all orders to the

## ADDRESS DELIVERED

(Continued from Page 3)

equitable relationship between farm income and non-farm income. Farmers know that, in the long run, no group can profit at the expense of the remainder of the population without bringing disaster to the country as a whole.

Texas farmers, and particularly the members of the Texas Agricultural Association, will, I am sure, continue to help with their suggestions and their support in whatever progams are inaugurated in the future by farmers and their Government in order to promote the interest of agriculture and thus, in the words of the Constitution, "provide for the * * * general welfare."

## KUDZU STOPPED

(Continued from Page 1)

perienced in killing the kudzu, according to Mr. Daniel. Cotton planted on the land made a third of a bale to the acre in spite of the dry weather. This was better than the land would produce under similar conditions before it was washed Mr. Daniel said.

## VETH BOOSTS COTTON YIELD BY 250 POUNDS

Andrew McClaren of the Atkins section, Pope counnty Ark., finds that vetch makes a very profitable fertilizer, according to W. R. Daniel, county agent. For the past two years, Mr. McClaren has planted vetch and turned the crop under in the spring, and finds that a good crop of vetch turned under on ordinary Arkansas river land will increase the cotton yield from 250 pounds to 325 pounds of lint cotton.

On corn, Mr. McClaren' experience is that a good crop of vetch turned under will bring the yield up from 10 bushels to 50 bushels, the country agent said. Mr. McClaren believes vetch is the cheapest fertilizer he ever used, as about all the cost is for seed (20 pounds to the acre, plus innoculation, costing less than .02), Mr. Daniel added.

## COLTS FROM WORKING TEAM BRING $1,000

Beside their value as work animals, a team of mares on the farm of C. C. Davis, of Piggott, has earned more than $1,000 from the sale of foals during the past seven years, said George F. Metzler, Clay county agent.

The mares were bought in 1930 for $300 each. Since then they have foaled seven colts, four of which sold for $700 and three for $350. Two of the mule colts have been winners at the last two Clay county fairs. The mairs are now in foal again.

## RICE, CATTLE COMBINE WELL, GROWER FINDS

Cattle raising is an excellent supplement to rice farming, according to R. E. Short, of near Wheatley, St. Francis county. Mr. Short began raising cattle as a means of cleaning rice land in years when fields were not in use, but found that he could earn a profit on grazing cattle by providing additional grazing with lespedeza and fall oats.

The oats used for pasturage during the fall and winter, brought another cash income when harvested and sold, Mr. Short said. The lespedeza which is sown in the spring is used for grazing during the summer and fall.

Mr. Short also grew 256 acres of sagrain and soybeans in rows for winter feed this year. These grains will be fed with cotton seed meal in finishing steers now grazing on lespedeza.

Some fields of lespedeza were cut for hay and the fall growth grazed. Mr. Short has found that Kobe lespedeza is better for late grazing in this section than Korean. In a field where 250 head of 2—and 3-year-old steers were grazing recently the Korean died out while there was still an abundance of fresh Kobe. The steers fed on lespedeza are in excellent condition and have gained two pounds a day since tho middle of July.

Other demonstrations in grazing Kobe lespedeza have proved satisfactory. The value of this crop as a means of getting late fall gains on steers or calves should receive more attention, said M. W. Muldrow, extension animal husbandman.

## SEC'Y. WALLACE REPORTS CONSERVATION OF SOIL ALONE NOT SUFFICIENT

### Check on Production, Consumer Protection Also Needed.

### LOOKS AT TENANCY

### Annual Report Suggests 'Reshaping' of Renting System.

As a possible indication of what further plans the New Deal may have for agriculture, the annual report of Secretary of Agriculture Henry A. Wallace is attracting much farm attention.

Outstanding among the secretary's suggestions was one favoring crop control, which was thrown out by the supreme court when it declared the national government had no authority in this matter. The secretary said a permanent agricultural policy "should achieve soil conservation, consumer protection and crop control together."

Soil conservation alone is not a sufficient preventive of overproduction, the secretary asserted. He pointed out that in building up fertility, soil conservation is likely to result in larger crops in the future Even now, he intimated, more intensive cultivation of the smaller area left under the plow by diverting some acreage to soil-building growth, may bring about heavier yields than can be absorbed at fair prices, especially if the farm population remains large.

Hence, unless domestic and foreign markets for farmstuffs improve, the country will again face the necessity of "establishing a good adjustment between production and market requirements," in the secretary's opinion.

#### Moving Toward Control

A step in the direction of crop control has been announced in the program under the Soil Conservation Act for 1937. Benefit payments, farmers are told, will favor producers who go along with plans for restricting the acreage of major cash crops.

Demands for corp control have been voiced by a number of farm leaders from the South and West, who believe that the present system of benefit payments will not prove sufficient to hold back surplus production in good season.

In this connection there has been voiced in some quarters the thought that American farmers should withdraw from the European and Asiatic markets, as a way to keep the country from becoming involved in the war many see as threatening over there. Instead of selling to Europe and Asia, we would develop a larger trade with South America and Canada.

A drawback to such a procedure from the South's point of view is that it would leave Dixie with little export outlet for the half of its cotton now sold to Europe and Asia, critics of the plant point out. They remind that South America is itself coming up rapidly as a cotton exporting region.

#### Farm Exports and War.

Secretary Wallace seems to look with some sympathy on the idea of American farmers pulling away from the Old World. In in a speech before the American Farm Bureau Federation, in Pasadena, Calif., the secretary said:

"The danger of the United States getting into a serious war comes from the fact that we export goods to Europe and when war comes one side or the other interferes with that trade.

"Our farmers, seeing this danger and not liking certain types of foreign governments, have urged that we withdraw as much as possible from Europe and Asia. On the basis of this theory the thing to do would be to build up our trade more and more with those of our near neighbors who have similar political ideals.....

"With Europe and Asia in the state in which they find themselves, it is clear that our immediate future lies in these two continents (North and South America.)"

#### Farm Ownership Adocated

In the report of the secretary of agriculture, another item of interest to Arkansas is a recommendation for legislation to meet the tenant problem, providing for a wider extent of farm ownership and to "reshape" the land tenure system. This, he said, would require both federal and state legislation.

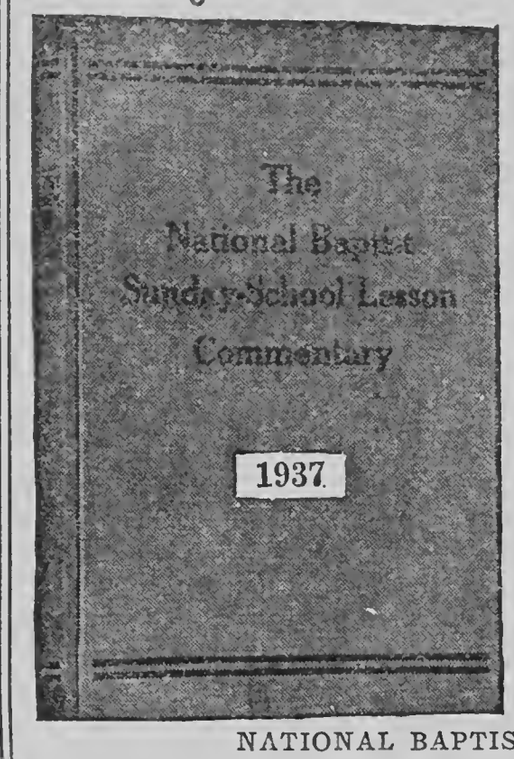
The secretary suggested the possibility of improving leasing agreements and viewed the whole situation as one in which "the problem is to reshape our land tenure system so as to promote a type of agriculture calculated to conserve the soil, to give the cultivator a more secure occupancy of his farm, to maintain the existing capital investment in farm buildings and farm improvements and to promote development of sound rural institutions."

A system of crop insurance and farm storage was also advocated by the secretary in his report. On crop insurance, he intimated that the premium rates must be so adjusted that in the end each farm will pay for the risk the government takes on it. "Crop insurance," he declared, "must not benefit the shiftless at the expense of the thrifty, and the poor land at the expense of the good."

## LANGUAGE OF JESUS UNCHANGED

Since it is generally agreed that Jesus preached his first sermon in the Capernaum synagogue, Aramaic inscriptions recently found on stones among synagogic ruins at Capernaum add further proof that Aramaic was probably the language spoken by Jesus instead of Hebrew or the two other tongues in use in Palestine at that time. Aramaic experts say, has come down through the centuries unchanged.

# Sunday School Lesson Commentary



**1937**

**PRICE $1 PER SINGLE COPY**

**Six Reasons Why You Should Use It:**

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theories leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

## FARM INCOME

(Continued from Page 1)

Government payments to farmers in October 1936 were approximately $22,000,000 compared with $62,000,000 in the same month last year. The gains in receipts from marketings had, however, more than offset the smaller Government payments so that total cash receipts, including Government payments, were larger this October in each region. The October Government payment this year included for the first time payments under the 1936 Agricultural Conservation Program amounting to $3,000,000.

For the first 10 months of 1936 the United States cash income from farm marketings, amounting to $6,108,000,000 was 17 percent higher than in the corresponding period of 1935. Gains for this 10-month period were likewise recorded in each region and ranged from 11 percent in the South Atlantic States to 23 percent in the West North Central States. Cash receipts for the period also were higher in each State except North Dakota, West Virginia, Kentucky, Oklahoma and Montana. Including Governmen payments, the country's total cash farm income for the first 10 months of 1936 was 11 percent higher than for the same period of 1935.

## THE DAILY DIGEST SAYS

(CONTINUED FROM PAGE 1)

in tanks and rig it up to release the gas into the irrigation water where it quickly dissolves."

### Seedless Fruits

Seedless tomatoes and peppers have been induced to form in unpollinated flowers by treating the fruit-producing parts, or ovaries, with any one of four different organic acids. Dr. Felix G. Gustafsen of the University of Michigan has reported to the National Academy of Sciences through that body's official proceedings. Similar results were also obtained with the fruits and seedpods of a number of other vegetables and garden flowers. While no immediate commerical application is contemplated, it is interesting to note that in the tomatoes at least the seedless specimen had very small seed spaces—indeed, in some of the smaller ones the flesh was completely solid. Immediate commercial exploitation is regarded as impracticable at present because each flower requires individual operation by a skilled botanist. The real significance of the experiments is the proof that fruit production without pollination is possible through the use of growth-promoting substances. The chemicals used by Dr. Gustafson were indole-propionic acid, indole-butyric acid, indole-acetic acid and phenylacetic acid. All of these have been used by a number of botanical researches to promote the growth of stems, leaves, etc., on dormant plants and parts of plants. The four acids were mixed into a kind of slave with hydrous lanolin for application to the places where growth promotion was desired. In this, Dr. Gustafson followed the technique developed at the Boyce Thompson Institute for Plant Research at Yonkers, N. Y., by Drs. P. W. Zimmerman and A. E. Hitchcock. (Science Service, December 2.)

### Canned Rabbits

A new product was introduced at the Canada Pacific Exhibition in Vancouver this year by the Cariboo Trail Fur Breeders of Laidlaw, B. C., who presented canned rabbits. There are domestic grain-fed rabbits and only the white meat is used by the company in its canned products. The product has recently been introduced on the Vancouver market. (Western Canner and Packer, November.)

## XMAS TREE HARVEST

Axes flew and saws sang last month in answer to the demand for more than $5,000,000 worth of Christmas trees, says a Salt Lake City report by the Associated Press. A survey among forest supervisors turned up estimates of the national harvest ranging to more than double that amount. Washington State alone marketed $2,000,000 worth. Western States led in free-felling volume, but the East, in particular New England, contributed to the Yuletide toll. Heavily productive in the Midwest is Missouri's Ozark region. Lake-dotted Minnesota produced 1,750,000 Christmas trees last year. Michigan and Wisconsin forests contribute to December saws. The Southwest, too, helps.

## GREEN FEED AIDS LAYING

### Cuts Cost of Providing Flock With Needed Vitamin A.

Feeding the laying flock during the winter always taxes the skill of the poultryman, says H. L. Hempster of the Missouri college of agriculture in pointing out some of the problems the poultryman faces during the coming months.

"The poultryman this year is confronted with an additional problem, which has to do with a vitamin A deficiency in the ration that is more apt to exist due to the substitution of other grains for yellow corn," Mr. Kempster said, Yellow corn contains an abundance of Vitamin A, and when it constitutes the great bulk of the ration the vitamin A requirement of the laying hen are usually satisfied.

### Lacking in Most Grains.

"On the other hand, when the great bulk of the ration consists of other grains—such as wheat, kafir, milo, or oats—then a vitamin A deficiency is apt to occur unless vitamin A in some form is added to the ration.

"The most common method of supplying vitamin A is through green leafy material secured from green forage from the range when conditions are favorable. But supplying green for the laying flock becomes difficult when weather conditions make it inadvisable for the birds to range.

"When it is necessary to confine the flock then, if yellow corn is not fed, it will be necessary to use green feed substitutes. Probably the easiest method of supplying vitamin A is to mix 10 per cent of alfalfa leaf meal in the laying mash. Another source of this important vitamin is fish oils such as cod liver oil. An oil with high vation A potency should be used".

## WORK NOW TO DO IN GARDEN

### PLOWING UNDER MANURE OR LEAVES ADVISED BY SPECIALIST

While the weeks just ahead comprise the slack season in gardening, there are important things to do to plan for the next year's crop, suggests J. W. C. Anderson of the Missouri college of agriculture. This is an ideal time of year to take steps to maintain or improve the fertility of the garden soil, he said, adding:

"If barnyard manure is available, a heavy application equivalent to 15 to 20 tons per acre, or as much as can be turned under, should be applied. If manure is not available in sufficient quantity, leaves may be used. Leaves are excellent as a fertilizer and every gardener has access to large quantities of them.

"Chemical analysis shows that a ton of leaves contain 15 pounds of nitrogen, 3.2 pounds of phosphorous and 6 pounds of potassium. In addition to the fertilizing elements, leaves are among the best humus-forming materials that can be applied. If they are not applied to the soil now they may be composted and put on after they have rotted."

In case the garden plot is level and there is no danger of the soft washing during the winter, the garden should be plowed, Mr. Anderson advised. By plowing in the fall or early winter, following application of barn yard manure or leaves, these fertilizing materials will be broken down and sufficiently rotted in the ground so that much of their fertility will be made available to the plants next year, he pointed out.

The organic matter thus added will act as a sponge in holding moisture in the soil for the plants to use through the season, the specialist said.

## Start Work On New Trades Building At Va. College

Petersburg, Va., Jan. 7 (ANP)—WPA workers last week started the task of razing the old Trades building at Virginia State college here as the preliminary to construction of a modern $70,000 building to house the Division of Mechanic Arts, of which H. E. Fauntleroy is the director. The old building now being razed formerly housed the plant of the Scarns Silk Mill, which years ago was one of the show places of the state. It is expected that the new building will be ready to receive students in the Spring of 1937.

## Boston Pharmacist Slated For Place On Parole Board

Boston, Jan. 7—(ANP)—According to reports in local political circles, Gov. James M. Curley last week placed before his Council the name of Silas F. Taylor for the post on the Massachusetts Parole board held for the past seven years by Republican Attorney Matthew W. Bullock.

Taylor, a well known pharmacist here, and the proprietor of the Lincoln Pharmacy, has been active in state-wide Democratic circles and had charge of the state colored campaign for the November election. His appointment, according to reports, has been held over for confirmation at the next meeting of the Governor's Council, at which time it is expected to be ratified.

Teacher—If your father could do a piece of work in six days and your uncle could do it in four, how long would it take both of them to do it?

Johnny—They'd never get it done. They'd sit down under a shade tree and tell fish stories.

# THE MODERN FARMER

Vol. X. NASHVILLE, TENN., FEBRUARY 15, 1937 No. 1.

MAR 2 1937

# Negro Farm Leaders Study 1937 Program

## TILLERS OF THE SOIL AT TUSKEGEE CONFERENCE

### Director C. A. Cobb of Southern Division With Ass't Director Miller

Tuskegee Institute, Ala.,—"Every farmer, both white and Negro must be informed, if the 1937 Soil Conservation Program is to succeed in its purpose to reduce surpluses and increase farm income."

That was the message sent by C. A. Cobb, Director, Southern Divisoin, AAA, to a group of Negro agricultural leaders, who have just concluded a two-day intensive training course on the details of the 1937 Soil Conservation Program.

E. A. Miller, Assistant to the Director of the Southern Division, AAA, and representative of Mr. Cobb, presided at the sessions while the actual training was conducted by T. L. Ayers, Senior Agricultural Economist, Washington, D. C., and T. M. Gachet, Junior Administrative Assistant, Southern Division, AAA, Washington, D. C.

In addressing the visitors, President F. D. Patterson of Tuskegee Institute, told his audience that "at last the government is making a serious and sincere effort to solve some of the South's agricultural problems and it is significant that Negroes are being given an opportunity to actually participate in various phases of the program."

Provisions of the program and plans for its execution which are of special interest to Negro farmers include:

1. Government checks for cotton diversion payments will be made payable to and mailed direct to the tenant or sharecropper.

2. The program will encourage the use of land, diverted from cotton and other soil-depleting crops, for growing a balanced food ration in the home garden, including poultry, hogs and milk cows.

3. Negro Farm and Home Demonstration Agents will give direct assistance to Negro farmers by encouraging them to participate in the program.

4. Owners of small farm, tenants and sharecroppers are accorded, under the program, the privilege of direct appeal for consideration in unsatisfactory settlements or disputed claims involving government payments.

5. Under the program, the Negro farmer may receive many benefits, including increased income for systematic and conscien-

(Continued on Page 8)

## HEN AND COW ARE SAID TO BE ABLE HELPERS

### Small Herd and Flock Paid Smith's $1,633 In 1936

An income of $983 from poultry, and $650 from butter, last year, totaling $1,633 from chickens and cows, is the cheerful record of Mr. and Mrs. H. S. Smith, Royal, Garland county, said Miss Velma Alford, home demonstration agent.

The Smiths had 250 hens till July, Miss Alford related, when 100 were culled out and sold. Mrs. Smith brooded 500 baby chicks, from which she got 200 pullets. The culls and cockerels brought her $125, and she marketed 3,120 dozen eggs, at an average of 27 1-2 cents a dozen, for $858, making the poultry returns $983.

About $500 of that sum was profit Mrs. Smith told the demonstration agent.

The Smiths milk eight Jersey cows, two and four year olds, from which they sold an even ton of butter—2,000 pounds at an average of 32 1-2 cents a pound, amounting to $650.

Thus the chickens and cows together ran up an income of $1,633.

The Smiths produce infertile eggs and follow feeding methods recommended by the extension service.

## 1,500 VARIETIES OF ROSES SHOWN IN YALTA GARDEN

Yalta, the famous Crimean resort on the shore of the Black sea, is the home of the Nikitsky experimental botanical garden, which has a rich collection of specimen representing flora from practically every part of the globe. The rosarium contains over 1,500 different varieties of roses, including very rare specimen of blue and green roses.

Through skillful selection and cross-breeding the Nikitsky garden has succeeded in cultivating in its experimental nurseries 400 different varieties of grapes, 300 varieties of apples and new species of pears, apricots and peaches. There are groves of fan-shaped palms, laurel trees and cork trees.

A 1,300-year-old turpentine tree of exceptional beauty attracts the particular attention of visitors. The garden supplies the soviet perfume industry with a large number of valuable essential oils extracted from the various plants.

## GOOD RATIONS AID HATCHING

### Well-Fed Breeding Flock Means Better Chicks, Says Expert

Healthy, vigorous breeding stock with good feeding and management during the hatching season are necessary for high quality hatching eggs that will produce strong chicks, says D. D. Moyer of the Missouri college of Agriculture.

In many instances, eggs hatch poorly and the chicks are small and weak because inadequate rations are fed through the winter and during the hatching season, the specialist declared. He said further:

"The ration for the breeding flock should be completed in every respect. It should be well loaded with good protein at least one-half of animal origin, and milk in some form.

Vitamins A, D, E, and G are necessary for good hatches. Green feed or five per cent alfalfa leaf meal in the mash to supply adequate vitamin A, and one to two per cent biologically tested cod liver oil or sardine oil, to provide plenty of vitamin D, should be included. Vitamin E is found in grains, and where milk is included in either dried or liquid form vitamin G will not be lacking.

**Balanced Ration Suggested**

"A good ration for the breeding flock is composed of 200 pounds of shorts, 165 pounds of bran, 35 pounds of alfalfa meal, 115 pounds of dried skim milk or buttermilk. To this should be added seven pounds of salt, and from seven to 15 pounds of cod liver oil or sardine oil, depending upon the potency of the oil and the amount the hens are exposed to the direct sunlight.

"Where liquid milk is available in sufficient quantities, the dried milk may be left out of the mash. Alfalfa, clover, soybean or lespedeza hay can be fed in wire racks as a substitute for the alfalfa leaf meal in the mash.

"Oyster shells or ground limestone should be kept before the flock to supply adequate calcium for strong egg shells. A plentiful supply of water, preferably in a heated watering device of some kind, will help increase the egg size."

## BEES PAY $400 ANNUALLY

Bob Meurer, of Craighead county, averages more than $400 a year from his 85 hives of bees, according to Miss Edrie Spier, home demonstration agent. This year Mr. Meurer sold 3,200 pounds of honey. He has been winner of the county land owner plant-to-prosper contests for the past two years and was second in the state in 1935, Miss Spier added.

St. Louis Star-Times: The average American works himself to death trying to get ready to live.

# Poultry Problems Under Discussion

## FARM TENANCY SOLUTION HELD VITAL PROBLEM

### Editor Tells of European Cooperative Work

Urbana, Ill.,—Solving the farm tenancy problem in Illinois and other states will go far toward meeting the problem of soil conservation and erosion and also serve as a stimulant to better agriculture and a more stable community life, C. V. Gregory, editor of Prairie Farmer, Chicago, told visitors at the final session of farm and home week at the college of agriculture, University of Illinois, Friday.

Evidence of this fact can be found in European countries with agriculture making progress in nations where tenancy has been reduced, he explained. In such places where land stays in the same family for generation after generation conservation becomes automatic, he declared.

**Attendance Near Record.**

A new all-time record for attendance for the week was set with registration of 3,384 farmers, homemakers, and rural leaders.

Gregory spoke on "Some Things We Can Learn from Europe," basing his talk on observations made abrood last summer as a member of the President's commission to study European cooperatives.

"Farm folk are not much different any place you go." he said as he told of visits in the homes and on the farms of counties visited "Farmer's problems are much the same the world over, with the greatest emphasis being on a fair

(Continued on Page 8)

## SON OF SAM PIERCE GETS CAPITOL POST LATE FATHER HELD

Madison, Wis.,—If Sam Pierce could know he would be happy tonight to learn that another Pierce—Sam's son, Theodore, 29—has proudly taken up his post as guard and messenger at the governor's office in the state capitol.

Sam, whose genial "good morning, suh, nice day, suh" greeting was familiar to capitol visitors and state officials for more than a decade, served under five governors. Last spring an illness sent him to the hospital. He died on May 14. Gov. La Follette appointed Theodore to the post today.

Sam's mother, Mrs. Hettie Pierce, is Madison's oldest resident. Born a slave in North Carolina, she celebrated her 108th birthday on New Year's day.

## GROUP OF GENESEO FARMERS TELLS WHAT TO DO

### Iowa Will Lead Out Says C. R. Lash in Moline Daily Dispatch

By C. R. Lash.

The days of the old "setting hen" are about over. No longer do people argue whether a hen "sits" or "sets," because the mechanical incubator hatches most of the chicks. Large hatcheries sell chicks by thousands and custom hatch many more.

Production of hatchable eggs is a problem still, however. To produce them requires a little more care than ordinary market eggs. Following are good rules to follow for production of eggs with a high percentage of hatchability.

1. Produce the eggs under sanitary conditions.

2. Use plenty of males. One male to every twelve or fifteen females should be the practice, and the male should be with hens at least a month before any hatching eggs are kept.

3. Select males at about ten to twelve weeks of age so well-growing, healthy birds with plenty of feathers can be chosen.

4. Use young cockerels, that is of last spring's hatch, rather than old birds. Young cockerels are about 20 percent more fertile.

5. Feed plenty of green feed.

6. Feed codliver oil, and get the hens out into direct sunlight whenever possible.

7. Do not keep eggs more than seven days.

8. Keep eggs in a case small end down.

9. Turn eggs daily by tilting the case up at an angle of 45 degrees, then tilt the case back to the other corner the next day.

10. Keep eggs in a dark place.

11. Keep eggs at a temperature of from 40 to 60 degrees Fahrenheit.

**Brooding Chicks**

Inasmuch as home incubation is not greatly practiced any more, we will not consider it but advance to the next stage, that of brooding chicks.

Three methods are in general use, as follows:

1. Rearing chicks in confinement.

2. Rearing in confinement for two weeks and then using regular brooder house.

3. Using regular brooder house during the brooding period.

In an effort to grow healthy poultry some poultrymen have practiced keeping their chicks con-

(Continued on Page 8)

## BETWEEN 750 & 1000 ATTEND THREE DAY SESSION NATIONAL FEDERATION OF COLORED FARMERS, OCTOBER 25 TO 28

The following account of the last convention of the National Federation of Colored Farmers appeared in the columns and on the front page of the Enterprise-Courier, the leading paper of the city of Charleston, Missouri.

Between 750 and 1000 Negroes representing 21 states, attended the twelfth annual convention of the National Federation of Colored Farmers, held here Monday, Tuesday and Wednesday.

Organized in 1912 by James P. Davis, Gilchrist Stewart, Cornelius R. Richardson and Leon R. Harris, for the purpose of bettering the agricultural condition of Negroes, the organization has increased in membership until this year it embraces a total of 50,000 persons.

The three-day program included speeches by men of national prominence, round table discussions, a banquet Tuesday night, and a grand ball as the closing feature last night.

### Produce Better Crops

Every effort is made to encourage Negro farmers to raise better agricultural produces, and to improve living conditions. To further this program, several national concerns offered valuable prizes.

Amos'n Andy, the radio comedians for the seventh consecutive year presented two registered Berkshire hogs to the producer of the best sample of cotton. The hogs this year were awarded to F. H Burnley living near Little Rock, Ark. A radio presented by Sears-Roebuck, was presented to Abe Hamilton of Eden, Miss., for the second best cotton sample. An Adalin lamp remained in Mississippi county, being awarded to Dave Burnett of Wyatt for an excellent display of vegetatbles. An imported pocketbook, the gift of Irene Castle McLaughlin, was awarded to Mrs. Marshall Currin of Charleston.

### Best Quilt Prize

The prize was given for the best pieced quilt, and Mrs. Currin's exhibit, a perfectly matched spread containing exactly 13,000 pieces and requiring more than a year and one-half to complete, was easily first place winner. A broach, also presented with the compliments of Mrs. McLaughlin, was awarded to Mrs. Fannie Crosby of this city, for her "Yoyo" quilt exhibit,

A garden plow was presented tc Mrs. K. O. Adams of Wyatt for the best assortment of canned fruits and vegetables.

One of the most unusual exhibits, and one which created more interest than farm crops, was also the work of a Mississippi county Negro woman. It was a home-made hat—made of corn shucks, woven together, dyed and trimmed with a bit of ribbon.

### Endorse Farm Program

The convention went on record officially endorsing the present farm program, and in a telegram to Secretary Wallace, Wednesday, the assembly pledged its support.

Officers elected for the ensuing year include the following: L. R. Harris, president and secretary; S B. Wilson, treasurer; Major R. A. Byrd of Springfield, vice president; Board of Directors, C. R. Richardson of Indiana, R. A. Byrd of Missouri and W. O. Hill of Arkansas. Prof. L. B. Boier, formerly stationed at Charleston, was again named general organizer for the association.

## BUTTER PRICES SOAR TO SEVEN YEAR HIGH MARK

## EGGS, POTATOES CLIMB; DROUTH IS CAUSE

By Charles S. Michaels
In Chicago Tribune

Trading on the Chicago Mercantile exchange during 1936 was marked by soaring prices for butter, eggs and potatoes. Butter moved up to a 7 year peak at 36 1-8 cents a pound. Refrigerator eggs touched 30 3-4 cents a dozen, a new high mark since 1930. A top of $3.50 per 100 pounds was paid for potato futures and sales as high as $5 were reported in the spot market during the early summer, the highest price in several years.

Trading expanded sharply as the result of the sharp curtailment of supplies incident to the drouth. Transactions in futures were estimated to show an increase of approximately 6 per cent compared with 1935, and a gain of 24 per cent over 1934.

### Year's Sales Totals

Approximately 527,000,000 pounds of butter 423,000,000 dozen of eggs, and 950,000 sacks (1000 pounds) of potatoes were traded on the exchange during the year with a monetary value exceeding $270,000,000, compared with $225,686,000 in 1935, and 170,600,000 in 1934.

Drouth, which materially curtailed production, provided incentive for the sharp advance of prices, but government purchases of about 2,000,000 pounds of butter during April and May helped to stimulate the upturn in the price of that commodity. Fairly large amounts of foreign butter were imported during the year, and tended to restrict price upturns during the closing month of 1936. As a result of high prices domestic consumption of butter decreased sharply and was estimated 50,000,000 pounds under that of the preceding year.

### High Prices Predicted

At the close of the year mounting feed costs and increased consumer purchasing power led to a government prediction that butter prices uring the early part of 1937 would probably average the highest in seven or eight years.

Eggs went into cold storage last spring at the highest average price since 1930 despite large receipts. When the full effect of the drouth became apparent there was a rush to cull chicken flocks with the result that supplies of frozen poultry increased in September to record breaking totals. This was reflected later in the season in relative low poultry prices.

## MINISTER RECALLS THRILLS OF MOUNT OLIVE IN PALESTINE

Fourth in a series of sermons on his trip to the holy land was given by the Rev. Walter A. Tillberg at the service last night at Trinity Lutheran church, Moline, Ill.

His topic was On a Hill Far Away. The sermon dealt with the last supper, Christ's trip to the Garden of Gethsemane where He was seized by servants of the high priest, His trial before Caiaphas, the high priest; His trial before Pilate; his trial before Herod, the second trial before Pilate, and the trip from the tower of Antonio to Calvary.

"On Holy Thursday" the Rev. Mr. Tillberg said, "I went to the Mount of Olive. It was in the evening. There within a stone's throw of the original Garden of Gethsemane, I had intended to read my Bible with the aid of a flashlight and follow the story of Christ on that night. Later in the evening there were no less than seven groups holding services on the slope of Mount Olive.

### Three Gardens.

"There are three Gardens of Gethsemane at the present time. One is controlled by the Roman Catholic church, another by the Greek Orthodox church, and the third by the Russian Catholic church. Since there are three, all of which are claimed to be the original Gethsemane, it makes one wonder if any of the three is the right one.

Mr. Tillberg told of learning of the service held by the Catholics in the large upper room where the last supper was held and of following the procession there to the Mount of Olive.

Mr. Tillberg continued the route over which Christ was taken after his capture the next morning. He visited the ruins of the hall of the high priest Caiaphas, where Christ was tried by the priest and scribes. Then he went on to the tower of Antonio where Pilate, governor of Jernsalem, lived and where Christ was tried twice. He then visited the home of Herod six blocks away and told of Christ's journey on the Way of Blood from the tower of Antonio to Calvary.

## BEER BARRELS BURST; CATS, DOGS ON 'BINGE'

LONDON, ENGLAND (U. P.)—Scores of cats and dogs became drunk on Putney Hill, Wandsworth, when a number of barrels of beer fell from a brewer's lorry and bust.

As the beer went flowing down the hill, the cats and dogs lapped it up greedily.

## WOODPECKER BECOMING RARE

Uncle Sam's Biological Survey has appealed to hunters, and especially young boys with rifles and sling shots, to spare our native birds. One reason for this appeal is the thinning population of birds. One of the birds directly responsible for such an appeal is the pileated woodpecker. Big, noisy and conspicuous this dandy makes an easy target for almost any weapon. For this reason they are becoming extinct and will soon disappear unless they are spared by everyone.

## BREAD RETAINS VITAMIN B

Very little of the vitamin B content of whole wheat or rye is lost in the baking process, according to Dr. Agnes Fay Morgan of the University of California. Size of the loaf has a small effect in that the larger loaves have a slightly higher vitamin B content. Crust of whole wheat bread is definitely lower in vitamin B than the crumb due to the higher temperature in baking. Vitamin B helps protect the body against nervous disorders.

# Preacher's Text and Topic Book

WITH ONE HUNDRED ORDINATION QUESTIONS AND RELIGIOUS THOUGHTS

By Rev. H. M. Williams, D. D.

This book contains texts from Annual Sermons, Anniversaries, Baccalaureate, Business, Christmas, Easter, Educational, Funerals, Missions, Revivals and almost every occasion the minister has need for. The texts are carefully chosen with Bible references given. You only have to build your sermon to suit the occasion being celebrated and the audience you are to address. There is a part of this book called "Common Sense" that gives more direct, wholesome instruction than could be gotten from other books that sell for twice the price of TEXT AND TOPIC.

## AT THE GARDEN GATE

Claude Woolsey
Extension Horticulturist

UNIVERSITY OF ARKANSAS
COLLEGE OF AGRICULTURE

A pleasant home surrounded with the beauty of flowers, shrubs and trees is loved and admired by everyone. We each strive to have such a home for ourselves be it developed from an extensively executed plan, a modest plan or just a rose or lilac by the doorway. Some may find pleasure also in a well kept vegetable garden and the friendly contests with the neighbors to see who can produce the earliest tomatoes.

We are all interested in the "how" and "when" of gardening. For example, we would like to know just what time is best to plant sweet peas, what variety to plant and the plant food or fertilizers giving the best results under our local conditions. These and many other questions will be answered in this column.

The soil is beginning of all life and the imperishable storehouse of eternity. No plant can be better than the soil upon which it grows. Therefore, a deep fertile soil well supplied with organic matter is necessary. A liberal application of well rotted manure, deeply spaded into the soil is a good starter. Rich bottom land soil may be added if necessary to build up the fertility.

If the soil contains liberal amounts of clay, add sand to make it more friable. Applications of lime are desirable for certain plants (acid tolerant plants such as Azaleas, Rhododendron. Japanese Iris and others should not be planted on soils receiving applications of lime).

A good all-around plant food to use is a commercial fertilizer analysing 4-12-4 (four per cent nitrogen, 12 per cent phosphorus and four per cent potash). This may be obtained in 100-pounds bags from your fertilizer dealer at considerable saving as compared to the same material in small packages. It is the same as that used on the farm. A 100-pound bag will usually be sufficient for all plants in the average yard during the growing season.

An application of this fertilizer worked into the soil before growth starts and at intervals from six to eight weeks throughout the summer will produce strong, vigorous plants. An average single application is about two pounds to the 100 square foot to bed space. Therefore, if three applications are made during the summer it will require six pounds for each 100 square feet of bed space.

Make small holes one to two inches in diameter, 18 to 24 inches deep, with a soil augur. An augur may be obtained from your hardware dealer. The desired length is provided by using small pieces of small gas pipe welded to the augur. The holes should be spotted about the area covered by the spread of the branches.

One hole should be made for each inch in trunk diameter. Thus a four-inch tree would have four holes and a tree 24 inches in diameter would have 24 holes. Place about one pound of 4-12-4 fertilizer in each hole and replace and firm the soil at the top. It is the best to have at least four inches of soil at the top.

## AID FOR TENANTS IN BUYING FARMS PROVIDED IN BILL

### FIFTY MILLIONS YEARLY FOR DECADE PROPOSED

Washington, D. C.,—The administration's farm tenant bill, calling for an annual appropriation of $50,000,000 for 10 years to finance the purchase of farm homes for renters and share croppers, was introduced in the senate by John H. Bankhead (Dem., Ala.,) and the house by Representative Marvin Jones (Dem., Tex.) today.

The new bill eliminates the billion dollar bond issue authorized by Bankhead's bill last year, which passed the senate, and provided for in the bill introduced by Senator Tom Connally (Dem., Tex.) this year. The bill would create a new government agency to be called the farmer's home authority under the jurisdiction of the department of agriculture, and it would extend long term, low interest credit to tenants for the purchase of their farms.

## ANCIENT RACE MIXTURES

(By Science Service)

Races were mixed in ancient Asia 5,000 years ago and more, as they are mixed in all the world today. Two dominant types lived side by side, and t ney had mingled with them (perhaps as immigrants, perhaps as slaves) small admixtures of other races, ranging from Negroid to Mongoloid.

One of the world's oldest cities, Tepe Hissar in Asia Minor, has yielded this evidence to Prof. W. M. Krogman of Western Reserve university. To the American Association for the Advancement of Science he reported his study of a large collection of skulls excavated in the ruins, dating from 3,500 to 5,500 years ago.

Skulls of long headed people were by far most numerous, but they belonged to two quite distinct racial types. One is similar to the long heads of modern northern Europe; these Prof. Krogman calls proto-Nordics. The other more closley resembles the more slightly built south European of today; these he calls proto-Mediterraneans. He does not consider that the two long headed types originated in Asia Minor from a common ancestral stock, but considers it more likely that the two distinct race types met here and mingled. The immigrant and or slave population is represented by a small number of Negroid, Alpine and possibly Mongoloid skulls.

Life was hard in Tepe Hissar, the tale of the skulls shows. The average age at death was less than thirty years, and women died from three to five years younger than men. Child mortality was shockingly high; of all skulls collected 17.5 per cent were those of children.

Sickness left its marks on the bones; disease and impacted teeth, arthritis, tuberculosis, varicose ulcers, osteomyelitis, dietetic insufficiencies, hereditary congenital shortening of the upper arm, and two cases that "look like syphilis."

Prof. Krogman concluded: "Tepe Hissar tells us not only of the contact of people, one with the other, tells us not only of the contact of peoples one with the other. tells us not only that race mixture is age old, but tells us also of the living and health conditions of an ancient people. If urbanization exacts its toll today, nature exacted an even more bitter toll yesterday. The age gain of fifteen years in modern life more than offsets the allegedly great increase in modern dental ills and in other ills of the flesh for which civilization is blamed."

## NUBBINS

FAMILY WASH BOILERS may come in doubly handy during January and February, if used for preserving nut meats. . Commercial preserving method uses vacuum packing to keep out staleness and rancidity caused by light, heat, and air. Farm families who prepare shelled nuts during the winter for sale or home use have often had to take a loss when warm weather came and turned the nut oil rancid.

COMMERCIAL vacuum packing is out of the question for most farm people, but the new method developed by a Department of Agriculture scientist makes safe storage and a fresh supply of nuts throughout the summer a possibility for anybody.

FIRST put freshly cracked nut meats into glass jars. Adjust, but do not tighten, the glass lids and rubbers. Place the jars in an ordinary clothes boiler, or a big kettle with a wooden rack on the bottom. Put in about 2 inches of water, and make sure the lid is on tight. Let the water boil for 15 or 20 minutes. Then remove the jars rapidly, and tighten the tops down as quickly as possible.

STORE in the dark at ordinary room temperature, nut meats thus processed will keep fresh even during hot weather, if you don't remove the jar lids until you're ready to eat the meats. This method is similar to that often used for home canning of fruits and vegetables. In nut meat canning, however, jars should not be covered with water, as they are in vegetable canning. Two or three inches of water will do the trick quite well.

GOVERNMENT GRADING of butter for the year ending June 30, 1936, jumped to 242,000,000 pounds, nearly 10 percent more than the preceding year. At 11 different places in various parts of the country, butter makers may now have their product certified as to Government grade by Federal-State graders. Manufacturers pay the small fee charge for the service.

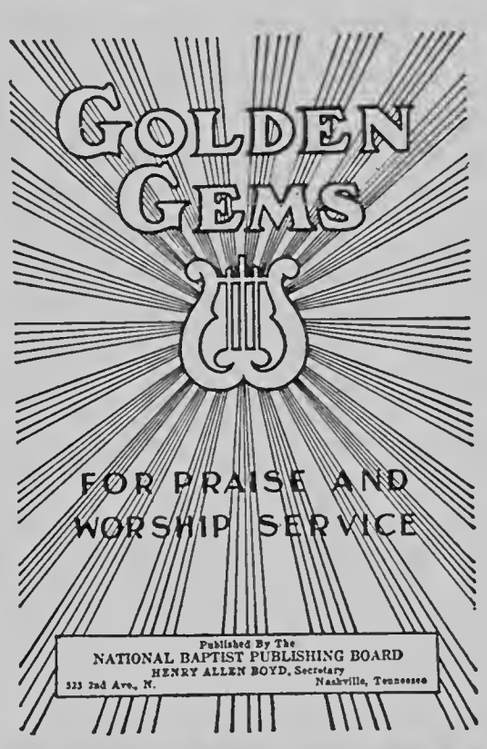
## BIGGER YIELD PRODUCED BY THICK-SPACED COTTON

Thick-spacing of cotton has proved its value on the Pinchback Planting Company plantation, as shown by a comparison of results on two 15-acre plots planted by sharecroppers, said G. B. Spencer, Lincoln county agent.

The cotton was planted at the same time with a hill-dropping planter with eight inches between the hills. Both tenants were instructed to leave one to three stalks in each hill of cotton One followed instructions; the other cut out every other hill, leaving just half as many hills of cotton.

The thickly-planted cotton porduced 8,500 pounds of lint. That which had been thinned produced 6,500 pounds of lint. The thinning of the 15 acres cost the Pinchback Company two bales of cotton and one ton of seed or $10.67 an acre, according to Mr. Spencer's information.

OUR NEWEST AND MOST POPULAR SONG BOOK



Contains such Popular Songs as:

*He is Coming Soon* — *Is He Yours*
*Singing as We Go* — *Only Give Me Jesus*
*He's My Everything* — *Over in the Glory Land*
*He Understands,* — *The Unseen King*
*He'll say well Done* — *I'm Out on the Battlefield*
*Gospel Waves*

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

**"OUR SLOGAN"**

**STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.**

**OUR PLATFORM**

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## TALKS TO COLORED FARMERS ABOUT OUR 1937 PROGRAM

By Leon A. Harris

BROTHER FARMERS:

I want to tell you briefly about some of the things the National Federation of Colored Farmers desires to do this year.

**1. We Want to Increase our Membership.**

The American Farm Bureau, the Grange, and the National Farmers Union, the other three large American farm organizations, are making strong drives this year for new members. These organizations realize that there is no chance for the farmer unless he is organized. This is where our strength lies. Our Federation must also realize this. Like the other national organizations, we will offer better inducements to farmers to join this year than have ever been offered before. So I am asking every member and friend of our organization to make himself or herself a committee and go out and bring in the new members. All of our old members must also be brought back into the organization. We want every Unit to hold a rally for new members. We want every community of colored farmers not organized to be organized. Write to our office for full particulars. Address us in Chicago, or if you want to hear from me, immediately and personally, write me and address Box 209, Moline, Illinois. Don't fail to do this. We must grow and grow fast.

**2. We Want to Increase the Circulation of the Modern Farmer 100 Per Cent This Year.**

This means we must have more tion paid up and get as many of your realize how much it costs to get out this paper every month. It costs a plenty. We are giving you a good paper,—the only paper published for colored farmers in the U. S. You should appreciate this effort to serve you and keep your subscription aid up and get as many of your friends and neighbors to subscribe as you possibly can. Write to the Modern Farmer, 447 Fourth Avenue, North, Nashville, Tennessee, and send in a few paid-up subscriptions. Write them a letter of encouragement. Tell us how you like the paper. Tell us how we can improve it and make it more interesting. Do this now, before you forget it. One good fat hen or three and a half dozen eggs will pay a year's subscription. Can't you do this much for us? We know you can and believe you will.

**3. We Want Our Units to Meet Regularly this Year and to Follow to the Letter all Instructions sent out From our National Office.**

If you have not held your annual election, you should hold it at once and be sure and choose officers who will be faithful, make good, wise leaders. Much depends on your officers. One bad officer can ruin any Unit. Get officers who are unselfish. Get those who look after the Unit and YOU before they look after themselves. Such officers will keep your Unit progressing.

**4. Our Annual FARMERS SUNDAY Will be Observed This Year the First Sunday in August.**

We will inform you later just why this day has been set. Don't forget it, and let's have the biggest day we have had since the beginning of our Federation.

## CATTLE AND PASTURE PAY HIM BETTER THAN PRODUCTION OF COTTON

Willard Locke of the Richmond community, Little River county, is satisfied that land suited to permanent pasture and cattle pays better returns from that combination than from field crops, said C. L. Rodgers, county agentt.

Mr. Locke owns 500 acres of fertile land in a bend of Red river, the county agent continued. He started several years ago turning land to grass, raising cattle on a small scale, and reducing his cotton.

At present Mr. Locke's herd consists of 200 Hereford and red Polled cattle, and all of his land is devoted to pasture and feed crops. Each year he raises 100 calves which bring him a nice profit, the county agent said.

# WHAT OTHERS SAY

**About the N. F. C. F. and Modern Farmer**

### A NORTHERN FARMER SPEAKS

"The National Federation of Colored Farmers is invaluable to any farmer, south or north. Your advice and assistance have saved me expense and given me encouragement when I was about to give up. I have not words to express how I value my membership in the N.F.C.F.

Robert Gardner,
Three Oaks, Michigan,
Owner of a 40 acre fruit farm."

### A SOUTHERN FARMER SPEAKS

"I expect to die a member of the N.F.C.F. I owe everything I have to our Federation. I have been succeeding ever since I joined it and I was failing before I joined. I am out of debt, own my farm and stock and have money in the bank. This year I had good crops.

Abe Hamilton,
Eden, Miss.,
Holmes County.

### NOTED MINISTER ENDORSES N. F. C. F. FOUNDER

"I wish to express in a small way the great worth of James P. Davis to humanity in general and to our agricultural class in particular. Mr. Davis stands pointing the colored people back to the farm, for which they are best fitted, and where they can get a good living. He has great knowledge of the art of scientific agriculture and he is a marketing expert. Those he serves know he is one of the most beneficial leaders of the times. He is a convincing speaker and teacher.

Rev. T. Reeves, Chairman,
Committee on Labor and Industry, A.M.E. Minister's Association of Chicago."

### BEST ORGANIZATION THEY KNOW OF

"We know that there is no organization under the sun that has given Negro farmers the opportunities given by the N.F.C.F. We purchase our supplies cooperatively and save from thirty to fifty per cent by doing so. We have learned to do more for ourselves. May God forever bless our organization and its leaders.

Rev. M. G. Giggle, Chairman,
Jesse McGraw, Secretary,
Mt. Olive Unit No. 1521,
Shaw, Miss."

### EVERY TENANT FARMER READ THIS

"I know I am indebted to the N.F.C.F. and it is worthy to be praised. In December, 1929, I joined our Unit. At that time I was a tenant farmer, owning four head of stock and making an average of ten to twelve bales of cotton a year. Every year I came out about like I started, sometimes behind, but anyway, 'BALANCE DUE' seemed to be my 'Settlement Day' companion, But the N.F.C.F. advised every farmer to buy a farm. But I couldn't see no way at all to make a start. I let our officers know my trouble. They promptly appointed me to an individual who advised me.

In May, 1930, I received deeds to forty acres of land, agreeing on Dec. 29, 1930 to make a $400 payment. But when that time came, I could see no way to pay as much as one dollar. My landlord took my eight bales of staple cotton I made, took my wagon, plow tolls, cotton seed that I had saved for seed and told me he had rented the place to another man and would like to have his house, and that I owed him a balance of $250 and to get it up for him. I went back to the N.F.C.F and told them my trouble. They told me more about my business than I could tell them, told me to move on the place I had bargained to buy, get my ax and go to work. I soon met the man I had purchased from and he told me the N.F.C.F. had made everything O.K. When I told my wife this, she smiled. She has been better looking to me every day since. This year I will have 7 bales of cotton, 300 bushels of corn, 40 bushels of potatoes. My crop expense will be about $80. I owe my success to the N.F.C.F.

T. J. Noel,
Lexington, Miss."

## THE DAILY DIGEST—SAYS:

**Manure for Tomatoes**

"Growers of glasshouse.....alone in their leaning towards phosphatic fertilizers," says the Journal of the Ministry of Agriculture (December, London) "In the past, market gardeners have used heavy dressings for out poor vegetable crops and many vegetable growers still insist on the need for these heavy applications. With tomatoes, however, there is now definite experimental evidence that bone meal or bone flour at the rate of 1-2 ton per acre need not be used in the base fertilizer more than once in two or even three years, irrespective of whether the soil has been steamed or not. Potash is probably the most important constituent of any base fertilizer. Not only does adequate potash make for good, healthy growth, but it often helps to counter such troubles as blotchy ripening. Sulphate of potash, at the rate of 1-2 ton per acre, is preferable to other forms of potash in view of the susceptibility of tomatoes to injury from chlorides.

The nitrogen in the base fertilizer should be in a slowly available form such as 1-2 ton per acre of hoof and horn. Nitrogen can often be omitted, however, on new land, and it is usually unnecessary and may even be harmful on newly steamed soil.....The inclusion of phosphate in top dressings is by no means universal, but in view of the recently established connection between the phosphate and potash content of the tomato plant it seems undesirable to omit phosphate altogether, especially in seasons when it is not included in the base fertilizer."

**Soybean Progress**

"The soybean continues to amaze observers of agricultural progress," says an editorial in Country Home (December). "The acreage in less than thirty years has grown a hundred times. Now more than five and a half million acres of farm land are growing soys. Last year 272,745 tons of beans were crushed, 25 times as many as only ten years ago. The cake has become a preferred ingredient in feed mixtures. The oil and protein products of the beans go into enamels, paints, printing materials, glues for plywood and other purposes, into the sizing and coating of papers, for waterproofing, for sand binder in foundries, into the making of plastic substances. More new uses come to light almost every month....."

**Champion Steers**

Cleo Yoder, 19-year-old farm boy in Iowa, rose to farm fame a year ago with Pat's Blue Ribbon, an Aberdeen-Angus steer he bought as a calf for $175. Pat's Blue Ribbon paid off with $750 in prize money and sold for $3,150 as the grand champion steer of the 1935 International Livestock Exposition at Chicago. This year he missed the international championship, but later his steer was selected as the grand champion at the Great Western Livestock Show at Los Angeles. It netted him $93.75 in prizes and $1,200 on sale. (A. P.)

## MELON GROWERS, PROFITS LOW, PLAN CO-OPERATIVE

Jonesboro—Formation of an Arkansas-Missouri, Co-operative Melon Association is under way here to procure lower freight rates for watermelon growers in this section of northeast Arkansas and southeast Missouri. St. Louis produce men are behind the formation of the organization.

Growers of eastern Craighead county who last summer lost heavily on their melons are not eager to put in large crops the coming year unless lower freight rates can be obtained to permit more profit. Shipments leaving Lake City, Lunsford, Black Oak and Leachville last summer for St. Louis were described as profitable, but later in the season, when shipments were billed out to Des Moines, Kansas City, Omaha, Pittsburgh, and other points, practically no profits were realized.

Growers said rates from Kennett, Arbyrd and Senath in southeast Missouri, were much lower under inter-state commerce commission rulings. Several growers trucked their melons to one of these towns and shipped them from point, saving freight charges.

Faced with possibility of receiving practically nothing from their crops, melon growers permitted community associations to sell carload lots of melons to buyers bidding the highest. After loading expenses were taken out, profits were unusually low.

Under the provisions of the new organization, each member would pay a membership fee of $2.50 but would have his melons sold in carload lots on a commission basis, receiving considerably more than under the previous plan of selling to the highest bidder.

It is estimated that approximately $50,000 was brought into this section last year from sale of melons, but if adequate marketing facilities had been available, the sum would easily have reached $150,000.

Mrs. Scallop—It says here that women have more courage than men.

Mr. Scallop—Yes, I can't imagine a man with only a quarter in his pocket trying on five or six suits of clothes.

## GRAPHIC SUMMARY OF FARM TENURE

A graphic summary of farm tenure was made available today by the Bureau of Agricultural Economics in time for use by President's Farm Tenancy Commission. The summary will be generally available within a few days and may be obtained from the Superintendent of Documents, Washington, D. C., at 10 cents a copy.

The Bureau reports that "owner-operated farms outnumber tenant farms, and ower-operated farm acerage exceeds tenant-operated farm acreage.

"But the general trend," the report continued, "has been toward tenancy, with a lessening ratio of equity in farm real estate held by farm operators. In brief, farmers are gradually losing ownership of the land."

It is shown in the summary that the proportion of farms operated by tenants has increased from 35 percent in 1900, 37 percent in 1910 and 38 percent in 1920 to 42 percent in 1930 and in 1935.

The percentage of farm land operated under lease has increased from 31 percent in 1900, 33 percent in 1910, and 37 percent in 1920 to 44 percent in 1930 and 45 percent in 1935.

"Equities of the farm operators of the Nation constituted," the Bureau says, "54 percent of the value of all real estate in 1900, 50 percent in 1910, 46 percent 1920, 42 percent in 1930, and have presumably decreased even further since 1930."

The proportion of farms operated by tenants who own none of the land they farm ranged in 1935 from 70 percent in Mississippi to 6 percent in Massachusetts. The proportion of farm land under lease to operators in 1935 ranged from 62 percent in South Dakota to 8 percent in Maine and Massachusetts.

Equities of farm operators in all farm real estate in 1930 ranged from an average of less than 30 percent in the three states, Illinois, Iowa, and South Dakota, to an average of more than 70 percent in the three States of Maine, New Hampshire, and West Virginia, with a low of 28 percent in South Dakota and a high of 78 percent in Maine.

The highest rate of tenancy exists on cotton farms, the Bureau said. In 1930, 73 percent of the cotton type of farms, as classified by the census, were tenant operated. The rate of tenancy for other farms the country over was about 32 percent.

"In the North," it said, "the tenant in many areas is frequently a son or relative of the farm owner, and if he is not, the social distinctions, as compared with farm owners, are much less pronounced than in the South.'

There were only 180 counties in 1880 wherein as many as half the farms were tenant-operated, and practically all these were in the South; but in 1935 such counties totaled 890, and they effectively blanketed the Cotton Belt and much of the more fertile parts of the Corn Belt. In all, there were 1,107 counties in 1935 in which half or more of the land in farms was under lease to the operator.

"Form tenancy tends to increase, says the Bureau, "with the commercialization of agriculture. Free land and democratic rural institutions have retarded the segregation of labor from capital in agriculture, as contrasted with industry; but the trend toward such segregation is clear.

"Increasing proportions of the farmers are becoming tenants in the regions where commercial agriculture is dominant, and increasing proportions of the tenants are becoming croppers or wage hands in the South. This trend is, profoundly affecting both the present and future welfare of rural people."

The publication, containing 71 charts, was prepared by H. A. Turner of the Bureau staff with the assistance of other research workers in the Bureau and the Resettlement Administration. It is one of ten graphic summaries covering various phases of American agriculture prepared by the Bureau, representing analyses based on 1930 and 1935 census data. The series is being prepared under the general supervision of Dr. O. E. Baker.

### Business

Business Week (December 26) reports that the total annual pack of fruit juices, including tomato juice, "is now valued at $25,000,000 and is almost as large as he production of any one of the three canned vegetable stars—tomatoes, peas, and corn—and larger than any of the big three of canned fruits, peaches, pineapples, and pears. And the juice industry appears to have developed without upsetting any part of the packing field. The 345,000 tons of fruit which were turned into preserved juices last year amounted to 3 1-3 percent of the nation's total supply of fruit and even the canned fruits normally take only 10 percent of the total yield. More than one-fourth as much fruit was made into juices as was dried. As analysis of figures prepared by the National Canners Association shows that, out of every 100 cases of canned fruit and fruit products produced in the United States last year, 13 cases were canned juice. Adding the bottled juice and canned tomato juice output, the entire straight canned fruit pack was less than 2 1-2 times larger than the juice production. This growth, it must be remembered, has all taken place within 10 years. The public will now find on grocery shelves such newcomers among preserved juices as apricot, peach, pomegranate, cherry and prune in addition to the well established favorites—grapefruit, pineapple, orange, lemon and loganberry...."

### Cotton

### Sugar Bags

"Some time ago a new item from Washington, D. C., revealed the federal technologists were working in cooperation with the North Carolina State College in developing a cotton raw sugar bag which may eventually displace the old burlap bag now commonly used by packers and shippers," says an editorial in the Houma (La) Times. "It is claimed that the bag has already met with laboratory tests and will be placed into service, carrying raw sugars from Hawaii to refineries on the Pacific Coast....Should it prove successful its use annually for shipping raw sugars would consume approximately 50,000 bales of cotton....We hope that all the sugar interests of the nation will sense the importance of the new enterprise and demand the general use of cotton bags in the service of raw sugars.....It may be that the cotton bag may also be serviceable for the rice, corn, beans and other agricultural products that are successfully cultivated here in Terrebonne Parish. We hope our truck farmers will also find uses for the new 'cotton bag' in the near future."

## FLOCK OF 53 HENS RETURNED $15 ABOVE FEED COST IN MONTH

John Hackett, Pulaski county, Ark., reports that he has received better than 73 per cent egg production from 53 hens which are hybrids, being a cross of Leghorns, White Wyandottes, Buff Orpingtons, and Black Minorca birds, said Carroll S. Morrow, asssistant county agent.

Mr. Hackett's 53 hybrid hens produced 1,174 eggs in October and his total feed cost, including laying mash, scratch feed, oyster shell, and sprouting oats, all fed to the hens, daily, was $18.75. Figuring the sale value of the eggs at 35 cents per dozen, his income from the flock was $34.30, or $15.55 above feed costs.

This flock is sheltered in a house which is properly built and has the proper amount of space for his hens, and is provided with one acre of range when weather permits the hens being out, said Mr. Morrow.

Little Leona—"Mama, do dogs get married?"

Mother—"Certainly not, dear"

Leona—"Then what makes old Towser growl so at Bessie when they are eating their breakfast?"

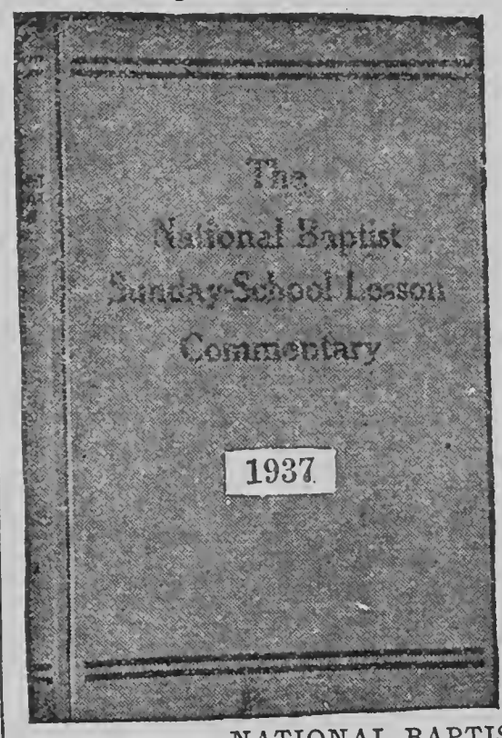
### Chain Stores and Farmers

"One chain store maneuver credited with an important share in the defeat of California's anti-chain tax in last month's referndum was the yoeman aid which the mass distributors rendered in moving surplus fruits and vegetables—particularly a 4,000,000 case surplus of peaches to market at stable prices. That helped chains win the farm votes. Independents could match them for advertisement, dollar for dollar in the big campaign, but they couldn't deliver organized marketing aid. As the big man vs. little man fight grows hotter along the whole distribution front, the independents are preparing to match the chains' bid for farm support. They have set up an Independent Food Distributors Council with headquarters in Chicago where permanent operating plans will be mapped during the week of the big food conventions January 24-31....."

## RUBBER FROM GOLDENROD

Perhaps the day when American autos will ride on rubber coming from fields of cultivated goldenrod was brought a little nearer by the recent discovery made by a United States Bureau of Plant Industry scientist. Since it was first learned that goldenrod has a high rubber content, scientists, including the late Thomas A. Edison, have tried to learn why this rubber content is so greatly reduced after the harvesting of the plant, John T. Presley, a government research scientist, has now announced that the rubber is not lost when the harvested goldenrod is not exposed to light.

Sunday School Lesson Commentary



1937

PRICE $1 PER SINGLE COPY

Six Reasons Why You Should Use It:

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theorics leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

## TOWARD BETTER CONSUMER STANDARDS

The way for consumers to get grade-labeled canned products is to ask for them, according to Paul Williams, Senior Marketing Specialist of the Bureau of Agricultural Economics in the Department of Agriculture, who outlines in this article, the unfinished business ahead in getting complete information for canned goods consumers.

BACK in the days when consumers spun the wool from which clothes were made, preserved the products of the adjacent orchards in the form of jellies, jams, and preserves, and canned or dried many vegetables, the need for standards and grades was not apparent. The producer sold his surplus directly to the consumer.

NOW that such products must move through today's conventional marketing channels, the need for standards of quality is at once apparent and urgent. Standards afford a "common language" which enables the buyer and seller to consummate sales safely on the basis of a given quality or grade.

TODAY consumer groups are studying as they have never studied before the qualities of merchandise they buy. They are delving into the mysteries of food prices and distribution. Price and distribution studies are of little consequence unless quality or grade is given consideration.

NOT UNTIL 1913 did Congress appropriate the funds necessary to conduct research studies in marketing. The first appropriation made to the Department of such purposes was included in the Agricultural Appropriation Act for the fiscal year 1913. This work was committed to the then office of Markets and Rural Organization, the forerunner of the Bureau of Agricultural Economics.

ORIGINALLY Congress contemplated only the development of commercial standards—perhaps they should be called farm standards—so that the farmer, by classifying his products according to quality or grade, might more advantageously market his crops. Among the first commodities to receive attention were apples, sweet potatoes and Irish potatoes. In those pioneering days, investigators of the Department were assurred by many, as are its present-day investigators working on other products, that practicable and workable standards could never be devised and used for agricultural products. Many argued that no two potatoes ever grew exactly alike, that all the peas in a pod were not the same, that the quality of commodities differs in the same fields and that varietal and seasonal differences made standardization impracticable.

INSTANT approval of the grades suggested by the Bureau for potatoes, for example, did not come from the trade. It was not until an order of the Food Administration took effect in 1918, that trading on the basis of United States potato grades was practiced to any great extent. Today probably 80 to 90 per cent of the fresh fruits and vegetables distributed through commercial channels are sold in wholesale markets on the basis of United States grades.

IMPETUS was given the standardization and grading movement in the passage of such legislation as the United States Cotton Futures Act and the United States Warehouse Act in 1915 and 1916. It was in the latter act that the Secretary of Agriculture was given the first authority to establsih official standards and grades for a number of agricultural products "by which their quality or value may be judged or determined." It is doubtful even at that comparatively recent date whether many members of Congress, if any, had consumer standards in mind. Probably their sole thought was to enable the farmer to store his products in licensed warehouses and to borrow money thereon.

FIRST United States standard for food written into law was a consumer standard. It is not a mandatory standard. The Sulzer apple law, still on the statute books, defined "standard grade" apples, and provided for their labeling. On March 4, 1923, the President approved an act requiring that butter contain not less than 80 per cent butterfat. This was the first mandatory standard. The Appropriation Act for the Department of Agriculture for the fiscal year beginning July 1, 1931, carried the first authority to extend the inspection service on agricultural products to include dried and canned fruits and vegetables. On July 8, 1931, the President approved an amendment to the Food and Drugs Act authorizing the Secretary of Agriculture to draw a minimum standard of quality for all canned fruits and vegetables and requiring all such products falling below that standard to be labeled with a legend of inferiority.

THE GRADING service of the Bureau of Agriculturel Economics is concerned primarily with the grading and certification of large lots of canned frnits and vegetables hypothecated or sold on the basis of the grades of the Department. It becomes necessary that carefully defined, closely drawn, standards for grades be developed in order that there be a basis for certification. So the Department has bee obliged to develop standards for canned fruits and vegetables. Otherwise, it would not be possible to carry out the mandate of Congress that we certify to interested parties the grade, class, and condition of canned products.

CANNED FOODS differ from many of our agricultural products in that they are practically ready for consumption at the time they are grades. They are in their finished form. Therefore, the grades for canned fruits and vegetables are at once consumer standards.

MOREOVER, when canned goods move from factory to jobber, distributor, or retailer, they are sold on the basis of some grade—either definitely expressed, or implied, in the contract of sale. A large volume of canned fruits and vegetables is sold on contracts in which the United States grades are used as a definite basis of sale. The ultimate purchaser or user of the canned products also wishes to know the exact grade of the product, just as the wholesaler or distributor of the lot of which a given and was a part.

SO, SOMETIME ago the Bureau of Agricultural Economics recommended that labels of canned products should show the following information: (1) A truthful, concise statement of grade in such terms as "Grade A" or "Fancy" or "Grade B" or "Standard" or "Grade C"; (2) Such additional descriptive information as may be appropriate pieces in the case of peaches, seive for the product, such as count of size in case of peas, strength of sirup in the case of fruit, number of servings, etc.

THE BUREAU of Agricultural Economics hopes the canning and distributing industries will voluntarily adopt these recommendations. We believe that in the long run the industry will find it decidedly to its best interests to take the housewives of the National into its confidence, and frankly and honestly sell its products on the basis of the grades they really are.

A RECENT study of 10,500 labels by the Home Economics Club at the University of Iowa indicated that although the net weight declarations required by law appeared on all labels, 97 per cent gave no indication of the volume of contents, number of servings, or pieces; 85 per cent of the fruit labels gave no indication of sirup density; 80 per cent of the labels carried pictures of the food in the raw state.

THE REPORT reads: "No standardized clear-cut term was given to indicate quality. Accepted, meaningful, standardized terms describing quality such as 'Fancy,' 'Choice,' 'Standard,' 'Grade A,' 'Grade B,' 'Grade C,' appeared on only 10 per cent or less of the label, except for corn where 18 per cent of the labels recorded such a term. It is obvious as a result of this study that in the great majority of cases there is either no information or information which tends to confuse the buyer."

SOME outstanding representatives of the canning industry are aware of the confusion now existing with respect to statements on labels. An officer of a canning association said in an address:

"I HAVE recently made a careful study of 474 different labels of 53 firms from 13 States. The firms included the leading pea packers of the country, as well as some smaller ones and one wholesale grocer—a truly representative list. The labels covered in the main only fancy brands, and if extra standard and standard lines had been included, our picture would doubtless have been even more confusing and disheartening. As it was the 474 labels showed that the 53 firms using them for the edification of their customers employed 254 different phrasings to express the size of the pea in the cans, totally independent of quality. Hence our allusion to the Chinese characteristics of our canned pea labels."

AN ASSOCIATION of canners, nation-wide in scope, when grade labeling proposals were before the industry, suggested a so-called "descriptive" system of labeling. The program suggested by the canners' labeling committee would have provided 144 different combinations of socalled "descriptive" statements on labels for canned cream-style corn in No. 2 cans alone. Corn is packed in at least four well-known sizes and in wholegrain style as well. Here are some of the descriptive terms employed in the 144 combinations taken at random from a booklet of specimen labels: "Medium Sweet . . . Very Tender . . . Very thick consistency . . . To a high degree free from dark kernels, cobs, husks, or silk." Another label reads: "Unsweetened . . . Firm not tough . . . Creamy consistency . . . Practically free from dark kernels, cobs, husks, or silk." Another label reads "Slightly sweet . . . Not tender . . . Thin consistency . . . Practically free from dark kernels, cobs, husks, or silk."

ONE LARGE distributor used last year, 1935 (his first year using them), 88,000,000 labels bearing grade designations of which 17,000,000 were "Grade A," 4,000,000 were "Grade B," and 67,000,000 were "Grade C" labels. These figures should dispel any fears any merchant might have of his inability to sell goods that are labeled "Grade

"Grade A," "Grade B," and "Grade C."

IN ANSWER to a recent query for similar information for the current year, we can see how grade labeling is growing. Here is the organization's statement: From January 1, 1936, to November 1, 1936, 146,948,00 labels were used, of which 40,434,000 were "Grade A," 959,000 were "Grade B," and 105,-555,000 were "Grade C." For the period from November 1, 1935, to November 1, 1936, a total of 170,-500,000 labels were used, or, in other words 14,200,00 dozen cans were actually placed on the market bearing labels with the grade designations devised by the Bureau of Agricultural Economics. This is equivalent to more than 7,100 carloads. This would make one of those well-known freight trains 7 miles long, and if the cans were placed end to end would reach half way round the world.

MOST OF the canners and distributors know the actual grade of their merchandise, but if they want official assurance of the official grade to use as a guide in labeling, they may send samples of their packs to one of the official canned fruit and vegetable grading offices of the Bureau of Agricultural Economics for grading and certification. The certificate they receive will tell them precisely the grade of product in each can in the sample and under the terms of the Farm Products Grading Law, the facts set forth in the certificates are "prima facie evidence" in all Federal courts. So if the samples sent have been actuallly representative of his pack, the distributor need have little concern over the possibility of having his goods seized for misbranding, if he labels in accordance with the Bureau's findings.

A GREAT deal has been said by those not yet convinced of the advantage of revealing the whole story of quality on their labels taat the cost of Government grading would impose a terriffic cost burden on the industry that the consumer would have to absorb in the end Let's get that straight. **First,** if the vendor knows the grade of his merchandise, he need not have it officially graded in order to label accurately. Then it won't cost him a cent to label in terms of our grades. Someone has to buy the labels and have them printed, and the extra ink used in the few extra words and letters will be so small as to be impossible to calculate. The official grades are simple enough. He can do the grading himself. **Second,** if he elects to draw samples in the method recommended and send them to the Bureau of Agricultural Econimics for grading, in order to be officially informed as to the grade, the cost of official grading will be 0.000125 cent—a little over 1 ten-thousandth of a cent—per ordinary size can. If he sends 50 or more samples to one of the Government grading offices in a year, the cost will be 25 per cent less than the above figures or 9 hundred thousandths of a cent per can. So consumers need not be particularly concerned about any tremendous-cast arguments that may be propounded.

ASWERING another question frequently asked, "What are the differences between Grade A, Grade B, and Grade C?", here are the essential distinctions: Grade C canned foods is good wholesome food. In this grade, a large percentage of all canned foods is found. The raw products used in this grade may not be so carefully selected as to size, color, and maturity as in the higher grades. Products of this grade should sell at a cheaper price than products of higher grades, but in the case of many commodities the food is just as nutritious. In Grade B will be found vegetables that are more succulent than those in Grade C, and the fruit is better selected as to color, size, and maturity. Consumers will find that products of this grade will be very satisfactory for general household purposes. Only the finest products are found in Grade A merchandise. The fruits and vegetables are very carefully selected as to size, color, and maturity. Incidentally, not a large proportion of canned products is fitted for this grade.

DIFFERENT factors for quality or grade are involved for each commodity. or example, the grade of peas is ascertained chiefly by considering five factors—clearness of liquor surrounding the peas, uniformity of size and color, freedom from defects, tenderness and maturity, and flavor. In grading fruits, the usual considerations are color, uniformity of size, freedom from defects, character of fruit, and flavor. An interesting difference in grading fruits and vegetables exists in that the young, tender, most succulent, immature vegetables usually grade highest, while fully mature but not overripe fruits are usually most desirable.

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.

## A National Religious Digest

**NATIONAL BAPTIST UNION-REVIEW**

**Published Weekly, is tho Official Organ of the National Baptist Convention of America.**

Leaders should be well informed on what the denomination is doing, whether in their church, their association, their district convention, state convention or the National Baptist Convention; hence, in order to get this information you should read The National Baptist Union-Review, published every week in the year. The subscription price is $2.00 a year.

It contains "Every Woman's Page," together with that of the Sunday School Lessons. Many state organizations have adopted it. The publication is never old, because it is a religious, weekly digest.

Send your subscription price of $2.00 to the—
**NATIONAL BAPTIST PUBLISHING BOARD**
**523 Second Avenue, North,**
**Nashville, Tennessee**

## Select Sermons
### By Gordon

An improved, revised and new edition of Gordon's Select Sermons is now on the shelf. This book contains a rare collection of sermons by an eminent pastor, preacher and theologian who had a successful career. The price of the book is $2.50, postage paid. Place one of these in your library.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## Pulpit Bibles
### At Low Cost

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## A Metoka and Galeda Manual
### PRICE 25 CENTS

Your organized classes, such as the Metoka for men and Galeda for women, should get a copy of the Metoka and Galeda Manual, a new book of methods for juniors and seniors, for men and women; invaluable to organized classes, price 25 cents. We also have the Metoka and Galeda Hand Book, price 10 cents; the Metoka and Galeda Magazine, price 20 cents; Metoka and Galeda Pennants at 50 cents each; gold-filled M. and G. Buttons at 50 cents. Equip your class. They will work better when they have better material to work with.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

### ICE CREAM CONE 6 FEET TALL

Sydney—(AP)—Something new in ice cream cones was provided for former pupils and their guests at the jubilee of the Methodist Ladies college here. It was 6 feet high, weighed 250 pounds and was built in seven tiers, colored pale blue and dark blue (the college color), and adorned with the college badge.

### HER SMALL FLOCK BROUGHT IN $188

A poultry return of $188.04 from January to October of this year and 112 pullets added to her laying flock, is a pleasant achievement Mrs. Andy Warnett, of the Gid home demonstration club, has to her credit, related Miss Marian Penrose, Izard county agent till recently, when she went to Arkansas county.

Last January, Mrs. Warnett's flock numbered only 50 single comb Rhode Island Reds, the home demonstration agent continued. In March Mrs. Warnett hatched 283 chick, raising 277. She sold 104 for fryers and broilers and used 61 on the table, which represented a profit of $59.25. The 112 pullets raised were added to the flock.

The flock produced from January to October 814 and three-fourths dozens of eggs, which sold for $128.79, making a total with the profit on the fryers and broilers of $188.04. This, said Miss Penrose represented an income of $18.80 a month.)

Only $7.09 worth of feed was bought, the rest having been raised at home, the demonstration agent continued. Milk was kept before the chickens, and they picked up a good deal of their feed on range. When the sumac berries were ripe, Mrs. Warnett gathered a 100-pound sack of them for her flock every 15 ao 20 days, the demonstration agent said.

"One of the most valuable of the home-grown feeds, in Mrs. Warnett's opinion, was green stuff—wheat oats and alfalfa," Miss Penrose noted. "Mrs. Warnett feels that better returns than she got could be had by more careful attention."

### EX-SLAVE DIES HERE AT AGE OF 119 YEARS

Chicago—Mrs. Molly Harris, ex-slave, 119 years old, died last Monday in the home of her daughter, Mrs. Alice Little with whom she had been living in the last ten years

Born in Chattachoochee county, Ga., more than a century ago, at the age of nine Molly was taken away from her parents and sold for $500 to Col. Orphia Sapp whose plantation was near Richland, Ga. She was one of a hundred slaves owned by Col. Sapp.

IN THIRTY-FOUR months we have built up new instruments of public power. In the hands of a people's government this power is wholesome and proper. But in the hands of political puppets of an economic autocracy such power would provide shackles for the liberties of the people—Franklin D. Roosevelt in his message to congress in January, 1936.

### TRIPLET CALVES ARE BORN TO HEREFORD IN INDIANA

Rochester, Ind.,—Triplet calves were born today to a Hereford cow owned by Marion Severns, farmer, living two miles north of this city. The calves are normal and each weighs from 35 to 40 pounds. The mother of the triplets is 6 years old and has given birth to three other calves. She was considered only a fair milk producer.

### SALES ON CURB MARKET PAID HER $134 PROFIT

Mrs. J. W. Shipp, of the Mount Pleasant community, Miller county, Ark., has found selling fruit vegetables and flowers on a curb market profitable, according to Mrs. Tommie S. Worth, home demonstration agent.

During the past season, Mrs. Miller sold $30 worth of strawberries at a profit of $20; $15 worth of blackberries at a profit of $12; $50 worth of vegetables at a profit of $35 and $82 worth of flowers at a profit of $67 earning a total profit for the season of $134, the home demonstration agent said.

## POULTRY PROBLEMS

(Continued from Page 1)

fined to the brooder house and small outdoor pen with a floor of hardware cloth. This method has been very successful where used, particularly where there is a limited range. If a 10x12 foot brooder house is used for 350 chickens, a pen 9x10 feet is sufficiently large. The floor is made of one-half or three-fourths inch hardware cloth and the top and sides of woven chicken wire. It should either be built high enough off the ground to permit cleaning underneath, or built so it can be moved for cleaning.

### Second Method

The second method, that of close confinement in battery brooders for two weeks and then the use of the regular brooder house, is used by some in this community with very good results. Each section of the battery brooder is made two feet square with hardware cloth for the floor. Feed troughs are hung outside of the brooder, and one of the slats forming the sides made movable so as the chicks get larger the opening may be enlarged. Cardboard or paper are used for the top so that when the batteries are in place, one on top of the other, droppings fall through to the top of the one below. These may be kept either in a sufficiently warm room in the house or basement or in the brooder house. After two weeks the chicks are put in the regular brooder house. Those using this type of battery brooder report more health chicks, less care necessary and less cannibalism.

### Colony Brooders

A few desirable qualities of the colony brooder house worth considering are:

1. Portable, so the chicks can be raised on clean ground each year.
2. Plenty of ventilation. Some houses use large windows and a rear ventilator.
3. Tight, warm dry floor; many use double floor.
4. Plenty of room. Not more than three chicks per square foot.
5. Plenty of heat.
6. Floor litter used; sand, peat, ground corn cobs, oat hulls.
7. Temperature lowered gradually to about 70 degrees Fahrenheit at end of four weeks.
8. Round corners with hardware cloth to prevent chicks from crowding.

Some poultrymen very successfully use summer roosting shelters. After heat is unnecessary the chicks may be moved to summer shelter.

## FARM TENANCY

(Continued from Page 1)

price for farm products."

In attempting to solve this problem, most European countries have turned to farmer's cooperative marketing associations. The movement has achieved its greatest success in Denmark. To a more or less extent, the most successful cooperatives own their processing plants.

### Seek Government Aid.

Despite the efficiency of the more successful cooperative, the depression cut too deeply for them to prevent a crisis, Gregory asserted. Like in this country, the farmer was forced to turn to the government for aid.

Nearly all farm schemes suggested in this country have been tried in one or more European states and most of them have been effective, he said. Several nations have turned the operation of the government over to the cooperatives.

## NEGRO FARM LEADERS

(Continued from Page 1)

tious work to improve the soil which he tills, either as an owner, tenant or sharecropper.

Conferences of Negro leaders at Tuskegee Institute and at Prairie View, Texas, will be followed by State, county and district meetings, in order to reach the Negro farmer and outline the program direct to him. Other agencies, such as churches, schools and newspapers, will be asked to supplyment the educational work of the various meetings.

Out of town visitors and Extension workers included: Alexander Hurse and Miss Camilla Weems from Georgia State Industrial College, Savannah, O. W. Sanders, P. S. Bowles, M. C. A. Talbert from Alcorn A. and M. College, Mississippi; T. M. Campbell, N. Kellock, V. C. Turner, Miss L. C. Hanna, Mrs. B. T. Pompey, Mrs. L. R. Daly, Miss J. L. Dent, R. R. Bell and R. T. Thurston, of the Alabama Extension Service, Tuskegee Institute; A. A. Turner, and Mrs. B. S. Shute, Florida A. and M. College, Tallahassee; Mrs. James P. Davis, Field Officer AAA, Capahosic, Virginia, and Jennie B. Moten, Feld Officers AAA, Little Rock, Arkansas.

## MORE USES FOR CITRUS FRUITS

Study by the Department of Agriculture has resulted in development of by-products by which surplus citrus fruits need not go to waste in favorable crop years. Chemists have found that high quality salad oils and solid fats may be obtained from grapefruit seed and wines and cordials may be made from the juices. New methods of canning orange and grapefruit juices have improved the taste and keeping quality of those juices.

## THE GARDENER'S LAMENT

I thought I'd plant a garden,
And raise myself some eats—
Fine lettuce, leeks and cabbage,
Potatoes, corn and beets.
But birdies sat upon the fence
And saw my lettuce seeds,
They flew right down and ate 'em up,
And I grew only weeds.
The beetles 'rose at four a. m.,
And feasted on my beans;
Potato bugs ate up my spuds,
And left disaster scenes.
The cutworms sawed my cabbage off,
The chickens ate my corn,
And had I been a man of wrath,
I really might have sworn
To get revenge on all these pests,
And end their lives in May,
But I just dug that garden up,
And now I play croquet.
—Chester E. Shuler, Newport, Pa.

# *The Sunday School Congress For 1937*

*CINCINNATI, OHIO, KNOWN AS THE QUEEN CITY OF THE NATION, SELECTED FOR THIS SUMMER SCHOOL OF METHODS*

*Arrange for every department of your church to be represented. It will be the thirty-second annual session. Send some one to the following departments:*

| | | |
|---|---|---|
| TEACHER TRAINING | METOKA | GALEDA |
| ADVANCED TEACHERS | PRIMARY | MUSIC |
| SUPERINTENDENTS | MISSIONARY | JUNIOR |
| B. Y. P. U. | MINISTERIAL | CRADLE ROLL |
| BIBLE STUDY | HOME DEPARTMENT | NATIONAL A. F. CADET |
| DAILY VACATION BIBLE SCHOOL | | |
| RELIGIOUS BOOKS AND PARAPH | ERNALIA | |

Each of these sections will be in charge of some of the nation's best known teachers, instructors and demonstrators.

The Sunday School Congress is not a deliberative body. No motion or points of order are ever made. It is a veritable university of the denomination, the training camp of the Baptists, and the one national gathering that offers a course to those who want to learn, and an opportunity to those who can teach. It is an ocular demonstration of that saying, "You cannot teach what you do not know; you cannot lead where you do not go."

Elect your representatives for the thirty-second annual Sunday School Congress, which will be held June 9-14, 1937 in Cincinnati, Ohio.

Railroads are offering better rates than ever. For further information, write

HENRY ALLEN BOYD, Secretary,
SUNDAY SCHOOL CONGRESS

Nashville, 523 2nd Avenue, North, Tennessee

## CHAMPION CORN GROWER TELLS HOW IT IS DONE

Russellville—Farmers desiring to produce higher quality corn would do well to give more attention to advance preparation of the land and to thinning the corn crop, according to Garland Proctor of Belleville Yell county champion corn grower who has carried off the first prize on corn at the county fair for the past two years.

Discussing his success at growing corn on average upland soil, Mr. Proctor said he broke his land deep in the fall, and then was careful to prepare the soil well in advace of the planting in the spring. The corn is plowed deeply only once, the first plowing, later workings being shallow.

Most upland farmers fail to thin their corn properly, Mr. Proctor stated. For the average upland soil, the rows should not be closer than three and one-half or four feet, and the corn should be thinned to about four feet in the drill, he advised.

Mr. Proctor does not grow cotton, hay, peas, beans and melons. He has attracted quite a bit of attention as the producer of huge muskmelons, growing one the past season that weighted 27 pounds.

## GOT $33 FOR COW'S PRODUCTION IN MONTH

Selling $32.50 worth of dairy products from one cow during November, with a feed bill of only $7.60, was the pleasant story Mrs. P. L. Jobe, member of the Oakland Heights Home Demonstration Club, north Sebastian county, told her associate members at a recent meeting, said Miss Ruth Fairbairn, county home demonstration agent.

Buttter, buttermilk and cotttage cheese were the products Mrs. Jobe marketed. she related. The butter brought 35 cents a pound, the buttermilk 20 cents a gallon, both going to regular customers, and the cottage cheese was sold to a hotel for 10 cents a pint.

The feed bill was for feed purchased. Kaffir fodder and hay, grown at home, formed the basis of the cow's raiton.

## SOYS PLOWED DOWN DOUBLED RICE HARVEST

Harry Elliott, rice farmer, DeWitt, has demonstrated in co-operation with J. H. Dean, county agent, that it is profitable to plow under soybeans for soil improvement.

On an 80 acre field which was divided into two equal parts, soybeans were planted on 40 acres and 40 acres were left idle, Mr. Dean related. The beans were planted with a drill in order to provide more foliage to shade the ground to keep down weeds and grasses. When in full bloom the peas were plowed under approximately six inches deep.

Early Prolific Rice was planted on the 80 acres, and where the beans were plowed under the rice produced 80 bushels per acre by actual weight, and where land was left idle and no soil improvement crop plowed under the rice produced 42 bushels per acre. The entire 80 acres of rice was planted and matured at the same time.

"Thus, by using a soil improvement crop Mr. Elliott doubled his rice yield," said the county agent.

## BERMUDA, VIEWED AS PEST 10 YEARS AGO, HAS WON COMMUNITY

Ten years ago when J. R. Towery of Eglantine Community, Van Buren county, Ark., sodded pastures on his farm with Bermuda grass, his neighbors were indignant because they thought he was introducing a pest into the community. Now practically every farmer in the community has some Bermuda grass in his pastures, said D. S. Lantrip, county agent.

It has been found that Bermuda grass withstands drouth better than most pasture grasses, that it may be heavily grazed, and that it offers a check for soil erosion, the county agent explained, adding:

"Mr. Towery has 10 acres sown to Bermuda grass which he considers worth more than any 10 acres on his farm. This year in spite of the drouth he was able to graze eight head of cattle on this pasture".

# THE MODERN FARMER

Vol. X. NASHVILLE, TENN., MARCH 15, 1937 No. 2.

## FARM PROGRAM EXPLAINED

### Information Given To Negro Agents of Ga.

### A. L. Holsey Field Officer Addressed Forty-six Represenatives

Savannah, Ga.—Forty-six Negro County Farm and Home Demonstration Agents concluded their annual intensive training week at Georgia State College here today. Specialists from Washington, from the State University at Athens, and from the State Extension Service, conducted round table conferences on Soil Conservation, Discussion Groups, and similar related subjects.

In opening the two-day discussion on the AAA Soil Conservation Program, E. A. Miller, representing C. A. Cobb, Director of the Southern Division, AAA, Washington, D. C., said that "our government recognizes its responsibility to see that every farmer, irrespective of race, is informed of the benefits available to farmers for conserving the soil."

Mr. Miller said that the object of the program is to assist the farmers to "improve their land" and that the benefit payments were not made as subsidies but "to enable farmers to practice soil conservation for the ultimate good of the entire country."

Mrs. R. R. Moton, who recently joined the Field Staff of the AAA, commended the Soil Conservation Program, because lands diverted from cotton may be used by the Farm women to grow "a balanced food ration in home gardens." Miss Camilla Weems, State Home Demonstration Agent for Georgia, told of many instances where landlords are encouraging tenants and sharecroppers to grow food and feed crops.

Miles Hackney, successful Negro farmer of Union Point, Georgia, told how soil conservation methods had improved a section of very poor land on his farm, and brought samples of wheat, oats and vetch which this land has produced.

James P. Davis, Field Officer of the AAA, said that 75,484 farms in Georgia, representing 5 1-2 million acres, are operated by Negroes, and of this number, 10,571 farms of 833,000 acres are owned by Negroes.

Blackboard tests in computing soil-building allowances on typical farms, were conducted by F. C. Ward, Georgia State Administrator of the AAA, and G. L. Prichard, Administrative Assistant, AAA, Washington, D. C.

Before an assembly of the students and faculty, President B. F. Hubert presented the visitors and highly commended the efforts of the government to help the farmers through a farm program which not only builds the soil but has increased farm income.

P. H. Stone, Georgia State leader of Negro Extension work, conducted the sessions.

## LOWLY CARROT USED

### Vegetable Utilized To Prevent Accidents

"A Carrot a day to keep the undertaker away," may become the national slogan for motorists, writes Naomi Doeble in the Cedar Rapids Gazette.

There's a possibility that spinach will slither its green stuffiness off the comic strips to be replaced by crisp rich-hued raw carrots, the food to develop ambitious little boys into champion racing car drivers and never-crackup aviators.

Cod liver oil may become the beverage for gimlet-eyed night-working detectives and every woman who wants to stop her stumbling while searching a seat in the darkened motion picture theater will eat cream on her cereal and gobs of butter on her bread.

While Mayor F. H. LaGuardia of New York City this month recommended "a T-bone steak and French fried potatoes" as "one of the best preventives of crime," medical research workers were focusing the attention of safe driving evangelists on vitamin A, found in carrots, cream, butter, cod liver oil, canned fish, cheese and eggs.

**Doctors Have a Word for It.**

Deficiency of this vitamin in the diet, they declared after international experimentation and study, causes night blindness. This, it is believed, may explain the predominance of night driving accidents and possibly account for some of tragedies.

Doctors have a word for it—"hermeralopia," or "dysaptatio visualis," meaning difficulty or occasional inability of adapting the faculty of vision to very faint illumination.

This vision failure, due to deficiency of vitamin A requires performance of a test not commonly used at present for motorists or aviators, states Dr. Harold Jeghers of the Boston University of Medicine in an article published in the January 14, 1937, issue of the New England Journal of Medicine, copies of which were recently received in Cedar Rapids.

**Need Purple Reserve.**

Ability to see in dim light, the article brings out, depends upon the visual purple constituent of the retina. When the eye is exposed to bright light (either sunlight or artificial light such as the headlight glare of an advancing automobile) the visual purple becomes exhausted. The rapidity of its comeback depends upon the presence of an adequate supply of vitiman A in the body.

Most of the accidents in Cedar Rapids, according to police reports, occur between 7 and 9 p. m., beginning during winter months as early as 5 p. m., when light is dim. In nearly every instance the motorist "couldn't see," or complains that he was blinded by headlights.

**Blame Reckless Eating**

Reckless eating, instead of reckless driving, may be the police blotter charge of the future.

Numerous findings of foreign investigators, as well as records from

(CONTINUED ON PAGE 2)

## MORE GOOBERS TO BE RAISED

APR - 2 1937

### South to Produce a Major Crop This Year

Dothan, Ala., Feb. 13—Peanuts, known since slavery days as "goobers," have become in recent years one of the South's major crops. The estimated 1936 value was $44,150,000.

In Alabama, of which this city is "the peanut capital," the crop has become third in value, being eclipsed only by cotton and corn. Agricultural experts say the same undoubtedly is true in other states, particularly Georgia, which leads in peanut production.

Uses, domestic and commercial, of the lowly "goober" are almost unlimited. They go into candy, provide good hog feed, make butter popular in picnic sandwiches, and their oils are used commercially. Recently experiments have been made in treatment of infantile paralysis victims with peanut oil massages.

Parched and boiled "goobers" long have been a Southern delicacy.

The "peanut belt" stretches from Virginia to Florida across to Texas and Oklahoma. It produced 1,300,540,000 pounds in 1936.

**Crop Eestimates**

The 1936 estimates of crop values issued by the United States Department of Agriculture follows:

| State | Pounds | Value |
|---|---|---|
| Virginia..... | 151,200,000 | $5,746,000 |
| N. Carolina .. | 243,960,000 | 9,270,000 |
| S. Carolina .... | 8,160,000 | 343,000 |
| Georgia ..... | 441,575,000 | 14,774,000 |
| Florida..... | 46,757,000 | 1,397,000 |
| Tennessee..... | 5,625,000 | 197,000 |
| Alabama..... | 255,060,000 | 7,397,000 |
| Mississippi.... | 16,120,000 | 790,000 |
| Arkansas..... | 9,350,000 | 411,000 |
| Louisiana..... | 7,680,000 | 392,000 |
| Oklahoma..... | 9,990,000 | 360,000 |
| Texas..... | 99,120,000 | 3,073,000 |

The United States Agriculture Department estimated the average value per pound in 1936 was 3.4 cents. This did not include subsidy payments for crop control co-operation or otherwise. Acreage was reduced sharply in many states during the last crop year as compared with 1935, thereby curtailing production as much as 10 to 20 per cent in some states.

Peanuts are among the easiest crops to cultivate, growing without aid of fertility in most Southeastern soils. Besides, the vines make hay and nogs may be turned into peanut fields to do their own harvesting.

**Runner Type Predominates**

A variety known as "runners" predominates in the Southeast, although Valencia and Spanish varieties are widely cultivated. The latter types process more oils and meats and are therefore more valuable. But the runner type mature usually in October—just when the Deep South planter is finishing his cotton picking. Spanish nuts mature usually in September.

Another "advantage," when hogs are permitted to harvest the pea-

(CONTINUED ON PAGE 8)

## UNDER NEON LIGHTS

### Strawberries Given New Treatment Says Digest

J. W. M. Roodenburg, Wageningen, Holland, reports in the Journal of the Royal Horticultural Society (London, December) on experiments with growing strawberries under neon lights. Summarizing the experiments, he says: "It is quite possible to begin strawberry growing early in autumn provided care is taken to put the plants into the greenhouse at the beginning of October and to irradiate them at night. This prevents the plants getting into such a state, on account of the shortening of the days, that they are no longer fit to be forced. They must be cultivated directly out of summer, without having been exposed to frost. If one would like to begin later on, it is necessary that the cold of winter passes over the plants in order to be able to begin forcing about New Year. With the means now at our disposal it is not yet possible to begin profitably cultivation in November or December. So one is put to the choice either of beginning to force very early with the aid of artificial light or in the usual manner rather late. The use of both cultural methods can form a well-connected whole, neon-strawberries from January till March and strawberries forced by heat at Easter."

**COMBATING THE FLY**

"A successful new method of combating the fly menace has been developed at Saint Elizabeth's Hospital, Department of the Interior, Washington, D. C.," says David Arthur Brodie, Superintendent of Farms, in Country Home (February). "In what has grown to be an urban section, more than 300 dairy animals, 22 horses and 1,000 hogs are kept within 300 yards of the main hospital buildings.....Some 2,000 tons of manure each summer are piled onto platforms made of concrete to prevent seepage. Close to and around the piles are small concrete trenches with smooth, perpendicular sides. Into these trenches containing water and crankcase oil, the maggots fall and die. Water and oil are kept four inches from the rim of the trench so the live larvae cannot climb out. Two inches below the surface is a 1x6-inch board fitted into an upright slot on each side of the trench. This holds the oil in place as the water passes under it and over the cross dam. Heretofore, practically every device to exterminate flies was made to smash or trap them on the wing....."

—Daily Digest.

## SWEET POTATOES DEMANDED

### New Use Found for Them By The Experts

### Chemical Research From The Department of Agriculture

After two years of chemical research on a commercial plant scale and one year of commercial production at the trial plant at Laurel, Miss., the Department of Agriculture feels that the sweet potato starch production looks promising as another Southern farm industry, particularly in sections where large yield of sweet potatoes can be produced at low cost.

During 1934, the first year the plant was in operation, it produced 140,000 pounds of sweet potato starch; the second year, 250,000 pounds, and last year 420,000 pounds. Approximately 42,000 bushels of sweet potatoes were processed last year with an average of 10 pounds of starch a bushel, but under better methods developed near the end of the season it is believed a bushel of potatoes will produce between 11 and 12 pounds of starch and about four pounds of potato pulp, about equal to sugar beet pulp as livestock feed.

This new starch has been tried to a commercial basis in cotton mills, adhesive factories, laundries, and so on and found satisfactory. Large quantities of starch are used for sizing yarns. Big cotton mills use it by tons. Dextrin made from potato starch is the only domestic starch product that meets the government specifications for adhesive for postage stamps, labels and envelopes. At present imported cassava starch is used for this.

More than half of last year's production of approximately 500,000 pounds of sweet potato starch was sold to one cotton mill. The cost of producing the starch has been reduced from 13 cents a pound in 1934 to 10 cents in 1935 and 3 cents in 1936, so that the new starch can begin to compete in a small way with the 250,000,000 pounds of root starch imported each year.

The chemists have solved the color problem and the new starch is very white as demanded. It is not the object of the new industry to compete with the 800,000,000 pounds of cereal starch consumed in this country, the bulk of which is domestically produced. The goal is to develop a sweet potato starch industry that will get its share of the imported root starch business and help farmers of the South just as the corn starch industry helps the farmers of the Midwest.

## AAA WARNING ISSUED TO HELP SHARECROPPERS

### Agency to Withhold Checks to Landlords Who Divert Benefits

By Russell Smith.

Southern landlords who attempt to divert AAA benefit payments from sharecroppers and tenants to their own uses were warned yesterday all such funds will be withheld if the attempts are discovered.

Asserting "a number of complaints from both sharecroppers and standing-rent tenants" have been received by the Southern division of AAA, Cully A. Cobb, director of that division, informed State directors in nine Southern States:

"It will be in order for you to

(CONTINUED ON PAGE 6)

## A NEW KIND OF SOUTHERN VENGEANCE

William Clark Mitchell, a white man, murdered a Negro in Yalobusha county, Mississippi. A jury found Mitchell guilty and he was sentenced to death. State psychiatrists have reported that Mitchell was "fully responsible for his acts." With that report before him, Gov. Hugh White of Mississippi announced a few days ago that he will not commute the sentence.

The carrying out of a death sentence is never a subject for rejoicing, but the action of the Mississippi prosecutor, jury, judges, alienists, and governor does suggest that a wholesome and altogether commendable modification of public opinion is taking place in the south. Although many Negroes have been killed by white men in Mississippi in the 119 years since the state was admitted to the Union only one white man, so far as the records show, has actually suffered the death penalty for such a crime, and that was nearly fifty years ago. The conviction of Mitchell and the refusal to grant him any form of clemency does not prove that the Negro's equality before the law has been fully established in the deep south, but it does suggest strongly that the old maxim is no longer valid that a Negro in the rural south can expect no legal protections in any circumstances as against any white man.

To be sure, the crime which Mitchell committed was particularly astrocious. In the summer of 1932 Mitchell and his brother-in-law Arthur Cook, went to the home of Lewis Bryant, a colored man, and robbed him of $88. The two white men then doused kerosene on the clothing of Bryant, his wife, and his son, poured kerosene on the floor of the house and set the place afire. Bryant and his son burned to death; only the wife escaped.

Cook surrendered the next day, pleaded guilty, and was promptly sentenced to life imprisonment. Mitchell fled to Missouri, where he lived under an assumed name for three years until September, 1935, when he was arrested. At his trial his brother-in-law was a principal witness for the prosecution.

In view of the revolting nature of the crime it may not seem remarkable that the death penalty was imposed and sustained by the state Supreme court, but in this connection it must be remembered that leniency to white men guilty of crimes even of this type has been the rule rather than the exception in the past. It should be remembered, too, that only a few years ago the Supreme court of Mississippi affirmed the conviction for murder of three Negroes although all the testimony against them was in the form of confessions extorted by cruelty.

There is, therefore, substantial basis for the belief that a change for the better has occurred. If so, it is of far more significance for the future of race relations in the south than such purely judicial determinations as the federal Supreme court's decisions in the Scottsboro cases and in the Mississippi case just mentioned. Important as these findings were, they were imposed upon southern courts and southern juries from the outside and were not the product of a wholesome community opinion. Substantial justice to the Negro in the south will never be fully realized until white men serving as jurors, prosecutors, and judges in the south are disposed to grant it. That day may now be dawning.

## LOWLY CARROT USED

(Continued from Page 1)

research workers of the United States, are reviewed in the article by Dr. Jeghers. One of the cases he cited was reported through the courtesy of Dr. Henry Bakst. It concerned a 31-year-old married, certified public accountant who suspecting a vitamin A deficiency requested a photometer test. This is the check that reveals vision handicaps in dim lights in instances where there is no other evidence of eye weakness.

About five years ago, related the physician, this patient, fearing a gain in weight, eliminated all dairy products from his diet. He lived continuously on this deficient intake of vitamin A. Shortly after starting on the regime he experienced great difficulty in reaching his seat on entering the darkened interior of a motion picture theater. The pictures seemed blurred for five or ten minutes and then cleared.

Driving an automobile at night became difficult, especially when trying to pass an oncoming car. Even dim headlights dazzled him. Under such circumstances the patient drove, as he put it, "entirely by instinct." He feared an accident. One night a police officer stopped him and threatened arrest for "drunken driving," which amazed the patient since he had not been drinking. He was on the wrong side of the road and entirely unaware of it! Several eye examinations had revealed 20-20, or normal vision. There was no evidence of systemic or intraocular disease. When examined in the dark room the patient was unable to see a luminous watch dial after ten minutes (normally it would have been seen in three minutes). A photometer reading was 60 percent below normal.

**Vitamin A Restores Vision.**

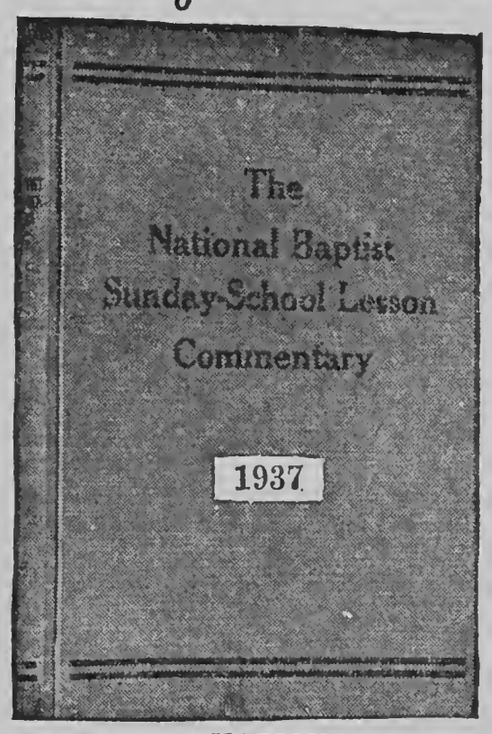
Carotene, an extract from raw carrots and rich in vitamin A, was prescribed. Butter milk and raw carrots were added to his diet. At the end of three weeks he was again tested in the dark room and he could see the luminous watch dial in four minutes; his photometer reading was but 10 per cent below normal. With the continued treatment his photometer reading became normal and the difficulty of adapting his vision to dim illumination disappeared.

The medical record of this man was found typical of similar cases reported from many nations. Dr. Jeghers suggested that the problem may be of sufficient practical importance to warrant an intensive study by traffic experts.. He added that at present no test for the presence of "night blindness" is required for either automobile drivers or aviators.

## STOCKMEN AMAZED WHEN EWE BEARS QUINTUPLETS

St. Libory, Neb—Sheep at Arthur Bosselman's farm had something new to ruminate about today. They gazed at a ewe which gave birth to quintuplets. Live stock men here said they never heard of such a thing before.

# Sunday School Lesson Commentary



**1937**

**PRICE $1 PER SINGLE COPY**

**Six Reasons Why You Should Use It:**

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theories leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

## THE PROGRESS OF A RACE

The 1932 Federal census of Negroes in the United States, a copy of which has been received by the local Chamber of Commerce, tells a stricking story of the upward climb of a race from bondage in a period less than the Scriptural three score years and ten. More than 81 per cent of its members were illiterate in 1870. now only 16 per cent in a total colored population of 11,891,143. Negroes in 1930 operated 25,000 stores with aggregate sales of $101,000,000. Among the professions at the time of the census, they had 54,000 teachers, 25,000 clergymen, 10,500 musicians and music instructors, 5,700 nurses, 3,800 physicians, 2,100 college presidents and professors, 1,740 dentists, 1,230 lawyers and justices. Of the 14,000,000 bales of cotton reported in 1929, nearly one-third were the product of Negro farmers.

While the depression has fallen with especial severity on this race the long view—the memory of an unexampled climb—has sustained its leaders. Its members have shown a unique power of endurance, in part their African inheritance, in part a by-product of slavery itself. They seem to weather adversity with a minimum of social wreckage. In ways that escape general notice they help each other, and many a white family has somehow found itself elected as patron of a Negro household and under the novel necessity of proving that Noblesse Oblige is more than a foreign phrase listed in the back of the dictionary. A resilient and resourceful race.

The Cincinnati Times—Star.

## TOUGH COYOTES CHASE DEER INTO TOWN; MEN STAY HIDDEN INDOORS

CORDOVA, Alaska,—Alaskans peeped out of their homes on Main street today with their six shooters cocked to see if any more cold crazed coyotes were chasing deer through town.

Trappers reported that coyotes, nearly starved, had been making great inroads among deer around Cordova. But even oldtimers were given a shock yesterday when two deer sought protection in Cordova. The coyotes followed the deer into the city, killed and ate parts of the carcasses and escaped before citizens could kill them.

From Anchorage came reports that coyotes killed an ace porcupines, quills and all. The coyotes died a few minutes later. The quills pierced their stomachs.

## GOVERNMENT SETS UP DISASTER LOAN AGENCY

The Disaster Loan Corporation re-established at Memphis, Tenn., an office to serve persons who suffered loss in the flooded area and located in Tennessee and Arkansas. The office is in charge of M. J. Knight and located in the Arcade Building, 146 Union Ave.

Examiners will be stationed in the outlying smaller cities and communities to facilitate the filing of applications and give consideration to the applications.

The members of the advisory committee are: Memphis, A. L. Pritchard, I. R. Wilson, W. P. Oliver, Earl Smith and William Simmons. West Memphis, Arkansas, J. C. Johnson. Osceola, Ark., C. D. Ayres, Blytheville, Ark., H. Highfell, Hughes, Ark.; J. Beck. Marked Tree, Ark., W. B. Chapman, Truman, Ark., J. Cash, Lake City, Ark., William Craddock, Helena, Ark., Al Hareway and John McRao, Marianna, Ark., Paul Denham.

## MINNESOTA WATERMELON

A watermelon that ripens as early as 9 to 10 weeks from the time of planting, is remarkably sweet and of high quality and possesses great market appeal, is among the newer introductions of the Minnesota Experiment Station. The seed was first sent to America from Russia by H. G. Zeveral, a member of the extension division of the station, while engaged in work for the Russian Government. Reports from growers in various sections of the United States, to whom small sample packets were given, indicate the ripening period to be 63 days in some sections. Growers consider the new Northern Sweet Watermelon, as it is named, to be of exceptionally high quality. The melons are attractively green, marked with lighter green longitudinal stripes. The rind is thin, sometimes not over a quarter of an inch. Flesh is dark red, tender and medium grained, while the flavor is rich and sugary. A Minneapolis market gardener reports that an acre of these melons sold for $500, with 99 percent of his crop sold without necessity of going to market; buyers came to his farm for them."

## CAUSES OF CHICK LOSSES

The replies of 568 Kansas flock owners to the question of chick losses shows that some owners lost very few while others lost as high as 85 per cent of the chicks hatched. The average loss was estimated at 22.2 chicks out of every 100.

This is a comparatively low percentage of loss as compared to similar figures which have been compiled from other sources. Chick mortality is one of the important phases of the poultry business that deserves careful consideration.

Accidents ranked first as the cause of greatest losses. White diarrhea was ranked in second place. Hawks, pneumonia, drowned, crows, rodents, roup and colds, smothered, bowel trouble, chilled, low vitality, improper feeding, lice, wet weather and storms, mites, overfeeding, worms, leg weakness overheating and chiggers were ranked in comparative order as other causes of loss.

Success in the poultry business depends to a large degree on one's ability to raise good pullets. If strong, vigorous pullets are put in the laying houses in the fall there is a much smaller likehood of losses during the winter months. Weakly, small, low vitality pullets will never become well enough matured by fall to lay profitably during the winter.

These facts make it evident that more and more attention should be placed on proper equipment, proper feeding and the securing of proper stock for brooding. When these essentials are met there will be fewer chick losses and the resulting chicks will be better matured and therefore more profitable to the flock owner.

## GENERCUS BROTHER

LITTLE 6-year-old Harry was asked by his Sunday school teacher:

"And Harry, what are you going to give your darling little brother for his birthday this year?"

"I dunno," said Harry; "last year I gave him the chicken pox."

## RULING REQUIRES GRAIN INSPECTION

### Grades Cover Wheat, Barley And Oats Shipments

A ruling requiring government inspection of grain transported by motor trucks in interstate commerce is announced by the United States Bureau of Agricultural Economic.

The burden of obtaining inspection is upon shippers.

Officials explained the ruling puts grain transported by motor truck under the same requirements as grain transported by rail or boat.

The government grades apply to all grain sold by grade in interstate and foreign commerce. The official grades cover wheat, barley, oats, feed oats, mixed feed oats, rye, mixed grain, flaxseed, corn and grain sorghums.

## INCREASED DEMAND FOR SEED IS SHOWN

### TWO-THIRDS OF LESPEDEZA ALREADY SOLD

The demand for lespedeza seed, sorgo seed, cowpeas and soybeans is increasing.

Reports by seed shippers to the Bureau of Agricultural Economics say the movement of lespedeza seed this season has been faster than usual. Up to the middle of January, growers had sold two-thirds of their lespedeza seed.

The movement of sorgo (cane) seed also has been faster than usual. Up to the first of the year, growers had sold about 40 per cent of their crop.

Cowpeas were also selling faster toward the end of the year with about 40 per cent of the crop sold prior to Jan. 1.

Movement of soybeans speeded up toward the end of the year and about 65 per cent of the soybeans in the South and the North together had been sold before Jan. 1.

## PINE PLANTING BY FOREST SERVICE ON

### Million Seedlings To Be Placed On State Lands

The U. S. Forest Service has begun planting nearly 1,000,000 pine seedlings on barren cut-over lands of the Conecuh National Forest in Covington County, according to Frank W. Rason, forest supervisor at Montgomery.

This work is to be the first large scale tree planting job undertaken on the national forests of Alabama. This number of seedings will cover an area of approximately 2,000 acres of denuded forest land which is now almost entirely devoid of tree growth, or supports only sparse clumps of scrub oak which has been the only survivors on cut-over lands where repeated fires have killed the young natural seedlings of pine.

The actual planting will be done by CCC boys and it is expected that the job will be completed by March 1.

## HE GOT THE MENU

A SMART little waitress slipped up and said, "I've got deviled kidneys, pigs' feet calves' brains."

"Your troubles ain't nothing to me," growled the stranger, "I've got eczema, rickets, bunions, a headache and an empty stomach. Feed me or I'll start something."

## PIG IS AUCTIONED FOR $140 TO RAISE FLOOD AID FUNDS

Pana, Ill.,—Two novel methods of raising funds for flood relief sufferers through the Red Cross were cited here today by the originators. A 75 pound pig donated to the Red Cross chapter of Christian county by H. L. Montgomery, Mount Auburn, was auctioned. It was sold to Melle Sadler, Taylorville, for his high bid of $140, or almost two dollars a pound.

Sadler then took the pig to Springfield to be reauctioned to boost Sangamon county's relief fund.

H. McIntyre, Shelby county, donated a bushel of yellow corn. This was sold and resold until it netted $47.

## TURKEYS RAISED FROM SIX HENS CLEAR $100

Miss Jessie Williams of Lafayette county made a profit of $100 on turkeys last year in spite of the low prices prevailing during the holidays, said Mrs. Mary M. Yates, home demonstration agent. Living on a farm four miles from Lewisville, Miss Williams, who is three years out of school, took up turkey raising to earn her own spending money.

Encouraged by one year of excellent results from a small start, last year Miss Williams raised 97 turkeys from six turkey hens, selling 80 birds during the holidays. Much of the feed which consisted of corn, oats, and field peas, was raised on the farm. The turkeys had access to an alfalfa field over which they ranged freely. The eggs were hatched partly under chickens, but all the young turkeys were raised by the turkey hens as a sanitary measure.

Sanitation and vaccination for disease prevention, Miss Williams stated, were responsible for the small percentage of loss.

## SOYBEAN PRICES RISE

### 40 To 50 Per Cent Increase Over Last Year Is Noted

Soybean prices have gone up since last Summer because of a smaller supply and a larger demand for soybeans.

Soybeans have been selling well above $1 a bushel in recent weeks—some 40 to 50 cents more than they were bringing a year ago.

During the past two seasons of high prices for edible oils and fats, more than half of the oil produced from soybeans has been used in food products where it competes with cottonseed oil. So the relatively high price of cottonseed this season has been an important factor in bringing up the price of soybeans and soybean products.

When the price of edible oils and fats are relatively low the price of soybean oil depends more on the price of the "drying" oils used in paint varnish and other manufacture.

## A FLAIR FOR SKUNKS

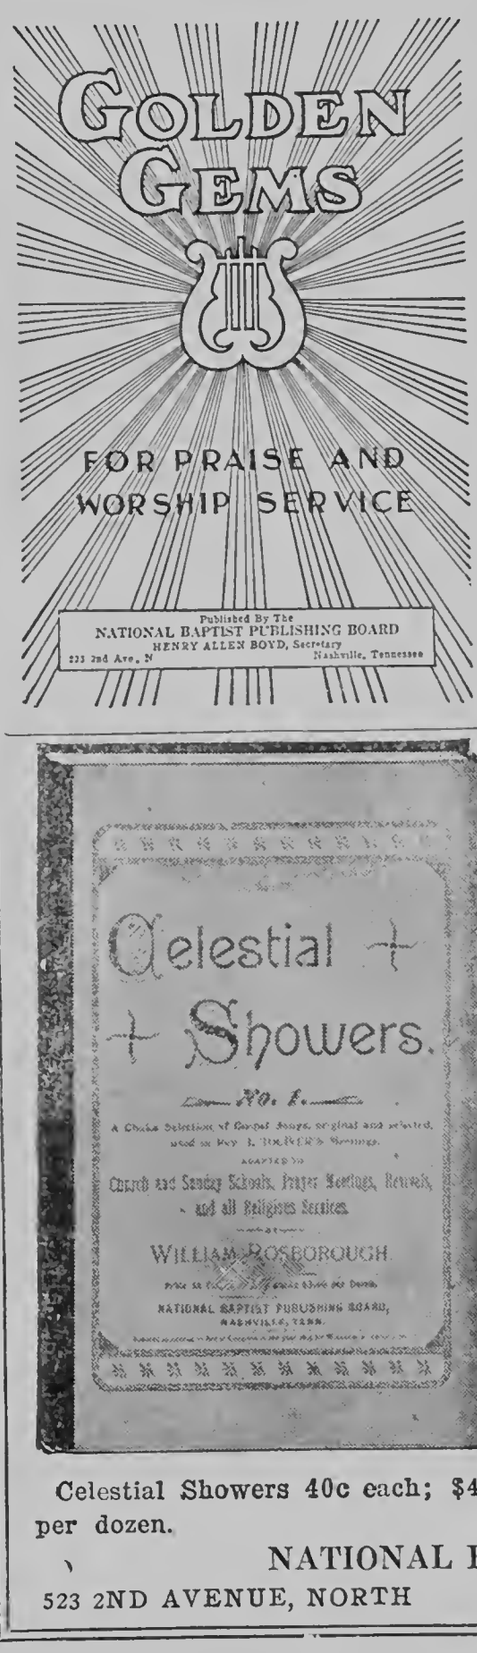
Washington Post: In Arkansas a man was arrested for stealing a pet skunk. It's remarkable that within the boundaries of a single state there should be found a person who will pet a skunk and another person who will steal one.

## MANY THANKS

Hotel guest—I say, porter, did you find a big roll of money under my pillow?

Porter—Yassuh, I did, an' I thanks you very much suh.—Windsor Star.

OUR NEWEST AND MOST POPULAR SONG BOOK



Contains such Popular Songs as:

*He is Coming Soon* — *Is He Yours*
*Singing as We Go* — *Only Give Me Jesus*
*He's My Everything* — *Over in the Glory Land*
*He Understands,* — *The Unseen King*
*He'll say well Done* — *I'm Out on the Battlefield*
*Gospel Waves*

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

**FROM THE BIBLE**

"While the earth remaineth, seed time and harvest, and cold and heat, and summer and winter, and day and night shall not cease."—Genesis 8:22

"Let us then be up and doing,
With a heart for any fate:
Still achieving, still pursuing,
Learn to labor and to wait."

**—Henry W. Longfellow.**

## SOLVING THE TENANT PROBLEM

The American people are smart enough to solve any harrassing problem that is worrying them. The tenant problem, like the Negro problem, the liquor problem, the divorce problem and others, cannot be solved in one month or one year. And no single agency, such as the federal government, or the church, or the farm organization can solve it either. It is a problem that concerns all the people and all the people must aid in its solution.

Farm tenancy is simply a way of living and a way of making a living on a farm. It has existed for centuries. It never became a problem until it began to produce more evil than good. When tenancy—this way of living—began to harm those who lived that way and began to harm all the rest of us—the whole nation—then it became a problem that required solution. The nation is trying to solve it now.

This problem and its solution is of supreme interest to Negro Americans. It effects all of us whether we are farmers or not. The evils of farm tenancy are hurting us more than any other class of Americans. We should think about this problem—study it—and be ready to give loyal assistance to those who are now attempting to solve it.

During the present year the MODERN FARMER will publish a series of editorials on this problem of farm tenancy and we will welcome any comments or suggestions our readers may care to send us.

## ANOTHER ROBINSON OF ARKANSAS

Rev. J. P. Robinson, of Little Rock, is known and loved by the colored people of his state for what he is and for what he has done.

He is one of the 'grand old men." More than four score years old, he is still the active pastor of the First Baptist Church, which has a membership of approximately fifteen hundred and a plant worth $150,000.-00. He has pastored this church and people for fifty-three years. He has been a successful pastor.

Pastor Robinson has preached to his people the way of life and the way of making a decent living. He could not stand to be pastor of a successful church and of an unsuccessful people. So he taught them to be diligent in work and business as well as to be fervent in spirit. He wanted to see them own their homes as well as their church. He is still going about doing good.

The younger pastors of Arkansas, of churches of any denomination, should visit and talk with this gallant "soldier of the cross" and learn just how he has done it. He could certainly tell them some things they should know—things the schools have never told them. For the aged have a monopoly yet on the wisdom of the world whether we wish to admit this truth or not. Long live Pastor Robinson!

## THE 1937 FARM PLAN

The second paragraph of Secretary Wallace's farm program for 1937 asks for "fair and stable income for the farmer, on an equal with city incomes." No one who believes that the farmer is entitled to a square deal should object to this.

There is no unemployment on the farm, the farmer always has a job, but his wages in the past have been so uncertain he could seldom if ever plan ahead. His existence has been too much of a hand-to-mouth, planting-to-harvesting existence Unless he was fortunate enough to be a gentleman-farmer he was never assured of a steady or ample income. This uncertainty has made it hard for business in farming communities.

Much progress has been made during the past four years toward guaranteeing the farmer a steady income. In fact, farm income has now returned to its pre-war parity with urban incomes. Farmers are now better off than they have been for many years. They are spending more for necessities and luxuries, they are smiling more and their families are happier. The nation is profitting and progressing because the farmer has money to spend and is spending it.

The third paragraph of Secretary Wallace's program—"Adjusting supplies of farm goods to adequate home needs and foreign demand,' expresses a policy that has been much criticised, but the policy has helped more than it has hurt. We believe this policy should be continued. It is far better than the old policy of depending on supply and demand to regulate prices and therefore, the farmer's income.

## A LESSON FROM AFRICA

During the recent depression, the Mission Church of native Africans at Batonga, West Africa, passed the hat for the "starving Americans" they had read about, and sent the collection amounting to $3.77 to the Presbyterian Board of Foreign Missions in New York.

We may call them "heathens" but quite often nowadays, it seems that heathens do many godly things that put to shame we high-class American Christians. These Africans remembered how they had received help from America in their hour of need and showed their gratitude by endeavoring to help us. A good lesson this. Be grateful. And "If you have a kindness shown, pass it on."

## THEY MUST WORK ON

North Carolina has refused to ratify the Child Labor Amendment. Her children must stay in her numerous tobacco factories, furniture factories and cotton mills and keep digging. North Carolina needs this cheap "child labor" so wealthy northern and southern stockholders can continue living on velvet. The children of these plutocrats can continue going to Harvard, Yale and Vassar, but her own children can't get even the opportunity to go through the sixth grade in her own mediocre public schools.

North Carolina is being "taken for a ride" and doesn't know it. Certainly her children of the present generation will not rise up and call her "Blessed."

## INTERESTING NEWS AND NOTES

Earl C. Smith, president of the Illinois Agricultural Association, discussing social security legislation at the last convention of this organization, declared that farmers may be exempt from the benefits of social security but they were not exempt from the cost of it. He urged farmers to take more interest in guiding the course of such laws.

Thomas L. Stokes, a staff writer for a newspaper chain, says that industrial carpet-baggers are flocking into the South from the North to escape higher standards of working conditions and wages. He says there is a surplus of labor in the South which needs cash, and the northern industrialist is capitalizing on this need. He says that a Federal law covering wages, hours and working conditions is the only remedy.

At a farm sale near Hooppole, Illinois, horses brought $142, cattle $60 a head, hogs $18, pullets 79c. corn $1.06 a bushel, and oats 53 cents a bushel. Even the church society which served the luncheon cleared $20.

In a survey made to discover what farm women considered essential in the ideal farm home the following were mentioned: bathrooms up and down stairs, a separate room for storing vegetables and canning fruit, a breakfast room, hardwood floors, built-in-furnaces, book-cases, clothes chutes, fireplaces, coat rooms, playrooms, and separate rooms for handling milk and other farm produce.

Russia is observing this year the one hundredth anniversary of the death of her greatest poet, Alexander Pushkin. The first university of Moscow is being changed to the University of Pushkin and many streets in other cities are being named after him Newspapers are devoting entire issues to commemoration of him. It is not universally known that this great poet was a Negro, but he was.

A committee drafting the new crop control bill includes the president of the American Farm Bureau, E. A. O'Neal, L. J. Tabor, Master of the National Grange, E. A. Everson, president of the National Farmers Union, and N. C. Williamson, president of the National Cooperative Council.

Colorado farmers are eating canned turkey. There was such a large crop this year the farmers could not get a normal price so the birds were canned in WPA kitchens. Farmers furnishing the birds got seventy-five per cent of the product and twenty-five per cent went to needy families on relief.

The United States Commodity Credit Corporation will probably release three million bales of 1934 cotton between February 1 and April 1. This is government loan cotton. It is reported that a minimum price of 12.75 cents a pound for middling seven-eighth inch cotton would apply.

Three thousand people are now engaged in professional rose growing in England.

Ice storms in the west this winter have played havoc with farm stock. Many animals have had to be killed on account of becoming crippled. Many farmers have had to keep all farm animals in sheltered places since the first ice storm, January 7th.

Arkansas is the only state in the Union in which diamonds have been mined. Diamonds have been found however in a dozen other states.

Max, a big German shepherd dog, walked all the way from Denver to Des Moines, a distance of 750 miles in forty-seven days. His master took him from Des Moines to Denver in his auto, but the dog was homesick and only remained a week in the latter city. His feet were cracked and sore when he arrived home.

## PARAGRAPHS FROM THE PRESIDENT'S INAUGURAL ADDRESS

In taking again the oath of office as president of the United States, I assume the solemn obligation of leading the American people forward along the road over which they have chosen to advance.

The test of our progress is not whether we add more to the abundance of those who have much; it is whether we provide enough for those who have too little.

If I know aught of the spirit and purpose of our nation, we will not listen to comfort, opportunism and timidity. We will carry on.

Government is competent when all who compose it work as trustees for the whole people.

Today we reconsecrate our country to long cherished ideals in a suddenly changed civilization.

In our seeking for economic and political progress as a nation, we all go up—or else we all go down—as one people.

Prosperity already tests the persistence of our progressive purpose.

We have come far from the days of stagnation and despair.

Our tasks in the last four years did not force democracy to take a holiday.

Nearly all of us recognize that as intricacies of human relationships increase, so power to govern them also must increase.....

The essential democracy of our nation and the safety of our people depend not upon the absence of power but upon lodging it with those whom the people can change or continue at stated intervals through an honest and free system of elections.

We have always known that heedless self-interest was bad morals; we know now that it is bad economics.

We are beginning to abandon our tolerance of the abuse of power by those who betray for profit the elementary decencies of life.

## YOUR FOOD COSTS

FRESH EGG SUPPLIES increased during December and should continue expanding until peak egg production is reached in April or May. This seasonal increase in egg production and decline in prices is not expected to be as large as usual because of high feed costs and the slow recovery of midwestern farm flocks from the effects of the drought. Sharp increases in egg prices often occur during the first quarter of the year when the weather becomes unusually cold. These changes, however, are of short duration, since egg production, and deliveries to packing plants resume their upward trend as soon as weather conditions improve. Because of low cold-storage egg stocks, periods of severe winter weather this year probably will result in sharper than usual temporary price advances.

GREEN VEGETABLE SUPPLIES usually increase monthly from January through the summer months. Earliest vegetable production occurs in the southern States and California. As weather conditions improve production expands to the northern States and in the summer local truck gardens furnish the bulk of supplies. Prices usually decline as production moves northward because supplies are larger and travel shorter distances to arrive to markets. At present early cabbage, spinach, snap beans, and cauliflower are moving to market in volume. Weather conditions up to the first of the year in the early producing States were favorable for crop production. In the absence of freezes or heavy rains

production of most early crops may be expected to exceed last year's supplies because of larger planted acreage. Prices may be about the same as a year ago, however, due to increased consumer incomes.

## COOPERATIVES INCREASING IN U. S.

There are 10,500 farmers' co-operatives of one sort or another in the United States. Of them 8,388 are marketing cooperatives engaged in the business of selling farm products. In 1936 they sold a billion and a half dollars' worth of farm products. There are 2,112 co-ops engaged in buying supplies for farmers. They reported a business of $225,000,000, a gain of 20 per cent over 1935.

## ONE WAY TO SOLVE TENANT PROBLEM

Writing in the Chicago Tribune, an eighty-year-old farmer suggests that the Scotch system of solving the tenant problem might do the work in the U. S. We must admit that the system has much merit. The letter follows:

Farmer City, Ill., Jan. 24—Regarding the farm tenant question, my observation for a lifetime on the farm (I was 80 eight days ago), is that a big share of the tenants that could be helped to the advantage of the country consists of those who are already laying by some money to buy a farm, while another goodly share never will own a farm, even if interest is reduced to zero, and would not be a national asset anyway.

I spent the fall of 1903 in the Galloway country in southwest Scotland, and observed a plan of cooperation between the incoming and outgoing tenants and the landlord, enforced by law, by which any new fertilizer furnished jointly by landlord and tenant was estimated to give up a certain percentage of fertility each year for several years, and the outgoing tenant was given credit for his share of the unexhausted fertility and was paid for it by the landlord and the new tenant, with arbitrators to do the adjusting.

This simple method adopted by the canny Scotch thirty-five years ago would do more for conservation of fertility of soil than many methods now put forward by politicians mainly to get farm votes, is the opinon of

O. H. Swigart,
Farmer and Stockman

## HAY FROZEN FOR MILK COWS

An interesting experiment has been conducted in Columbus, O., this winter. Alfalfa hay, stored on dry ice that froze it and preserved all of its freshness, was fed to dairy cows last week. Milk production was improved and the nutritional value of the milk was increased. It was an Ohio State university project, and the director said afterward that he was pleased with the result and that he could conceive that the time might come when dairy cows would be given a certain amount of feed preserved in all its freshness during the entire year.

## RICE GOES WELL WITH MANY FOODS

### Bumper Crop Aids Menus of Thrifty Housewife

With a bumper rice crop this year, thrifty housewives are looking about for as many ways as possible to use the "Oriental staff of life."

The bland rice flavor goes well with many foods of more pronounced taste. For example, rice with curried meat or fish; with braised liver; with cheese sauce. The white flaky rice is a pleasing color contrast to reds, greens, yellows and browns in sauces, vegetables and side dishes. Its texture makes it a good carrier for many foods like gravies and stews.

There are a few dishes in which the rice is cooked in stock or in milk or tomato juice until the liquid is absorbed or thickened. Sometimes the rice is first browned in salt pork and cooked in hot water or meat broth. Chicken jambolaya is a rice dish in which the rice is cooked in chicken stock.

Creamy baked rice pudding is cooked from the start in milk. But for most rice combinations the rice is boiled in water until tender and in whole flaky grains.

The secret of cooking rice so the grains stay whole is to use lots of water—eight cups of actively boiling salted water to one of rice. Boil slowly with the pan uncovered until the grains are tender. Drain, put hot water through to separate the grains, cover with a clean cloth and put over hot water at back of stove or in a warm oven. The kernels will continue to swell.

## ADVICE IS OFFERED ON POTATO RAISING

### Results of Experiments at Auburn Are Told

Experiments show that Alabama farmers will profit by using one of two methods of fertilizing, spacing and planting Irish potatoes.

With 16-inch spacing the potatoes should be fertilized with 1,500 pounds of 4-10-7 per acre and planted with 1 1-2 ounce seed pieces.

When planted on first-year new ground the potatoes should receive a side application of nitrate of soda in addition to the mixed fertilizer. The side application is not needed on any land except first-year new ground.

The two leading varieties of Irish potatoes for Alabama are the Triumph and Cobbler. Farmers growing Spring and Fall crops will find the Triumph the most desirable. Those growing only one crop per year may desire the Cobbler, due to its characteristics of remaining dormant for a longer period.

The experimental facts about Irish potatoes were obtained from Prof. L. M. Ware, head of the horticulture and forestry department of the Alabama Polytechnic Institute. County agents and Prof. Ware will be glad to furnish farmers further details about how to make the greatest profits growing Irish potatoes.

## CHICK DEMAND LOW

### Poultry And Egg Prices Out of Line With Feed Costs

The demand for baby chicks has continued to fall off. The Bureau of Agricultural Economics points out in its latest hatchery report that poultry and egg prices and feed costs have become more and more unattractive to poultrymen month by month, and consequently the poultrymen have been ordering fewer baby chicks this year.

The bureau predicts the demand will not get much better until egg and poultry prices get more in line with feed costs.

For several months feed costs have been high compared with egg and poultry prices. One reason egg prices have not more nearly caught up with feed prices is that chickens have been laying an unusually large number of eggs during the mild Winter. In fact, the supply of fresh eggs has been so large this Winter as to more than make up for the small number of eggs in cold storage.

## FAILS TO FEED HORSE FIRST, GETS HIS EAR BITTEN OFF

Brazil, Ind.—For eight years it has been the custom of Rolla E. Barnhart, farmer and former county auditor, to feed Napoleon, 8 year old horse, he raised from a colt, first. When he walked by Napoleon today and fed the other aminals first, the horse, which has been always been most gentle and affectionate, reached out and bit off Mr. Barnhart's left ear and ate up his cap.

## CONDUCTOR STOPS TRAIN TO TAKE A DOG ABOARD

Whitesburg, Ky.—The conductor, a good natured man, on an L. & N. train between Maysville and Carlisle, Ky., stopped his train several miles out from the latter town and let a shepherd dog aboard. The dog had run for his life to catch the train, his mistress having boarded it in Carlisle. The little dog was near exhaustion when the kind hearted conductor brought the train to a standstill and lifted the dog on to join his mistress.

## JUST LET IT GO

Answers: Every flash of lightning represents $1000 worth of electricity gone to waste, according to an expert. Another says that there is enough power in one of these flashes to drive an express train 100 miles.

But you can't fit lightning in with the timetables.

## AAA WARNING ISSUED

(Continued from Page 1 )

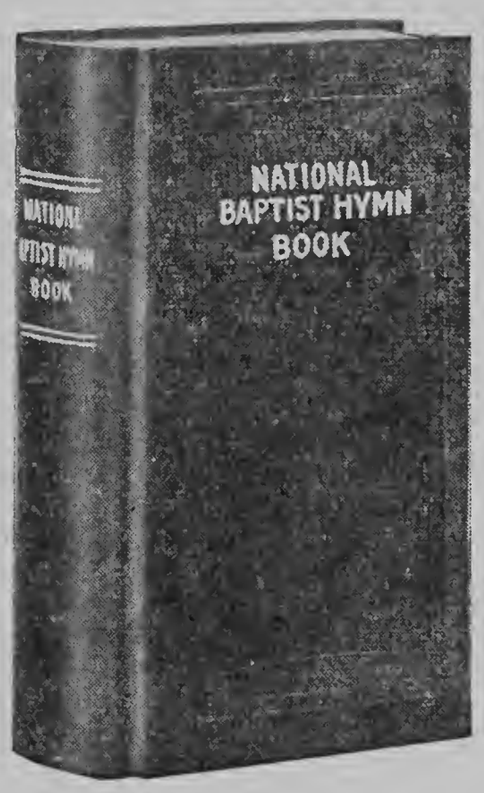
take the necessary steps to bring to the attention of the landlords and landowners in your State the provision quoted above and to advise the various county agents and county committees that they will be expected to follow the foregoing quoted paragraph (on withholding funds) in each instance where the 1937 worksheet shows that there has been a change of status of the tenants on the farm. County committees should make definite recommendations to the State committees in instances where the above provision has been violated.

"By giving this provision the proper publicity at this time, it will no doubt serve to reduce the number of such cases for the year 1937 in your State."

Cobb also called attention in his letter to a clause of the AAA regulations which provides that the Secretary of Agriculture, if he discovers "any person has for 1937 made any change from the 1936 leasing or cropping arrangement for the farm or has adopted any other device for the purpose of, or which would have the effect of diverting....any payment to which tenants or sharecroppers would be entitled.....the amount of any such payment which otherwise would be made to such person may be withheld in whole or in part."

Sharecroppers and tenants, under AAA regulations, are entitled to share in benefit payments, while wage laborers are not. Thus, AAA officials explained, it would be possible for landlords by shifting the status of a tenant or sharecropper to that of a hired hand to obtain a greater share of Federal benefit payments. They added there is no evidence of widespread evasion of the regulations, however.

AAA benefit checks are made out separately for landlords and sharecropper. The extent to which the latter share in the payment for an individual farm is based upon the arrangement in force between owner and tenant on that particular farm. Thus, if a tenant is a "fourth sharecropper"—one who furnishes his own tools, seed and other necessaries, and pays the owner one-fourth of his crop as rent—then owner and sharecropper share equally.—Washington Post.



Prayer Meeting

HYMN BOOK

(POCKET SIZE)

Every prayer meeting attendant and leader needs one of these books. It contains words to common, short and long meter songs. There is no music in this book. It is what is commonly called The Old Style Hymn Book.

*Many of Dr. Watt's old songs are given in this splendid book.*

**IN EACH AMERICAN REGION, "SIRUP" MEANS THE SPECIAL SIRUP DICTATED BY LONG TRADITION FOR THAT SECTION. BUT SHARP DIFFERENCES SET EACH SIRUP APART FROM ALL THE OTHERS IN FLAVOR AND CONSUMERS' USE**

EARLY CONSUMERS in America could not choose among the sweetenings brought by train and truck from everywhere. They took what Nature placed at hands, and liked it. Pretty much, they've likened that same sweetening ever since.

THE DEEP SOUTH still thinks the sugarcane sprang up to grace their table every meal with a sirup from its juice. Joining the cane belt on the north and running westward is the sorgo belt, where they specialize in sirups from the sweet sorghum plant. The Corn Belt produces the raw material for the corn starch from which corn sirup comes. Northern, some Eastern, and especially New England States are famous for maple sirup. But honey bees take no account of State lines and provide a universal sirup, ready-made, for every section of the country.

BOUNDARIES of taste and fancy tend to dim a little as transportation trades the food of California for that of Maine. Consumers now can choose molasses or maple, cane or corn, depending on the use to which they want to put their sirup.

MISUSED as sirups are in some parts of the country, where their prominence on every meal's menu of the year tends to crowd out the craving for important foods like milk and fruits and vegetables, they still have their rightful place in the diet. All provide calories for energy, some offer other values besides. Each has its definite use in the kitchen or on the table, suggested by the character of its taste and its consistency. We aim in this article and another coming next issue to help consumers put each sirup in its place.

SUGARCANE, down in the cane belt, is the raw material for a different product at each step of the progress from cane in the field to refined white sugar on the table.

TOP SIRUP from cane is cane sirup itself, made simply by boiling down the whole juice of the sugarcane to sirup consistency. Cane sirup has the characteristic robust flavor that we associate with molasses, but to an expert palate there is in high quality cane sirup, along with this pungency, a delicacy and fineness that molasses lacks. All the food value of the cane juices is in cane sirup, including the iron and calcium.

CANE SIRUP, according to the Federal Food and Drug rulings which apply to sirup so labeled in interstate commerce, must be of a consistency which measures not more than 30 percent water. The minerals, or "ash" content, must not make up more than 2.5 percent. Consumers can buy cane sirup, as such, in many groceries all over the country. In the South it is a staple—home-made, neighborhood-made, and store-bought. We are likely, too, to meet it in mixtures with other sirups under trade names, and to see the words "cane sirup" among the list of ingredients on the label. The one case in which you will see "cane" on a label when it does not mean real cane sirup is the "cane and maple" on a bottle of what is technically sugar sirup mixed with maple sirup.

MOLASSES, success secret of such foods as gingerbread, baked beans, Indian pudding, Boston brown bread, and many cakes, cookies and candies, is a byproduct of the manufacture of raw white or brown sugar from sugarcane. Lacking more or less of the original sugar, depending on the grade of the molasses, it is made by concentrating and sometimes clarifying the "mother liquor" left after part of the sugar has been removed from the sirup. Removing the sugar leaves the color, flavor, and minerals more concentrated in the remaining molasses. The process itself, in which lime, sulphur dioxide, and other chemicals take part, also leaves its mark on the flavor. The more sugar removed the stronger and cruder is the flavor of the molasses, and the lower the grade.

INDUSTRY divides molasses sold for human consumption into two levels—"First Molasses" and "Second Molasses." Consumers know them simply as "light" and "dark", and that is how the difference may show on labels. All molasses, light or dark, moving across State lines under the label of molasses, must be thick enough to contain not more than 25 percent moisture.

LIGHT MOLASSES, meant mostly for table and fancier kitchen uses, will have in it 62 percent of total sugars, if the tentative standards of the Food and Drug Administration are adopted. Dark molasses, more generally used in cooking where a strong flavor is called for, will contain, according to the standards now being considered, a minimum of 55 percent total sugars.

BARBADOS molasses, with its own clientele among molasses connoisseurs, has a distinctive rum-like flavor. Other special types of molasses, frequently named after the place where they originate, have unique flavors from their special processes of manufacture and please their own sets of customers.

BLACKSTRAP molasses is the very lowest grade, made from what is left after every possible bit of sugar has been removed from the sugarcane by the commerical process. It is combined in mixtures for feeding stock, and enormous quantities of it are used in the production of alcohol.

RAW SUGAR, extracted from the sugarcane juice, comes from Cuba, Puerto Rico, Hawaii, the Philippines, the Virgin Islands, and other regions including our own cane States, to refineries in our great cities. From the different grades of refiners' sirup.

REFINERS' SIRUP varies from dark brown to almost white. It has a cane taste, but not so strong as that of molasses. There are just as many gradation from crudeness to fineness in quality of refiners' sirup as there are between blackstrap molasses and top quality cane sirup. The lowest grades are not used for human consumption, but as the grades go up their uses are correspondingly higher class. Some refiners' sirup is sold to bakers and confectioners and other food manufacturers, but consumers meet refiners' sirup mostly in blends with sugar sirup and corn sirup, sold under trade names. Under the Federal Food and Drugs Act, refiner's sirup should contain not more than 25 percent of water and not more than 8 percent of ash (mineral matter).

SUGAR SIRUP, made by simply boiling sugar and water down to sirup thickness, is indirectly a product of the cane plant if it happens to be cane sugar from which it is made. But this relationship does not justify the labeling of sugar sirup as "cane sirup," which is a very different product. The Food and Drug Administration requires sugar sirup to be labeled as such when it is shipped in interstate commerce, except in the case of sirup labeled "cane and maple" which long familiarity has taught consumers not to mistake for true cane sirup, one tablespoon of which would drown the flavor of a quart of maple sirup. Sugar sirup must not contain more than 35 percent of water.

BEETS, which provide much of our sugar, could also give us a sirup direct from the juice, just as cane gives us cane sirup and molasses. In Germany much beet sirup is used, but its characteristic flavor, which has been likened to horehound, does not make much of a bid for the favor of American consumers, accustomed to different tastes. During the war, when shortage of sugar gave a stimulus to the production of sweetening from other sources, people in the beet sugar areas began to inquire into the possibilities of making a sirup from sugar beets. One of the scientists in the Department of Agriculture worked out a simple method and patented it, but because of the flavor barrier and other factors the method was never put into commercial use to any appreciable extent. Even now, though, the Department sends directions in response to an occasional request.

THE SORGHUM plant kin but not twin to the sugarcane, offers its own sirup called sorgo, sorghum, or—incorrectly—"sorghum molasses." Throughout the northern part of the southern cane States, northwest through southern Indiana and Illinois and then westward lies the sorghum belt. Sorgo sirup is dark, thick, and has a flavor which to the uninitiated is much like cane sirup. But there is a sharp tang that sets it apart. Sorgo is a good source of minerals in the diet, and is rich in calcium and iron. In cooking, it does the same job molasses does. To be correctly labeled in interstate commerce as "sorgo" or "sorghum," the sirup must contain not more than 30 percent of water.

IMPROVING the quality and uniformity of sorgo and sugarcane sirups has been the goal of special studies in the Department of Agriculture. Since these sirups are important as cash providers on many small farms, improvement will put money in the pockets of many farmers while it puts better sirup on their tables. Government scientists are showing them how to bring the flavor of all sorghum and cane sirup up to the level of smoothness now reached only by the best.

CORN SIRUP, sold as such and as a part of many of the table sirups the grocer sells, is manufactured from constarch. Consumers find it in trade-named table sirups flavored with butterscotch, honey, vanilla, sorghum, cane sirup, or refiners' sirup.

COLORLESS "crystal white" corn and sugar sirup mixtures sometimes called simply "light," is about 90 percent corn sirup and 10 percent sugar sirup. Darker mixtures consist of corn sirup with refiners' sirup added to give them

the golden or dark color. The sugars in corn sirup do not crystallize so easily as other sugars, so both light and dark corn sirups take important places in formulas for candies, icings, and sauces. Next issue of the CONSUMERS' GUIDE will continue the story of American sirups, with maple sirup and honey in the headlines.

## TURKEY FOR UN-FESTIVE FARE

### LARGE TURKEY SUPPLIES THIS YEAR MAKE POSSIBLE SPREADING THIS HOLIDAY TREAT INTO ORDINARY DAYS AND BRINGING PRICES WITHIN RANGE OF MORE MODERATE PURSES

TURKEY is plentiful and cheaper than usual these days. This year's crop, estimated at 20 million turkeys, is 5 million more than last year's supply. During the first 3 weeks in January live turkey in New York was wholesaling at from 4 to 7 cents a pound below prices a year ago. Fresh killed turkeys were selling at wholesale from 5 to 7 cents under last year.

MAJORITY of turkeys you buy these next few months will be cold-storage birds. As a rule fine stock is kept for this purpose. Contrary to a too persistent supersition that cold storage takes something from the quality of the bird, experts say that freezing does not detract from the tender quality of poultry.

MUCH of the turkey supply during the next months will be Government graded. During the last fiscal year, 10 percent of the total marketed turkey crop was U. S. graded.

U. S. GRADED turkeys are sometimes individually tagged. More often the box containing several birds is stamped with the grade.

FOUR GRADES of U. S. dressed turkeys are:

U. S. Special or U. S. Grade AA
U. S. Prime or U. S. Grade A
U. S. Choice or U. S. Grade B
U. S. Commercial or U. S. Grade C

NO BIRD that is badly bruised so as to make an appreciable part of the carcass inedible and no emaciated birds can measure up to the U. S. standards for turkey. The difference in grades AA, A, B, C, depends largely on the degree of fat over the entire carcass, and the flesh covering the breast, thighs and back of the turkey and the care with which the bird has been bled and dressed.

IF YOU buy a Government tagged turkey, the tag will tell you whether it is "Young" or "Old." Turkeys are classified as "Young Hens" and "Young Toms," which are female and male birds usually less than I year old, soft-meated with a flexible breast bone. Old Hens and Old Toms are turkeys more than a year old with toughen-flesh and hardened breast bone.

METHODS of plucking and packing, too, are specified in Government grading regulations. U. S. Special and U. S. Prime birds can be semi-scalded before being plucked or can be dry-plucked. They must be dry-packed. Birds that have been scalded at a temperature of 170 to 180 degree F. and which are packed in ice may pass as U. S. B. ad U. S. C. grades.

BE SURE when you select your turkey that you know whether you are buying a young or old bird because it makes a difference in the way you cook it. About 3 hours are required for a young 10 to 12 pound turkey, and about 4 1-2 for a 15 pound turkey that is a year or so old.

IF YOU BUY a bird that is carefully dressed you will only have to wipe out the body cavity with a soft dampt cloth. As a sanitary precaution scrub the outside with a wet cloth and a little soap, or soda, or corn meal.

DO NOT let your turkey soak in water. If you do it will lose flavor and food value.

## MORE TWO-WAY RELIEF

CARLOADS of foods, bought with AAA funds by the Federal Surplus Commodities Corporation to help farmers get better markets and to help relief families get better diets, are rushing into flood areas. Between January 23 and February 1,787,500 dozen eggs, 384,000 cans of evaporated milk, 519,000 pounds of canned beef, 800,000 pounds of rice were shipped into States damaged by recent floods, there to be distributed to distressed families by relief agencies. Eight flood-stricken States had on hand from previous shipments, in addition, over 280,000 cans of milk, over 6,000,000 pounds of canned beef, 3,320,000 pounds of prunes, close to 3,000,000 pounds of grapefruit.

## "ASK ME ANOTHER"

Questions were being put to an Indianapolis lad, age six, from one of the intelligence test books with which saleswomen canvass the neighborhoods, and he wondered why his answers to two of the questions brought laughter.

Here are the actual questions and answers:

"From what animal do we get pork?"

"The porcupine."

"What do we get from bees?"

"Stung."

## WASHINGTON SAW EROSION DANGER

"My countrymen," wrote George Washington in 1782, "are too much used to corn blades and corn shucks; and have too little knowledge of tho profit of grass land."

H. H. Bennett, chief of the Soil Conservation Service, says "Washington was among the first to recognize the dangers of a single-crop system of agriculture and the benefits of a vegetation cover in protecting the soil against erosion.

"On his own farms Washington used 'vegetable rubbish,' as he called it, to check the spreading of gullies and prevent sheet erosion. For nearly every acre he owned he had a system of crop rotation, and sometimes several alternate systems for a single plot.

"The practices which Washington used to control soil erosion on his farms now seem somewhat inadequate. Scientific farmers today employ these practices in a more advanced form and supplement them with methods which in Washington's time, were virtually unknown.

"But the Soil Conservation Service maintains Washington was on the right track and was far in advance of most farmers of his day, both in theory and in practice."

NEW

**Metoka and Galeda Guide and Manual**

Work of the Committee Named at the last Sunday School Congress Enables Organized Classes to Get New Book

A Metoka and Galeda Guide and Manual to be used for the organized classes in Baptist Sunday Schools is now ready for distribution. The cover is bright red with blue letters.

It contains a brief sketch of the late Rev. N. H. Pius, D. D., and the late Rev. R. H. Boyd, D. D., as it pertains to their work in erecting these two college departments of Baptist Sunday Schools.

This new Guide and Manual sells for 25 cents. Send all orders to the—

NATIONAL BAPTIST PUBLISHING BOARD,
Henry Allen Boyd, Secretary,
523 2nd Ave., N., Nashville, Tenn.

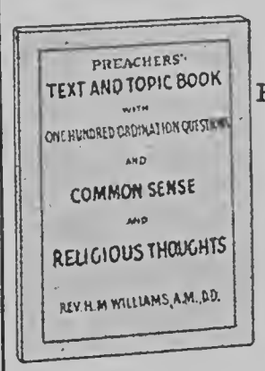
**The Handy Book for Pastors**
**BOYD'S**
**Pastor's Guide**

A Standard for Baptist preachers of the Missionary Baptist Denomination. Endorsed by the National Baptist Convention more than twenty-five years ago. Written, edited and compiled by the late Dr. R. H. Boyd. Contains a form of service for every occasion that can be held in a Baptist Church.

Send 75c For a copy By Mail

Send all orders to
NATIONAL BAPTIST PUBLISHING BOARD
Henry Allen Boyd, Secretary
523 2nd Avenue, North,
Nashville, Tennessee

**PREACHER'S TEXT AND TOPICS**



By THE LATE DR. H. M. WILLIAMS

This book contains many helpful suggestions, questions and references designed to aid young men who are aspiring for the ministry.

The book is inexpensive. It is within the reach of every person's means.

**Price 15c**

Send all orders to
NATIONAL BAPTIST PUBLISHING BOARD,
Henry A. Boyd, Secretary,
523 2nd Avenue, North,
Nashville, Tenn.

**'Hope Magazine'**

"Where There's Hope There's Life"

Organ of the Fireside School

A monthly religious journal for the Christian Worker

REMEMBER—when you order "Hope" you are ordering a magazine which carries not only daily zine which carries not only daily series of Sunday school lessons, but also stories, children's lessons, mission helps, and seasonal messages to help you plan the right kind of program for all special days of the year.

In single subscriptions, fifty cents per year. Send 10c for sample copy. Write for details to

**"HOPE" Magazine**
521 Second Avenue, North,
NASHVILLE, TENNESSEE

## POETRY IN REAL ESTATE

Bill bought a car with his money
And Joe bought a piece of ground;
Bill was a swell for a year or two,
As he traveled the country around,
But the car grew old and the paint came off

And often the tires went flat,
But Joe's land did not depreciate
In any such way as that.

Joe had little to show at first
For the money he had spent,
For a piece of ground couldn't follow him around
On pleasure and business bent.
Bill was a swell for a year or two,
But the worth of a car goes down
While a bit of earth increases its worth

If it is close to a thriving town.
Today Joe rides in a modern car,
For a bit of his land he sold.
He has no fear for the coming year,
No terror of growing old,
For he bought land with his little sum,
While Bill bought a shining car.
Now Joe has a first class modern home.
And Bill has a worn-out car.

## FARM AGENTS NAMED

T. C. I. Employs Market Aids In Seven Southern States

Assistant farm products agents in seven Southeastern state to assist farmers in marketing their products, have been employed by the Tennessee Coal, Iron and Railroad Company, Birmingham, Dr. M. F. Jackson, farm products agent of the company, has annonnced.

The names and addresses of the assistant agents are Luther Fuller, Birmingham, Ala.; Paul Orr Aycock, Knoxville, Tenn.; Robert E Hays, State College Miss.; W. Hill Hosch, Decature, Ga.; Charles D. Kime, Orlando, Fla.; W. G. Booker, Raleigh, N. C., and Donald D. Whitcomb, Columbia, S. C.

## FINDS BERRIES PROFITABLE

Ira Hughes of near Murfreesboro made a profit of $252 from 2 1-2 acres of straw-berries despite a 40 or 50 per cent frost damage last spring. Mr. Hughes sold 200 crates of berries for which he received an average price of $2.25 per crate, making a total of $450. His expenses were $198. Mr. Hughes believes that Pike county is one of the best sections of the state for growing strawberries.

**Woman's Home Mission Literature**

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.
No supplies sent free. Remittance requested with each order.

Please send all orders to the

Nashville, Tenn.

# *The Sunday School Congress For 1937*

*CINCINNATI, OHIO, KNOWN AS THE QUEEN CITY OF THE NATION, SELECTED FOR THIS SUMMER SCHOOL OF METHODS*

*Arrange for every department of your church to be represented. It will be the thirty-second annual session. Send some one to the following departments:*

| | | |
|---|---|---|
| TEACHER TRAINING | METOKA | GALEDA |
| ADVANCED TEACHERS | PRIMARY | MUSIC |
| SUPERINTENDENTS | MISSIONARY | JUNIOR |
| B. Y. P. U. | MINISTERIAL | CRADLE ROLL |
| BIBLE STUDY | HOME DEPARTMENT | A. F. CADET |
| DAILY VACATION BIBLE SCHOOL | NATIONAL | |
| RELIGIOUS BOOKS AND PARAPH | ERNALIA | |

Each of these sections will be in charge of some of the nation's best known teachers, instructors and demonstrators.

The Sunday School Congress is not a deliberative body. No motion or points of order are ever made. It is a veritable university of the denomination, the training camp of the Baptists, and the one national gathering that offers a course to those who want to learn, and an opportunity to those who can teach. It is an ocular demonstration of that saying, "You cannot teach what you do not know; you cannot lead where you do not go."

Elect your representatives for the thirty-second annual Sunday School Congress, which will be held June 9-14, 1937 in Cincinnati, Ohio.

Railroads are offering better rates than ever. For further information, write

HENRY ALLEN BOYD, Secretary,

SUNDAY SCHOOL CONGRESS

Nashville, 523 2nd Avenue, North, Tennessee

## MORE GOOBERS TO BE USED

(Continued from Page 1)

nuts as fattening material, a vast store of nitrogen is left in the earth. The peanut is a legume and stores nitrogen.

Oils are used principally as vegetable compound substitutes and in cooking.

Dr. George Washington Carver, Negro scientist at Tuskegee Institute, began using peanut oil as a massage compound for treatment of infantile paralysis victims several years ago. He said "some wonderful results" were secured, but the treatment has not been sufficiently used to establish itself medically.

## COTTON AND OKRA

Charles Alldredge, former well known Montgomery newspaper man and Journal reporter, and now official spokesman for the Oklahoma City Chamber of Commerce, sends The Journal the story of experiments made by J. A. Webb, an Oklahoma farmer in crossing cotton plants with okra plants that should be interesting to every cotton grower. The resultant strain of seed called Webb's Purple, is said to produce longer staple, to offer full resistance to boll wecvil, and to yield more bolls to the plant. This farmer claims an average yield of two bales to the acre, lint one and seven-eighths inches long and having six locks to the boll. If he can prove his case there ought to be a rapid spread of Webbs Purple through Dixie.

## HUNTER KILLS TWO FOXES WITH SINGLE RIFLE SHOT

Bloomington, Ill.—One shot from a United States army rifle bagged two foxes for L. W. Peyton of Normal. A brown speck on an opposite hill, 220 yards away, was sighted by Peyton. After adjusting his sights he fired and on arriving at the hill found two dead foxes. The bullet had passed through both.

## POPE URGES U. S. CATHOLICS TO WORK FOR NEGROES

Washington—In a letter to the cardinals, archbishops, and bishops of the Catholic church in the United States the Pope praises the work of Catholics among colored people during the past years and urges all members of the Catholic faith to extend their activity in the education and conversion of colored peopie

While the letter concerns itself primarily with recruiting increasing numbers of colored people to the Catholic church, its powerful but indirect effect is expected to be the enlistment of the Catholic church in the fight for citizenship rights for colored Americans.

Evidences of this trend have been numerous during 1930. The Catholic church, the Catholic newspapers and magazines and numerous Catholic priests and higher dignitaries have spoken freely and forthrightly in support of full civil rights for colored people. The Catholic weekly papers have come to the front in the fight against lynching and other Catholic publications have discussed the denial of the vote to Negroes in certain sections of the country as well as the denial of economic opportunity and discrimination in employment.

The Pope's letter will probably become the basis for the whole activity of the church in the United States during 1937 and succeeding years. The Holy See urges greater missionary work among colored Americans he calls more priests to work among colored people; he urges the establishment of churches even in rural sections of the South; he urges the establishment of parochial, elementary and high schools, and also more college activity.

The letter signalizes the 15th anniversary of the work of the Commission for Catholic Missions among the Colored People and the Indians. It declares:

"While so much good gives rise to consolation and gratitude, one cannot think without sadness of how much remains to be accomplished."

## BRING ON THE CAMELS

American Lumberman: Camels have been barred from some of the streets of Palestine because they slow up traffic. What we need in America is camels.

"A man who is good enough to shed his blood for his country is good enough to be given a square deal afterward. More than that no man is entitled to, and less than that no man shall have."

## A MYSTERY SOLVED

(Cedar Rapids, (Ia.) Gazette.)

A little incident that happened at the Metropolitan Museum of Art in New York City the other day seems to emphasize the way some of us these days frequently go around in circles and meet ourselves coming back. It seems also to hold a moral for those who like morals.

The Metropolitan museum's Egyptian expedition at Thebes last year dug up, among other things, two wooden objects which, for want of a better idea, the archaeologists classified as "vats or tubs." These were considered among the earliest known examples of the cooper's art. One of them was kept by the Egyptian government and the other was brought to New York.

But none of the scientists engaged in the work seemed to know what they were. Nothing of the original contents was found to offer a clew as to their use and nothing like them had been found by other Egyptologists. Tomb paintings, which tell much about the daily life of the ancient Egyptians, threw no light on the mystery.

Last Wednesday, while the museum people were arranging their "vat or tub" for display along with other finds of last season, the assistant superintendent of the building happened to pass through the room. He is Egyptologist, or even a general practicing archaeologist. As a matter of fact, he is a carpenter by training. He used to live in Yonkers in the days when Yonkers was less urban than it is now and it was not unusual for a citizen of Yonkers to keep a cow.

"Well," he said, as he looked over the collection of archaeological finds, "I see you dug up an Egyptian churn."

One of the members of the Egyptian expedition grinned and nodded. It was the answer to a hitherto baffling problem in Egyptology. At any rate, the experts think it was. The "vat or tub" looks like a churn and it doesn't look like anything else. The Egyptians had butter, all right, for the museum has a sample of some, but nobody ever gave much thought before to how they might have made the butter. So the Metropolitan museum now has on display one of the only ancient Egyptian churns in captivity, thanks to the staff carpenter emeritus.

To us there is something just a little bit silly in this spectacle of balloon browed scholars who know about all that anybody knows of the daily lives of the ancient Egyptians but are so unfamiliar with the lives of millions of their own contemporary countrymen that they can't recognize a churn when they see one. We suppose a man who does much digging in ancient tombs is pretty well tied down to lonely spots. Nevertheless, it occurs to us that, just as a knowledge of the past throws light on the present, a knowledge of the present might throw some light on the past. Archaeologists ought to get around more.

## REPRESSION ON CHILDREN

Springfield Journal: Silence imposes too many repressions on children, declares Dr. Herbert R. Stoltz of Oakland, Cal. He is opposed to the discipline which teaches youngsters that they should be seen, but not heard.

The doctor is right. Noisy children become nuisances, it is true, but their urge to express themselves is natural and is necessary to their healthy growth and development. If the older folks can't abide the racket it's just too bad, but it is what Dame Nature decrees.

Probably the worst form of repression on youngsters is that imposed when they are attempting to gratify their curiosity. We would have far fewer helpless little folks, unable to look after themselves, if dad would break himself of the habit of frowing every time Junior puts him under cross-examination.

## SWEET POTATOES DEMANDED

(Continued from Page 1)

The plant paid 20 cents a bushel for field-run potatoes in 1936, and on that basis farmers who obtained yields of around 300 bushels an acre found it as profitable to grow sweet potatoes as cotton. Such a yield is much above the average, but obtainable with good farming.

The sweet potato starch plant is an outgrowth of a Federal Emergency Relief project started in 1933. The plant is now operated on a full commercial basis by a cooperative farm organization with the Bureau of Chemistry and Soils continuing its research.

## WOULD FINANCE HOMES WITH SECURITY FUNDS

Philadelphia, Jan. 28—Investment of "billions of dollars of Social Security reserves" in low-cost housing was proposed by Congressman Henry Ellenbogen (Dem., Pa.) at the annual meeting of the Pennsylvania Conference on Social Work this week.

The funds would be safe, Ellenbogen insisted, and at the same time would create decent home conditions, "which we need as much as other forms of security."

## TO DE-BUNK LYNCHING

(Cleveland Plain Dealer)

A group of intelligent southern women makes an effective move to de-bunk lynching. They resent the traditional alibi of week-kneed law enforcement that lynching is "necessary to protect southern womanhood."

They resent it because it is untrue. Says Mrs. Jessie Daniel Ames, director of the Association of Southern Women for the Prevention of Lynching, "the white women of the south protest the use of their skirts as a blind for lynching....Economic greed is the cause of many more lynchings than the protection of white women's honor .....We want women everywhere to know that most of the so-called attacks by Negroes are fictional."

Operating in thirteen states the association has signed 35,000 women who are pledged to fight against lynching. Those familiar with the close relationship of racial prejudice and economic exploitation will welcome the help of this vigorous group of truth-seekers.

## OUICK WITTED

Householder (hearing noise downstairs)—"Who's down there?"

Burglar (with great presence of mind)—"This is station KDKA now signing off until tomorrow morning at 11 o'clock. Good night, everybody.

## HELL BENT

Washington Post: "There's no money in heaven," declares an evangelist. This probably explains why so many people go to hell trying to get hold of some.

# THE MODERN FARMER

Vol. X. NASHVILLE, TENN., APRIL 15, 1937 No. 2.

MAY 1937

# Federal Cooperative Service Explained By H. A. Hunt Of Washington

## FARM CREDIT ADMINISTRATION WILL OFFER ASSISTANCE

### Production Credit Loans And How to Secure Them

Washington, D. C.,—As this is the season of the year when farmers are wondering where and how they can secure the money necessary to meet their production needs, it seems a good time to inform them of the service available through production credit and emergency crop and feed loan agencies.

**Production Credit Loans**

Production credit loans are made by local production credit associations to enable qualified farmers to purchase seed, feed, fertilizer, machinery, farm supplies; for the purchase of cattle or workstock, or to hire farm labor. Production loans may be used to finance the breeding, feeding, fattening and marketing of livestock and for the repair and improvement of farm buildings.

**Emergency Crop and Feed Loans**

Emergency crop and feed loans are not available to farmers who can qualify for production credit or for aid from any other source. These loans are made only in the amount actually needed to grow crops or to care for livestock, and are handled by field representatives of the Emergency Crop and Feed Loan offices in the various counties.

County agricultural agents (farm demonstration agents) will direct applicants in either case to the local representatives for their counties.

Negro farmers who can qualify for loans from either of these sources are served on the same basis as any other farmer.

Inquiries addressed to H. A. Hunt, Assistant to the Governor, Farm Credit Administration, Washington, D. C., will receive prompt and considerate attention.

## Here Is An Easy And Inexpensive Way to Get Rid of Old Stumps

Don't let old stumps stump you.

They can be removed without resort to tractors or dynamite. Here's how to beat them inexpensively and effectively. In the center of the stump bore a hole 1-12 inches in diameter and 18 inches deep. Then put in 2 ounces of saltpeter, 10 cents worth from most drug stores.

Fill the hole with water and plug the mouth tightly. A plug can easily be whittled out of wood. Forget about the hole for about 3 months so that the saltpeter can impregnate throughly the stump. If after 3 months the hole isn't dry, wait till it is. Then fill it with 10 ounces of crankcase oil or paraffin wax and ignite. There'll be no blaze. The stump will merely smolder away to nothing leaving not even a stump of a stump—Sunset.

## SOIL CONSERVATION A MUCH DISCUSSED SUBJECT WITH FARMERS

## COURT RULING ON COW

### Not Milk Producting Machine Says Judge

Honolulu, (UP)—Whether or not cows are contented is the least of dairymen's worries in Hawaii.

With one adverse decision already against them, dairymen have the problem of proving that the cows is more than just an ordinary animal—that it is a milk producing machine.

It doesn't affect the cows much one way or the other. They still get their hay and are milked twice a day. But for the dairyman the fact his cows have been ruled animals and not machines is costing him solid cash.

The trouble started when the government disallowed a $68,465 deducation in excise tax computations by Robert Hind, Ltd., a dairy.

The dairy sued for that allowance, asserting that the deduction was for grain and molasses fed to the cows. Expert testimony was sought in an attempt to determine the exact percentage of grain and molasses turned into milk in relation to the amount necessary merely to sustain life.

"From the evidence," wrote Associate Justice James J. Banks, "it is impossible to tell what, if any part of the special foods were incorporated into and remained in the product (milk) dealt in by the taxpayer.

"There is a vast difference between the cloth going into a suit of clothes, or even grain going into machinery of a brewery, and material fed the cows.

"Although ..... a cow often is called a milk producing machine, it differs substantially from what is ordinarily called machinery in that nothing need be fed to a machine to maintain it in working condition, while a cow requires food to keep it alive even if it does not produce anything."

He sustained the government in disallowing the deduction.

—Nashville Tennessean.

## Turnip Greens Papered House

Mrs. Jennie Jones, Hot Springs, a member of the Pleasant Valley home demonstration club and community leader in home management for her club, papered her four-room house from the sale of turnip greens grown in her garden, at 50 cents a bushel, thus earning $79, said Miss Sarah J. Turnnell, Garland county home demonstration agent. Mrs. Jones had some money left and is still selling greens and will use the money to refinish the wood work in her house.

## SPEEDY AID TO FARMER

### Unbelievable Human Misery is Pointed Out

President Roosevelt this week called on Congress to speed legislation that will "provide security" for the nation's farm population.

He declared that conditions among millions of farm tenant families are "intolerable" and that "we can no longer postpone action," significantly adding:

**"Most Americans believe that our form of government does not prohibit action on behalf of those who need help."**

Accompanying the President's message was a report of a special committee, headed by Secretary of Agriculture Henry A. Wallace which has made a study of farm tenancy and its effect on the nation's economic life.

**Unbelievable Misery**

The report urgently recommended action that would strike directly at unbelieveably shocking human misery.

"Rural civilization is threatened with decadence," the committee declared. It pointed out that less than half of the farmers of the nation own the land they till. The majority are dependent upon the doubtful mercies of exploiting landlords.

**Nearly 3,000,000 farm families, the committee declared are living under conditions directly traceable to tenancy which make "them easy prey to economic and political parasites."**

It is to the everlasting shame of the nation, the committee asserted, that almost a fourth of the nation's farm families are trying to exist "below any level or decency." Amplifying this point the committee said:

"In many areas, particularly in the South, families are living in conditions of poverty little, if any above the lowest peasantry of Europe.

**Prey to Diseases**

"Large families of tenants are living in houses of two or three rooms. The buildings are frequently of poor construction, out of alignment, weather-beaten and unsightly. Often the roofs are leaky.

"A large percentage of these families is under-nourished. Their bodies are easy prey to the ravages of disease. Pellagra, malaria and hookworm and other parasites exact heavy tolls in life and energy.

"Clothing is often scarcely sufficient to afford protection to the body, much less to help maintain self-respect.

**The outlook for these families is hopeless, the committee emphasized, unless Uncle Sam undertakes a heroic task of rehabilitation. The job is far beyond the capabilities of**

## WARNING ISSUED BY AAA

### Tyler Daily Courier Writes Editorially on Mr. Cobb

Solution of the tenant farmer problem, in which Texas is vitally interested and which the administration proposes to accomplish, will be hindered no little by the attitude laid to some landlords by the department of agriculture.

Culley A. Cobb, able director of the Southern division of the agriculture adjustment administration, calls attention to numerous complaints being registered against landlords by both share-croppers and standing-rent tenants, who claim that owners plan to oust them and utilize laborsaving machinery and day-wage hands. The cases cited, the director said, mark a departure from the cropping arrangements from 1936, notwithstanding that tenants say they have made satisfactory settlement with the land owners for that year.

The complaints are not new to the department, Cobb added, but their increasing number this year led him to issue a warning in the form of a letter to A. A. A. administrative officers.

(CONTINUED ON PAGE 5)

## Sex of Some Baby Chicks May Be Told By Markings

A practical method of determining sex of baby chicks, although limited to Rhode Island Reds, has been developed by poultry specialists of the United States Department of Agriculture.

In a study of more than 1,100 Single-Comb Rhode Island Red chicks, T. C. Byerly and J. P. Quinn of the Bureau of Animal Industry were able to tell the sex of 81 per cent correctly.

Female chicks were marked with spots and stripes of black down on the head or back. Males lacked such markings.

A total of 524 chicks had black markings. Of this number 444, or 84.9 per cent were females. Of the unmarked group 450, or 77.8 per cent, were males.

Thus the poultrymen were able to distinguish the sex of 894 chicks, or 81.2 per cent correctly. A similar sexing study of 633 chicks in a commercial flock of Single-Comb Rhode Island Reds showed the same general results.

Sexing of chicks is comparatively recent in origin. Commercial poultrymen, especially in the Far West, have shown interest in its development. The method used by many hatcheries was introduced by the Japanese.

## CHICAGO DEFENDER EDITORIAL ILLUMINATING

### Improving Conditions Among The Millions Suggested by Writer

We are becoming impressed with the belief that the most vital force for improving conditions among the three million members of our group, living on farms in so-called cotton states of the South, found its exemplification in the AAA program. This, of course, has been invalidated by a Supreme Court decision but the principles have been remedied to some extent through the passage of the Soil Conservation Act.

The purpose of the agricultural conservation program, as testified to by southern leaders is three-fold: Adjust cotton production to supply and demand; stabilize farm prices so that the farmers may have some assurance of cotton payments which are more in line with the cost of production and, third, to attempt such measures as will help to restore the fertility of some three hundred million acres of land whose fertility has been lessened or destroyed by intensive growth of each crops.

The government operates its plan by offering to make payments to farmers who will agree to take out of cotton production up to 35 per cent of the normal cotton acreage, provided, further that these diverted acres are planted to feed and soil-building crops which will help to restore soil fertility and at the same time provide a balanced food ration for the family and thus remove some of the hazards of the old plantation commissary.

From the standpoint of Race people, this program is breaking down some of the most cherished traditions of southern plantations. For example—the original plan of distributing payments was for the government to send one check to the landlord who in turn was expected to give each tenant and sharecropper his share of the government payment, based upon that tenant or sharecropper's part in the program.

The government has been compelled to abandon its program of sending checks to landlords due to complains that the tenants were not receiving their just proportion. Late in 1936 the information reached Washington that some of the landlords were changing the status of their tenants and sharecroppers to that of day laborers and wage hands—the obvious purpose of which was to keep tenants and sharecroppers from participating in the payments. But Washington was not to be outdone.

(CONTINUED ON PAGE 4)

## SPEEDY AID TO FARMERS

(Continued from page 1)

state and local governments, the President was told.

**Home Buying Urged**

A Farm Security Administration, backed by a Farm Security Corporation, was recommended. It would buy up farm lands and buildings and sell them at easy terms to tenant farmers, with repayment extending over 40 years. But even with this generous provision, the committee insisted, home buyers must be protected against lean crops and low prices.

Impressed by the gravity of the disclosure, Chairman Marvin Jones of the House Agriculture Committee promised swift action on the President's recommendations.

Jones said a bill he introduced at the start of the session, providing $500,000,000 over a 10-year period for government loans to aid tenant farmers buy land, will form the basis of new legislation.

## COW'S USEFUL LIFE 5 YEARS

### Good Heifers Coming on Declared Need for Dairy Success

Economical improvement of a dairy herd is possible only where discarded cows are replaced by well grown heifers of improved breeding, says Bulletin 377, "Raising the Dairy Calf," by the Missouri college of agriculture. This publication was compiled by H. A. Herman.

It is estimated in the bulletin that the average period of usefulness for an individual cow in the herd is about five years. In herds where rigid culture of the low producers is practiced, and when diseases such as Bang's disease and mastitis are present, the average length of time a cow is in the herd may be much shorter.

As a rule, 20 to 30 per cent of the milking herd must be replaced each year. This requires raising at least two to three heifers each year for every 10 cows in the herd, if the herd is to be maintained at its original number without outside purchases.

The success of the dairy farmer depends to a considerable extent upon the careful raising of calves, the publication continues. Most farmers begin with the best cows they can get close at home, which is usually the best plan to follow. The development of a first class herd from these cows will depend largely upon careful selection of individual cows from the standpoint of production records and desirable confirmation; continued use of a good purebred sire; careful raising of the heifer calves from the best cows; and control of disease, dairymen are told.

## OLD TOM, FAMOUS MULE OF MOLINE, DIES AT 45

Moline, Ill.,—Old Tom never again will have to gee or whoa against his will. The 45 year old mule familiar to all residents of Moline and Rock Island died in a pasture in which he has loafed away the days since he was retired Sept. 1. Tom was last owned by the Rock Island Transfer and Storage Company. He began work in Coal Valley coal mine when two years old.

## MAKING EGGS POPULAR

The editor of the Egg and Poultry Magazine says: "Liver meat doubled in price last year when the fact leaked out that it had certain unusual healthgiving qualities. The demand for eggs in the not distant future may double when their vitamin content, in which the public is greatly interested, can be certified.

"And it can be under certain conditions of feeding and marketing. Eggs contain all the vitamins, but their potency in this respect is both variable and controllable. When producers, acting with the marketmen, work our practical means for controlling and certifying the vitamin content of the better grades of eggs, the medical fraternity will rate them very high and the public will take notice.

"Eggs and milk are two common foods supplied by nature to the young. But eggs are not only food for the chick; they are the chick and its food. This may be one reason why they contain all the vitamins".

## 20 GIRLS BREAKFAST ON 1 EGG (OSTRICH)

KINGSVILLE, TEX. (AP)—Twenty co-eds at Texas College of Arts and Industries here breakfasted recently on a single egg—and had more than enough.

The girls weren't on a diet. The egg weighed four pounds and was laid by one of the ostriches owned by the college farm.

## CHASES RABBIT INTO BOTTLE, THEN BRINGS IN THE BOTTLE

Hiatt's Camp, Ariz.—Jerry, a mongrel dog owned by Archie King, chased a rabbit. The rabbit, somewhat undersized, sought to escape Jerry by crawling into a milk bottle. The dog came trotting home with the bottle in its teeth, rabbit and all.

## S. C. STATE COLLEGE ADDS COURSE IN CONSERVATION

Orangeburg, S. C., March 2—During the recent AAA Agricultural Conservation Conference held here, President M. F. Whittaker of South Carolina State College announced plans for inclusion of a special course of instruction in Agricultural Conservation for the next school term.

"It is our intention," said Dr. Whittaker, who also is president of the Association of Negro Land Grant Colleges, "to cooperate with the national and State governments in this program, because in the rural sections, conserving the soil is necessary in order to conserve the human resources."

Concerning the new course of study, W. M. Buchanan, Director of Agriculture for the college said: "Here in South Carolina, our soil has many different characteristics, each of which requires different fertilizer treatment in order to rebuild and conserve its fertility. We are, therefore, planning the course in order to give our students such technical information and supervised practices in drainage, terracing, fertilization and other methods as will best enable them to meet these conditions.

Mr. Buchanan, a graduate of Ohio State, has made many tours of the State and Cornell, has made many tours of the State in order to secure first hand knowledge of conditions.

The Agricultural Conservation Conference held here was a training course in the 1937 Soil Conservation Program for the Negro Farm and Home Demonstration Agents of the State. The conference was conducted by Thomas L. Ayers, Senior Agricultural Economist, AAA, Washington, D. C., assisted by R. C. Hamilton, Assistant State Director, Extension Service.

Harry E. Daniels, Negro State Agent, presided and the Negro speakers included Mrs. R. R. Hoton and James P. Davis, Field Representative of the Agricultural Adjustment Administration and John B. Pierce, Field Supervisor, Negro Agricultural Extension Service.

## 1,450 POUNDS FOOD EATEN BY EACH PERSON IN YEAR

An average of 1,450 pounds of food, including coffee, tea, spices, cocoa, and chocolate, is eaten each year by each person in the United States, Bruce McDaniel, president of the American Fruit and Vegetable Shippers' association, said recently at the annual convention of the organization at the Stevens hotel.

McDaniel said that about a fourth of the food eaten consists of vegetables and fresh fruits, which have a market value of approximately 1 billion 333 million dollars a year.

McDaniel said that the Robinson-Patman anti-price discrimination act appears to be the legal puzzle of the century.

"Apparently it has as many interpretations as there are willing interpreters," he asserted. "In the fruit and vegetable business about the only way to avoid its implications is to shut up shop. The intent and objective of such legislation is constructive. Unfortunately it is difficult to make a general principle apply to widely divergent crops grown in this country, especially in the perishable class."

## CASHING IN

(Atlanta Constitution).

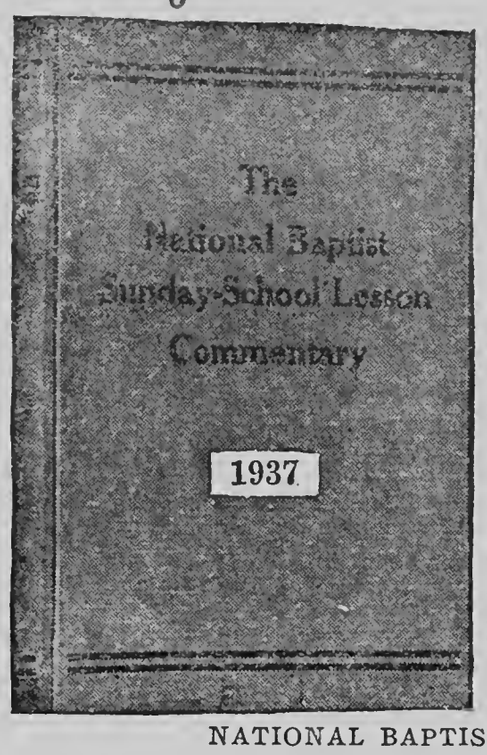
Expansion of industry in Georgia and the southeast, already advanced to the point that it is crowding agriculture for the lead in trade, commerce and transportation, will be further augmented in the operation of plans devised by former Assistant Secretary of the Treasury L. W. (Chip) Robert for a nation-wide campaign looking toward the industrial development of the south through decentralization of industry in congested metropolitan areas of the north.

Mr. Robert, who is the head of one of the large industrial engineering organizations of the south, was named some years back by President Roosevelt to the position of assistant secretary of the treasury. Last year he became secretary of the national Democratic executive committee. He announces that he will now make Atlanta his headquarters in promoting southern industrial development. In outlining the plan to be pursued Mr. Robert says:

"The concentration of industries in large centers of population in the north and east has long been recognized by economists of the Roosevelt administration as a prime factor of unemployment relief and other problems. If we are to restore the national balance conceived by President Roosevelt as a major theme of his recovery program, there must he a decentralization of industry. The south, because of its climate and raw materials, lends itself more than any other section to such a program. We shall endeavor to bring this home to industrial leaders of the country."

Mr. Robert's intimate contact with the heads of outstanding industries of the nation and his thorough knowledge of southern conditions should prove a winning factor in the campaign which will be carried on with the assistance of a number of business leaders of this section.

# Sunday School Lesson Commentary



**1937**

**PRICE $1 PER SINGLE COPY**

**Six Reasons Why You Should Use It:**

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theories leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

## YOUR CHOICE OF SIRUPS

**Northern most of America's Regional Sirups, Along With Our Most Universal Sweet, Round Out The Guide to Different Types And Uses Of Our Major Sweetenings.**

MAPLE SIRUP, the only native American among our sirups, is the sap of the maple tree, gathered and boiled down by farmers in early spring. On waffles and pancakes it does its first duty, but it ranks high on the list of favors for ice creams, candies, sauces, puddings, icings, and cakes.

DIFFERENT FARMS yield maple sirup of somewhat different taste and color, varying with the kind of tree, the climate, the soil, and the method of making the sirup. Buyers who visit maple neighborhoods during sap season blend the different lots in order to standardize their commodity for the market.

STATES in the lead for maple-sirup production, in cooperation with the scientists in the State agricultural experiment stations and in the Department of Agriculture in Washington, have set up quality standards for maple sirup. Much of the sirup sold nowadays is graded and labeled according to these standards.

COLOR is the main quality indicator, the lighter the sirup the better the grade. Other factors come into consideration in grading, but in a negative way. If the sirup is too cloudy instead of clear, it can't make the top grade. If it is "off," has the "buddy" taste that goes with too late tapping of the trees, it is disqualified for top grade, no matter how light its color. People inexperienced in the tradition of connoisseure of the maple country may object to the importance color gets in grading, contending that the darker-colored sirups have more flavor than the light. But the experts in biggest maple—producing areas answer that the mild, delicate flavor of the light-colored sirup is the true maple flavor, the darker color with its stronger flavor coming actually from the caramelization that goes with too long or incorrect boiling of the sap. But consumers can choose among the grades, buying, if they like, the darker sirups at a lower price.

FANCY is the top grade according to all generally accepted standards. Next comes Grade A, or No. 1, depending on the labeling practice of the State, on down to Grade C or No. 3. The grades are voluntary, and no farmer need label his sirup with its grade. But if he does put the grade on his label it is subject to check by State authorities.

NO FEDERAL standards of quality have been adopted yet, but the Bureau of Agricultural Economics is working on the problem. In the meantime, most of the big maple States are in general agreement on their States standards, which make use of a color scale worked out by the Bureau of Chemistry and Soils in the Department of Agriculture. Each year this Bureau sends to each of the States these scientifically accurate gages of color which are then matched by chemists either in the State bureau of markets or the agricultural experiment station and released to the individual producers to use in grading their sirup.

PURE MAPLE SIRUP, to be labeled as such in interstate commerce, must be simply the product of evaporation of maple sap or of dissolving of maple sugar in water, with the resulting sirup not over 35 percent water and weighing no less than 11 pounds to the gallon, according to the regulations of the Food and Drug Administration.

MIXTURES of maple with sugar sirup offer no such clear-cut picture to the consumer. They range in maple content from a low of about 3 percent to a high of almost half maple. Some labels give the percentage of maple in the combination. Others merely say "cane and maple," which means sugar sirup—not true cane sirup—with enough maple in it to give it a maple flavor. The typical sirup sold under a brand name contains from 12 to 20 percent maple.

THE FOOD AND DRUG Administration is not empowered in the law to set definite percentages of maple in sirups labeled different ways. But some States have regulations setting minimum percentages of maple which sirup sold in the State under labels mentioning the word maple must contain. This makes it possible for a popular brand of sirup to be sold in one State with 40 percent maple in it and in another State with 20 percent, both under the same label "cane and maple." Consumers may find out what regulations, if any, control the maple sirup content of mixtures sold in their States by writing to the State food commissioner.

HONEY, as every poetry reader knows, is a natural sweet manufactured by bees from nectar of flowers and stored in the small waxen cells of the honeycomb. Composed partly of levulose, sweetest of all sugars, honey is sweeter than any sirup.

REGULATIONS of the Food and Drug Administration make it illegal to sell as honey across State lines anyhing but the pure natural product of the bee. Before the passage of the Federal Food and Drug Act of 1906, it used to be a common practice of food racketeers to adulterate honey with invert sugar made from plain table sugar. Invert sugar is in chemical formation so like the sugar found in honey that this adulteration is difficult to detect. But since the Food and Drug Administration has been on the job protecting the integrity of natural foods, this adulteration crops up only rarely. Last year, though, one case made it necessary for Food and Drug chemists to prove by four separate scientific tests that certain honey seized by Food and Drug inspectors was adulterated with invert sugar.

EXTRACTED honey is the form in which consumers buy three-quarters of their honey. A "whirler" extracts the honey from the comb in much the style of a cream separator. Purchasers of large quantities buy extracted honey in 60—pound cans, barrels, or kegs. Over the grocery counter it goes in glass jars or small pails.

SECTION-COMB honey comes to market in wooden frames just as it is taken from the hive. A recent variation of section-comb is cut-comb honey, the comb cut in fractions and the honey allowed to drain from the outer cut cells. then sold in carton or paper wrap bags.

BULK COMB, or chunk honey, consists of pieces of comb with extracted honey poured over them. Consumers find this type of honey on the market in glass jars or tin pails.

CRYSTALLIZED honey is honey that has taken on a solid form because of the crystallization of one or more of the natural sugars in it. Honey is sometimes prepared to he sold as crystallized honey by grinding the crystals that have granulated naturally, or by controlling the size of the crystals in the process of crystallization.

WHIP HONEY is the light, creamy-textured product made by whipping granulated honey.

FLAVOR and color of honey vary with the flower from which it comes. Chief sources of honey in this country are sweetclover, white and alsike clovers, and alfalfa. Honeys of special characteristic flavor come from southern tupelo trees, from orange and cotton blossoms, from wild sage in the California foothills, from the Pacific coast star-thistle, from the tulip tree, from buckwheat, mesquite and fireweed. The strongest flavor and darkest color comes from cultivated buckwheat with its peculiar odor. The lightest honey, "water-white" in color and mild in flavor, comes from fireweed. Between these two extremes are enough varieties to satisfy practically any taste. In California a bottle of honey blended of different flowers must be labeled as blended, not as from a particular plant source. A container labeled "California Orange Blossom Honey" for instance is ten-tenths orange blossom, not a mixture of different varieties.

QUALITY GRADES are also part of California's honey standardization law which was passed in 1935. It requires that comb honey shall be classified, graded, packed, and marked according to Federal standards. Several other States have adopted them as optional standards. Producers and cooperative associations have had certain standards for years under which they have packed their honey for market, but more and more packing of honey under Federal standards is going on in the honey-producing States.

ANY BEEKEEPER may pack and sell his honey under the optional United States standards, so consumers may find honey in the store from many States under United States grade labels. United States grades have been issued for comb-section honey, wrapped cut-comb honey, chunk or bulk-comb honey, and extracted honey. The top grade is U. S. Fancy, next comes U. S. No. 1, and in the case of comb-section honey, U. S. No. 2 as well. Honey of any color and flavor is eligible for Fancy grade, so long as the color is uniform and the flavor is not "off", and it meets the requirements of the grade otherwise. Consumers who wish to study honey grades in detail may send for Department of Agriculture Circular No. 24, United States Grades, Color Standards, and Packing Requirements for Honey. This is free on request to the Department.

"HONEY and Some of its Uses" is the title of a new publication by the Bureau of Home Economics which tells consumers about the food values of honey; how to take care of it in the home, and recipes for making the best use of it. It is Leaflet No. 113, and will be sent free to any consumer who writes to the Department of Agriculture for it.

"While the earth remaineth, seed time and harvest, and cold and heat, and summer and winter, and day and night shall not cease."—Genesis 8:22

"Let us then be up and doing,
With a heart for any fate:
Still achieving, still pursuing,
Learn to labor and to wait."

—Henry W. Longfellow.

## SPEECH OF A HERETIC

Forthright speech on public questions is so rare in American political life that frankness has come to possess intrinsic merit and people admire men whose principles they may deplore, if only they will talk plainly. Al Smith's political fortune was built upon that. In an age of stuffed shirts and Messrs. Face Both Ways, everybody knew what Al was for and what Al was against. In the slippery, greasy, golden twenties, how many politicians enjoyed a reputation of that sort?

It is a rather enduring sort of reputation, too. In Tennessee today you rarely find a middle-aged man who doesn't speak well of the late Edward Ward Carmack, and many who speak the most favorably of him now were against him every time he ran for office.

One of those rare and refreshing speeches which take an unpopular stand and mince no words is reported in a recent number of the Congressional Record. For 50 years 98 per cent of American politicians have said they favor civil service or the merit system—when everybody knows that hardly any of them favor it in practice. But not the Hon. Charles I. Faddis, a representative from Pennsylvania. Listen to him: "Mr. Speaker, I fully realize that in voicing my objections to the so-called merit system or civil service, that I will be accused of being a spoilsman. To this I plead guilty at the outset. I am wholeheartedly in favor of the spoils system of filling the most of our minor public positions because I believe it to be the best system for this purpose yet devised."

In developing his theme Mr. Faddis, whose name is almost "faddist," reveals that he is a thorough believer in the doctrine of the late Lord Fisher, reorganizer of the British Navy before the war with Germany. Fisher's motto was "favoritism is the mother of efficiency." Congressman Faddis is convinced that civil service is inefficient. Says he: "I defy the Civil Service to show in any department under its control as high a state of efficiency as that of the justment Administratiou, which was hurriedly organized, and without regard to the civil service rules and regulations." Representative Faddis contends that the AAA had a higher percentage of highly educated personnel than any government agency under the Civil Service Act. Furthermore, he points out, after the Supreme Court clipped AAA, 1575 AAA employes found employment in private industry and voluntarily separated themselves from the government pay roll. That is outright contradiction of the dictum about government employes that says "few die and none resign."

Editorial Memphis Appeal

## NETTED $89 FROM GARDEN OF HALF-ACRE

A net profit of $89.50 from her half-acre garden last year, besides the vegetables it supplied fresh for a family of sir, is the handsome result obtained by Mrs. Ethel Pankey, of the Cypress Valley Home Demonstration Club, according to Miss Dora S. Stubblefield, Faulkner home demonstration agent.

The cash outlay on the garden was only $4, Miss Stubblefield said, $2 for seeds and $2 for nitrate of soda used as a side dressing. Most of her seeds Mrs. Pankey saved from her garden of the year before. Returns were, vegetables sold, $8; vegetable canned (figured at 25 cents a quart), $85.50: total, $93.50.

Subtracting the $4 cash expenditure, the garden netted $89.50, besides supplying the table with fresh products for six persons.

The garden was fall plowed, then plowed again in the spring and well pulverized, Miss Stubblefield related. Seeds for early plants were started in window boxes.

In controlling insects, Mrs. Pankey used nicotine sulphate for aphids and arsenate of lead against beetles, cabbage worms and other chewing pests. Poison bran bait was broadcast for cutwoms. Hard seeds, such as peas and beans, were treated with carbon disulphide.

The garden was well cultivated, and as fast as any vegetable matured the space was replanted. Mrs. Pankey arranged her garden so that in replanting, the later vegetables were not disturbed, the home demonstration agent said.

## MEAT FIGURES GIVEN

The United States consumes each day at luneh approximately 15,000,000 pounds of meat, estimates H. R. Davison of Chicago, vice president of the Institute of American Meat Packers. Each person in the U. S. consumes about 50 pounds of beef each year, about seven pounds of veal, about seven pounds of lamb and about 70 pounds of pork, Mr. Davison added.

MORRISTOWN, N. J., Matthew A. Henson, aide to the late Rear Admiral R. E. Peary on his trip to the North Pole, delivered a lecture on his twenty years with the late admiral on exploration trips, at Union Baptist Church, Spring and Water streets Thursday. December 17.

Mr. Henson was born in Charles county, Maryland, August 8, 1866. Most of all Race explorers Henson accompanied Commander Peary on all but one of his expeditions in search of the North Pole. He was the only civilized person with Peary in his final dash to the pole on April 7, 1909. He made eight trips to the Arctic regions.

In describing Henson's part in the discovery of the North Pole, Commander Peary said:

"On that bitter brilliant day in April, 1909, when the stars and stripes floated at the North Pole, Caucasian, Ethiopian, and mongolian stood side by side at the apex of the earth, in the harmonious companionship resulting from hard work, exposure, danger and a common object.

"Matthew A. Henson, my Negro assistant, has been with me in one capacity or another since my second trip to Nicaragua in 1887. I have taken him on each and all of my expositions, except the first, and also without exception on each of my farthest sledge trips. This position I have given him primarily because of his adaptability and fitness for the work, and secondly on account of his loyalty. He is a better dog driver than any man living, exeept some of the best Eskimo hunters themselves."

When Peary was criticized for taking a Race man to the pole, he said: "Matt was a better man than any of my assistants. He made our sleds, was very popular with the Eskimos, and could talk their language like a native. Matt was the greatest man living for handling dogs. I couldn't get along without him.

Mr. Henson is the only man now living who has stood at the North Pole.

## NEGRO FARM LEADERS STUDY 1937 PROGRAM

Tuskegee Institute, Alabama.—"Every farmer, both white and Negro must be informed, if the 1937 Soil Conservation Program is to succeed in its pupose to reduce surpluses and increase farm increase farm income."

That was the message sent by C. A. Cobb, Director, Southern Division, AAA, to a group of Negro agricultural leaders, who have just concluded a two-day intensive training course on the details of the 1937 Soil Conservation Program.

E. A. Miller, Assistant to the Director of the Southern Division, AAA, and representative of Mr. Cobb, presided at the sessions while the actual training was conducted by T. L. Ayers, Senior Agricultural Economist, Washington, D. C. and T. M. Gachet, Junior Administrative Assistant, Southern Division, AAA, Washington, D. C.

In addressing the visitors, President F. D. Patterson of Tuskegee Institute, told his audience that "at last the government is making a serious and sincere effort to solve some of the South's agricultural problems and it is significant that Negroes are being given an opportunity to actually participate in various phases of the program."

Provisions of the program and plans for its execution which are of special interest to Negro farmers include:

Government checks for cotton diversion payments will be made payable to and mailed direct to the tenant or sharecropper.

The program will encourage the use of land diverted from cotton and other soil-depleting crops, for growing a balance food ration in the home garden, including poultry, hogs and milk cows.

Negro Farm and Home Demonstration Agents will give direct assistance to Negro farmers by encouraging them to participate in the program.

Owners of small farms, tenants and sharecroppers are accorded, under the program, the privilege of direct appeal for consideration in unsatisfactory settlements or disputed claims involving government payments.

Under the program, the Negro farmer may received many benefits, including increased income for systematic and conscientious work to improve the soil which he tills, either as an owner, tenant or sharecropper.

Conferences of Negro State leaders at Tuskegee Institute and at Prairie View, Texas, will be followed by State, county and district meetings, in order to reach the Negro farmer and outline the program direct to him. Other agencies such as churches, schools and newspapers, will be asked to supplement the educational work of the various meetings.

Out of town visitors and Extension workers included: Alexander Hurse and Miss Camilla Weems from Georgia State Industrial College, Savannah; O. W. Sanders, P. S. Bowles M. C. A.. Talbert from Alcorn A. and M. College, Mississippi; T. M. Campbell, N. Kollock, V. C. Turner, Miss L. C. Hanna, Mrs. B. T. Pompey, Mrs. L. R. Daly, Miss J. L. Dent, R. R. Bell and R. T. Thurston, of the Alabama Extension Service, Tuskegee Institute; A. A. Turner, and Mrs. B. S. Shute, Florida A. and M. College, Tallahassee; Mrs. Jennie B. Moton, Field Office AAA, Capahosic, Virginia, and James P. Davis, Field Officer AAA, Little Rock, Arkansas.

## CHICAGO DEFENDER

(Continued from page 1)

Early in January, C. A. Cobb, director of the southern division of the AAA gave out to the press a letter which went to the landlords and tenants informing them that anything changing the status of the tenant and sharecropper from the 1936 agreements was not approved by AAA officials, and any landlord guilty of this subterfuge would not be paid the money which would have been paid to him had he retained the status of the 1936 leasing or cropping agreement.

Such measures followed by such vigilance will mean much to the future hopes of the Race farmers. Funds which came from the government have helped many of these farmers to pay off mortgages, repair their homes, send their children to schools, etc. The problem of the tenant and sharecropper in the South has not yet been solved. Much is yet to be done, but a step has been made in the right direction.

The greatest problem is to get the Race farmers themselves to pass on the proper information to one another. There are 654,000 such farm operators in the nine southern states of the Southern Division, whose information must come from Race farm demonstration agents, which number only 300 in the entire South. These agents must teach the people to read their newspapers; the schools and churches and fraternal organizations should also contribute their part in disseminating proper information to these uninformed farmers.

—Chicago Defender.

### Faces House Opposition

The bill faces opposition in the house from Representative James P. Buchanan (Dem., Tex.) chairman of the appropriations committee, who is advocating economy and believes that tenant farmers are just naturally shiftless and would not justify government assistance.

The farm tenant question was injected into the campaign by President Roosevelt when he appointed a special committee, headed by Prof. Rexford G. Tugwell, to make a survey and recommendtions. Bankhead said that final passage of the new bill would not be sought until this committee reported but his bill has the tentative approval of the agriculture department.

## SEC. WALLACE ON FARM TENANCY "B"

In 1880 three farmers out of four owned the land they operated; only one in four was a tenant. Today, two farmers out of every five are tenants, and the three who are still owners have seen their equity in their own land decline until it amounts on the average, to considerably less than half the land's total value. In 18 States in 1930 the farmer-operator's equity, or ownership free of debt, was less than 40 percent of the total value of farm real estate, and in three of still owners have seen their equity was under 30 percent. Thus in the past half century, while we hoped we were building a secure rural foundation for our civilization, we were actually converting owner-farmers into tenants and at the same time chisling away the equities of those not yet converted.

These trends are not new. We

have known about them for years. Now it is time we began to do something about them.

The backbone of any enduring civilization is a hopeful, virile, energetic people who feel that they have a stake in the future worth working and fighting for. In the business world the coperate form of organization has crowded increasing numbers of small businessmen to the wall. Wealth and income, according to the Brookings Institution, are being increasingly concentrated. This tendency for the power and wealth of corporate organizations to pass into fewer and fewer hands makes it increasingly essential, if the civilization of the United States is to remain secure, that those farm families actually living and working on the land have a much stake in that land than many of them now have. There must be either an increased ownership or an increased security of tenure, or both.

Apparently the American people are ready to get behind any reasonable program to check and reverse the growth of tenancy. Last Sunday the American Institute of Public Opinion reported; on the basis of a typical cross-section of the voting public, that 83 percent of the people would approve a Government program to enable tenants to buy the farms they now rent.

This indication of support is encouraging, but unfortunately the problem is not as simple as that vote suggests. Throughout our history we have tried to help our people settle and stay settled on the land. Public land has not merely been sold at nominal prices: it has been given away, millions and millions of acres of it. And still tenancy has increased, farming by owners has decreased, and the debt burden has mounted. If gifts of land did not seem to check tenancy and promote ownership by the operators, can we be any more confident that the sale of land, even at extremely favorable terms, will be an adequate answer to our problem?

Any genuine attempt to lessen the evils of tenancy must attack a whole complex of things—our land tenure system, our traditional attitudes toward land ownership and land use, and the instability of farm income as well as the simple problem of providing credit on reasonable terms.

It is certainly true that millions of our people in the past sought most of all a permanent home and livelihood on the land, and hoped these might be passed on intact to future generations. But it is also true that from the very beginning of colonization in this country many, many other people sought not stability on the land but quick gain. They worked and schemed for a speculative profit through a quick turn, for unreasonable profits through exploitation of the soil, or even through misrepresentation and fraud. In this company could be found that gaudy procession of land speculators, timber skinners, and land sharks which has marched across so many pages of American history.

The evil that land speculators do lives after them insofar as it excites the hopes and appetites of later generations. If a sufficient proportion of the American people think that a fat living is to be made simply by waiting for a rise in land values, then of course our hope of checking tenancy and advancing ownership is a vain one.

Land speculation is one of the greatest foes of farm ownership. We can never hope to advance very far toward increased ownership until we find some way to reduce wide swings in land values. The tendency of land values to get beyond the earning power of the land causes people who have no real interest in farming to take speculative flyers in land. A steep rise in land values prevents many young people, who should have the opportunity, from buying and working land as farmers; or if they do make down payment, a subsequent smash in land values all too often bankrupts them: When land values blow up, tenancy increases on the downswing, and many heavily mortgaged owners are suddenly converted into tenants. One of the essenitals, if we are to stop the onward march of tenancy, is to bring about adequate stability of farm income, and another is to favor rules of the game which will prevent land values from going beyond a fair relationship with that stable farm income.

Ample credit to help tenants is unquestionably desirable, but I am sure those who believe most firmly in its desirabiltiy would be the first to recognize its limitation. During the period 1880 to 1935 farm tenancy increased at the rate of 33,465 farms per year. If it is assumed that this represents a normal rate of increase and if a $4,000 investment will be sufficient, on the average, to supply each of these tenants with adequate land, buildings and equipment to make him economically independent it would require an appropriation by the Government of $133,860,000 per year merely to take care of the annual increase in tenancy. This would not make any inroad whatever upon the number of tenant farms already in operation. In other words, it would merely arrest the trend.

The above increase in tenancy, however, while representing the long-time trend, is conservative. In more recent years the trend toward tenancy has increased. If we take the ten years from 1925 to 1935 the rate of increase has been 40,255 annually. During the past five years, 1930 to 1935, the increase has been at the rate of 40,-158. Assuming again the $4,000 per farm investment it would require, at the rate of increase during the past five years, an appropriation of $160,632,000 per year merely to take care of the increased number of tenants each year and would not provide for the 2,-865, 155 farms operated by tenants in 1935.

The figure of $40,000,000 has suggested at various times as being sufficient to make a beginning toward financing the purchase of farms by tenants. An appropriation of this amount, as has been shown above, would take care of only about one-third of the annual increase in tenants. If some way could be found to stop the increase, and the sum of $50,000,000 were used annually to reduce the number of tenaut farms already in existence at the rate of investment per farm used above, namely $4,000, it would require about 230 years to eliminate tenancy. The problem is of such a magnitnde that many other approaches besides mere purchase and sale must be found if any appreciable improvement in the situation is to result.

In the reaction against a feudal system of land tenure, our ancestors swung to the oppcsite extreme and established ownership in fee simple. Under this system the owner need not assume any obligations to society in the use of his land. He may conserve the soil or he may destroy it. He may buy or sell it, barter it, mortgage it or lose it in any manner and to any individual almost as freely as any commodity. So long as ownership and operation of the land were combined in one person, the results were not so serious, but with ownership and operation divorced, to the extent that now exists, the land and the civilization dependent on it are in jeopardy. As a result we may have to revise our attitude to include, a minimum of social responsibility as a condition of land ownership.

## WARNING ISSUED BY A. A. A.

(Continued from Page 1)

The letter contains the following paragraph relative to A. A. A. rules and regulations, which, couched in slightly legalistic language, nevertheless is clear:

"The A. A. A. provides that if the secretary (of agriculture), on the basis of investigation by the state committee, finds that any person has for 1937 made any change from the 1936 leasing or cropping arrangements for the farm or has adopted any other device for the purpose of, or which would have the effect of, diverting to such person any payment to which tenants or sharecroppers would be entitled if the 1936 leasing or cropping arrangement were in effect in 1937, the amount of any payment which otherwise would be made to such person may be withheld in whole or in part."

It is plain that Cobb levels no blanket charge against landlords of the cotton belt. A Southerner himself and an agricultural expert of ability, he knows and understands landlords and their problems and is not unacquainted with the many sacrifices they have made, during and after the depression, in behalf of their tenants.

They are the men who, as a rule may be depended upon to assist the government in its ambition program. Already a house committee has granted tentative approval to a measure providing $50,000,000 yearly to assist the nation's nearly 3,000,000 tenants to purchase land. As a precautionary plan, an additional $75,-000,000 would be authorized to prevent small landowners from edging into the tenant category.

It is interesting to learn, from Washington reports, that whereas half a century ago only one farmer in four did not own his land, today two out of five are tenants.

It would be unfortunate, with a definite program in sight, if a minority of landowners would complicate the issue.

It is to these the A. A. A. warning is addressed. It is a shoe for the foot to fit.

---

Cityite—Are you sure these eggs are fresh?

Farmer—Why, lady, if you'll step outside you can hear the hens that laid them still cackling.

---

Johnnie (looking out of the window): "Oh, Mother, an automobile just went by as big as a barn."

Mother: "Johnnie, why do you exaggerate so terribly? I've told you forty million times about that habit of yours, and it doesn't do a bit of good."

# Pastor's Guide
## By Boyd

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

# Pulpit Bibles
## At Low Cost

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

# Baptismal Garments For $30.50

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## The Best Book For The Ministers

# Theological Kernels

*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## KNOWS HER HISTORY

"In whose reign do we first hear of railways, Mary?" asked the teacher.

"In Solomon's," promptly replied Mary.

She was asked to think again, but persisted in her original statement, and the teacher inquired why she thought so.

"Because," replied the child, "we are told in the Bible that the queen of Sheba went to Jerusalem with a very great train."—Montreal Star.

## SOW COSTING $35 WAS PROFIT-MAKING DEAL

Jim Trimue, second year 4-H Club member, Caldwell 4-H Club, made the following financial report on his 4-H Club work to J. M. Thomson, St. Francis county agent.

In 1935 Jim brorowed $35 from the Bank of Eastern Arkansas, Forrest City, and purchased a bred Poland China gilt. From the pigs raised to date his sales amount to $87 and he is keeping the sow and one pig for his own use.

He values the sow at $50 and the pig at $25. This outstanding demonstration is pepping up other boys in the Caldwell Community to the value of 4-H Club work, Mr. Thomson said.

### "Cabinet Culture"

"Beanstalk magic' is the description which has been applied to the intensive cultivation of cereals in cabinets, a process of indoor cultivation receiving widespread interest at the present time," says Country Life (London, February 13). "Intensive Cultivations, Ltd., have made this process a practicable proposition in marketing apparatus by the use of which a continuous supply of sprouted grain for feeding can be insured. A galvanized iron cabinet of substantial construction contains a number of trays in which the grain is placed and allowed to germinate. The cabinet is thermostatically heated and the grain is fed by a nutrient solution automatically sprinkled over every tray by operating a central control. The largest size can produce 200 pounds of fodder per day at an estimated cost, including depreciation, of just over 2 pounds per ton, the feeding value of this being such that 10 pounds of fodder are equivalent to 2 1-2 pounds of concentrates. The product is suitable for feeding to all classes of farm livestock and the high vitamin content should make it a valuable addition to existing foodstuffs for winter feeding.

### Streamlined Turkeys

Smaller turkeys with more meat will reach the New York and Boston markets from St. Lawrence County., N. Y., next Thanksgiving to satisfy the demand of urban families for "streamlined" holiday fowls, Morton Adams, County Agricultural Agent in charge of the Farm Bureau, said recently. The new type of turkeys will be bred this spring in an attempt to regain for the county the top market prices which it received several years ago. The smaller, fatter, less bony and closer-to-the-ground turkeys will be produced by either of two methods, Mr. Adams said. The first is the selection for breeing of female birds which approximate the requirements. The second is the cross-breeding of Naragansett and Bronze large fowls with Bourbon Red and White Holland, small types. (New York Times).

### Exhibit Farm

The exhibit farm idea, which had been so successful in various parts of the country in demonstrating the diversified uses of electricity in agriculture, has been adopted in Georgia. Modeled after the Rural Electrification Administration elctrified farm near Herndon. Va., this new exhibit farm is sponsored by the Toombs County Rural Electrification Association, which has been allocated $53.000 by Rural Electrification Administration to build 52 miles of line to serve 208 farms. The exhibit farm, operated by Mr. and Mrs. T. E. Baker, is located at the intersection of U. S. 1 and the paved road leading west to Vidalia, Cordele, and Columbus, Ga. (Rural Electrification News, Feb.)

### Motorized Blacksmith

John E. Coursey, of Lisbon, Maryland, is a blacksmith who has motorized his bnsiness and finds that it pays, says a report in the Baltimore Sun (March 1). Instead of requiring farmers to risk the hazards of the highways by bringing their horses to him to be shod Coursey, who for forty-two of his sixty-one years has stood at the forge, takes his shop to the farms. Coursey travels to hundreds of farms in the course of a year. The blacksmith still has his place, he insists, in spite of the harm done the trade by the motorization of many farms. The only way blacksmith shops will pass out will be through failure to train young men to become smiths, declared Coursey. Lately Coursey has observed that farmers are giving more attention to their horses' feet and seeing that they get new shoes at regular intervals. He takes this to indicate returning prosperity because "for a long time the farmers just didn't have the money, and they were letting the horses go without shoes."

### Butter Fraud

"Harold V. Skinner of Wichita, Kansas, and Michael J. Cota, of Chicago, Illinois, had a formula better than that of any alchemist—while it lasted," says Fred H. Sorrow in Southern Dairy Products Journal (Feb.) "Their procedure was to take two pounds of butter and four pounds of oleomargarine, adding water to the mixture until they had 21 pounds. They were making a profit of abont $9.00 on selling this 'butter' from door to door in Buffalo, New York, and each 21 pounds when the police arrested them on the charge of selling food unfit for human consumption."

## MORE APPLES BY PRUNING

Low vigor trees usually produce more apples of larger size when pruned than when not pruned, says T. J. Talbert of the Missouri college of agriculture. Old trees in a low state of vigor are generally made more profitable by light pruning, he added, stating that weak, slow-growing branches and twigs should be removed.

## TWO ACRES OF ROWDEN RETURNED NET OF $89

Truman Rogers of the Maul 4-H Club, Ouachita county, made a profit of $89.71 on two acres of cotton last year.

His black loamy soil was broken in early April. He planted Rowden 40 on April 27. The total cost of production was $22.35. He got 1,810 pounds of seed cotton from the two acres, yielding 663 pounds of lint. The combined value of the lint and seed was $112.06. Less the production cost of $22.35, he had a net profit of $89.71.

Truman is an active 4-H Club member, and was awarded the Harvey Couch 4-H award for Ouachita county in 1936. He was president of the Maul 4-H Club in 1936 and is again president in 1937. He is taking cotton as his project for 1937.

## TWENTY GOATS MADE PASTURE OF 10 ACRES OF BRUSH, WEEDS

Goats are used by G. Z. McCaslin, Scotland, Van Buren county, as an easy and efficient method of clearing land which has small trees and brush on it, so it can be made into a permanent pasture, said Carroll S. Morrow, county agent.

In the spring of 1936 Mr. McCaslin had the small trees cut on 10 acres of land, letting them fall where they would, and then he put 20 goats on the tract, the county agent related. The goats have eaten all the leaves off the trees and have kept the sprouts eaten back. They have also solved the permanent pasture problem by eating the weeds.

"Goats prefer leaves, brush and weeds to grass, thereby giving the grass a good chance to get started," said Mr. Morrow.

Mr. McCaslin told the county agent that his plan is the best he has ever found to get a pasture established.

## IN HIS 54 YEARS OF FARMING HAS HAD TO BUY CORN ONLY TWICE

"I have been farming in Calhoun county 54 years and I bought the farm on which I now live 25 years ago. In these 54 years' farming I have bought corn only two years, in 1896 and 1930. With the exception of these two years enough feed has been produced on the farm to care for all the livestock." Thus said W. H. Brown, Calhoun county farmer, living in Bowen community.

Mr. Brown related that when he bought his farm it would not make more than 20 bushels of corn on five acres or an average of not more than four bushels per acre. He has since built the land up by crop rotation and a well-planned system of farming, according to R. D. Setzler, county agent.

Mr. Brown has tried to have a crop of peas either for hay or to plow under on each field every other year. In 1936 he produced an average of 265 pounds of lint cotton per acre.

## RASPBERRIES PAID IN FIRST YEAR FOR COST OF THEIR SETTING OUT.

W. W. Fenner sold enough raspberries from a one-acre plot last year to repay his investment, in spite of the fact that the first crop is usually about 1-3 to 1-4 of the normal yield. He also had a plentiful supply for the table, said C. F. Lund, Carroll county agent.

On February 10, 1935, Mr. Fenner bought 2,950 plants, which cost him $29.50. The drouths of 1935 and 1936 killed about five per cent of them. Labor for planting cost around $40, making a total cost of approximately $70.

During 1937 Mr. Fenner plans to add another acre to his patch from his own plants and will have from 15,000 to 20,000 plants for outside orders. He estimates that he will clear about $175 on the acre of raspberries, with 1-4 of a crop.

A FOUR PIECE PULPIT SET

For $125.00

This is a beautiful set of Pulpit Furniture consisting of three chairs and the pulpit—Just the set you need for your church

Terms: $50.00 CASH—Balance In Three Monthly Payments

## THE WASHINGTON MERRY-GO-ROUND
(Trademark)

Boom in Price of Cotton Raises AAA Bogey of Over-production.

Fear Farmers Will Be Lured by Profits, Refuse to Curtail Crops.

Lobbies Sabotage New Deal's "Model Acts" in Legislatures.

By Drew Pearson and Robt. S. Allen
Authors of "Washington Merry-Go-Round" and "More Merry-Go-Round"

Washington, March 27—Recent ballooning of the price of cotton brings a chill to officials of the AAA. They are afraid of next year.

Cotton now is priced at about 14 1-2 cents a pound, recently touched 15 cents, the highest figure in seven years. Merchants are bullish. Will Clayton, of the big trading firm of Anderson, Clayton, has forecast a season of superlative business. Benjamin Adler, New York cotton statistician, has predicted a price of 20 cents by fall.

AAA officials discount these statements because the trade is interested in volume and wants to promote expansion rather than price. But they are afraid farmers will not discount them, will be lured into excessive planting, thus producing a crop so large that the price will tumble.

Two years ago, such a price rise would have caused no worry, for AAA had a firm hand on the check rein. The compulsory provision of the Bankhead act gave the administration complete control over production.

But the Supreme Court's invalidation of the AAA last year took away the check rein. The only control now exercised depends on voluntary cooperation of farmers, who earn benefits for soil conservation practices.

Those benefits become less and less inviting as the price of cotton rises. A farmer can earn about five cents a pound for the average yield of diverted acres. To earn this he must pay for the seed and fertilizer to grow conserving crops on these acres.

In contrast is the prospect of 15 or perhaps 20 cents a pound on cotton. The temptation is almost irresistible.

Most alarmed is Cully Cobb, director of the Southern Division of AAA. He is begging extension directors to counteract the bullish market by talking bearish to producers. Cobb says:

"A crisis has been reached in our effort to retain a balanced production. I am afraid advancing prices have caused farmers to forget the situation which brought about five-cent cotton."

Similar, though milder, appeals were made last year with success. But last year the price of cotton was not 14 1-2 cents a pound, and this year the AAA will have a harder time to sell its bill of goods.

Thus is the stage set for the first real test of voluntary crop control in the realm of King Cotton.

## SOUTH SLIGHTED IN SOIL PLAN, CONTENTION

Washington, March 27 (AP)—Senator Tom Connally of Texas asked Secretary Wallace tonight to reexamine the basis of the soil conservation program allocation to nine Southern states. He contended that of $500,000,000 to be spent throughout the nation, the Southern region can not "possibly receive more than $123,000,000, since the $132,000,000 apparent allocation includes administrative costs."

Based on the percentage of farm population under the 1934 census, the senator said in a letter to Wallace, the allotment should be $169,500,000; if on the percentage of acreage diverted from soil depleting crops in 1936, it should be $174,000,000.

States in the region are Texas, Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Oklahoma and South Carolina.

## SPINACH PROVIDING JOBS

The present spinach crop is a benefit to the people of Crawford county in many ways, according to Sam T. Woods, county agent. B. J. Farmer has 125 acres planted to spinach, which, he told the county agent, will yield an average of 1 1-2 tons per acre. He is getting from $16 to $25 per ton and employs from 50 to 100 persons to harvest the crop. Spinach not only provides needed labor and brings in cash, but it also leaves the soil in good condition for spring planting, Mr. Woods observed.

## SOME LIKE BROME GRASS BETTER THAN BLUEGRASS

Reports from western and northwestern Iowa indicate that brome grass as a meadow or hay crop is worth more serious consideration than has hitherto been given it. Many farmers in these regions report that this grass has a superior resistance to heat and drouth, that as a pasture it will carry more livestock to the acre, and that when seed is harvested there is always a ready and profitable market.

In 1935 one farmer living northwest of Battle Creek sold 11,000 pounds of seed from 39 acres of brome grass. He pastured 60 head of cattle from April until Dec. 15 on this acreage another year.

Brome grass may be seeded broadcast with a mixture of red clover, or with alfalfa or sweet clover. In each case it should be seeded with some nurse crop as oats. It may be sown in the spring or fall, at the rate of between 10 and 35 pounds per acre, H. D. Hughes, head of the Farm Crops Department, Iowa State College, suggests.

When brome grass is seeded with alfalfa or clover, it gradually thickens after the alfalfa or clover stand has died out. This grass becomes less productive after a period of years. It gives the highest yield in the first 3 or 4 years, growers report.

Almost all northern Iowa growers of brome grass report that as a pasture it will carry twice as many head of livestock per acre as Kentucky bluegrass. It provides both earlier and later pasture than bluegrass, and is very palatable according to reports received at the Farm Crops Department, Iowa State College. While brome grass makes a very tough sod and it takes some work to subdue it, it is not at all troublesome when plowed and planted to corn, some of the brome enthusiasts declare.

## FOR THE HOMEMAKER

### CANNED NUT MEATS

Let the family washboiler do double duty some winter day—can nut meats, suggests Miss Ruth Cessna, extension nutritionist at Iowa State College.

Home-grown supplies of walnuts and hickory nuts cracked during February afternoons, frequently become stale and rancid by summer. Canning solves this difficulty.

Put freshly cracked nut meats into glass fruit jars; adjust—but do not tighten—the glass lid and rubber. The jars are placed in an ordinary wash boiler or large kettle with a wooden rack on the bottom. Put about 2 inches of water, no more. Allow the water to boil for 15 or 20 minutes in a tightly covered boiler. Remove the jars and tighten the tops rapidly.

Miss Cessna advises use of half-pint jars, because once the lid is removed the nut meats are again subject to staleness and rancidity. Store in a dark place at ordinary room temperature.

The problem of over-weights and underweights must be considered in including nuts in the family menu, says Miss Cessna, because nuts are high in fat. She suggests that they be used two or three times a week for variety and flavor. Glace apricots stuffed with nut meats are a delicious and nutritious dainty, particularly for teas.

Wash two cups dried apricots and boil in sufficient water to cover until fruit can be easily pierced with a fork. Combine 2 cups sugar, 1 cup water and 1 teaspoon cream of tartar and boil mixture three minutes. Add the drained apricots and cook until the syrup sheets off the spoon, jelly fashion. Skim out the fruit and place on a rack to drain and dry. When cool, roll, filling center with a nut meat and sprinkling with granulated sugar. The syrup may be used to flavor fruit drinks.

## ASKS AN INDIANA LAW IDENTIFYING EGG WHEN FRESH

Indianapolis, Ind.—A fresh egg is one in which:

The air cell does not exceed one eighth inch in depth, localized regular.

The yolk may be dimly visible.

The white is firm and clear.

The germ shows no visible sign of development.

Take it from Purdue university's experts and Hobart Creighton, Republican member of the Indiana house of representatives from Warsaw, no egg is fresh unless it meets these requirements.

And, under terms of a bill introduced in the Indiana house today, no egg might be sold as "fancy" or "fresh" unless it meets those requirements.

Representative Creighton runs a poultry farm with 20,000 chickens.

NEW
**Metoka and Galeda Guide and Manual**

Work of the Committee Named at the last Sunday School Congress Enables Organized Classes to Get New Book

A Metoka and Galeda Guide and Manual to be used for the organized classes in Baptist Sunday Schools is now ready for distribution. The cover is bright red with blue letters.

It contains a brief sketch of the late Rev. N. H. Pius, D. D., and the late Rev. R. H. Boyd, D. D., as it pertains to their work in erecting these two college departments of Baptist Sunday Schools.

This new Guide and Manual sells for 25 cents. Send all orders to the—

NATIONAL BAPTIST PUBLISHING BOARD,
Henry Allen Boyd, Secretary,
523 2nd Ave., N., Nashville, Tenn.

**The Handy Book for Pastors**
**BOYD'S**
**Pastor's Guide**

A Standard for Baptist preachers of the Missionary Baptist Denomination. Endorsed by the National Baptist Convention more than twenty-five years ago. Written, edited and compiled by the late Dr. R. H. Boyd. Contains a form of service for every occasion that can be held in a Baptist Church.

Send 75c For a copy By Mail

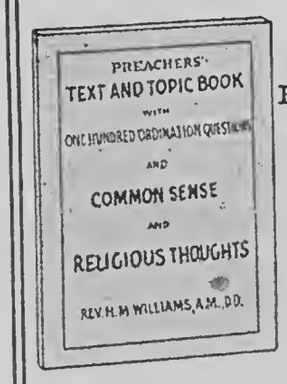
Nashville, Tennessee

**PREACHER'S TEXT AND TOPICS**



By THE LATE DR. H. M. WILLIAMS

This book contains many helpful suggestions, questions and references designed to aid young men who are aspiring for the ministry.

The book is inexpensive. It is within the reach of every person's means.

**Price 15c**

Send all orders to
NATIONAL BAPTIST PUBLISHING BOARD,
Henry A. Boyd, Secretary,
523 2nd Avenue, North,
Nashville, Tenn.

**'Hope Magazine'**
"Where There's Hope There's Life"
Organ of the Fireside School

A monthly religious journal for the Christian Worker

REMEMBER—when you order "Hope" you are ordering a magazine which carries not only daily zine which carries not only daily series of Sunday school lessons, but also stories, children's lessons, mission helps, and seasonal messages to help you plan the right kind of program for all special days of the year.

In single subscriptions, fifty cents per year. Send 10c for sample copy. Write for details to

**"HOPE" Magazine**
521 Second Avenue, North,
NASHVILLE, TENNESSEE

**Woman's Home Mission Literature**

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

**Send Your Orders to Us for**

Guides for Home and Foreign Mission Societies and Combined Bible Band and Mother's Union @ 15c each or $1.50 per dozen.
Y. W. A. Guides and Combined Junior Mission Society @ 15c each or $1.50 per dozen.
Shepherd Boys' League Guides @ 15c each or $1.50 per dozen.
Girls' Auxiliary Guides @ 15c each or $1.50 per dozen.
Children's Band Guides @ 15c each or $1.50 per dozen.
Secretary Books for all Organizations, $1.00.
Pledge Charts for each organization @ 50c.
Buttons for each organization @ 10c each or $1.00 per dozen.
Hope, a monthly magazine—5c a year.
No supplies sent free. Remittance requested with each order.

## 'OLD PEG'S CACKLE IS STILLED AFTER 26 LONG PRODUCTIVE YEARS

By James Taylor Adams

Big Laurel, Va., March 13.—"Old Peg" was a mongrel hen, speckled, the property of Roe Chisenhall when she passed away.

Twenty-six years ago "Old Peg" was hatched along with a brood of 15 other chickens in the barnlot of Mrs. Mary Mullins. She kept her until she was 10 years old and then sold her along with other hens of her flock to Mrs. Nannie White. Mrs. White kept the hen for 10 or 12 years, and at her death the hen went to Mrs. Roe Chisenhall as part of the estate.

Fifteen years ago the hen was caught in a trap set for prowling animals and one of her feet was cut off. Since then she hopped about on the stump of her leg and it was this that gave her the name "Old Peg." Until last year she never failed to "bring off" two broods of chicks and was very successful in raising them.

## MR. CORNELIUS HAMILTON WRITES EDITOR HARRIS

Tchula, Miss., March 28—Gentlemen: Please allow me space for a few words of endorsement of the message made in last month's issue by our editor, Mr. Leon R. Harris, in regard to increasing our membership. His statement uplifted me so much until I at once, without more delay, went right out and secured a money order to pay for my subscription to the Modern Farmer. I have been interested in the paper for a long time but I was not a subscriber of the paper. I would borrow it from my neighbors. Hereafter I want it to be my own, and continue to arrive regularly for my own use. I shall also use my influence in getting new members and I hope that our old members and the new ones will come back into the National Federation of Colored Farmers. This organization has my heartiest wish for its success and I also wish to express my appreciation for the helpful news carried in the paper. I hope this best of all Negro farm-papers will be found in every home and I never want to be without it.

Yours for success,
Cornelius Hamilton.

## ACRE IN TRUCK PAID $165 AND SUPPLIED HOME

E. E. Martin, Marcella, advises farmers to have at least a small truck garden.

Last year from about an acre of fruits and vegetables, Mr. Martin got ample supplies of these crops for home use, and sold $165 worth, in spite of the drouth, said Troy Mullins, Stone county agent.

Sales included $80 worth of strawberries, $20 worth of blackberries, $25 worth of dewberries and youngberries, and $40 worth of Irish potatoes. These products were yielded by one-fourth acre of Irish potatoes, one-third acre of strawberries, five rows of dewberries 175 feet long, four rows blackberries 180 feet long and two rows of youngberries 200 feet long, Mr. Mullins related.

"Mr. Martin feels that he can make the best profit from strawberries and youngberries," said the county agent. He will increase plantings of these this spring. Raspberries will also be planted for the first time.

"He believes he will install a small canning unit to take care of surplus berries which might be marketed to best advantage in containers. The home supply can thus be preserved, and some of the yield held for better prices, if it seems advisable.

"I believe every farmer should have enough of these fruits for home use and some to sell," Mr. Martin told me. 'The money certainly comes in at a time when most needed."

## LESPEDEZA WORTH TOO MUCH TO BE WITHOUT

Bud Sayles who lives in the Armstead Community in Pulaski county says he would not be without a field of lespedeza for his hay crop, according to Stanley Carpenter, county agent. Mr. Sayles had three acres in 1935, which was the second crop of lespedeza on that piece of land. The lespedeza grew to a height of two to two and one-half feet, producing an estimated yield of three to four tons of hay per acre.

Mr. Sayles sows his lespedeza with spring oats when starting a new field. He used 25 pounds of the Tennessee 76 variety with two bushels of oats per acre. The weeds are cut when he harvests his oats, so the lespedeza is not crowded out before it begins to make its rapid growth in the late summer.

Mr. Sayles said he leaves the lespedeza on the same piece of land for three years, since it reseeds the land each summer. He planted two more acres last spring.

## ABOVE RACIAL BARRIERS

(The Christian Science Monitor)

The future of the Negro in the United States is not merely a matter of his education, but of his relationships to his white fellows. Evidences of friction between representatives of the two races find their way into print so easily that it is refreshing to note concrete cases of understanding and cooperation. A significant instance comes, not from the North, but from the South.

"A friend of mankind," was the tribute paid to the Rev. Jesse Belmont Barber, a gradnate of Lincoln University, in the anniversary program arranged recently by prominent white citizens to celebrato his tenth anniversary as pastor of Leonard Street Presbyterian church, Chattanooga, Tenn., one of the Negro Churches in the city.

Testimonies to tho civic and social consciousness of the Negro pastor as a factor contributing to the progress of the city marked the course of the program. "Monday Morning," published by the General Council of the Presbyterian church in the United States of America, pronounced the occasion "one of the most significant in the history of tho city, if not of the whole South." Chairman for the occasion was former Mayor T. C. Thompson, son of a Confederate army officer who was an adviser to Jefferson Davis. "A meeting of this kind could not have happened in Chattanooga ten years ago," he declared in paying tribute to Mr Barber's co-operation in inter-racial work as chairman of the colored section of the city Inter-racial Commission.

The occasion was made one for facing the situation of the Negro in the South, as well as the situation in the city. The problem of race relationships can be solved in the United States if reliance upon Christian concepts of brotherhood, mutal understanding, helpfulness, tolerance and united effort by both races is kept to the forefront.

## A FUTURE DIPLOMAT

THE teacher had explained the cruelties of Nero, and believed he had made an impression. He asked the class: "Now, boys, what do you think of Nero? Do you think he was a good man?"

No one answered. The teacher singled out Tommy.

"Well," returned the boy after a long pause, "he never done nothin' to me."

**The Bible is and must be the basis of our social life in these troubled times.—Albert Einstein.**

## SMALL FLOCK LAYS WELL

Neighbors who have 150 hens get no more eggs per day than I do from my 30 pullets and six hens," Lucille Fryar, 4-H club girl of M. Walton home demonstration agent. Lucille reported a profit of $11.15 on her 1936 poultry demonstration. She started her poultry venture in 1936 with six Buff Minorca hens. She bought 100 baby chicks for $9.50. Her brooder house was placed in a grove of young trees and bushes so the chicks would have shade in hot weather and be sheltered from hawks. The pullets started laying in October at eight months of age.

## GOT $393 CASH FROM SEVEN ACRES COWPEAS

A. D. Jones, of the Centerville community, found that planting his diverted cotton acreage to cowpeas was a real success in adding to the cash income of his 100-acre farm in 1936, said Walter Cooper, county agent.

Mr. Jones diverted 14.7 acres of cotton land to cowpeas, and seven acres were picked for seed. From the seven acres he threshed 145 bushels of peas. One-seventh of this paid for the threshing, leaving 135 bushels. Recently Mr. Jones sold 70 bushels of peas for $140, netting him $20 an acre, with 65 bushels still in the barn for home use and for sale.

Mr. Jones will receive a diversion payment of $174.75 for his 14.7 acres of cotton; he will receive a $19.70 soil-building payment and will sell 30 bushels more of peas for which he expects to get $60. So, the total income from the 14.7 acres will amount to $393.45 with 35 bushels of peas left for home use, the county agent summed up.

## SAYS HAWKS MOST VALUABLE

Extensive killing of hawks was condemned by the Wildlife Division of the National Park Service, which described as "regrettable and alarming" the spectacle of more than 100 dead hawks strung by hunters along a roadside fence near Mart, Tex.

Pointing out that only the so-called "blue-darter" hawks are destructive, while other varieties are "friends of the farmers," the statement said that all birds identified in newspaper photographs of the Mart group were of the beneficial species—"killed by thoughtless, untrained men."

"If you must shoot hawks," hunters were warned, "remember that practically every large hawk you see perched in the open or soaring on motionless wings is a friend of the farmer and should be protected. These hawks feed on mice, ground squirrels, rabbits, prairie dogs and insects. This food preference has been demonstrated many times through the study of large numbers of hawks' stomachs."

## SOLD 25 CALVES FROM HIS 29 COWS IN '36

I. B. Stewart of the Yocna community, St. Francis county, has about the best, well-fed herd of Hereford cows in that part of the state, in the opinion of M. W. Muldrow, extension animal husbandryman, said J. M. Thompson, county agent.

From 29 cows Mr. Stewart sold 25 calves last year, grass fed, which averaged around $30 a head net, the county agent related.

The cows have been fed soybean hay and no grain this winter. Mr. Stewart estimates that he feeds each cow at least a ton and a half of soybean hay over winter. He is planning a trench silo which he intends to fill this season with sorghum.

# *The Sunday School Congress For 1937*

*CINCINNATI, OHIO, KNOWN AS THE QUEEN CITY OF THE NATION, SELECTED FOR THIS SUMMER SCHOOL OF METHODS*

*Arrange for every department of your church to be represented. It will be the thirty-second annual session. Send some one to the following departments:*

| | | |
|---|---|---|
| TEACHER TRAINING | METOKA | GALEDA |
| ADVANCED TEACHERS | PRIMARY | MUSIC |
| SUPERINTENDENTS | MISSIONARY | JUNIOR |
| B. Y. P. U. | MINISTERIAL | CRADLE ROLL |
| BIBLE STUDY | HOME DEPARTMENT | NATIONAL A. F. CADET |
| DAILY VACATION BIBLE SCHOOL | | |
| RELIGIOUS BOOKS AND PARAPHERNALIA | | |

Each of these sections will be in charge of some of the nation's best known teachers, instructors and demonstrators.

The Sunday School Congress is not a deliberative body. No motion or points of order are ever made. It is a veritable university of the denomination, the training camp of the Baptists, and the one national gathering that offers a course to those who want to learn, and an opportunity to those who can teach. It is an ocular demonstration of that saying, "You cannot teach what you do not know; you cannot lead where you do not go."

Elect your representatives for the thirty-second annual Sunday School Congress, which will be held June 9-14, 1937 in Cincinnati, Ohio.

Railroads are offering better rates than ever. For further information, write

HENRY ALLEN BOYD, Secretary,
SUNDAY SCHOOL CONGRESS

Nashville, 523 2nd Avenue, North, Tennessee

# THE MODERN FARMER

Vol. X. NASHVILLE, TENN., MAY 15, 1937 No. 4.

# Increase of Fifteen Percent in Stable Acreage is Seen This Spring

## COTTON WOOING FARMERS FROM SOIL CAMPAIGN

An increase of 15 per cent in cotton a reage is probable this year in Arkansas, with a range in increase of five to as high as 20 per cent, Kenneth B. Roy, agricultural editor of the University of Arkansas college of agriculture, said yesterday on return here from a tour covering some 20 counties in the hill, upland and delta sections of the state.

County agents said that about the same number of farmers would participate in the 1937 agricultural conservation program as took part in the 1936 program, but growers would divert less of their base acreage from cotton production. The agents reported that present indications point toward increased acreages by both small and large operators.

Concerned over the prospects for a larger cotton acreage, C. C. Randall, assistant extension director of the University of Arkansas college of agriculture, said that an increase in cotton acreage this year would be pure speculation, and added that there is nothing in the agricultural outlook which would justify such an increase.

**Big Surplus Impends.**

"Farmers will get five cents a pound for all cotton they divert up to 35 per cent of their base acreage," he said. "The two million bales of cotton above the normal carryover plus a substantial increase in production this year would result in a situation pointing to lower prices. On the other hand, farmers more safely could plant about the same acreage as in 1936, and receive five cents a pound for all the cotton that would have been produced on the diverted acreage.

"Thus they would be maintaining about the same cotton carry-over, assure themselves of a price more nearly parity, and secure five cents a pound for all cotton on diverted acreage. Incidentally, the five cents per pound is certain and involving no production costs. Furthermore, on the diverted acreage, farmers may grow much needed feed crops for their use, thus devoting such acreage to soil building crops rather than to a soil depleting crop," Mr.

## 30,000,000 Brazilians Go Shoeless, Inquiry Shows

Rio De Janeiro—Testimony recently heard by the federal council for foreign trade was to the effect that about thirty million of Brazil's forty-seven million residents wear no shoes. Shoe manufacturers, on the other hand, told the council that the shoe industry was suffering from overproduction to a point where many factories have had to shut down.

# White County Home Garden Earned $100.00 Profit In 1936

## RICE FEEDING FOR POULTRY

### May Substitute for Corn Or Wheat Test Shows

Rice and rice by-products are recommended for poultry feeds as a means of reducing cost of either egg production or growth, by R. M. Smith, poultryman of the Arkansas college of agriculture.

Feedings experiments by the college of agriculture show that rough rice, brewer's rice, rice bran, and rice polish may be included in the poultry ration as a satisfactory substitute for a part of the corn and wheat.

Mr. Smith makes the following recommendations for the inclusion of rice and rice by-products in poultry rations: (1) Either rough rice or brewer's rice may be substituted for corn in the grain feed; (2) finely round rough rice may be substituted for one-half of the corn meal in the mash feed (3) rice polish may be substituted for one-fourth of the corn meal in the mash feed; and (4) rice bran may be substituted for one-half of the total wheat bran and wheat shorts of the mash feed.

"When including rice and rice by-products in the poultry ration, it is important to note that these feeds are low in vitamin A content," the specialist said. "For this reason either cod-liver oil or an abundance of green feed is a valuable supplement to the rice ration.

"Present feed quotations show that rice bran and rice polish are lower in price than the wheat bran.

(CONTINUED ON PAGE 8)

## Flock of Fifty Layers Returned Profit of $140.00 in 12 Months

Mrs. R. L. Lewallen of the Green Laseter home demonstration club, Hempstead county, has made a net profit of $140.09 on fifty yhite Wyandote hens over a 12-month period, according to Miss Polly Rouse, home demonstration agent.

"Mrs. Lewallen has sold 584 dozen eggs for $167.74 besides setting 14 dozen for baby chicks," the demonstration agent related. "A hatchery incubated the eggs for her, at a cost of $11.45 which she paid with eggs.

"From this hatch Mrs. Lewallen raised 112 chicks. She sold 82 pullets at the curb market for $90.27, keeping 30 for next year's hens.

"She used a specially prepared baby chick starter and a laying mash, costing $107.49.

"With part of the money received, Mrs. Lewallen bought a drum type automatic control brooder."

## ELEVEN PIGS TOP RECORD

### Weighed Over a Ton at The Age of 6 Months

Wallace Waits, Mulberry, Crawford county, produced a ton-litter of pork at the age of six months, said Sam T. Woods, Crawford county agent. The pigs were of a purebred Duroc-Jersey sow which had been crassed with a Poland-China male.

Eleven pigs were farrowed August 1, and marketed December 28, the entire litter at that time weighing 2,335 pounds. They were sold for the top market price of .985 cents. The average weight of the pigs was 212 pounds.

The ration of the sow and litter during the earlier part of the growing period consisted of skim milk,

(CONTINUED ON PAGE 8)

## More Fertility From Sows in Limed Soil

Reeent studies emphasize that soybeans must find lime in the soil before their soil improvement activity is possible, says W. A. Albrecht of the Missouri college of agriculture.

Nodule production cannot take plaee without lime, the specialist explains, and the nodules contain the nitrogen that enriches the soil. Doubling the lime availabie to the soybean plants more than doubled the number of nodules, in a recent study.

Increasing the amount of lime four times increased the number of nodules almost four times, while an increase by six times in the available lime content in the soil increased the number of nodules almost five times, Mr. Albrecht reported.

## Till Only Enough to Kill Weeds, He says

Too much cultivation of a garden is a mistake, as well as cultivating it too little, according to R. A. Schroeder of the Missouri College of Agriculture.

The main purpose of cultivation is to control weeds, so that the number of surfaee stirrings required will depend on weed growth, the specialist said, adding:

"Right after planting or transplanting, a reasonably deep cultivation may be given. But as the plants grow, the soil should be worked only deep enough to kill weeds. Going deeper injures the roots of many kinds of vegetables."

## CALVES NETTED $17 PER HEAD

### Live Stock and Grass Best For Hills Is Said

A net of $17 per head on feeder ealves sold from 20 Hereford cows, was made by Dell Kendall, near Marble, according to C. B. Gilliland, Madison county agent. That sum was realized above the cost of carrying the cows through last summer and winter, the county agent explained. The calves averaged $25 a head.

"Mr. Kendall, in trying to work out a profitable system on his 532-acre farm, and one that would also maintain fertility, believes he has found the answer in good pasture and lives stock," said the county agent. "He has 42 head of beef cattle, 34 sheep, 25 hogs, and work stock and chickens."

One hundred fifty acres has been put in a permanent pasture of lespedeza, hop clover, orchard grass and blue grass, Mr. Gilliland related. With this grazing, the livestock has to be fed only about four months of the year, and the hay and grain needed for winter is

(CONTINUED ON PAGE 8)

## Thriftier Pigs When Fed Early

After the farrowing sow has been fed so that she will secrete enough milk of good quality, the next step is to get the pig accustomed to grain feeding, advises A. G. Hogan of the Missouri college of agriculture.

"If the sow is hand-fed it is desirable to creep-ieed the pigs," the specialist said. "If feed is available, they will nibble at it when about three weeks old, and by the time they are eight weeks old they should consume a considerable amount.

"The pig ration should contain more protein than the ration of the sow. If the pig gets plenty of milk of high quality, and plenty of a high protein grain mixture, it will be gaining well at weaning. Ii a nutritious pasture is available it will continue to gain.

"This period in the life of the pig is very important, for if pigs are undersized and unthriity at weaning time their performance aiter weaning is almost certain to be disappointing. If properly fed they will recover but the delay in getting a start is expensive.

"Unthrifty pigs are expensive pigs and care should be taken to reduce their number to a minimum. They may be the result of disease or parasite infection, but poor rations are often the cause of runts. Plenty of feed is not alone enough—it must be the right kind of feed."

## AVERAGE VALUE OF INDIVIDUAL EFFORTS SHOWN

Antioch—The average home garden in White county was worth $100 in 1936, despite the ravaging effects of the third consecutive annual drouth, it is estimated. Seed, plants and fertilizer for these gardens cost about $10 to 15, and the products were worth as much as an average field of four and one-half acres of cotton produced.

Experience showed that plenty of humus is a prime need for productive gardens. Gardeners found that deep plowing of the seedbed at the beginning and keeping the growing plants well supplied with plant food were very important factors. As the gardens were the most valuable small plots of land on the farm, it was evident that careful attention to the tract paid well.

Home demonstration women throughout central Arkansas declare that a well-rounded, all-year garden supplies vegetables that would not be otherwise available for the rural family. Not only is it much easier to go into the nearby garden for food for the table, but there is a wide difference in the cost, too.

One of the most valuable practices during the extremely dry weather of 1936 was the careful cultivation of plants so as to keep the soil in tilth to help the plants withstand the drouth. Careful cultivation keeps down weeds, conserves moisture and aids in setting plant food free.

(Continued on Page 8)

## Manured Peaches and Got Crop Every Year

Fertilization with barnyard manure has been responsible for a peach crop in his 52-acre orchard during the past four years, reports Barney Smith of Pike county.

Mr. Smith has used barnyard manure along with winter legumes in his orchard to increase the nitrogen content of the soil. He applies about two tons of manure per acre each year.

Mr. Smith has demonstrated that peach trees which have plenty of plant food can stand from four to five degrees more cold than orchards that do not have adequate fertilizer. He has not lost a crop of fruit during the last four years, while fruit on orchards adjoining his farm last year was all killed.

Mr. Smith also credits part of his success to air drainage, as his orchard has a fine slope toward the northeast, according to W. F. Spivey, county agent.

## POULTRY PAYS PROFITS

D. A. Howell of Bono community, Faulkner county, has become poultry-minded. In 1936 he cleared $209.33 and has pullets on hand valued at $230, says Garland J. Greene, county agent. Mr. Howell, who is physically unable to carry a full farm program, took up poultry work last year. In January, he purchased 50 hens for $37.50. He placed them in the laying house which he had repaired at a cost of $12.50. In March, he bought 400 baby chicks for $36. The feed bill for the year amounted to $406.90. The income from eggs amounted to $616.33. An average price of 25 cents a dozen was received. He also made $85 from the sale of friers and cockerels. There are 230 White Leghorn pullets now in the laying house, valued at $230.

## SAYS FENCE POSTS CAN BE GROWN AT LOW COST

E. B. Sloan, Walnut Ridge, believes Arkansas farmers should take advantage of the Soil Conservation program to establish woodlots for growing their fence posts, according to John L. Faulkner, Lawrence county agent.

Mr. Sloan points out that there is a scarcity of good fence posts, and unless trees are planted immediately, in a few years the supply will be completely exhausted. He ordered 4,000 black locust seedlings from the State Nursery at Scott, and plans to plant these trees on eroding land, as they are valuable for checking soil washing.

Under the Soil Conservation program the planting of black locusts for posts is not expensive. Mr. Faulkner said. A soil-building payment of $5 per acre is allowed for planting them, and since they can be obtained for $2.50 per thousand and an average of 1,500 trees are usually planted to the acre, the cost of procuring the trees is approximately $1.25 per acre less than the government allotment.

## LARGE GROWTH IN SOY BEAN CROP PREDICTED

Omaha, Neb., March 20.—(Special)—I. C. Bradley, president of the National Soy Bean Processors' association, recently told the Midwestern Conference of Agriculture, Industry, and Science here that the astonishing rise of the soy bean as an American crop is likely to continue until production has reached great heights. He said that consumption of soy bean meal through stock feed channels will sometime tend to guide production for a considerate period.

"Of 600,000 tons of soy bean oil meal produced last crop year, we have discovered that over 90 per cent went into stock feed channels," Bradley said. "Of 185,500,000 pounds of soy bean oil sold, 85 per cent went into the edible field and 15 per cent into the industrial field."

## TRENDS TOWARD THIRD TERM

**Washington Correspondents Discover Popular Demand and Political Conditions Set Against Tradition**

By George Morris

Washington, March 27—The Queen's Work, national Catholic magazine, printed in St. Louis, conducting a poll of Washington correspondents on the question of the probable Democratic nominee for the presidency in 1940, reports a "startling trend" toward President Roosevelt for a third term. Two-thirds of those submitting votes in the poll place the president first in the list of probable nominees. The only surprise revealed by the returns is how the other third avoided what appears to be an obvious fact, based on existing conditions.

Omitting the president from consideration, one guess is as good as another for the simple reason that there is no outstanding contender. The few who come within the range of vision may be permanently submerged at any time in these rapidly changing days. The disposition of some correspondents to consider the president for a third nomination is based on his statement that it was his "ambition," instead of saying it was his "determination" to retire in 1941.

Even if the president had said he was "determined" to retire at the end of the present term, it could scarcely be regarded as final. Only pure obstinacy, such as that revealed by Coolidge, would stand in the way of overwhelming public demand.

### Popular Sentiment Not For Coolidge

Coolidge, it will be remembered, was not responsive to public sentiment, and such sentiment as existed for his renomination was provided by the cold, calm, uninspiring demand of business, or the slightly enthusiastic support of jobholders and patronage dispensers, who consider any change as a potential danger to future security.

Private business has little or no influence in political conventions and the qualms of jobholders may be assuaged by the simple process of laying on of hands. All that is required of the president is that he designate his choice of a successor to cause devoted followers to transfer allegiance.

It is an almost unbroken custom for the administration in office to select the candidate for successor. Political history reveals no more impressive example than the nomination of Hoover. The politicians did not want him. The delegates at the Chicago convention that nominated him didn't want him. He was the choice of only Coolidge. The delegates would not believe it until they heard the word from the lips of Mellon. They didn't like it but nominated Hoover with less enthusiasm than ever marked the proceedings of a national convention.

### Roosevelt Must Choose Successor

With more patronage and power in his control than any president ever had before, and dominating the Democratic National Committee to the extent of being practically absolute, President Roosevelt can hardly refuse to accept responsibility for selecting the next party nominee. To refuse to accept that responsibility would precipitate chaos in the organization. It might invite defeat, if not disaster.

No party ever goes so high that it cannot fall. Usually the higher it gets the harder it falls. Mr. Roosevelt is not capable of disservice to the party. Besides, his idea of service to the country is to make progress along the lines he has laid down, after which he hopes to turn the office over to one who will carry the Roosevelt program to conclusion. He has not short-range policies. Political expediency does not appeal to him as a means to an immediate end.

The president's mental attitude toward national problems was demonstrated by the policies adopted during the emergency of the depression. He could think of present distress only in terms of remedies that were not only guaranteed to cure but prevent recurrence. He rejected the philosophy of curing now and preventing later. There were those who believed more progress might have been made by concentrating on recovery, but the president insisted that the patient should be treated for prevention while being dosed for recovery. His is the long-range attitude.

### Third Term Tradition Not Impregnable

When the time comes for the Democrats to nominate a candidate for president, based on conditions as they exist today, Mr. Roosevelt will have the responsibility of designating someone to whom he can intrust his program. Unless there is a change in public sentiment he will have to sell the country, as well as himself, on the idea that he has made a wise selection.

Despite respect for tradition opposed to a third term, it may be possible that Mr. Roosevelt will not be able to resist popular demand for renomination. He is susceptible to the influence of public opinion. He is so deft an artist that it is sometimes suspected much of the public sentiment to which he yields so graciously was created by him.

## BIG CROP ACREAGE AND SLUMP IN PRICE OF COTTON IN FALL FEARED BY AAA HEAD.

**Present 14-Cent Quotation Seen As Production Stimulator**

**By Drew Pearson and Robert S. Allen**

The Washington Merry-Go-Round

Washington, March 27—Recent ballooning of the price of cotton may be warming to the hearts of southern planters, but it brings a secret chill to officials of the AAA. They are afraid of next year.

Cotton is now priced at about 14 1-2 cents a pound, recently touched 15 cents, the highest figure in seven years. Merchants are definitely bullish. Will Clayton, of the big trading firm of Anderson-Clayton, has forecast a season of superlative business. Benjamin Adler, New York cotton statistician, has predicted a price of 20 cents by next fall.

AAA officials discount these statements of the trade, since the trade is interested in volume and wants to promote expansion rather than price. But they are afraid farmers will not discount them, will be lured into excessive plantings, thus producing a crop so large that the price will tumble.

Two years ago, such a price rise would have caused no worry, for AAA had a firm hand on the check-rein. The compulsory provisions of the Bankhead Act gave the administration complete control over production.

But the Supreme Court's invalidation of the AAA last year took away the check-rein. The only control now exercised depends on voluntary co-operation of farmers, who earn benefits for soil conservation practices.

Those benefits become less and less inviting as the price of cotton rises. A farmer can earn about 5 cents a pound for the average yield of diverted acres. And to earn this he must pay for the seed and fertilizer to grow conserving crops on these acres.

In contrast is the prospect of 15 or perhaps 20 cents a pound on cotton. The temptation is almost irresistible.

Most alarmed is Cully Cobb, director of the southern division of AAA. He is begging extension directors to counteract the bullish market by talking bearish to producers. Cobb says:

"A crisis has been reached in our effort to retain a balaneed production. I am afraid advancing priees have caused farmers to forget the

NEW

**Metoka and Galeda Guide and Manual**

**Work of the Committee Named at the last Sunday School Congress Enables Organized Classes to Get New Book**

A Metoka and Galeda Guide and Manual to be used for the organized classes in Baptist Sunday Schools is now ready for distribution. The cover is bright red with blue letters.

It contains a brief sketch of the late Rev. N. H. Pius, D. D., and the late Rev. R. H. Boyd, D. D., as it pertains to their work in erecting these two college departments of Baptist Sunday Schools.

This new Guide and Manual sells for 25 cents. Send all orders to the—

NASHVILLE, TENNESSEE

situation which brought about 5-cent cotton."

Similar, though milder, appeals were made last year with success. But last year the price of cotton was not 14 1-2 cents a pound, and this year the AAA will have a harder time to sell its bill of goods.

Thus is the stage set for the first real test of voluntary crop control in the realm of King Cotton.

**More Worry for Administration**

Congress is not the only legislative battle ground furrowing administration brows. They are also wrinkled by the close watch that must be maintained on the several score state legislatures now in session.

Though it is not generally realized, some of the most important phases of state legislation today have a direct and vital relation to federal policies. Social Security, housing, power loans, relief, soil conservation, mortgage loans, are intimately tied up with state government.

For example, the unemployment insurance feature of the Social Security Act is inoperative unless the states adopt conforming measures.

To assist the states, and at the same time speed up and widen the scope of its numerous programs, the administration has supplied legislatures with model acts. The strange things that have happened to these measures explain why the New Dealers have to keep an eye peeled on state legislatures.

In order to obtain PWA loans and grants for the construction of public projects, states are required to enact laws setting up self-liquidating authorities, in effect, public corporations.

A bill of this nature recently was introduced in the Georgia Legislature. It was a model bill in all respects—except one. The exception was most significant. The page authorizing the proposed authority to build power plants was missing.

Private power interests, violent foes of PWA power loans, had quietly torn this page out of the bill.

If the bill had been enacted in the form it was offered, the Georgia authority could have obtained PWA funds for schools, parks, etc., but not for the construction of publicly-owned power plants.

**HOLC Sabotage**

In 19 state legislatures are now pending bills that would seriously restrict the power of the Home Owners Loan Corporation to foreclose on mortgage defaulters.

Millions of dollars of federal funds are at stake. The HOLC is vigorously opposed to the legislation, but hard-pressed home owners are putting the heat on their state senators and assemblymen and demanding relief.

The Social Security Board also is up to its ears in troubles with state law-makers.

Many hours of every working day are consumed in long distance calls, behind-the-scenes conferences and delicate negotiations to iron out differences and prevent innocuous or inadequate enabling laws. Some of the state bills, through the machinations of hostile lobbies, are so worded as to be virtually unworkable.

Note—The National Emergency Council is the chief federal sentinel on the state legislative front. It keeps a close and detailed check on what develops in the legislatures, but is careful to avoid the charge of lobbying. Nevertheless, covert but potent pressure is exerted on governors and legislators to keep them in line.

**WPA Writers**

At long last the WPA Writers Project is about to bring forth several volumes of the American Guide. But the birth pains are terrific.

What prolongs the labor is the necessity of providing both literature and relief. In other words, the project has been trying to ride two horses at the same time: (1) use people most competent to write; (2) use people most in need of relief.

The two horses don't want to ride in the same direction.

The Idaho Guide, first of the series, appeared in January, two months overdue. Reason for delay was the presence on the state editorial staff of a minority group of incompetents. Their qualification for the task was not so much the fluent pen as the empty bread basket.

A similar problem is hampering Boston's guide-writing today. WPA expects the Massachusetts Guide to be the next published, but it is bogging down. Out of 40 members of the editorial staff in Boston, 15 were incompetent. They were dropped, and promptly the work picked up speed.

Then vigorous protests came from the American Writers Union, which will champion the cause of any member regardless of literary skill, WPA was forced to re-hire 8 of the 15. Now the work is lagging again.

**Brain Truster**

Charles Taussig, one of Roosevelt's original Brain Trusters, has got all embroiled with the Cuban government.

For several years, Taussig was considered the great friend of Cuba. He went there in the winter of 1933, even before Roosevelt was inaugurated, to make a confidential survey for the president-elect. Later he helped arrange for Cuba's favorable sugar quotas. Finally Cuba bestowed upon him the Order of Cespedes, most sought after of Cuban decorations.

But the days of Cuban-Taussig friendship now are past.

Taussig, who is president of the American Molasses Company, had been buying molasses in Cuba, shipping it to the U. S. A. thus avoiding the quota on sugar. So the U. S. Agricultural Department placed a quota also on molasses. Knowing in advance that this was pending, Taussig bought a large quantity of molasses to get in ahead of the new quota deadline. However, he was not able to ship all of it out of Cuba in time.

A large quantity is still there. It was manufactured in 1936, but the 1936 quota has expired. And Taussig cannot arrange to have it made a part of the 1937 quota.

Taussig is the man who gave the glamorous Professor Rex Tugwell a job when Rex wanted to retire from the Roosevelt Brain Trust. But even this association, plus all Taussig's previous friendship for Cuba, does no good.

Apparently the only thing that will move the molasses is Taussig's friendship for Sumner Welles, assistant secretary of state and ex-ambassador to Cuba. Cuban officials hint that if Taussig can work through Welles to get greater U. S. imports of Cuban sugar, his molasses can move.

So far it remains as congealed as ever.

**Merry-Go-Round**

The Supreme Court has a sheriff. It is the job of Sheriff Joe Barnard to keep order in the courtroom. Chiefly, this means restraining gum-chewers and knitters.....Yale Law School gives its students a strong dose of liberalism through Prof. Walton Hamilton, former NRA official, and a strong dose of reaction through Prof. O. Glenn Saxon, former GOP braintruster. Saxon offers more politics than law....Congressman John M. Houston, Kansas Democrat, has appointed himself the unofficial heckler of Congressman Charles L. Gifford, Massachusetts Republican. Gifford, in turn, is unofficial heckler of the administration .....Like a faithful dog waiting for its departed master, the Abilene (Texas) Daily Reporter appears regularly in the news racks of the House lobby, looking for its old reader. But Tom Blanton of Abilene has departed those corridors.

# CHINA "HORRIFIED" OVER MISSISSIPPI'S LATEST LYNCHING

## Country Wants U. S. to Keep its Missionaries in Its Backward States

Jackson, Miss., May 20 (ANP)—One of the few times Mississippi has ever been in the headlines in Chinese newspapers was April 14, after the double blow torch lynching at Duck Hill, according to word received here this week from Mrs. Juanita Byrd, white mississippian who is professor of English at the University of Shanghai.

She said the North China Daily News, an English language newspaper, carried complete details of the atrocity on the front page. It is one of the few papers placed in the Shanghai university library and is eagerly read by students. Their reactions were that "missionaries ought to go to Mississippi instead of coming to China."

Mrs. Byrd said she went next day to a tea attended by whites from many states and many countries. When she greeted another white woman, also a native of the lynch state, with "hello, fellow Mississippian," her friend replied, "not today" and ducked her head in shame.

"After reading of the lynching, my first feeling was one of humility and indignation," Mrs. Byrd asserted, "but I realize that many Mississippians are doing their best to make lynching impossible even once in a thousand years. I believe in the necessity of a program of Christian education in race relations which will forever do away with attitudes which make lynching a possibility."

**HIS "SWEETS" PAID HIM IN SPITE DROUTH**

Sweet potatoes are one of the important cash crops on the farm of Morris E. Rowen in Calhoun county, said R. D. Setzler, county agent. In spite of the dry weather during the 1936 growing season, Mr. Rowen dug and cured 300 bushels of U. S. No. 1 potatoes from slightly over three acres.

Mr. Rowen cures his potatoes in his own curing house and estimates his loss in curing at one per cent on the 1936 crop, the county agent continued.

The yield and quality of this crop, Mr. Rowen attributed to the use of disease-free seed and fertilization with 150 pounds of 4-8-6 fertilizer to which was added 150 pounds of cottonseed meal to the acre. Mr. Rowen produces his own potato plants and has been growing potatoes for several years. So far he has had no trouble with sweet potato diseases.

Mr. Rowen has sold 200 bushels of his 1936 potato crop, receiving an average price of 90 cents per bushel at the shed, the county agent said.

**PLOWS FOR ALFALFA IN FALL, SOWS IN SPRING**

William Geels, Scranton, is one of the Logan county farmers who believes in growing alfalfa, according to G. E. Tanner, county agent.

(CONTINUED ON PAGE 6)

**Pastor's Guide**
**By Boyd**

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Pulpit Bibles**
**At Low Cost**

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Baptismal Garments For $30.50**

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The Best Book For The Ministers**
**Theological Kernels**
*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the
NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

**FROM THE BIBLE**

"While the earth remaineth, seed time and harvest, and cold and heat, and summer and winter, and day and night shall not cease."—Genesis 8:22

"Let us then be up and doing,
With a heart for any fate:
Still achieving, still pursuing,
Learn to labor and to wait."

—Henry W. Longfellow.

## HERE ARE SOME IDEAS FOR MAKING MASHED POTATOES TASTIER

Here are ideas for simple additions to mashed potatoes to make them look new and special:

1. Four tablespoons finely minced canned pimento.

2. One tablespoon chopped watercress and one teaspoon chopped fresh mint leaves.

3. Four anchovies, cut in small pieces, and one-half teaspoon nutmeg.

4. Two teaspoons grated raw onion and one table minced parsley.

5. One teaspoon lemon juice, one teaspoon confectioner's sugar, and one-half teaspoon paprika, and two teaspoons chopped chives.

6. One cup cooked mashed carrots and one teaspoon minced raw onion.

## U. S. DEPARTMENT OF AGRICULTURE, AGRICULTURAL ADJUSTMENT ADMINISTRATION

## REPORT ON STATE MEETINGS ON SOIL CONSERVATION

A material increase in cotton acreage could easily place cotton producers in a position similar to that in which they found themselves in 1933. At the present time the burdensome surpluses of American cotton have been reduced to a point where there is a carry-over of 7 million bales, or approximately one and one-half times a normal carry-over and prices have improved to a great extent. These facts, together with ample credit, available land, and a poor memory regarding 5 cent cotton, are partly responsible for the tendency to increase acreage. Since the supply of cotton and the price that producers receive for cotton are so closely linked, each producer should thoroughly understand the supply and demand situation from a domestic and from a world standpoint before he decides what acreage he should plant to cotton in 1937.

C. A. Cobb, Director, Southern Division Agricultural Adjustment Administration.

A. L. Holsey, Field Officer Southern Division AAA, Tuskegee Institute, Alabama.

There are approximately 880,000 Negro farm operators in the United States, of whom 182,000 are owners. In the nine Southern States which compose the Southern Division of the Agricultural Adjustment Administration, there are 654,000 Negro farm operators of whom 122,000 are owners. Thus it is seen that 74 per cent of the Negro farmers are located in the Southern Division States.

The following table, compiled by James P. Davis, from Census Reports, shows the breakdown of these 654,000 Negro farmers by States:

| State | No. Farms Operated | No. Acres Cultivated | Value Land Operated | No. Farms Owned | No. Acres Owned | Value Land & Bldgs. |
|---|---|---|---|---|---|---|
| Alabama | 91,275 | 3,903,659 | 63,306,486 | 15,709 | 1,053,710 | 15,906,940 |
| Arkansas | 71,300 | 2,230,743 | 62,214,395 | 11,343 | 669,743 | 13,022,749 |
| Florida | 12,764 | 488,585 | 10,240,619 | 6,792 | 266,064 | 5,737,952 |
| Georgia | 73,284 | 5,333,181 | 74,230,550 | 10,571 | 838,573 | 11,485,134 |
| Louisiana | 70,315 | 2,205,151 | 61,704,562 | 10,839 | 543,827 | 11,639,632 |
| Mississippi | 69,006 | 5,545,452 | 126,231,458 | 21,288 | 1,592,580 | 21,898,399 |
| Oklahoma | 17,824 | 1,401,881 | 27,063,528 | 6,762 | 644,775 | 13,070,586 |
| S. Carolina | 76,537 | 3,489,252 | 69,828,296 | 18,394 | 795,077 | 14,827,788 |
| Texas | 71,785 | 3,821,751 | 90,064,504 | 20,800 | 1,378,141 | 28,190,598 |
| Total | 654,090 | 28,419,655 | 584,884,398 | 122,498 | 7,782,493 | 135,779,778 |

The entire farm families dependent upon these 28,419,655 acres for a livelihood represent a total rural population of approximately 3,000,000 persons.

This group is recognized by the AAA as an important factor in the development of a long range program to adjust the production of cotton, reduce overcropping of fertile lands, prevent further erosion and rebuilt acres which may be reclaimed. And Negro farmers are vitally concerned in the long range objectives of this program which are to conserve the soil, increase the farmer's income, and prevent the recurring nightmare of speculative price fluctuations of farm products.

From the leaflet issued by the Agricultural Adjustment Administration entitled, "Better Balanced Farming for the South,' we quote the following paragraph:

"The AAA Conservation Program seeks a better balance between crops which conserve the soil and crops which deplete the soil. It seeks more widespread use of farming practices which restore and maintain productivity and which retard wind and water erosion. It encourages those practices which make for good farming and are in the interest of the national welfare."

Negroes have participated in all programs which have been adopted by the AAA since its inception and since the passage of the Soil Conservation Act by the Congress, their participation has been more active despite the fact that there have been inequities. These inequities, however, are being eliminated as the programs are perfected.

The administration of the Soil Conservation Program is under the supervision of the State Extension Directors in each State. He, in turn, operates through State and County Committees on Compliance and the County Agents, both white and colored.

Early in January, the 1937 Soil Conservation Program was approved by the Secretary of Agriculture and immediately, groups of AAA specialists were sent into the States of the Southern Division to explain its details to the proper persons responsible for its administration, education and interpretation. Negro State Extension Leaders from South Carolina, Florida, Alabama, Georgia and Mississippi were called to Tuskegee Institute for a two-day conference—January 10 and 11—at which time T. L. Ayers, Senior Agricultural Economist and T. M. Gachet, Administrative Assistant, gave them a course in the program. On January 15 and 16 a similar training school was conducted at Prairie View College, Texas, to which Negro State Extension Leaders from Oklahoma, Louisiana, Arkansas and Texas were invited. At both meetings, Negro Field Representatives of the AAA, Mrs. R. R. Moton, James P. Davis and A. L. Holsey were present.

Beginning February 2 and extending through March 2, training courses were given to the entire staffs of Negro Farm and Home Demonstration Agents in the nine States. These meetings were under the personal direction of E. A Miller, Assistant Director, Southern Division, AAA and personal representative of C. A. Cobb, Director. Mr. Miller was assisted by G. L. Prichard, Administrative Assistant, AAA; the three Negro Field Representatives and the State Extension officials of each State in which the meetings were held.

Following are dates, places and States in which these meetings were held, with the name of the Negro State Agent in charge of the meeting:

| Date | Place | State | State Agent |
|---|---|---|---|
| February | | | |
| 2 | Langston University | Oklahoma | J. E. Taylor |
| 3 & 4 | Prairie View | Texas | C. H. Waller |
| 9 & 10 | State College | Georgia | P. H. Stone |
| 12 | Lake City | Florida | A. A. Turner |
| 15 & 16 | Tuskegee Institute | Alabama | N. Kollock |
| 18 & 19 | A. & I. School (Grambling) | Louisiana | T. J. Jordan |
| 24 & 25 | State College | South Carolina | H. E. Daniels |
| 26 & 27 | A. M. & N. College | Arkansas | H. C. Ray |
| March | | | |
| 1 & 2 | Jackson College | Mississippi | M. M. Hubert |

Prominent Negro educators who attended the meetings included Presidents F. D. Patterson, Tuskegee Institute; W. R. Banks, Prairie View; B. F. Hubert, Georgia State College; M. F. Whittaker, South Carolina State College; J. B. Watson, A. M. & N. College, Pine Bluff, Arkansas; J. S. Clarke, Southern University; E. B. Dansby, Jackson College, Mississippi; J. W. Sanford, Langston and J. E. Blanton, Voorhees.

**Some Important Points Stressed in the Meetings**

1. Explanation of difference between the 1936 and 1937 Programs.

2. Definition of terms used in the official AAA Bulletins, Work-sheets, etc., such as "Cropland", "Cotton Base", "Soil Conserving Base", "Soil Building Allowance" and many others.

3. Full Clarification of Class One and Class Two Payments.

4. Demonstrations on how to work out Soil Building Allowances.

5. Rates and conditions of payments for Soil Building Practices.

6. Division of payments between landlords, tenants and-or sharecroppers.

7. Functions of State and County Committees.

8. Regulations regarding changes in leasing and cropping arrangements.

9. Classification of land use and distinction between soil depleting and soil conserving crops together with methods of rotation, interplanting, etc.

10. Importance of feeding the family and the work stock from the farm.

NOTE: Full explanation concerning the important points discussed in the meetings are contained in S. R. Leaflet, 101. Copies may be obtained by writing to A. L. Holsey, Tuskegee Institute, Alabama, or to James P. Davis, 916 Gaines Street, Little Rock, Arkansas.

## URGES BEANS AS ONE OF BEST VEGETABLES

Beans rank high in the list of nutritions, body-building vegetables and should be grown in every garden, says J. W. C. Anderson of the Missouri College of Agriculture. The varieties are grouped into a number of classifications according to their growth habits and use, he pointed out, adding:

"In the group of green-podded bush varieties, the Stringless Green Pod and Bountiful are outstanding in their adaptibility to garden use. In the wax-podded dwarf or bush group whose pods are yellow, the Brittle Wax and the Davis White Wax are recommended varieties. In the green-podded pole group the Kentucky Wonder Wax is the most popular.

"All of the green and wax podded varieties of beans which are used as snap beans should be harvested and eaten shortly after the bean starts to develop in the pod. They are much more tender and brittle and their flavor is far superior if used before the beans are more than half developed."

In the bush lima group, the Fordhook, Henderson's and Burpee's Bush Lima are very good varieties. Mr. Anderson advised. The most widely used variety of pole lima bean is King of the Garden, he said.

## CCC BOYS STUDY PLANTING OF TREES

Washington—To augment the training on the job received by CCC members while at work in the field, camps in the Southern states have arranged classes in tree-planting and nursery work, Robert Fechner, director of emergency conservation work, announced today. These classes are held after working hours and attendance is voluntary.

This training is carried on as a part of the educational programs of the camps with the assistance of work supervisors of the U. S. forest service, who direct the free-time tree-planting activities of the men in addition to supervising the daily work programs.

In carrying out these tree-planting "courses," some of the camps developed their own seed beds, and enrollees engaged in all steps in the production of tree seedlings suitable for reformation purposes. Tree seeds were gathered locally, and the seedlings grown from them were planted on nearby treeless areas. Long-leaf, slash and loblolly pine were the major species used. The estimated output varied from 3,000 to 20,000 seedlings per camp.

Altogther, it is estimated that more than 200,000 trees have been planted by enrollees in devastated and idle forest lands in these after-hour planting programs. This work is in addition to the millions of trees which the CCC planted in national forests and other lands during the record-breaking 1936 reforestation program, when more than 215,000,000 trees were planted in national forests throughout the country and total CCC plantings, for all purposes approximated 500,000,000 seedlings.

A struggling author had called on a publisher to inquire about a manuscript he had submitted.

"This is quite well written," admitted the published, "but my firm publishes only work by writers with well-known names."

"Splendid!" shouted the caller in great excitement. "My name's Smith."

"How absurd," said the gnat to the gnu,
"To spell your queer name as you do!"
"For the matter of that,"
Said the gnu to the gnat,
"That's just how I feel about you."

## SOIL CONSERVATION COURSE TO BE GIVEN AT HAMPTON THIS SUMMER.

The School of Agriculture will offer a special course in soil conservation for the benefit of Negro agricultural agents, teachers, and others, for six weeks this summer. This work will begin with the opening of the Hampton Summer School, June 15 and close July 20.

The course will consist of three units. One will be soil classification and management, another crops and cropping systems, and a third agricultural engineering.

Regular members of the Hampton Institute agricultural staff will be in charge of the instruction, and three session hours of college credit will be given for satisfactory completion of the course.

The Soil Conservation Service of the United States Department of Agriculture, and the Civilian Conservation Corps are cooperating to make the course as beneficial as possible. Approximately one-third of the instruction will be given at Hampton Institute, after which the class will move to the C. C. C. Camp at Clover, Virginia for field instruction.

In that vicinity the class will have an opportunity to see at first hand some of the excellent erosion control work which is being done with the help of the C. C. C. camps.

Mr. W. N. Elam, Federal Agent in charge of Agricultural Education in Negro schools, is enthusiastic about the plans for this work. He regards the problem of soil conservation as one of the greatest challenges confronting agricultural teachers in the South today. The future is certain to require more trained men in this field.

A special effort has been made to keep expenses at a minimum. It is estimated that the total cost to each student will be slightly less than $40.00 for the six weeks! Nine dollars of this will be for tuition. Board, room, and transportation comprise the other major items.

Board and lodging, while at Hampton, will be given at the rate of six dollars per week, and at the C. C. C. Camp it will be furnished at the rate of sixty cents a day.

Students will be expected to provide their own transportation, and in view of the field trips involved, it is recommended that each bring his own automobile.

All who desire to enroll are asked to register by mail before June 1. Five dollars of the tuition is to be paid at that time. The balance of the tuition (four dollars, and the board and lodging for the duration of the course ($28.69) are payable at Hampton Institute on or before June 15, when the summer session begins.

Agricultural agents and teachers interested in taking advantage of this unusual opportunity are urged to get in touch at once with their superior officers with the aim of securing permission to attend. Because of limited camp and laboratory facilities the enrollment will be limited to 25 students.

For further details, write to Donald F. Fenn, Director of Agriculture, Hampton Institute, Virginia.

## THE JAPANESE PERSIMMON

In selecting fruit trees for this spring's planting, the southern farmer would do well to include one or two Japanese persimmon trees.

This cultivated persimmon not only adds variety to the home orchard, but its large, golden fruit finds ready sale in many markets. Moreover, the tree is practically free from the ravages of insects and diseases.

The Institute has two 15-year old trees and six younger ones in its experimental orchard. While it is too early to arrive at any definite conclusions concerning the younger trees the two older trees have borne large crops of luscious fruit consistently. Some years one tree has yielded a gross income of approximately fifty dollars.

Popular varieties recommended for home planting are the Okame and the Tanenashi. Another variety that shows favorable promise is the Fuyugaki. Being free from the characteristic astringency, the latter may be eaten before in is entirely mature.

When served with cream and sugar, the Japanese persimmon makes a delicious dessert. It is also an excellent flavoring for ice cream.

Trees may be obtained from the Glen St. Mary Nurseries, Glen St. Mary, Florida and from other southern nurseries. They may be planted at any time during the dormant period and should be spaced about twenty feet apart. The young trees often bear a few fruits the second or third year after planting.

## SPRAYING PROGRAM LED BY AGRICULTURAL TEACHER

How an energetic agricultural teacher may put across a home orchard improvement program is well illustrated by Willis B. Godwin, exstudent '32 of Holland, Va.

Noticing the neglect fruit trees prevalent on many farms in his area, Mr. Godwin began an active campaign two years to get his farmers interested in pruning, renovating, and spraying their home orchards. Starting with two orchards in 1935, the benefits were so evident that the following year fifteen additional farmers joined in the work. This spring the spraying program has been extended to include nearly 35 farm homes.

To get this program under way, Mr. Godwin enlisted the aid of his regular vocational classes, several part time boys, and a group of leading farmers in his vicinity. His first step was to instruct them in the principles of pruning. Whereupon he helped them to prune their own orchards and occasionally that of a neighbor.

To lead the farmers to see the value of systematic spraying, Mr. Godwin relied on the result demonstration. One of his farmers had won a seven-dollar prize in a Chilean Nitrate corn growing contest, and the vocational teacher pursuaded him to apply some of this money to improving his fruit trees. The high school principal also had a small orchard which he wished to have sprayed. These two orchards were sprayed regularly that spring and summer with a barrel sprayer which Mr. Godwin had purchased for that purpose.

The fruit produced in these two orchards was so much better that season, and the yield so much larger than ever before, that fifteen additional farmers asked to have their fruit trees sprayed the following year. A regular spraying schedule, based on the recommendations of the state experiment station, was adopted. The agricultural teacher also arranged for the farmers to secure their spraying materials at a discount through one of the local merchants.

Mr. Godwin reports that he has two young men who are now able to carry on this spraying program under his supervision, which has enabled him to double the number of orchards sprayed. He has sold his personal sprayer to one of his part-time students, who is contracting to spray the fruit trees of others at a flat rate per tree. There are now three barrel sprayers and one knapsack sprayer available for use in that locality.

A number of farmers are contemplating planting additional young trees next fall. Mr. Godwin is also encouraging them to plant some small fruits for home consumption.

## SENIOR AGRICULTURAL CLASS IS LARGEST IN SCHOOL'S HISTORY

The seventeen young men comprise the largest senior agricultural class on record at Hampton since the first degrees were granted in 1923. They represent ten different statts, and their curricular interests are similarly diversified.

Messrs. Bailey, Baker, Lennon, Matthews, Randolph, and Watson are majoring in Agricultural Education; Adolphus Miller in Agricultural Engineering; Woodrow Odom in Agricultural Extension; Brown, Cooper, Goodrum, Jennings, and McMillan in Animal Husbandry; and Harmond, Hill, Hull, and Taylor in Horticulture.

Their geographic distribution is as follows: Alabama 2, Arkansas 1, Delaware 1, Florida 1, Georgia 2, Liberia 1, Maryland 2, New Jersey 1, North Carolina 4, and Virginia 3.

Most of these men have had to work their way through college with very little outside help. Their achievement should serve to inspire other high school graduates throughout the South.

## INTERESTING FACTS

ANOTHER boon to farmers and relief families was announced by AAA on April 8, when it accepted bids from 17 companies to supply a total of 7,480,000 pounds of surplus dry skim milk. For 3 1-2 years AAA has been buying up surplus supplies such as these for two purposes: To relieve the pressure on farm prices, and to add nourishing foods to the slim diets of families still dependent on government for part or all of their living. Well over 2 1-2 billion pounds of food have traveled this route to relief family kitchens.....We reported first egg purchases for this year in our February 8 issue. Latest report of AAA, on April 5, shows more than 8,345,000 dozen eggs, involving an expenditure slightly over $2,000,000....Purchases of fresh grapefruit and canned grapefruit juice, too, have been important two-way relief items. From Texas canners close to 400,000 cases were purchased by March 21. Fresh fruit bought from Texas growers up to March 5 this season totaled 1,177 cars.....All such purchases by AAA are turned over to the Federal Surplus Commodities Corporation which distributes them to State relief organizations which in turn see that the foods get to needy families....In 1936 nearly 900,000,000 pounds, made up of

## PLOWS FOR ALFALFA IN

(Contiued from Page 3)

In 1935 Mr. Geels sowed seven acres to alfalfa. In 1936, eight more acres were planted. Mr. Geels prefers spring to fall sowing. He states he secures on an average four cuttings per year with a total yield of three tons per acre.

"I prefer land which has been alfalfa," Mr. Geels told the county agent. "The best time to plow for alfalfa is in September or October, especially, if the land has weeds and grass on it. Then give the land a general disking and harrowing before freezing weather so it will have plenty of time to settle for the spring seeding.

"I prefer land which has been in corn and peas or cotton, for alfalfa. I always buy my seed from reliable dealers, as I cannot afford to take chances on poor stands."

## MADE $2,252 CLEAR PROFIT ON SALE OF 85 HEAD OF CALVES

A net profit of $2,252.50 on the sale of 85 head of feeder calves by E. R. Henry of Dumas, Desha county, is a demonstration of the important part that livestock may play in land use and land management, said J. J. Pickren, county agent.

"Mr. Henry sold 85 head of feeder calves at $31 a head when they were from seven to 11 months old, the county agent related. "These calves had an average weight of 465 pounds each when sold, and cost only $4.50 to raise, due to efficient management.

Mr. Henry practices controlled breeding, placing his bulls with the cows in May and leaving them for two or three months. This gave him all spring, and no winter calves.

"The calves were from common grade cows sired by registered Hereford bulls. They remained with their mothers in a pasture consisting of 2,400 acres of cut-over woodland until November. Then they were weaned and put in an oat field that had been sowed in the early fall.

"Mr. Henry had to feed the calves only about six weeks during the winter. Their feed was made up of ground corn, oats, cottonseed meal and hulls.

"Mr. Henry is also selling a number of registered Hereford cows and calves and 21 bulls.

"I would advise you, madam," instructed the doctor, "to take frequent baths, get plenty of fresh air, and dress in cool clothes."

"What did the doctor say?" inquired the husband an hour later.

"He said I ought to go to Atlantic City and then to the mountains," related the wife. "Also that I must get some new light gowns at once."

## POISON STOPS GARDEN PESTS

### Early Treatment Urged by Specialist as Vital Point

Various species of sap-sucking plant lice will soon attack the different garden crops and the grower should have on hand some nicotine sulphate for preparing a spray to use as soon as they appear, says Leonard Haseman of the Missouri college of agriculture.

One ounce of nicotine sulphate to three gallons of soap water is the most effective spray for lice, the specialist advised, adding:

"Cutworms are sure to cause some trouble. Poison bran bait is most effective for them and should be scattered at dark to kill them during the night."

To control cabbage worms while the plants are still small, a dust made of one part arsenate of lead and five parts common flour should be used. (This mixture should be labeled POISON and kept in a safe place). Later, if the worms are still abundant as the cabbage heads form, pyrethrum or derris powder may be used in order to avoid putting harmful poison on the cabbage heads as they develop for the table.

### Picking Best Attack

"The brightly colored calico bug may be troublesome on cabbage, and on turnips, mustard, and other related crops. Hand destruction of the bugs early will protect these crops.

"Spraying potato vines with arsenate of lead or Paris green early before damage is serious will protect this crop against potato beetles.

"Tomato hornworms are more or less serious in many gardens. Spraying or dusting with arsenate of lead will help, but hand picking of the large worms will be most effective."

In the perpetual warfare against these insect enemies, nothing is more important than being everlastingly on the job and keeping acquainted with the latest proven controls, the specialist said. It should be remembered that along with the pests are also friendly lady beetles, ground beetles, toads, and other beneficial creatures which are ready to grow fat on the harmful garden pets, he pointed out.

## INSECTS, PESTS AND PLANT DISEASES RIDE AIRLINERS

Washington, April 6—Insects, pests and plant diseases are now riding the world's airliners.

These threats to farm crops, Secretary Wallace said Tuesday in a farm hour broadcast, have been increased by "airplane travel between countries."

He said federal plant inspectors found 20 species of insects on plant material upon the Graf Zeppelin on one of its stops in the United States. Six of the insect species "were not known in this country," he said.

Last year the bureau of entomology and plant quarantine inspected 300 airplanes from foreign countries at 16 ports of entry intercepting, Wallace said, "a thousand lots of prohibited plant material."

The secretary said the battle of scientists against these pests was a problem "that changes every year with changing weather, changing types of insects and new diseases."

## MORE RIGID CROP CONTROL IN PROSPECT

A virtual agreement of farm leaders on a new program for agriculture is reported from Washington.

The plan is said to call for three to five-year contracts between the government and farmers, providing for strict control of production, with heavy penalty taxes for non-co-operation.

It is believed the program will be introduced in Congress this week, as the administration's method for carrying out Secretary of Agriculture Wallace's ever-normal granary plan and getting a stronger rein on production.

There is a good deal of anxiety in Washington over the possibility that farmers may produce too heavily this year.

Cotton growers have been warned to hold down their acreage, or, perhaps, take lower prices next fall. A big increase has been made in the fall wheat crop, with indications of the spring wheat crop also being expanded.

## Is William Pickens White Or Colored? Asks Mrs. Roosevelt

Seattle, Wash., (ANP)—While Mrs. Eleanor Roosevelt, wife of the President, was visiting her daughter and family last week, she read an item in the daily press announcing that William Pickens, an officer of the N. A. A. C. P., was one of the speakers at the Federal Public forums.

"I have met some representatives of that organization," she said to friends, "but is Mr. Pickens a white man or colored man?"

When Mr. Pickens was told of this, he said, "Well, that is proof positive of one thing: that question of the First Lady, if properly authenticated, would be admissable as relevant evidence in any court of the land tending to prove that Mrs. Roosevelt has never seen me,—to know it."

## PROFITS IN TURKEYS

Miss Jessie Williams of Lafayette county made a profit of $100 on turkeys last year in spite of the low priees prevailing during the holidays. Living on a farm four miles from Lewisville, Miss Williams, who is three years out of school, took up turkey raising to earn her own spending money Encouraged by one year of excellent results, from a small start, last year she raised 97 turkeys from six turkey hens, selling 80 birds during the holidays. Much of the feed which consisted of corn, oats and field peas, was raised on the farm. The turkeys had access to an alfalfa field, over which they ranged freely. She took advantage of advanced methods and scientific poultry information. The eggs were hatched partly under chickens but all the young turkeys were raised by the turkey hens as a sanitary measure. Low prices last year did not discourage her, as she has increased her flock of six hens to eight.

## DAILY DIGEST SAYS

### Artifical Manure Method

"A new method of making artificial manure, a variation of the English method developed at Rothamsted Experimental Station, was used on eastern farms for the first time last year," says the Farm Journal (February). "The method calls for plowing under of a heavy growth of rye, or Sudan grass, or even crop of weeds. As the heavy growth is plowed under, a chemical reagent, composed of soluble nitrogen and lime, is turned under with it at the rate of about 500 pounds to the acre, to hasten the decomposition. The reagent costs about $8 an acre Spreading the reagent is a simple matter. A wooden hopper with small holes in the bottom is fastened on the rear of the tractor The granular reagent falls by gravity and covers a strip as wide as the plow turns over. This method was used on 4,000 acres last year in the Boston, Philadelphia and Norfolk areas. It is expected that the 1937 acreage will reach 20,000....."

### Yellow Corn Varieties

"Four new yellow corn varieties Yellow Surecropper, Golden Thomas, Yellow Tuxpan and Golden June are now available to farmers who wish to replace their old adapted white varieties with yellow corn of a high vitamin potency," says A. D. Jackson of the Texas Experiment Station in the Grain Dealers Journal (January 27). "A 10-year breeding program at the Texas Experiment Station designed to introduce yel-

low color into well established and productive white Texas varieties is is nearing completion and seed of the new yellow types is now available to farmers through seed growers and seedsmen....Until the yellow color was bred into Surecropper and other popular varieties of white corn, there were no varieties of yellow corn available in the state that would yield as well as white corn, except on the fertile soils of central Texas. In fact, the records show that the best white corn varieties yielded about 12 percent more than the best of the yellow varieties and since the high yielding strains of white corn have had the yellow character bred into them with a resulting yellow grain rich in vitamin A, the farmer is able to produce as high yields of yellow corn as he can of white."

**50-Year-Old Farmers' Club**

The Cambridge (Mich.) Farmers Club, one of the few such still in existence in this state, celebrated its fiftieth anniversary Friday. It was formed at the home of Mr. and Mrs. William White of Cambridge township, who came there in 1835 from Palmyra, N. Y. "Our club used to have between 150 and 200 members," Miss Anna White daughter of an early settler, said, "but that was in the days when newspapers did not circulate so freely as they do now, and the radio had not been dreamed of. There was little for farmers to do then and the club filled a real community need, giving opportunity for discussion of farm and political matters of current interest. We are still going strong, though." (New York Times.)

## Minta Cato Scores In "Aida" At Hippodrome

New York—(C)—Minta Cato, staff member of the Federal Music project in Harlem, scored in singing the title role of Verdi's 'Aida', at the third week end of the spring opera season at the Hippodrome theatre Friday night. The Herald Tribune said: "Her singing of the title role met its dramatic demands effectively and the tone quality and vocal style often merited much commendation, but the tones sometimes became unsteady in the stronger notes." The New York Times said: "In the early scenes Miss Cato's nervousness led her to force a voice of fair size and quality, widening a latent vibrato and corrupting the melodic line. Emotional restraint is not one of Miss Cato's musical characteristics, and the stress of a debut provoked exaggerations in dramatic effect. As the evening progressed, however she gained poise and projected an Aida that won the lively approval of her audience."

## Woman's Home Mission Literature

All literature for the Woman's Missionary Societies can now be obtained. Order now so you can start the New Year with the New Guide. If you wait and order later on you will miss a part of January lessons. Remember, for 1936 the Constitution and By-Laws for each auxiliary is printed under one cover and will sell for 15c per copy. The Guides will contain lessons, etc., as before and will send for 15c per copy.

## NEW VENTILATED PEACH BASKET IS DESIGNED

A ventilated basket which makes possible refrigerated shipments of more mature peaches has been designed as the result of experiments made by E. D. Mallison, fruit marketing specialist, Bureau of Plant Industry.

The basket is slatted or spaced for ventilation. The crownshaped lid also of open construction, allows air to pass through. Instead of a solid cushion between the lid and the fruit, Mallison devised a ring type, ventilated pad with a circular hole in the center. A slotted paper liner completes the ventilated basket.

Requirements of a cotton classing service to farmers as a basis for paying individual growers according to the quality of their product are outlined by the Bureau of Agricultural Economics in a report of a recent study of cotton prices.

The report suggests that a cotton classification service for growers would increase the premiums for the higher grades and longer staples, in local markets. To be of maximum usefulness to growers, the Bureau says that provisions would have to be made for obtaining samples that are truly representative of the quality of cotton in each bale, and for correctly identifying the sample with the bale from which it was drawn.

In addition, the Bureau points out that farmers need more adequate information on cotton prices in central markets and in near-by points of concentration, including prices for Middling 7-8—inch cotton and premiums and discounts for the various other grades and staples lengths. Copies of the report "Cotton Prices in Relation to Cotton Classification Service and to Quality Improvement" are obtainable from the Bureau. Washington, D. C.

**Spineless Okra**

The South Carolina Experiment Station announces that a new variety of okra developed by the station and named "Clemson Spineless" is now available for limited distribution to farmers and gardeners, says a press reporter in the New York Packer. The new variety is the result of selection begun in 1930 by R. A. McGinty, assisted by F. S. Andrews, L. E. Scott and W. C. Barnes, of the experiment station staff. The most important feature of the okra is the almost complete spinelessness of the pods. The variety seems to be equal or superior to Perkins Mammoth, which is at present the most popular type. The plants are three and one-half to four and one-half feet and bear smooth green pods.

**Halo Spot of Tomato**

The prevalence of tomatoes covered with a number of silvery spots has been noticed on many occasions. Insects were thought to be the cause, but Dr. C. L. Walton has shown (Gard. Chron., Jan. 2. 1937) that this is not so. The trouble appears when "top-watering" to stimulate rain is practised. Drops of water, fall upon the fruit, and if a burst of sunshine occurs, they evaporate very rapidly, and the skin of the fruit is scorched. This kind of trouble is probably more widespread than is often realized, and the lensshape of the drops may even cause necrotic spots or other puzzling symptoms (Nature, London, March 13).

**4-H Potato Records**

"Old-time potato growers in Pennsylvania took a first class trimming from 15-year-old Edward Kusa, Potter county 4-H club member, who grew 605 bushels of potatoes on a measured acre to become champion member of the 1936 Keystone 400—Bushel Potato Club," says the Farm Journal (March)".....Another potato record for grown-ups to beat if they can was made by a 19-year-old-4-H club girl, Kathryn Cytrynak, North Greenbush, New York. On three fourths of an acre of sandy loam soil she grew 601 bushels of Russet Rurals. That's at the rate of 766 bushels per acre. She planted 17 bushels of seed, used 482 pound of fertilizer, 20 tons of farm manure, and spent $5.42 for spray materials.. Nearly all of the potatoes were sold for $1.25 a bushel It was the eighth consecutive year potatoes were grown on the field."

## DR. THOMASSON TO TEACH IN HAMPTON SUMMER SCHOOL

Professor Maurice E. Thomasson of Johnson C. Smith University, Charlotte, N. C., has been employed to teach three of the graduate courses offered in Hampton's nine week summer school which will begin June 15. His courses will deal with Social Problems, Educational Sociology, and Problems, in Secondary Education, respectively.

Doctor Thomasson completed his high school work at Hampton in 1917, and was a student in the School of Agriculture during 1922-23. He received his Master's degree from the University of Minnesota in 1930, and a Ph.D. degree from Columbia University in 1936. He was formerly connected with the Agricultural Department at Tuskegee Institut.

## STARCH FROM SWEET POTATOES

Federal chemists are convinced the yellow pulp of the sweet potato can produce profits and possible new industries for the South.

At Laurel, Miss., in a plant financed with Emergency Relief funds, successful operation on a commercial scale has been demonstrated.

Here the "tater" has been converted into a high-grade laundry starch, adhesive for plasters, sizing for yarn or paper, "stickem" for postage stamps and labels with just the right flavor and stickiness, and live stock feed that rates with the pulp from sugar beets.

New recipes for candies and confections also have been developed.

Chemists even have found an inexpensive process of making the yellow pulp into very white starch demanded by many industries.

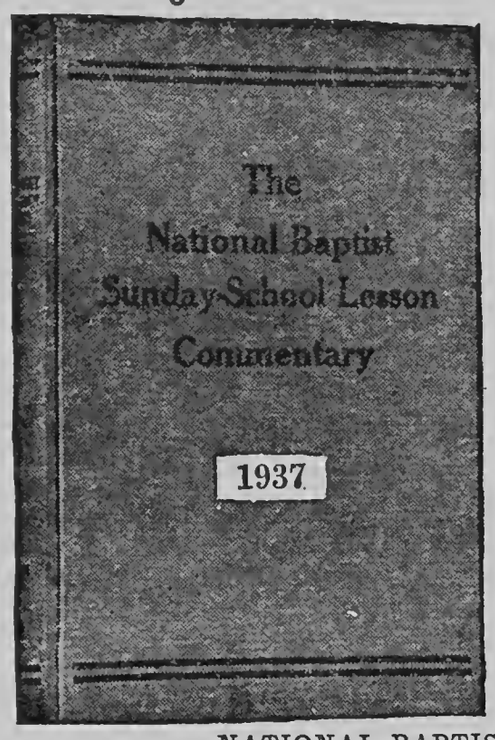
# Sunday School Lesson Commentary



**1937**

**PRICE $1 PER SINGLE COPY**

**Six Reasons Why You Should Use It:**

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theories leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

### COTTON WOOING FARMERS FROM SOIL CAMPAIGN

(Continued from Page 1)

Randall said.

Farmers throughout the state are being fully informed on the prospects for cotton this year and are being warned of the hazards of a material acreage increase by county agents, Mr. Randall said.

**Expect Lower Prices.**

Production of American cotton in excess of the probable consumption of about 12,500,000 bales will add to the carry-over and depress prices, pointed out J. B. Daniels, extension economist in farm management, University of Arkansas. The price of cotton is still about 25 per cent under the parity prices, mainly because the carry-over is still two million bales above normal, he said The price of cotton in January was 12.4 cents per pound, while the parity price for the same month was 16.4 cents.

A better price for cotton is assured if production is kept within reasonable limits, Mr. Daniels declared. "Most cotton producers will agree that the cost of producing cotton is more than seven cents a pound, and if this figure is correct, it leaves a profit of about five cents a pound on the crop. This amount will be paid by the agricultural conservation program for diverted cotton acres up to 35 per cent of the cotton production. In addition to this diversion payment, $2 per acre can be earned by planting the diverted acres in summer legumes and turning these legumes under. This payment is sure and certain, while the production of a cotton crop is not.

In addition to the payment, the cost of producing cotton on diverted acres is saved and the cost of producing cotton on those acres which are planted will be less per pound, Mr. Daniels points out. The diverted acres can be used to produce soil conserving crops and these crops may be used for food and feed. The additional feed will make possible better care of livestock on the farm. Soil fertility will be conserved and greater yields per acre may be expected for crops following soil conserving crops.

**No Consumption Increase.**

World consumption of American cotton amounted to 12,676,000 bales for the 1935-36 season. This was an increase of approximately 1,300,000 bales over 1934-35. It is not expected that the consumption of American cotton will increase materially during the present season. Domestic consumption is expected to increase but this increase probably will be off-set by a decrease in consumption of American cotton by foreign countries.

The world situation is similar to that in the United States, with a total supply of over 42,000,000 bales. The world consumption of all cotton during the 1935-36 season was 27.4 million bales. If this rate of consumption is carried over into the present season, when it is estimated the world will produce 30,000,000 bales of cotton, it means that 2.7 million bales will be added to the world carry-over of cotton. Under existing conditions it would seem that good farm management practice on the part of the farmers would be to co-operate with the agricultural conservation program to the fullest extent possible. Unless cotton production is maintained in balance with the demand for cotton the South will again be faced with low priced cotton. The agricultural conservation program provides for by a payment of five cents per pound for the average yield on the diverted acres.

When considered from every angle, it would seem to be merely good business for the farmers of the South to maintain the acreage of cotton at about the same amount that it was in 1936.

### RICE FEEDING TO CUT POULTRY COST

(Continued from Page 1)

wheat shorts or corn meal for which rice by-products may be partially substituted. Also, low grade brewer's rice may be included in the grain feed as an economical substitute for corn."

### ELEVEN PIGS WEIGHED OVER TON AT 6 MONTHS

(Continued from Page 1)

shorts and Bermuda grass pasture. The pigs were finished on corn and rye pasture with skimmilk and tankage as supplements, Mr. Woods related.

### CALVES NETTED $17.00

(Continued from Page 1)

mostly produced on the farm, he added.

"Due, however, to last summer's severe drouth, Mr. Kendall was short of winter feed," the county agent said. "He bought straw and cottonseed meal for his cows, and they gained some weight on an average daily ration of 12 pounds of straw and one and one-fourth pounds of cottonseed meal."

### AVERAGE VALUE

(Continued from Page 1)

During the last three years drouths have come in July and August; therefore, conservation of moisture has been very important.

### STARCH FROM SWEET POTATOES

(Continued from Page 7)

Cost of processing yams at Laurel has been reduced from 13 cents a bushel at the start to about 3 cents. The experimental plant paid farmers 20 cents a bushel for field-run potatoes last year. On that basis, it is estimated, farmers who can harvest 300 bushels to the acre will find sweet potatoes as profitable as cotton.

Chemists say the sweet potato starch industry could cut appreciably the annual imports of about 250,000,000 pounds of root starch.

### INTERESTING FACTS

(Continued from Page 5)

AAA purchases and food obtained by State agencies for this purpose, were added to relief family diets. This meant an average of about 30 pounds per month for a family. Included in the 1936 total were 18,800,000 pounds of meat and meat products; 213,000,000 pounds of cereals and flour; 430,000,000 pounds of canned, fresh, and dried fruits and vegetables: 19,000,000 pounds of milk and cheese; 9,000,000 pounds of butter, sugar, sirup.

NUMEROUS "economic cheats" were uncovered by the Federal Food and Drug Administration's activities during February, its monthly report reveals. (See "Policing Foods for Humans and Animals" in our February 22, 1937, issue.) Seizure was made by the Administration of 3,372 packages of pecan meats in baskets with false bottoms, with the net weight statement inconspicuously displayed on the under side of the container; 456 jars of preserves and jellies low in fruit content; 910 cans of so-called lemon juice, diluted with water; 1,600 pounds of thyme leaves from which most of the flavoring constituents had been extracted, 1,800 sacks of potatoes labeled as of a grade higher than their condition warranted; 390 jars of mustard sauce containing added gum and mustard bran, without any label declaration of their presence; 564 pounds of so-called malted milk found to contain a fat other than butterfat. In addition, 38 cans of cane syrup and 96 cans of sorghum syrup, both short of the declared net contents, and 21 cases of canned soaked dry peas which had on the labels a vignette of fresh green peas and the word "dry" inconspicuously placed, were sized. The following canned goods were seized because they fell below the prescribed legal minimum standards of quality and condition without label notification of that fact: 365 cases of canned cherries, 1,080 of tomatoes, and 295 of peas.

**"Human erosion is just as serious as soil erosion, and one of the most important items in preventing human erosion is plenty of good food".**

HENRY A. WALLACE,
Secretary of Agriculture.

## General Board Urges Passage of Anti-Lynching Bill

Jackson, Tenn., May 14 — (By Continental Press)—The C. M. E. Church, third largest Methodist body among Negroes, passed unanimously a resolution at the session of the General Board here Thursday urging the whole-hearted support of the pending Federal Anti-Lynching Bill now before the Senate.

The resolution said:

"We recognize mob violence and the lynching evil as blots upon the escutcheon of our American nation, a disgrace before the eyes of the civilized world.

"The lynching of human beings, with all its attendant brutalities and inhumanities as exhibited in too many instances, has awakened the American conscience to the danger of tarnishing the American mind with a criminal bent. Noting from the record that by far the greater number of lynched victims are Negroes which leads to the impression that lynching is largely based on race prejudice, race hatred, economic rivalry, and political agitation.

"In view of the fact that the lynching problem has come to the fore through the passage of the Gavagan Federal anti-lynching bill by the House of Representatives and now rests with the United States Senate;

"Be it resolved, That the College of Bishops and the General Connectional Board of the Colored Methodist Episcopal Church, herein condemn lynching and mob violence in all forms and for any reason. We believe in law and order, and we condemn crime of every kind.

"Resolved secondly, That we approve the passage of the Gavagan Anti-Lynching Bill as passed by the House of Representatives and that we send a copy of these resolutions to our several Senators, and urge that they will give wholehearted support to the passage of this pending anti-lynching bill."

A kind, old gentleman, seeing a small boy who was carrying a lot of newspapers under his arms, said:

"Don't all those papers make you tired, my boy?"

"No, I don t read 'em," replied the lad.

"My boss," said Rastus, "wants a pane of glass nine by eleven."

"Hain't got none that size, Rastus," said the smart-aleck clerk. "Will an eleven-by-nine pane do?"

"I'll try her," said Rastus. "Mebbe if we slips her in sideways nobody'll notice."

Who doeth small things well, will prove to higher trusts most true.

Little Marjorie came to tell her Sunday school teacher that she would have to give up her part in the Christmas exercise. "Oh, Marjorie!" lamented the teacher, "don't say that. Have you lost your Christmas spirit so soon, my dear?"

Marjorie shook her head.

"Not my Chrithmath thpirit," she lisped. "It 'th my front teeth."

## *The Sunday School Congress For 1937*

*CINCINNATI, OHIO, KNOWN AS THE QUEEN CITY OF THE NATION, SELECTED FOR THIS SUMMER SCHOOL OF METHODS*

*Arrange for every department of your church to be represented. It will be the thirty-second annual session. Send some one to the following departments:*

| | | |
|---|---|---|
| TEACHER TRAINING | METOKA | GALEDA |
| ADVANCED TEACHERS | PRIMARY | MUSIC |
| SUPERINTENDENTS | MISSIONARY | JUNIOR |
| B. Y. P. U. | MINISTERIAL | CRADLE ROLL |
| BIBLE STUDY | HOME DEPARTMENT | |
| DAILY VACATION BIBLE SCHOOL | NATIONAL A. F. CADET | |
| RELIGIOUS BOOKS AND PARAPHERNALIA | | |

Each of these sections will be in charge of some of the nation's best known teachers, instructors and demonstrators.

The Sunday School Congress is not a deliberative body. No motion or points of order are ever made. It is a veritable university of the denomination, the training camp of the Baptists, and the one national gathering that offers a course to those who want to learn, and an opportunity to those who can teach. It is an ocular demonstration of that saying, "You cannot teach what you do not know; you cannot lead where you do not go."

Elect your representatives for the thirty-second annual Sunday School Congress, which will be held June 9-14, 1937 in Cincinnati, Ohio.

Railroads are offering better rates than ever. For further information, write

HENRY ALLEN BOYD, Secretary,
**SUNDAY SCHOOL CONGRESS**

Nashville, 523 2nd Avenue, North, Tennessee

# THE MODERN FARMER

Vol. X. NASHVILLE, TENN., JUNE 15, 1937 No. 5.

## MORATORIUM BENEFITS

### How to Get them Fully Explained to Farmers

Since the Supreme Court decision in favor of the Frazier-Lemke Moratorium Act farmers have wanted information on how to use it to advantage. The following methods of applying for its advantages are:

1. When foreclosure proceedings are started, the farmer may file a petition with the clerk of the federal district court, or conciliation commissioner of the county. It is best to hire a good friendly lawyer. Organizations should retain their own lawyer for mutual protection.

2. The petition should contain a schedule of property, and should ask for reduction or extension of debts, or both, if desired. If a majority of the creditors agree to compromise, the farmer proceeds according to the plans drawn up in the petition. If the creditors are unwilling, the farmer may file under the bankrupty subsection of the act asking that he be allowed to remain in possession of his property for 3 years.

3. The property is appraised and the farmer proceeds to farm, paying rent as set by the court. The Court supervises the farming, and may for cause remove the occupant.

4. At the end of 3 years, or before, the farmer may pay off the appraised debt. However, there is where the hitch comes in. The creditor has the power to demand a reappraisal, or force sale at a public auction. Consequently, the act does not force an adjustment of debt, as provided in the original act, but merely for a breathing spell. The change was made after the court's invalidation of the original law.

## GA. FARMERS MET

### Benefits of Agricultural Administration Cited

Forsyth, Ga., May 12—Negro farmers from five counties gathered at the State Teachers and Agricultural College today to give reports of their progress under the Agricultural Conservation program and to hear addresses from Negro AAA and Federal Credit Administration officials and Negro State Extension Leaders.

Today's meeting was the last of a series which began a week ago at the Log Cabin Community near Sparta and several thousand Negro farmers have heard the various government programs explained and have themselves taken part in the discussions.

James P. Davis, head field officer of the AAA, told the farmers that white state and county officials have praised the loyal cooperation given by Negroes in the nine southern states which compose the southern Region of the AAA.

H. A. Hunt, president of the Fort Valley school and assistant to the governor of the farm credit administration, explained in detail how farmers may qualify for loans under the Land Bank and Production Credit associations. He too reported that Negroes in all sections of the south have qualified for loans and that in interviews with local adminstrators he learned that these borrowers are meeting their obligations.

A typical report from a Negro farmer was the statement from B. F. Story who owns a hundred acre farm near Ellaville. "One thing the depression taught me was to quit buying on credit. Things were bad for me in 1932 but the AAA

(CONTINUED ON PAGE 2)

## THREE TYPES OF LETTUCE

### Luxury Class to Gardners And Market Now Possible

Leaf lettuce is getting almost into the luxury class, since market gardeners have almost stopped growing it, and the supply of tight bleached head lettuce from irrigated sections has reached out to every village.

There was a time when head lettuce was the rarity, and esteemed for that reason; and many a home gardener who could not grow heads, felt that his leaf lettuce was hardly worth while.

But the tables have been turned by the revelation that leaf lettuce and its equally easy cousin, romaine, are both superior to bleached heads in vitamin A content. This vitamin which is so essential to the health of children, is said to vary in richness in proportion to the rich green color of leaves. Bleached leaves have much less than green leaves.

Leaf lettuce, moreover, when freshly picked from the garden, is held by good judges to be superior to bleached heads in tenderness and flavor, and quite as crisp. Like other table quality vegetables it is difficult to market, because it loses it crispness unless kept on ice. But the home gardeners may serve bowl salad made with crisp leaf lettuce of cos lettuce, which those who depend on market vegetables cannot duplicate.

Sow your favorite variety of leaf lettuce just as soon as the

## MACON CO. PROJECT

### Re-Settlement Area to be Flint River Farms

MONTEZUMA, Ga., May 20—Robert W. Hudgens, director of the resettlement activities in Region 5, announced today that the name of the resettlement project in Macon county, Ga., has been authorized as Flint River farm. This project was formerly called Fort Valley Farms.

Authority for this change in name was included in a letter from Dr. W. W. Alexander, administrator, to Director Hudgens and action is being taken to have this name officially recorded.

Director Hudgens states that this name seems well chosen as the site of this resettlement project is adjacent to the Flint River in Macon county.

Approximately 10,000 acres are included in the project area and present plans provide for the establishment of 110 families on as many units.

Two-horse farm units, approximating 80 acres each, are planned More than half of the acreage will be tillable and the remainder will provide pasture development and forest products.

There are 45 houses now located on this project which will be repaired and remodeled where necessary for the comfort and enjoyment of these families. Additional houses will be built, bringing the number of completed farm units to the authorized total of 110.

Repairing and building of the houses, fences, land clearing, and other improvements will be accomplished by the farm families selected to occupy these units.

## GRAY URGES PEST POISON

### Outlook this Season Much Better Than Year Ago

Farmers of the county were yesterday warned by Farm Agent W. R. Gray to beware of the presence of boll weevils in their cotton fields this month in the event there are continual showers over an indefinite period.

Mr. Gray, who stated that the crop this season was much more promising than one year ago, advocated close watching of crops in every instance in view of the warm spring season.

He added that the fields having the largest plants were most likely to become infested with the weevil at the outset.

#### Apply 1-1-1 Mixture

As a precaution Mr. Gray urged producers to apply the 1-1-1 mixture, consisting of one gallon of water, one gallon of molasses and one pound of calcium arsenate, as soon as one finds the smallest square.

"In no case should the farmer trust in a dry June," he stated, "but spread the sweetened poison mixture at once as a safeguard. Do not wait until large squares have appeared before one takes any action."

One almost sure way of stamping out the weevil, the agent concluded, is to repeat the application of the mixture three times at intervals of five to six days.

## SOME OBSERVATIONS OF RURAL CONDITIONS AMONG NEGROES

In Selma, Alabama there is a unit of the Alabama Farm Bureau with a membership of 520 Negro farmers of Dallas County. The members of this Farm Bureau get the benefit of discounts available to Farm Bureau members for seed, fertilizer, implements, etc. They have raised $1000 towards the construction of a building to be used as a recreational center for the thonsands of Negro farmers who come to Selma each Saturday. S. W. Boynton is the Negro County Agent in Selma and the officers of the Colored Farm Bureau are Herbert Kahn, President. D. J. Rountree, Secretary and Brack Martin, Treasuruer.

In 1936, three farms in Leon County, Florida, were selected for experiments in growing sea-island cotton. J. H. Leonard was the colored farmer in this group. Mr. Leonard owns 200 acres of land and has leased 400 additional acres. In addition to his successful experiment with sea-island cotton, he also had 50 acres in melons for seed to fill a contract with a nationally known seed house.

The Longview Cotton Gin is a cooperatively owned Negro enterprise, with headquarters in Huntsville, Ala. Organized 10 years ago,

## FARM LAND VALUES

By Henry A. Wallace

(Excerpts from a Radio Address)

During the past year, land values have gone up much more in the eastern cotton and tobacco sections of the United States than in the corn and wheat regions. In 1936 eastern cotton and tobacco land averaged about 96 percent of pre-war whereas in 1937 it averaged about 103 percent. The western corn belt stayed steady at 71 percent of prewar in both years while the eastern corn belt advanced four points from 72 percent of pre-war to 76 percent. The western cotton belt like the western corn belt has not made much advance.

Looking over the entire United States, I see no evidence of a disastrous speculative land boom getting started except possibly in some of the tobacco States. I hope farm income continues to increase but, if it does, I hope city people do not drag farmers into a land boom as they did from 1915 to 1920. Thousands of people have not fin-

(CONTINUED ON PAGE 3)

# The Daily Digest Says:

### FARM REAL ESTATE VALUES CONTINUE TO RISE

The per acre value of farm real estate, as a national average, is the highest in five years, according to the Bureau of Agricultural Economics.

The Bureau's index of value stood at 85 percent of the 1912-1914 level on March 1 this year, as against 82 on March 1, 1936, and the depression low of 73 on March 1, 1933.

The 16-percent increase since 1933 is attributed largely to increasing farm incomes which have expanded at the rate of a billion dollars a year during the past four years. It is also in part the result of relieved conditions of farm credit and of farm real estate taxes.

The Bureau also reported a 15-percent decrease in bankruptcies among farmers during the fiscal year ended June 30, 1936, as compared with the immediately preceding fiscal year. Reductions were reported for all geographic regions and for all States except Vermont, Connecticut, Indiana, Minnesota, Missouri, South Dakota, Wyoming, Utah, and California.

### PAPER MILK BOTTLES SUBJECT OF STUDY

A study of the comparative value of paper and glass milk bottles is being made by the New York State Experiment Station, New York State Departments of Health, and container manufacturers.

Dr. R. S. Breed of the Experiment Station says that while the initial cost of the individual paper container is much less than that of a glass milk bottle, the fact that the glass bottle is normally used 10 or 15 times much more than offsets this advantage. On the other hand, consumers seem to like the paper container.

### NEW USES FOR COTTON

"Much interest was aroused throughout the south last year by the announcement that the government had allotted each of the states a consignment of cotton fabric to be used in road building," says an editorial in Memphis Commercial Appeal (May 9). "There is nothing more important to the south than the developing of new uses for cotton. Not that the last 50 years have not revolutionized the cotton industry, as the tremendous strides of the oil industry so strikingly evidence. But these developments have come largely through the test tube of the laboratory. Chemists and research experts are still experimenting, and there is every reason to believe that the 250 and more uses to which cotton is now put will be added to. But it is encouraging to find the government interested. It evidences a sympathy with and an understanding of the south's great problem that may prove very beneficial. It is encouraging to note that Tennessee, Arkansas and Mississippi entered wholeheartedly into the cotton road experiment last year. It is to be hoped that as far as possible the new experiments now under way will receive similar support. The government deserves the fullest co-operation."

### ALL-PURPOSE POULTRY MASH

"The simplification of poultry-feeding formulas by University of Nebraska poultrymen into one all-purpose mash should merit a vote of thanks from most farm-flock owners," says Colin Kennedy in Coun-

(Continued on Page 2)

## THREE TYPES OF LETTUCE

(Continued from Page 1)

ground can be worked. It is better to thin out the plant so that they can develop well, though some gardeners do not thin, but allow the plant to grow in a crowded row, on the theory that the leaves are smaller and more tender that way.

* * *

Cos lettuce should be sown at the same timee, since it matures later and while it resists summer heat, it must make growth before the hot spell comes. The cos lettuce must be thinned or transplanted, to six inches apart in the row.

All good lettuce must grow fast. If it stands still the leaves will become bitter. It requires plenty of water, and a dose of plant food will help speed growth.

When cos lettuce begins to make a rosette of slender leaves, they can be tied together and bleached if you wish. Be sure the leaves are dry when you tie them up. Many prefer not to bleach the leaves, preferring their crisp fresh green.

All lettuces tend to go to seed in hot weather, but a second crop of both leaf, and cos lettuce can be used for the fall salads.

## THE DAILY DIGEST SAYS:

(Continued from Page 1)

try Gentleman (May). "The Nebraska system, which has stood the test under five years of experimental feeding, involves the use of the same mash for the first feeding of the chicks on through egg production, rather than changing mashes three times, as is now the common practice. The system also calls for the same mash for all classes of poultry. Known as Formula 8 the all-purpose mash is made up of 310 pounds of yellow corn meal; 200 pounds of shorts; 100 pounds each of bran, pulverized oats or barley and No. 1 quality alfalfa meal! 50 pounds each of meat scraps, fish meal and dried buttermilk; 20 pounds of pulverized limestone or sifted oyster shells; 10 pounds of fine salt and 10 pounds of cod-liver oil or other suitable fish oil. After the eighth week the latter is not needed in the ration. Fifty pounds of soybean meal can be substituted for the dried buttermilk. In the proportions given above several flock owners would have to go together in making up the mash if they wanted to realize a saving on the wholesale purchase of some of the ingredients used_____"

### $200,000 FOR RADISHES

An editorial in Arkansas Gazette (April 24) says: "There is something solid and impressive about a bale of cotton. Set beside it, a bunch of radishes would not make much of a showing. But there can be something solid and impressive about radishes too, if you have enough of them. This year Craighead county farmers planted 2,000 acres to radishes. Shipments of the crop have begun, and before they are over some 175 carloads will have started on their way to market. The estimated return to the growers will be $200,000. It would take 3,333 bales of 12-cent cotton—a bale and two-thirds to the acre—to bring in $200,000 from the same acreage. And radishes being an off-season specialty, those Craighead county radish growers still have their 2,000 acres available to grow cotton, corn, soy beans, or other summer crops this year.

### VEGETABLES MAY BE PRESERVED IN LOCKERS

Vegetables may be successfully preserved by freezing, without special facilities, in any cold storage plant where rooms can be held at zero F., it was recently announced by the Bureau of Plant Industry, following tests of several varieties of sweet corn, peas, green beans, and lima beans. The results of the tests, the Bureau said, give added proof to the feasibility, under adequate supervision, of community freezing storage rooms in which families store vegetables, fruits and meats in individual lockers. The vegetables studied are those grown principally in the East, but it was stated that similar results should be obtained elsewhere.

### PLANTING BLACK WALNUT

"Black walnut trees, a good source of cash income, can be grown in fence corners, along ditch and stream banks, and other so-called waste places about the farm. An average North Carolina farm could easily have 50 or more black walnut trees, said R. W. Graeber, extension forester at State College. The nuts from the trees can be harvested annually, and where a sufficient number of trees are produced, a few can be cut from time to time for timber. Figuring the nuts from one tree at $2.50 a year, a crop of 50 trees would produce an annual income of $125 from the sale of nuts alone. There is a big demand for black walnut lumber and high prices are paid for trees in good condition." (Manufacturers Record, May.)

### WILD TURKEY FARM

Turkey World (May) has an article by V. C. Russell on the breeding of wild turkeys on a ranch near Lesterville, Missouri. It describes the breeding pens, methods of incubation, and sanitary precautions. The only market for the birds is the State of Missouri which liberates the birds in wild areas.

### GLASS DEHYDRATOR

Topeka Capital (May 2) reports the opening at Midland, near Lawrence, Kansas, of a new $40,000 grass dehydrator, owned by the American Butter Co. The plant, says the report, "will handle oats, wheat, barley, rye and sudan grass. 'Only young grasses will be used,' W. H. Allison, manager of the plant, explained, 'as cutting after the first jointing will kill the plant.' Allison said that the fields will be cut every 18 days, and the average pay to the farmer is about $5.40 per acre for each cutting. The grass is bought by the dry ton, and last week the plant was paying $9 for good quality grasses, with a low of about $7. The idea of the dehydrating is to put the grasses into a concentrated form, thereby saving many of the valuable elements which would be lost if the plant were left to dry in the sun. The feed, which is a powdered concentrate, is used to mix with buttermilk, for a poultry food___The plant is equipped to dehydrate the grasses from 20 to 25 acres every day, and the plant is running 24 hours a day____"

### FARM TENANCY COMMITTEE REPORT IS PUBLISHED

Publication of the full Report of the President's Special Committee on Farm Tenancy was recently announced by Secretary of Agriculture Henry A. Wallace, chairman of the Committee.

Stressing the need for a broad attack on agricultural insecurity, the Report calls attention to the problems of farm tenants, share croppers, agricultural laborers, submarginal farmers, and other groups associated with the growth of an insecure type of farm tenancy. Recommendations of the Committee include proposals for rural rehabilitation, submarginal retirement, and a new Federal program to help tenants acquire farms of their own. State legislation to improve farm tenancy conditions is urged.

### AYRSHIRE WORLD RECORD

Another remarkable record has been completed by MacDonald Dorothy, a member of the Ayrshire herd of MacDonald College, Ste. Anne de Bellevue, Que. This cow has just completed a 13-year old record of 18,652 pounds of milk, 792 pounds fat, average test 4.25 percent, in 365 days, making it that she has now produced 154,081 pounds milk, 6,452 pounds fat, average test 4.18 percent in 9 lactations or 3,264 milking days. This record ties with Springburn Lovely Pet for the highest Ayrshire butterfat production in the world. The latter cow is now dead. (The Farmer Magazine, Toronto, May.)

THE WATERMELON is no longer a southern luxury, since science has now made it a New York State crop, said Professor Paul Work of the New York College of Agriculture. The watermelon may even rival the muskmelon in importance in the State, he said, since a number of varieties will mature as early as the standard varieties of muskmelon.

### PENNSYLVANIA WARNS AGAINST PRODUCE SWINDLERS

Secretary French of the Pennsylvania Department of Agriculture has issued a warning to farmers against persons who are buying hay, potatoes and other produce with promise to pay after the products are resold. Five such operators were recently arrested after swindling farmers in central Pennsylvania out of products valued at $5,000.

Secretary French reports that a bill which has passed the House of Representatives and is now in the Senate would require the licensing and bonding of all commission merchants and produce dealers who buy from farmers on other than a cash basis.

Warnings have been issued also to postmasters in Pennsylvania in connection with the baby chick mail racket recently uncovered in New England.

## GA. FARMERS MEET

(Continued from Page 1)

checks have put me back on my feet."

W. T. Flowers, a Negro farmer near Perry, operates a 400 acre farm as manager-operator. By cooperating with the AAA, he reported that his condition is much improved and he has purchased in 1932 nearly $2,000 worth of improved farm machinery. Last year he made 37 bales of cotton, sold 40 hogs, killed 35 from which he sold over $500 worth of hams and bacon. "I still have a plenty of food and feed for my family and work stock."

P. H. Stone, Negro state extension agent, assisted by Miss Camilla Weems, Negro state home demonstration agent, and Alexander Hurse, Negro state club agent, arranged the itinerary for the state tour.

At the meeting here today, President W. M. Hubbard of the school welcomed the delegates and Sanford H. Lee, Negro county agent of Bibb, Monroe and Twiggs, presided. Others present included Henry Heard, Negro state representative of the NYA, Albon L. Holsey of Tuskegee Institute and field representative of the AAA and G. F. King, editor of King's Agricultural Digest.

NEW

**Metoka and Galeda Guide and Manual**

**Work of the Committee Named at the last Sunday School Congress Enables Organized Classes to Get New Book**

A Metoka and Galeda Guide and Manual to be used for the organized classes in Baptist Sunday Schools is now ready for distribution. The cover is bright red with blue letters.

It contains a brief sketch of the late Rev. N. H. Pius, D. D., and the late Rev. R. H. Boyd, D. D., as it pertains to their work in erecting these two college departments of Baptist Sunday Schools.

This new Guide and Manual sells for 25 cents. Send all orders to the—

## FARM LAND VALUES

(Continued from Page 1)

ished paying for that speculative spree. The advance in land values between 1915 and 1920 caused millions of headaches between 1920 and 1935. Mortgages were doubled, expensive schoolhouses were built and taxes went up to two and even three times what they were previously. It is important to remember that higher land values almost inevitably mean a heavier interest and tax burden.

It means to me that when farmers' incomes increase it would be well for them to use the money to improve their living conditions—to build better homes, better barns, better physical improvements—rather than to bid up the prices of farm lands in an effort to add to their land holdings.....I hope that land values more and more will represent capitalized earning power and not speculative prospects. Somehow I doubt if it is a wise thing for most farm land to sell for more than 20 times the net rent after paying taxes.

On the whole, I think it is a good thing that farm land values in the United States in the spring of 1937 are only 85 percent as high as they were before the World War and only 16 percent higher than at the bottom of the depression in 1933. If farmers get their fair share of the national income during the next ten years, farm land values will and should advance. But I hope they never advance beyond a fair relationship with farm income.

Farmers and especially young farmers do not want a repetition of the 1920 foolishness. They want stability and security. They want to go ahead steadily year after year, feeding and clothing the people of the nation, and getting a fair price for so doing. They want to make their money by farming and not by speculating in land.

I hope the United States Department of Agriculture and the Land Grant Colleges can cooperate with these young farmers in building for security and that we shall never again be afflicted by the excesses of a land boom.

## SOME OBSERVATIONS

(Continued from Page 1)

the Negro farmers who founded the organization have received more in dividends than their original stock investment. The company has a reserve fund of $5000 and in 1936 paid a dividend of 8 percent.

F. E. Pinder, Negro County Agent, with headquarters at Gainesville, Florida, stated recently that Soil Conservation payments received by Negro farmers in his county amounted to more than $21,000.

W. T. Gray, successful Negro truck farmer near Ocala, Florida, recently sold string beans for which he received $400 from one week's harvest. Mr. Gray is also a grower and shipper of tomatoes, squash cucumbers and live stock.

David Simmons, a graduate of Tuskegee's Agricultural Department in 1936, has opened a poultry farm near Milledgeville, Georgia. During his last year at Tuskegee, Mr. Simmons was the National President of the New Farmers Association. Telling the story of his efforts, young Simmons said, "I borrowed money last February and bought 300 chicks. I earned enough on the sale of these chickens and eggs, to repay the loan and I still have enough chickens and eggs for the fall laying."

The Florida Farmers Cooperative Association has recently put on the market a super-refined cane syrup. J. T. Hamilton of Seffner, Florida, is President of this Negro Cooperative and C. L. Turner, Tallahassee, is Secretary.

The Citizens and Southern Bank of Savannah, with many branches throughout the state have agreed to finance 300 Negro 4-H Club boys with registered hiefers. P. H. Stone, Negro State Extension Leader, stated that the handling of this feature of the 4-H Club would be under the direction of Alexander Hurse, Negro State Club Agent for the state of Georgia.

## ON THE SHELF NEAR THE STOVE

Secret of many famous dishes is the dash of seasoning which gives them their distinctive flavor. Cooking meals graduates to culinary art in proportion to the cook's knowledge of the use of condiments to give a subtle taste to food. Of all the seasonings on the shelf near the stove, salt is the most common.

Salt is a white crystalline compound, known chemically as sodium chloride, which is obtained from deposits in the earth or by evaporation of natural brines, such as sea water. In 1935 nearly 8,000,000 tons of salt valued at $21,000,000 were produced in the United States. Only a portion of this was processed for eating purposes—2,837,613 short tons were used by manufacturers in its briny state. Salt has over 1,500 recognized uses. There is a pinch of salt in the clothes we wear, the glasses we use, the cars we drive.

Table salt, which we often buy in the little cardboard containers with the shaker top, is a fine-grained salt to which perfectly harmless chemicals, if their presence and amount are declared on the label, may be added to give the salt the noncaking quality which consumers want. A few hundred thousandths of 1 per cent of a salt of iodine, usually potassium iodine, is often added to table salt. A lack of iodine in the diet may cause an enlarged thyroid. The most usual way of getting one's necessary quota of iodine is in drinking water. In certain sections of the country known as "goiter belts," where iodine is lacking in the water, iodized salt is extensively used by consumers. Price of iodized and ordinary table salt is the same.

Salt is a seasoning used by people the world over, but individual tastes and national culinary traditions dictate the selections of seasonings, especially the spices one finds in kitchen cupboards. When we speak of spices we usually include all the aromatic vegetable products, such as pepper, mustard, ginger, etc., which are added to food to bring out its flavor or to give a flavor where little exists. Species contain volatile materials known as essential oils which give them their odor and taste. Though spices are negligible in food value, their addition to food is said to stimulate the gastric juices and hence make food more digestible. For many centuries these pungent buds, flowers, fruits and seeds, roots, bark and leaves of herbs, shrubs, or trees, growing wild in the equitorial countries and carrried over circutious routes to Europe, were the luxury of kings. Today scientific cultivation and rapid and steady transportation make a shelf of spices available to almost every family.

Most of the spices we buy are imported from other countries. Government standards for spices require that they be clean, sound, and true to name, and that no portion of their violate oil, which gives them their flavor, be removed. The Food and Drug Administration is on guard to see that ground shells, or exhausted spices—spices from which the essential oil has been removed—have not been added to the pepper, ginger, cloves, and other spices, and other spices we buy. All imported foods—spices included—must get their O.K. from this Administration before they can be marketed in this country. Chemical analysis is needed to test the purity of spices, but a consumer when selecting them would do well to both taste and smell them to judge their potency. Some spices of poor quality, such as low grade of cinnamon, are practically flavorless. It is far-sighted economy to buy the best quality spices.

In buying spices one should always buy by weight rather than size of container. Perhaps no other food is packaged in as varied sizes of containers as spices. The size of a can can easily give the impression that it contains more spice than it does. Reading the label is the good consumer insurance against buying slack-filled spice boxes.

Black and white pepper are two of the common condiments which we find on the dining-room table and on the kitchen shelf. Both are products of the same pepper vine grown in the East Indian Islands southern India, French Indo-China, and Siam. Ground black pepper, which is stronger and hotter than white pepper, is prepared from the dried immature berry of the pepper vine. White pepper is made from the mature berry after the outer dark husk has been removed. Because ground pepper loses its pungency if allowed to stand too long, many people buy the whole pepper berries and grind them as they use them. Common varieties are Singapore. Acheen. Lanpong. Java. Tellicherry, and Alleppy, but there are over 40 different varieties of pepper plants, the fruits of which have a slightly different flavor and color. When ground, some are dark or light grayish in color, others have a greenish shade. The consumer particular about his pepper soon learns to identify the flavor he prefers by the color of the grind.

Red pepper, which is hotter or stronger than black pepper, is made from the red, dried, ripe fruit of any spices of Capsicum. Cayenne pepper, the hottest of all peppers, is made from a certain small-fruited species of Capsicum. Red pepper mixture contains some cayenne, but a package labeled cayenne pepper, according to the U. S. standards, must be made from the berries of Capsicum frutescens.

Piperine, an alkaloid of pepper, stimulates perspiration, thus having a cooling effect on the body if a sufficient amount is eaten. For this reason, pepper is widely used in seasoning food in hot countries. The literal translation of the Mexican dish "chili con carne" is "red pepper with meat." Cayenne pepper is a common constituent of curry powder which is the high-flavor mark of many dishes popular in India. Red pepper is often an ingredient of the gingerale we drink to "cool off." It also heightens the flavor of many of the sausages and prepared meants which we buy.

**Pastor's Guide**
**By Boyd**

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Pulpit Bibles**
**At Low Cost**

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Baptismal Garments**
**For $30.50**

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The Best Book For The Ministers**

**Theological Kernels**

*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## GEORGIA AS TOMATO GROWING STATE

Ten thousand South Georgians were expected June 2 in Pelham for the first tomato festival to be staged by that progressive Georgia town.

This was a part of the National Tomato Week, which began May 30 and was celebrated in many of the southeastern states. Exploitation of the tomato as a beneficial food product has been nation-wide and tomatoes, fresh or cooked, now supply vitamins needed to build up resistance to disease or infection, in all of the states of the Union. "Eat tomatoes daily" is a slogan that has been carried into the nation's households.

Tomatoes, one of the latest upcoming industries of the Pelham section, constitute another Georgia crop which has proven the advisability of diversified farming in this state.

Besides the fruit, Georgians have been reaping an encouraging profit from the sale of plants in recent years. Expert inspection given plants have resulted in bids from over the nation and a recent news items told of Canada looking as far south as Georgia for plants.

Agricultural authorities have declared the state's land ideal for growth of the industry and that Georgia plants are superior to those grown in the hot houses of the North and Midwest.

An address by Governor Rivers and short talks by other prominent Georgians will feature the Pelham program. A beauty show, parade, and ball game also will provide entertainment for visitors.

Tomatoes in the near future may rank with peaches, tobacco, and melons as inspirations for festivals if they continue the pace set in recent years.

—Editorial, Macon Daily Telegraph.

## WHAT KIND OF SAFEGUARDS?

**More Facts About Government Control of Labels on Food Packages. This is the Second of Two Articles on Government on the Food Front.**

Honesty in labeling may be required in two ways: Negatively, in that whatever statements made on labels shall be truthful; positively, in that all the facts a buyer should know shall be stated. As we pointed out in the first installment of this article, the Department of Agriculture, in its control of meat labels, requires that labels honestly describe the contents of the can or package and be informative. It does not require that any quality grades shall be stated on labels.

Meat products described as "country" or "farm" must actually be made in the country or on the farm. If prepared in a factory, they must be described as "country-style" if prepared in the same way as country-processed meats. Philadelphia scrapple must actually be made in Philadelphia or called "Philadelphia style" scrapple. Pictures on labels must not lead consumers to expect something inside the can, bottle, or container which is not there.

"Fresh" on a United States inspected and passed label may be applied only to meats and meat products which have been neither preserved nor cured. "Ham" describes "pork hams." The use of words descriptive of meat products has been strictly defined by the Department of Agriculture and packers are required to use these words in the meaning of the Department. Consumers interested in these definitions may obtain them by writing to the Bureau of Animal Industry, Department of Agriculture, Washington, D. C.

Superlatives cannot be used indiscriminately. Words like "best" or "finest" may be used when qualified by the packer's name. A packer may not simply say "Best Bacon," he must say "John's Best Bacon." How John's Best Bacon compares with Jack's Best Bacon is for the consumer to decide.

Of course, each label must state plainly the weight of the contents of the package or can to which it is attached. Nor can the weight of non-edible preservatives be counted in determining the weight of the contents. For instance, the weight of the brine in which sausages are sometimes packed may not be regarded as part of the contents of the can in determining the weight of the contents. Weights also must be given in the largest possible unit. "Seventeen ounces" sounds like more than "one pound, one ounce." Labels, therefore, must read "one pound, one ounce," or "one pound, eight ounces," as the case may be, in order not to be misleading.

Brand names often confuse consumers, but not those carrying United States inspected and passed stamp. The right of the Department of Agriculture to forbid the use of misleading brands was upheld strongly by the United States Supreme Court decision in the case of Brougham versus the Blanton Manufacturing Co. The Blanton Manufacturing Co. had been engaged in the manufacture of a fat containing 30 per cent cream which it sold under the brand name of Creamo. Later, however, it stopped using cream in the manufacture of the fat, though it persisted in the use of the brand name. The Department of Agriculture sought to prevent the use of "Creamo" as a brand because it was misleading to consumers, since cream was no longer being used in the manufacture of the product. The case was carried to the Supreme Court and there, in a decision handed down on April 18, 1919, the right of the Department of Agriculture to forbid the use of misleading brand names was completely upheld.

All cans bearing United States inspected and passed labels are stamped with the number of the packing house where the product is made. Each United States inspected meat packing plant has a number. Thus, any package or canned meat product may be traced, if necessary, to the plant where it was processed.

Labels of imported products must, like domestic labels, conform to United States standards. Very often they are printed in foreign languages and use local, almost untranslatable words, but whatever the difficulties of translation, the same rigid standards of truth are enforced on them as on United States labels.

During 1936 the meat inspection service approved more than 21,000 labels of meats and meat products; 3,587 were disapproved. Reasons for rejection vary considerably, but a measure of the consumer protection afforded can be seen by listing some of the reasons: False statements regarding quantity, quality, origin of product, and in a number of cases, false statements regarding medicinal and curative properties of the products.

Required Government approval of labels on food products in advance of their sale stops here. Voluntary approval starts with the shrimp and poultry product packers. In order to secure Federal supervision of their plants these packers must agree to the regulation of their labels. Just as in the case of meats and meat products, the Federal inspection stamp on a shrimp or a poultry product certifies that the label describing it is truthful.

With these exceptions there is no other Government supervsion of labels on food products before the products appear on consumer markets. There is policing of labels after they appear on the market. In policing most labels the Government requires merely that the label shall not tell a lie. We will come later to those exceptions in which the Government requires that labels tell certain facts.

The Food and Drugs Act, which was enacted into law in 1906, together with the seven amendments to it adopted since that date, provides that a product is misbranded if its package or label contains statements, designs, or devices which are false and misleading. Violations of the law carry penalties all the way from forfeiture of the goods to fine and imprisonment.

Compare this with the label regulations under the Meat Inspection Act. There, no label may be used at all until it has the prior approval of the Department of Agriculture. Under the Food and Drug Administration the statements on the label are regulated in advance only by the manufacturer's discretion. Of course, if he violates the law he is likely to be prosecuted, but to establish in court that he violated the law it must be proved that he told an untruth on the label. He does not violate the law if, for instance, he simply refrains from telling the truth. Under the Meat Inspection Act the Department of Agriculture may require that a label not only be truthful but that it also be informative. With certain exceptions, the Food and Drugs Act does not require that a label give any relevant information to the consumer.

When products contain certain drugs or alcohol, the processor is required to note their presence on the label, and the amount or proportion.

Simple, unmixed foods cannot be sold under fanciful or "trick" names. The same is true of drugs described in the United States Pharmacopoeia of the National Formulary, which are authoritative compilations of recognized drugs and drug compounds.

Consumers should underline the fact that this applies only to simple unmixed foods and drugs. A drug or food that is a mixture may be sold under a brand or label which gives no indication of its contents.

Many foods have been defined for Food and Drug Administration, and butter is the only food which has been defined by law. These definitions serve as standards of identity, and only incidentally, imperfectly, and a few instances, as to minimum standards of quality. Under the McNary-Maps Amendment to the Food and Drugs Act, the Department of Agriculture has established minimum standards of quality for certain canned foods. Canned foods falling below this minimum standard must have this fact noted plainly on their labels.

Actual food content of a package is next in importance to the consumer. Here, too, the Food and Drugs Act requires that the manufacturer state plainly on the label the contents, in terms of net weight or other suitable units, of the food in the container.

Size of the container, however, sometimes influences consumers more than the actual weight of its contents. Consumers looking at shelves are impressed by the size of a can but learn later on opening the can that it is only partly filled. To prevent such deception the Department of Agriculture has issued, under the McNary-Mapes Amendment, regulations governing the fill of certain canned foods. These regulations prescribe the maximum amount of empty space in a can, and the maximum amount of liquid packing medium, such as brine or oil or water, that may be used. Such regulations now apply to all canned foods, as defined in the McNary-Mapes Amendment, either through general or special minimum fill of container standards.

Labels and brands, of course, are not the whole concern of the Food and Drug Act. The act also seeks to protect consumers by preventing adulteration, the addition of poisonous or harmful ingredients to foods and drugs, and the use of filthy, decomposed, or putrid ingredients. Bright colors in foods today present little hazard to consumers but manufacturers of food dyes voluntarily submit samples of color batches for testing by Food and Drug Administration chemists before they market their dyes. Safe dyes receive a certification of a consumer guarantee of purity that shows on the container.

Effectiveness of consumer protection under Federal Food and Drug Act is implemented by similar protective work of State and municipal agencies within their jurisdictional limits. Often where limited funds and personnel make adequate enforcement difficult the Federal agency is enabled to stamp out specific hazards by enlisting the cooperation of other agencies.

A-B-C grading or other consumer guides to quality are not required by Federal law for any food product. Consumers may, however procure at their grocery stores, if they demand them, many food products that have been graded for quality according to standards set by the United States Department of Agriculture.

Under the authority of the Farm Product Inspection Act the Department of Agriculture's Bureau of Agricultural Economics maintains a grading service for the use of producers, packers, and distributors of certain food products. These standards were intended originally to help producers, industry, and trade come to a common understanding of the quality of the community they were trading in, and to enable farmers to borrow money on crops stored in licensed warehouses.

Today consumers as well as farmers recognize the importance of official standards and grades. Consumers can now purchase in many markets individual pieces or packages of meats and meat products, dairy products, canned fruits and vegetables, and poultry, each of which bears the mark of a Government standard of quality.

### CORNING RADISH GROWERS MAKE FIRST SHIPMENT

Corning, April 23.—The first shipment of radishes from here this season was sent out last night. Two more cars were loaded today.

## FREAK PIG BORN WITH TWO BODIES

Adrian, Ga., May 18—A freak pig was displayed in town this week by Homer Youngblood, who lives near Adrian. The pig had two perfectly formed bodies, each body with four feet, but they were joined at the neck, with one head.

There were two ears in the usual place and on top of the head was another set of ears.

The pig, which was well developed, lived only a short time and is on display at the office of the vocational instructor, O. L. Hayden, who preserved it in formaldehyde.

### HOW ARE YOU DOING?

IN A COUNTRY as complex as ours, doing millions of different jobs, turning out millions of different articles, and spending money in millions of ways, it is difficult to see at a glance how we are failing.

To consumers, and therefore to the country, one signpost is more important than any other. It is the one that tells us whether we have arrived at the road of **increasing purchasing power.** That is the only goal that means real prosperity for all of us.

Dollar bills in themselves cannot satisfy hunger or thirst, keep us warm or cool us off, carry us to distant places or bring things to us. Money is important only in terms of what it will buy. Along with more money must come more goods, better quality goods, and progressively decreasing prices, so that more consumers can buy the goods they need, so that all consumers can buy more goods, so that the demand for these goods will keep mills and factories and shops busy, so that busy industry and trade can keep on employing workers and paying them decent wages. If profits grow too fast, if wages do not grow fast enough, if jobs do not increase enough, if lower costs of production do not get passed along in lower prices, trouble is sure to come.

### WASHING PILLOWS IS EASY PROVIDED RIGHT METHOD IS FOLLOWED

"Have you a summer pillow problem staring you in the face? Then don't let it worry you," advises Miss Frances Weedman, home economics expert. Washing pillows is no trouble at all when you have an electric washing machine and a rotary drier to do a first-rate job for you. Pillows come out clean and fluffy, pillow-cases bright and rejuvenated, provided you go at it the right way.

"First, be sure to pick out a clear, sunshiny day. Preparations are simple. Soft water or water softened with borax or ammonia is important for penetrating and loosening dirt particles in the ticking." Miss Weedman explains. "For washing, use very sudsy lukewarm water 90 degrees to 100 degrees), dissolving the soap flakes in hot water before hand.

"Starting with the agitated soak'—a real boom to the housewife—you may complete the task in four short steps. This means washing the pillows 8 to 10 minutes in the washing machine to remove surface dirt and thus eliminate pre-soaking. A small slit in the end of the pillow will keep it from floating after being put into the tub. Feathers may be poured into muslin sacks and washed separately from the ticking, but it is just as easy to wash the whole pillow in the washer.

"So gentle is the motion of the rotary drier that most of the water is easily extracted from the pillow, and two pillows may be washed at a time. Then put the pillows through another suds for five minutes and extract water again. Three rinsings in the washing machine with a turn in the rotary drier between each rinse will do the trick," Miss Weedman declares. "Pin the case firmly to the clothesline by one end, shake occasionally, and reverse to hasten drying. You may wash as many as ten pillows in an afternoon without feeling tired, and wash and iron pillow-case, too."

Ironing the pillow-cases, or ticking, presents no difficulties to the housewife with an electric ironer. With an increased ironing surface the modern ironer covers 2,736 square inches per minute and may be operated while she is comfortably seated.

"If the pillow-cases have ruffles, or pleats, at the edge," Miss Weedman concludes, "iron these details first at the open end of the ironer. Then guide the body of the cover through the roller. Snap the covers over the pillows, and they will look fresh and new.

### GREEN CABBAGE HAS PINK HEART WITHIN

WASHINGTON—A pink-hearted type of cabbage has been grown from stock imported from Turkestan, at the experiment station of the U. S. Department of Agriculture, at Beltsville, Md., Dr. Roy Magruder reports in the current issue of Science.

The heads are green outside. As the leaves are stripped off, the inner ones are first the usual cabbage-white or cream color. Then varying from a half-inch to three inches in diameter, there is an inner heart around the terminal bud, of pale pink or magneta color.

Dr. Magruder is sending the seed stock of this new cabbage type to Dr. C. H. Myers of Cornell University, who will continue the breeding experiments.

### EPSOM SALT IS GOOD IN KILLING HOPPERS

By Science Service

NORMAN, Okla.,—Epsom salt may find large-scale use this summer if the expected outbreak of grasshoppers reached its predicted magnitude. For this chemical, a bitter medicine to reluctant human palates, is even worse for grasshoppers—it kills them.

Discovery of the usefulness of Epsom salt as a grasshopper poison is reported in the current issue of Science by Hubert W. Frings and Mable S. Frings of the University of Oklahoma. They have compared the standard arsenic-poisoned bran bait prepared with epsom salt, and find the latter to be quite as effective, cheaper to make, and safer to prepare and use.

Their formula is: Bran, 60-65 per cent; molasses, 15 per cent; magnesium sulphate (epsom salt). 20-25 per cent and enough water to moisten.

Spread on the ground where the young grasshoppers are crawling—watch them turn up their toes.

### PASTURE GAVE FINE RESULTS

**Five Acres of Crimson Clover Grazed All Farm's Stock**

Crimson clover will furnish more grazing per acre than any other winter legume that has ever been grown in the Ozark region, according to Tom Clark of Maysville, in Benton county.

In the fall of 1935, Mr. Clark planted a five-acre block adjacent to his barn to Crimson clover for winter and early spring pasture. He got a good stand and it furnished considerable pasture until the dry weather set in early in the spring of 1936, related P. R. Corley, Benton county agent.

"The field was pastured heavily during the spring and summer of 1936 and it looked like there was such a small growth left that it would not be possible for it to reseed itself, says the county agent. "However, Mr. Clark found that it had made some seed, so in early September of 1936 he went into the field with a tandum disk and covered what seed had been produced that summer. A short time after the ground was disked, a perfect stand was in evidence. Mr. Clark pastured it some with his dairy cows and hogs all during the winter.

"When the warm weather opened about April 1 this spring, the clover began growing so fast that all the livestock on the farm was turned on the five-acre pasture. All during April the five acres pastured 34 head of cattle, 32 mature hogs, 30 pigs, and two horses. None of the livestock had anything to eat except what they got from the pasture. But even with the heavy grazing, it made a very satisfactory growth and will continue to furnish pasture for the amount of livestock on it throughout May, Mr. Clark believed.

"Judging from his experience, Mr. Clark said it is impossible to pasture Crimson clover so heavily that it will not produce seed enough to reestablish a stand. He also said that it starts growing the earliest in the spring of any plant he has had on his farm, and will grow on almost any type of soil."

### BOMBS, PLANE USED IN WAR AGAINST CROW

That well-known cornfield robber, Mr. Crow, is going to need all his cunning. War has been declared against him, and the battle front extends pretty well across the country.

In Nebraska, 75 men with shotguns got into a plane and swooped down on a crow roost near Columbus. There was a grand crashing of the 12-gauges, and thousands of crows were killed.

For the protection of game birds, the Indiana Department of Conservation is putting on its annual crow-slaying contest.

In Illinois, Iowa, Oklahoma and other states, the crow roosts are being bombed, with a large resulting slaughter of these canny pirates of the air.

Oklahoma farmers, suffering heavy damage from crows, pleaded with game wardens to do something about it. They said the crows followed the planters in the fields, digging up the seed grain. Game wardens went after the crows, and over 200,000 were reported to have been killed before they ran out of bombs. Farmers used the carcases for fertilizer.

**Two Bounties Collected**

Oklahoma game wardens say that state has more crows than any other.

In one Kansas county, $800 of bounty was paid out on crow heads in a few days. Then, as the story is reported, it was discovered that another bounty was being collected on the feet of the same crows in Oklahoma.

Much effort has been given to putting the crow on tables, as a game bird. A Kansas farmer caught a number of them and fattened them on milk for the annual crow dinner of the Izaak Walton League, at Wichita. The guest of honor was Dr. J. W. Stallings, Tulsa, Okla., who originated the idea of eating crows.

A St. Louis restaurant has been

advertising in the newspapers, "Enjoy Our Crow Dinners."

The U. S. Biological Survey has issued a bulletin on how to cook young rooks, or crows. Some call them "prairie squab."

## GIANT PINE SAWED INTO 3,330 FEET

**Americus**, Ga., May 20.—An unusual lumber yield is reported by Shiver Lumber Company, whose sawmill plant is located on Coker street in Americus. One single giant pine manufactured into high grade lumber there Tuesday of this week produced 3,330 feet of timber.

This timber, if sold at retail for $35 a thousand feet, would bring the seller $116.55. The sale price at the mill, of course, would be much lower than this figure.

The average log sawn into timber at the Shiver mill is estimated to produce 400 feet of lumber. The price paid for the giant log by the manufacturer was not learned.

## LIVE-AT-HOME PLAN EXTENDED TO BROOMS

Last year, Mrs. C. B. Bodkins, member of the Mount Zion home demonstration club near Marianna, virtually grew her own brooms, according to Miss Trannye Odum, home demonstration agent.

Mrs. Bodkins grew six rows of broom corn, the demonstration agent explained. In the fall a neighbor worked the corn into brooms for half the brooms. From her share of 13 brooms, Mrs. Bodkins sold six for $3, keeping seven for home use.

## SPICES

Both pepper and salt have had a romantic and bloody history. Nations have gone to war over salt mines and pepper vines. The gentler spice, paprika, which, because of its flaming color, we use to garnish food as much as we do to season it, does not have such an adventurous past. It is a product of a plant grown exclusively in Spain and Hungary. The highest grade of paprika, made from selected pods of the dried ripe fruits of **Capsicum annum** from which the placentae, stalks, and stems have been removed, is known as Hungarian Rosenpaprika. Olive oil is sometimes added to paprika to heighten its color. It has no other purpose. A paprika label declaring "olive oil added" means that the color of the product has been produced in part by added oil. Paprika should be kept in a dark place, as its color fades if it is exposed to light for any length of time. Also, if kept too long it may develop a slightly rancid odor due to the decomposition of the fixed oil it contains.

Allspice, much in demand in every household during the canning season, is the nearly ripe dried fruit of the pimiento tree. It is also known as pimiento and Jamaica pepper, but it is popularly called allspice because its flavor is said to resemble a mixture of clove, cinnamon, and nutmeg. Though native to Jamaica, which exports the greatest amount, it is grown in other countries. A cheaper spice than the clove, it resembles the clove in its reddish-brown color and small nail-like shape.

The fragrant clove is a dried flower bud of an evergreen tree of the Myrtle family cultivated in the Molucca Islands, Guiana, Ceylon, India, Zanzibar, and the East and West Indies. Cloves of good quality are plump, bright reddish brown in color, and when pressed will readily exude oil. Exhausted cloves are shriveled and dark in color. The common way of adulterating cloves in the past was by mixing exhausted cloves and clove stems, which have very little spice value, with cloves of good quality. According to Food and Drug standards, a product labeled cloves should not contain more than 5 percent stems. In Persia, centuries ago, cloves were an important ingredient in love potions. Today they are used in many places to make perfume in imitation of carnations, and the vanillin in clove is used to manufacture imitation of vanilla extract. In the kitchen the clove has numerous uses. It is a favorite seasoning used in baking ham, and it enhances the flavor of many pickles, ketchups, and preserved fruits.

Capers, commonly used in Europe but rather rare in the average American kitchen, is a flower spice, coming from a shrub which is native to the countries bordering the Mediterranean. In lands where it is cultivated for a culinary use, the buds are picked daily during June and July and kept in the dark for 3 or 4 hours and then are pickled in vinegar. Capers are small, somewhat four-angled in shape and are dark greenish brown in color, mottled with bright green.

Dried leaves of many shrubs and trees are used to give a distinctive tang to food. Bay leaves used to flavor fish, soups, custards, and puddings, come from the sweet laurel plant whose leaves were gathered by the Greeks and Romans for wreaths of victory. French cooks, famed for their use of bouquets—a mixture of sweet herbs—consider a bay leaf an essential part of their spice combination.

Dried leaves of the common garden sage, which grows in southern Europe, is a spice popularly used with meats and dressings. Austrian sage, known as Dalmatian, is considered the best quality. Next in quality is the French, then Italian, then Greek. In buying sage you will usually find the word Dalmatian, French, or Italian on the label.

Thyme and marjoram are two seasonings which the mint family contribute to the pantry shelf. Dried leaves and the flowering tops of these plants are used to flavor many sauces and soups.

Seeds of plants as well as their flowers and leaves are used as condiments to make eating more than a humdrum necessity. The most important ingredient of the prepared mustard which we spread on our hot dogs is flour made from ground mustard seeds which comes from an annual herb which grows in both Europe and America. The seed has a large amount of volatile oil but unlike most spices it demands a liquid to bring out its flavor. Many people prefer to make their own mustard, and buy mustard flour and mix it with water, vinegar, or milk immediately before use. In mixing mustard, tepid or cold but never hot liquid should be used. There are 2 types of mustard seeds in common use, known as black or brown and white or yellow mustard. The paste we use on our meats is usually made from a mixture of both—black for aroma and white for pungency.

Nutmeg and mace are both products of the nutmeg tree native to the East Indian Archipelago. Nutmeg is the dried, hard seed, and mace, which is retailed in powder form, is made from grinding the coating surrounding the nutmeg. The flavors of the two are quite different. Mace is added to sauces for fish, to pickles, and to ketchup. It is said to have a "smooth" flavor. Nutmeg is a favorite spice for sweet dishes, such as custard. It also gives a filip to eggnogs, ales, and punch. There are two general varieties of mace, known as East Indian and West Indian mace. West Indian mace which is commonly used is light yellow in color. Many spice connoisseurs, however, prefer the darker East Indian mace which they think has a superior flavor. Each consumer can judge for herself by sampling the two varieties.

Nutmegs are sold whole or in powder form. Normal nutmegs should be well rounded and symmetrical and brown in color. "Shrivels," or nutmegs that arrive in this country more or less shriveled, are often used for the powdered product. Ground nutmeg varies in value according to appearance and color. Good sound nutmegs will produce a light-brown grind, while a dark grind is often an indication that the spice has been processed from imperfect seeds.

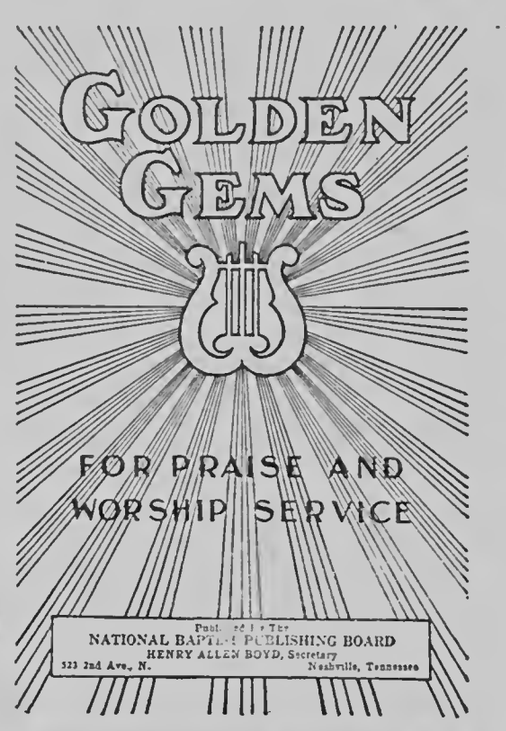
Cinnamon, used in so many holiday dishes that it is often called the "joy spice," is the bark of either the cinnamon or cassia tree. True cinnamon of the finest quality, is the dried bark of the young branches of a small tree cultivated chiefly in Ceylon. The thin pieces of bark when scraped and dried curl into quill-like rolls and are usually orange yellow with wavy lines of lighter color. Different varieties of cinnamon have different flavors varying from the mild, delicate flavor of Ceylon cinnamon to the strong and pungent flavor of the Saigon cinnamon. The quality of cinnamon depends on the amount and flavor of oil in the bark.

China cinnamon which is darker and coarser than the Ceylon, Batavia, or Saigon spice, has a smaller amount of essential oil, and is often practically flavorless. Though you will often see a product labeled Ceylon, Batavia, or Saigon cinnamon, you will seldom find the trade mark China cinnamon. Usually it will be marked merely "cinnamon." Though high-grade cinnamons cost more they give the best results. Cinnamon should always be kept in a well-closed container.

Ginger, one of the earliest-known spices, mentioned in Sanskrit literature and in the Talmud, is the root of an herb cultivated in tropical countries. Jamaica ginger, grown in the West Indies, is the best quality. Though Canton, China, makes a specialty of exporting ginger preserved in a sugar syrup, most ginger comes to this country in the dried state. In the trade the rhizomes, or underground stems of the ginger plant used for spice, are often called "hands" because of their somewhat palmate shape. To prepare the ginger for market the outer coating of the "hands" is removed, then they are washed and dried in the sun—and often as a protection against mildew they are "bleached" or coated with lime. Both the irregularly shaped pieces of ginger and the powdered ginger vary in color from light yellow to brown. The best quality gingers usually are of the lighter shades and when a piece is broken, the edges have a starchy, fibrous, resinous appearance. At one time ginger was used for spicing wine. Today it is the main ingredient of the English ginger beer and our ginger ale. It also adds zest to many courses of a dinner from soup to dessert.

Preliminary estimate of the total number of pounds of spices imported into the United States during 1936 is 141,898,046—valued at $12,526,555. Black unground pepper led all other spices, the estimated total being 69,345,389 pounds.

OUR NEWEST AND MOST POPULAR SONG BOOK



Contains such Popular Songs as:

*He is Coming Soon* — *Is He Yours*
*Singing as We Go* — *Only Give Me Jesus*
*He's My Everything* — *Over in the Glory Land*
*He Understands,* — *The Unseen King*
*He'll say well Done* — *I'm Out on the Battle-field*
*Gospel Waves*

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

## HELPING THE FARMER BY GRASS-ROOTS SCIENCE

By Dr. Frank Thone

Roots loom large in our national consciousness nowadays. Floods, soil erosion, and the lowering threat of chocking storms swirling out of the West's "dust bowl," have made even city folk apostles of the plant-more-grass movement. We all want to see the myriad cords of roots holding fast the slipping soil that is riches if it stays where it belongs, ruin if it does not.

Yet, paradoxically, we know very little about this subject that has become so important to us. Botanical scientists have for centuries centered their studies on the over-ground parts of plants, and have left the roots in muddy darkness.

This neglect of roots has been a serious error. Roots do an important and indispensable share of every higher plant's life work: they get the all-necesssary water, along with the all-necessary mineral nutrients from the soil, and they anchor the plant in place. Sometimes also they store reserve food.

Out on the Canadian prairies, at the University of Saskatchewan, there is a plant scientist who is actively doing something about roots. He knows more about where roots actually go than any man who has ever lived for he is the first man who has ever taken the trouble to remove all the sail from a whole root system, grain by grain, and chart the roots, inch by inch, as he has come to them. He is a real grass-roots botanist.

His name is T. K. Pavlychenko. He is a native of Ukrainia, but he has for several years been a Canadian citizen. He is attached to the faculty of the University of Saskatchewan, at Saskatoon, in the capacity of "weed experimentalist."

The whole thing started because of weeds. Farmers on the fertile plains of Saskatchewan were increasingly troubled with several particularly persistent and pestiferious weed species. The authorities at the experiment station of the province, located at Saskatoon, decided to attack the advancing enemy with all the weapons of science.

Among the most troublesome weeds of the Saskatchewan plains were several species of wild mustard and even worse than these, wild oats.

These weeds, in turn, can be routed by two or three species of range grass, especially one brought in from western Asia, known as crested wheat grass.

To Pavlychenko fell the task of finding out exactly how the roots of each weed and crop plant behaved, both when grown alone with plenty of space both above and under ground and when grown side by side with a competing plant.

He went about the job thoroughly. He planted seeds of each kind, both separately and within competing range of other plants. At four different times during the first growing season, and with perennial plants twice more during the following year, he took out a sample plant of each kind, lifting with each plant a solid block of soil contining its entire root system.

With a "brush" of fine water-jets he removed every particle of soil, charting the position of every root as he did so. Late, in flat tanks in the laboratory, he measured every inch of every root. How laborious this job was may be guessed from the fact that some of the root systems of full-grown plants had main roots and branches summing up to two and three hundred miles.

To get at a root system involves plenty of hard labor.

First, Mr. Pavlychenko digs a trench clear around the plant he is going to study, leaving a block of soil big enough to hold all the roots. If it is a big clump of crested wheat grass, for example, the block is four feet square and seven or eight feet deep.

The next step is to enclose the pillar in a sectional case or framework, made of stout two-inch lumber and steel rods. Once securely enclosed the soil mass is loosened at the bottom and tilted slowly over on its side. Then, with block and tackle, a couple of husky-backed young assistants haul the whole massive block up to the surface.

Here it is slid onto a platform mounted on trailer wheels, and removable sides are set up around it. Bolted tight, they form an oblong watertight tank. This is filled, and the soil mass is left to soak until it is soft through—perhaps a couple of days.

With this heavy-labor part of the job finished, the real work is ready to begin. All that earth has to be removed from around and among those infinite interwebbed roots, and yet not the smallest branch may be broken. No trowel, not even a toothpick, could meet those exacting requirements.

The only safe working tool is water, in fine, brush-like streams. Mr. Pavlychenko has devised such a water brush, a flat spray-nozzle with a valve to control the force of its fine streams.

Beginning at the bottom, working slowly toward the top, the water brush does its work. Inch by inch, as the roots appear, the scientist charts them on a big sheet of graph paper. After about two weeks, he has a complete map of the whole intricate root system.

Once the root system is clear of all foreign matter, it can be rolled up and packed away in a container of preservative to be taken out for further study when the long Saskatchewan winter comes, and not even the most enthusiastic grass-roots botanist can dig in the frozen soil.

The job of measuring up a big root system may take a month of winter laboratory time. The roots are laid out in natural position in a flat, shallow tank, painted black inside to set off the white of the roots to best advantage and strongly illuminated with a battery of eight 250-watt electric lamps.

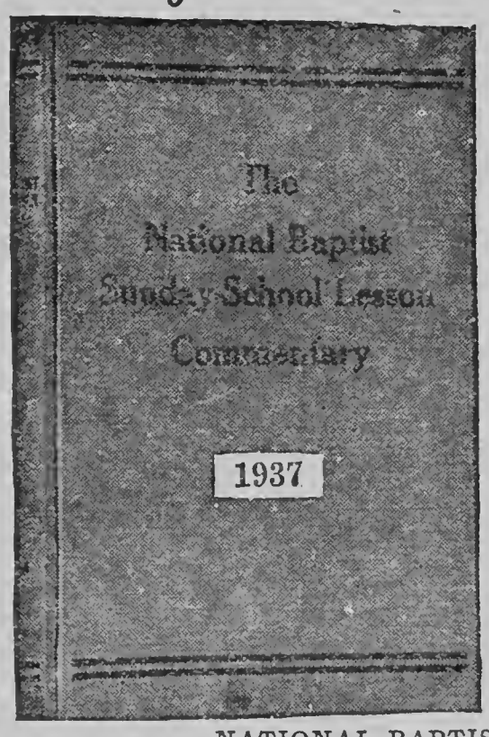
To take a big root system traveling, Mr. Pavlychenko has devised an ingenious traveling tank. It is as long as the root system is wide—some 40 inches. It has a tighly fitting lid, which can be sealed on.

The root system is first laid out flat in its tank with a wide sheet of oiled paper beneath it. The water is slowly drained away, letting the root settle flat on the paper. Preservative solution is sprayed or sprinkled on. Then the paper is rolled up, roots and all, beginning at the bottom.

The roll is gently lowered into the tank, which has a bulge built into its bottom, to accommodate the thick clump where roots and stems come together—the 'crown," botanists call it. Thus Mr. Pavlychenko's favorite crested wheat grass specimen traveled many hundreds of miles.

Mr. Pavlychenk is enthusiatic about crested wheat grass, as a plant for the Canadian West and for the northern Great Plains of the United States. It has practically all weeds licked from the first gong. It grows more roots, deeper roots, and grows them faster than any grass he has experimented with. And it holds soil with a tenacious grip.

# Sunday School Lesson Commentary



**1937**

**PRICE $1 PER SINGLE COPY**

**Six Reasons Why You Should Use It:**

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theories leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

## THE DAILY DIGEST SAYS:

### COOPERATIVE COLONY PLAN

Father Divine, Harlem cult leader, plans to take over the whole of Ulster County, New York, and make it into a model cooperative community, it was learned yesterday, say a New York Times report. The Divine Peace Mission Movement Plan already operates twenty-five farming and other enterprises in Ulster County. The plan, which is to be financed by the public, will set up enterprises against which local farmers and merchants are expected to compete because Father Divine's followers will work without cash wages—having been promised security and a higher standard of living than they could ever expect in the Harlem slums.

### HAY HARVESTER

"A new hay-making machine now on the market does away with pitchforks and perspiration, according to an announcement from the Wisconsin College of Agriculture. Driven by one man, the machine picks up the hay from the windrow, chops it, and throws it into a tight box. After the load is brought to the barn the chopped hay is dumped into a blower which throws it into the silo or mow". (New England Homestead, April 10).

### NORTH CAROLINA BERRY MEN CASH ON UNIFORM PACKS

The North Carolina Department of Agriculture reported this week that uniform packing of strawberries in the eastern part of the State this season raised the price to growers by about 30 percent. In packing experiments, key men in the strawberry section were asked to grade their berries, using not only United States and North Carolina standards, but trade and competitive standards as well. Citing examples of results, the Department said that one farmers received 80 cents a crate more for berries packed to competitive standards than for berries packed to "his own methods"; another, using Federal and State standards topped the market $3.50 a crate, or $1 above the average of the market.

### SHEEP FOR THE SOUTH

In an introductory paragraph, L. R. Neel in Southern Agriculturist (May) says: "The market will take more well developed and finished lambs from the South in April, May and June at profitable prices than our section is producing. Sheep are the best grazing animals of all of the domestic species, making use frequently of waste and surplus crops as well as turning to good use a portion of the land that is put in pasture and hay crops under our soil conservation program. The sheep is the one kind of livestock that can be grown successfully on pasture and forage without any grain whatever."

### NEW ENGLAND UNCOVERS BABY CHICK MAIL RACKET

A baby chick racket, consisting of the mailing of baby chicks to unknown persons, was recently uncovered in New England. New England postmasters received in the same mail letters from a mid-eastern hatchery advising that the chicks had been sent by mistake to the wrong State, and requesting that the postmasters advertise and dispose of the chicks at the best possible price, the proceeds to be sent to the hatchery. The Post

(CONTINUED ON PAGE 8)

## NEW ENGLAND UNCOVERS

(Continued from Page 7)

Office Department and Federal Trade Commission are investigating the practice.

## ELECTRIC FENCE

A fence to end all complaint against fences or dogs has been installed around the sheep pasture at the John Tarleton College farm near Stephenville, Texas, Bruce Bobo, herdman at the farm, reports. The fence consists of electrically charged wires, one close enough to the ground to keep dogs from crawling under, another high enough to keep them from jumping over and intervening wires close enough to prevent marauding animals from getting through. "With the number of lambs we have now," Mr. Bobo states, "it is much more economical to operate the fence than to have to take a loss on lambs killed by dogs." Other electric fences were installed at the farm early in the fall at the instigation of Oscar Frazier, professor of animal husbandry. (Dallas News, April 14.)

## CARBON DIOXIDE KEEPS STRAWBERRIES

"Added dollars for strawberry growers and sellers as well as brighter, firmer berries for the consumer, are advantages expected from a new carbon dioxide treatment which prolongs the salable life of the fruit," reports H. L. Harris, agricultural editor, University of Minnesota, in Country Gentleman (June). "A season's experiments by horticulturists and plant physiologists at the Minnesota Experiment Station have shown that this treatment keeps strawberries fresh from 24 to 48 hours longer. It slows down ripening and retards the mold which usually develops very rapidly when strawberries are removed from the refrigerator to retail shelves. Taste and digestibility of the fruit are not affected by the carbon dioxide when used as described. Very simple to apply, the treatment costs only about one cent for a 24-pint crate of strawberries. It reduces cold storage expenses and enables shipping fruit farther, since treated berries will keep better at 60 degrees F. than will untreated ones kept in cold storage at 48 degrees. Berries are treated from two to eight hours in an airtight chamber with a carbon dioxide concentration of 30 to 45 percent. One Minnesota fruitgrowers' association is considering the construction of both a stationary and gassing chamber and a portable one to be placed on a truck chassis for the benefit of its members. Treating the berries right in the truck will eliminate extra handling before taking them to market."

## GREENS IN THE SALAD BOWL

Cows cropping grass, and rabbits nibbling lettuce, have the edge on many humans in the matter of good diet. By nature they prefer what is good for them—the tenderest shoots and the greenest plants—while it may take a 10-year campaign waged by scientists to sell humans the idea of writing leafy vegetables large on the bill of fare.

By now we should not need a food expert to start us on the salad road to health. Taste alone recommends a dish of cool greens for summer days. Rub a wooden bowl with a clove of garlic, toss in crisp lettuce leaves, mix with oil, vinegar, pepper, and salt, and you have a hot-weather dish hard to beat. But there is no reason to pack away the salad bowl for the rest of the year. Vitamins and mineral salts stored in green things provide cheap health insurance during winter months. If you are training for a marathon or hoping to tip the scale at an additional 10 pounds, you won't find the necessary calories in salads. Keep to your beefsteaks and potatoes then. But for the body-building minerals, such as iron and calcium, salad plants are an essential. Thanks to improved methods of growing, refrigerating, and transporting, some form of this highly perishable food can put in an appearance at the dinner table every day of the year.

Most important of our salad crops is lettuce with its four types, the crisp head, the butterhead, cos or romaine, and leaf. Though its rise to popularity is recent, lettuce can trace its origin back hundreds of years to a plant carried from Europe to the Himalayas. It derives its name from the "Lactuca" of classical times, whose milky fluid served the Romans as freckle remover and sedative. In the seventeenth century Lettis won a reputation for cooling a "hot and fainting stomacke."

Crisp head lettuce is the reigning favorite in markets from coast to coast. A good representative of the crisp heads is the New York variety, with its compact, crumpled center of silvery leaves bedded in curling glossy-textured leaves of dark green. The grocer will probably sell you the New York under the name of Iceberg, for he uses the latter term loosely to designate several rather similar sorts of heading lettuce. The true Iceberg, much like New York, has a distinctive reddish-brown tinge along the outer edges of the center leaves.

Long the main commercial crop of western lettuce growers, the crisp head type has made its bow along the Atlantic seaboard. However, until a strain is developed to suit new growing conditions, Iceberg will probably not threaten the supremacy of butterhead lettuce in the East.

On its home ground in the East the butterhead holds its own. Smaller, softer than the Iceberg, the butterhead has straight-edged leaves of a rather coarse texture. It gains its name from its tender golden heart leaves. Not so handsome as its western rival, the butterhead makes up in flavor for what it lacks in looks. Of the several varieties—Big Boston, White Boston, Unrivaled, May King—Big Boston is the only one offering competition to Iceberg in the carload movement of lettuce and then only in limited areas. If you live in northeastern United States, look for an abudance of butterheads in the spring months.

Cos or romaine is another heading lettuce. This tall, thin member of the lettuce family comes to market by truck in the spring and fall. Its elongated head is composed of narrow leaves, bleaching from medium green at the outside to creamy white at the center. Thick midribs give the leaves a crunchy, full body, and flavor is rich.

Leaf lettuce makes a good showing at roadside stands during the spring and summer months. Market gardeners like to grow this plant because of its hardy nature, and greenhouse leaf lettuce still finds a ready sale in Pittsburgh, Cleveland and certain other eastern markets. But both the straight-edged, smooth-leaf type of leaf lettuce and the Grand Rapids variety with its wavy, tightly curled green leaves, are losing ground steadily to the heading lettuces.

Certain buying tips hold good whatever kind of lettuce. Lettuce should be fresh and crisp, with tender leaves. Dead or discolored spots on the outer leaves indicate decay. A few broken leaves will not affect quality, and the reddish color at the bruises is due to a natural change and is not a sign of decay. Avoid a head with touches of slimy rot. Sometimes a head with a well-developed seed stalk finds its way to market. This stem warns of an over-mature head that will be bitter. Even though such a stem has not burst through the leaves, it may be apparent as a swelling at the top or side of the head. An inquisitive thumb can detect this hard core within the leaves.

Should the family grumble about monotony in the salad menu, visit the large outdoor markets or poke about the small shops of the foreign sections for the chicory and endive beloved by the Latin race. These salad plants have an arresting, bitter tang that gives pleasing variation to the salad bowl.

Chicory serves a twofold purpose. Its roots may go into your morning cup of coffee as an adulterant; tops, into salad making. Witloof is the most popular of the chicory varieties, its crisp white heads making a delicious winter salad. The method of growing is this: The Witloof chicory roots first put forth broad green leaves. These leaves are cut off and the roots buried under 8 inches of sand. The weight of this covering keep solid the second growth of foliage that now pushes up. Blanched white by their protection from the sun, these closely folded leaves look somewhat like celery stalks. They have a finer texture, however, and a sharper flavor. If the grocer doesn't know what you mean by Witloof chicory, ask for Belgian or French endive, since these names are used interchangeably.

Endive has two types little resembling each other. The springing, curley green leaves of such varieties as Giant Fringed dress up a salad bowl to advantage. These come to many markets the year round. The second type—the broad-leaved Batavian endive of the South—is shipped north in fall and winter under the name of escarole. Because escarole leaves in their green state are unpleasantly bitter, they are generally blanched to improve flavor. For this purpose, farmers cover the plants with boards or tie the leaves together to exclude light. The result—a product much like Witloof chicory, with a flavor strong enough to be interesting but not so bitter as to be unpleasant.

Watercress takes first place for piquancy. Even the Babylonians, it is believed, cultivated this plant with its round dark-green leaves and succulent stalks. Watercress thrives in ponds fed from limestone springs such as are found in Virginia and Maryland. On certain hills of the Ozarks lush patches of deep green follow the courses of innumerable small streams. These are watercress beds, so placed as to receive a constant supply of clear water. Exeept in freezing winter weather, when plants are flooded to protect them from cold, farmers can gather and ship the tips of the stems.

As with all green vegetables, the color sign applies to the salad crops. That is, the greenest leaves provide the most vitamins. Watercress, a deep rich green, runs through practically the whole vitamin alphabet with its A, B, C, G content. Leaf lettuce has these same vitamins. A hearts-of-lettuce salad may be extremely decorative, but a good share of the vitamin value went into the discard when harvester, packer, and retailer stripped off the wrapper leaves. These heavy, prosaic leaves supply Vitamins A and G, to supplement the B and C content of the fragile inner leaves.

Though the unusual salad crops are prized by connoisseurs, these endives and chicories play a small part in the commercial growing of salad greens. Lettuce is the kingpin of salad crops. It made up about 75 percent of the greens unloaded in the New York City markets in 1936. Elsewhere the percentage would be higher, for New York City lies in the heart of a farming region that makes a point of supplying the less-known greens that are demanded by the city's huge foreign population. No production figures are available for these minor crops. With lettuce it is a different story, for in the United States lettuce has stepped into second place among vegetables in point of farm value.

Figures tell the story of lettuce in the last 10 years. Land devoted to commercial lettuce growing stepped up from 105,500 acres in 1926 to 167,000 in 7936—an increase of more than 60 percent. In 1936 production hit a peak of more than 21,800,000 crates—showing a 75-percent expansion since 1926. Total farm value climbed from $28,000,000 in 1926 to $31,800,000, 10 years later.

Of the 14 States growing lettuce commercially, California has swung far into the lead, credited with 65 of every 100 crates of lettuce produced in the United States. Arizona comes in a poor second with 18 out of every 100. Washington runs third, squeezing New York into fourth place with her 3 out of every 100 crates. States east of the Mississippi raise less than 10 percent of the lettuce crop.

To find what States produce lettuce and when, follow mild weather around the map. The temperate winters of the Imperial Valley of California, Arizona, and southern Florida assure a supply of winter lettuce; central California and the greater part of the Atlantic coast region provide a spring and fall crop; summer lettuce flourishes in the high altitudes of Colorado, Idaho, and the Great Lakes section. This means that lettuce belongs to the all-year vegetable calendar.

Lettuce makes exacting demands wherever grown and by whatever method. It requires good soil rich in organic matter, sufficient water, plenty of fertilizer, a large amount of hand labor, an even temperature, and protection from its worst enemy—excessive heat. Even after the heads have been cut, they call for special care until they are delivered to the customer's doorstep.

In California lettuce is planted on raised beds about 3 to 5 feet wide. Irrigation ditches separate the beds. Tractors prepare the land, plowing, harrowing, and leveling soil in one operation. A tractor-drawn seeding sled shapes the beds and plants the seeds. Crews of men thin out the young plants when they are an inch or two in height. After that the crop grows quickly to maturity. Usually a lettuce head is well grown in anywhere from 90 to 120 days.

At harvest time trailers laden with baskets move down the rows so that cutters can toss the lettuce heads into the containers. These go to packing houses where trimmers, graders, and packers set to work. Into paper-lined crates packers put layers of lettuce heads, sprinkling finely crushed ice between every two layers. Lidders and labelers speed the crate on its way to the refrigerator car which is spotted on a siding. Here men blow snow ice over the car to keep the load in as good condition as possible on its journey—a journey lasting sometimes as many as 10 days.

This business of transporting and refrigerating a perishable comodity, and one of considerable bulk for its value, is partly responsible for the spread between prices paid by the consumer and the prices received by the lettuce growers for their labor. Even more responsible is the elaborate service that the consumer demands from the retailer. He will not accept any but the freshest heads of lettuce, and he wants to be able to make his choice from a large variety of quality and size. Then, too country shipper and city wholesaler expect a margin of profit for their services in getting the lettuce head from the farm to the consumer's table. In 1936, 64 cents of every consumer dollar spent for lettuce went to distribution costs; 36 cents went to the farmer himself.

On account or periodic overproduction of lettuce, markets have been frequently oversupplied. The result has been that prices to farmers have sometimes dropped below-cost levels. Even from day to day, prices seesaw. This is not surprising, for shippers act independently, and whenever they hear the supplies are low in any particular city, they rush consignments to that market irrespective of how many of their competitors are doing likewise.

In an effort to guarantee the grower a fair return in 1934 lettuce growers hand handlers in six counties of western Washington adopted a marketing agreement under the Agricultural Adjustment Act. Colorado followed suit in 1935. The marketing agreement plan is intended to regulate daily shipments of lettuce to market so that growers will not suffer from over-supplying the market, and yet consumers will be assured of a regular supply at a reasonable price. What the ultimate effects of such control will be is a matter of speculation.

Unless weather turns temperamental, you should find plenty of lettuce on the market this month. Estimates say that annual lettuce production this year is about 18 percent above average.

## 45 CARS OF RADISHES SHIPPED FROM HEMPSTEAD

**Hope, April 23.—Forty-five carloads of radishes have been shipped from Hempstead county this year. Emmet led all shipping points with 23, carloads. Belvins and Hope are other leading shipping points.**

# THE MODERN FARMER

Vol X. NASHVILLE, TENN., JULY 15, 1937 No. 6

# Erosion Declared Country's Racketeer No. 1; Huge Losses On Farms

**By R. P. Bartholmew**

(Associate Agronomist, Arkansas College of Agriculture.)

Compared with the annual toll taken by erosion, America's No. 1 racketeer, all the gambles and swindles which fleece the nation of so much money come in the "small fry" class.

The annual tribute exacted by erosion in the valley of the Arkansas river is estimated at $46,000,000. Another $41,000,000 gouge is made in the Red River valley each year.

When these estimates are added to those of other streams draining the central part of the United States, the total loss becomes staggering.

If farmers in the area drained by the Mississippi river and its tributaries had to buy back all of the fertility washed past New Orleans each year it would cost more than $4,500,000,000.

They would have to buy back 4,000,000,000 tons of nitrate, a like amount of muriate of potash, 1,000,000 tons of phosphate, 70,000,000 tons of limestone, and 7,000,000 tons of sulphur.

This loss goes on every year, but that is not the whole story. If erosion took only the soluable materials from our farms, it would be serious enough; but in addition, it is washing away the farms.

The amount of sediment carried into the Gulf of Mexico annually represents a loss of six inches of soil from 343,000 fertile acres.

Erosion is not something new; it has always been with us. However, when unmolested, nature has more or less controlled erosion by the use of trees and grasses.

### Long-Time Plan Needed

While Arkansas farm people are realizing that something must be done to conserve moisture and soil, as shown by the extensive cooperation in the AAA's agricultural conservation program, we have not progressed far enough. There is need for this program or a similar one from a soil and moisture conservation standpoint over a period of time.

The seriousness of the situation in this state is made clear by the facts obtained in a soil survey of several Arkansas counties last summer, by the college of agriculture.

As an example, Faulkner county, typical of central Arkansas, has about two-thirds of the county in cultivation, and only 10 per cent of the total cultivated acreage classified as being too step for cultivation. Putting it another way, that 10 per cent should have never been cleared of its timber.

Three-fourths of the cultivated land in Faulkner was classified as moderately eroded. A little more than one-third of the county is covered with forests which is one of nature's way of preventing erosion. However, the practice of burning off has resulted in only one-fifth of that county's forest area being free of erosion. Two-fifths of the forest land was classified as being severely eroded.

(CONTINUED ON PAGE 4)

# Plan Is Made For Gardens of Great Tropical Charm

## PEST MAY BE DESTRUCTIVE IF NEGLECTED

### Severe Outbreak in '36 Halted by Immediate Poisoning

Arkansas cotton growers are warned by Dwight Isely, entomologist of the state college of agriculture, to keep a close lookout for cotton leafworm from now until late August.

"While the cotton leafworm is one of the easiest insects to control by dusting infested cottor plants with calcium arsenate, it frequently causes extensive injury and crop loss, because farmers are taken by surprise and are unprepared," said Mr. Isely.

The leafworm is a native of the tropics and does not pass winter in the United States, the specialist explained. It is the larva of a strong-flying moth which migrates northward into the cotton belt every year and deposits eggs on the foliage of the cotton plants.

How much destruction this pest will do depends on the earliness of its appearance, and whether the numbers are large enough to strip the leaves from the plants, Mr. Isely continued. If it does not occur before September, the loss is usually small, he said, adding:

"There have been four outbreaks of statewide proportions in Arkansas during the 15 years up to 1936. The years of general outbreak were 1923, 1930, 1935 and 1936.

"During two years, 1928 and 1932, there was no injury, and during the other years there was local, but not statewide injury, with severe injury in some counties.

"During eight of the last 15 years cotton leafworms were first recorded in Arkansas between July 15 and July 25. Twice it was recorded earlier, once as early as July 8. Three times it was observed in August.

"On this basis, it is advisable for farmers to be on the lookout now for leafworms.

The advantage of preparedness in combating leafworm outbreak were illustrated by Mr. Isely in comparing the 1935 and 1936 outbreaks:

"In 1935, little attention was given to the occurrence of leafworm until serious damage began to appear. Then it was discovered that the stocks of calcium arsenate in the state were low.

"Substitutes were used and considerable stripping of cotton occurred before the worms could be controlled. The prices paid for insecticides in the rush of buying were higher than normal.

"In 1936, the outbreak appeared earlier than in 1935, was more widespread, and potentially more destructive. But because preparation

## YOUR FOOD SUPPLIES

### Cantaloupes and Tomatoes Occupy the Spotlight

Cantaloupes and tomatoes occupy the spotlight in the June fruit and vegetable calendar. June also marks the opening of the season for blackberries, raspberries, apricots, peaches and plums.

Unseasonal advances in prices of fresh fruits and vegetables were primarily responsible for the 1 percent rise in average retail food costs from April 13 to May 18. Prices of dairy products were slightly lower and eggs—normally rising in price at this time—moved down sharply during the month. But these declines were offset by the marked advance in fresh fruits and vegetables and moderate increases in meat and bread costs. This third consecutive jump in bread prices carried the price to its highest level since 1930, with the exception of December 1935, when there was a processing tax on wheat, and bread prices reached the same level as is now reported in the United States average.

Retail food costs in general have gone up almost every month since last November and are at their highest level since January 1931. Costs now are 8.3 percent higher than a year ago, but the increase is due primarily to an 18.6 percent jump in fruit and vegetable prices. The smaller advances over May 1936 in other food groups are: Eggs, 3.6 percent cereals and bakery prodcts, 4.9 percent; fats and oils, and dairy products, 6.4 percent; and meats, 7 percent. On May 18 the index of costs as reported by the Bureau of Labor Statistics stood at 86.5 of the 1923-25 average compared with 62.5 on May 15, 1933, and 102.4 on May 15, 1929.

Unfavorable weather delayed maturity of vegetable crops about 2 weeks, reduced production of early varieties, and helped to raise prices. Short supplies of quality apples and California Valencia oranges boosted fruit prices. Unusually heavy production pushed down egg prices to their lowest level of the year.

Unless meat prices advance materially, there is a good possibility that food costs in general may decline slightly this summer. Fruit, vegetable, and poultry prices probably will go down, while only slight increases are in prospect for eggs and butter. No further sharp advances in bread prices are anticipated. Beef prices are the major uncertainty in meats. Lamb prices probably will go down while hog prices most likely will move up. But the extent of the price change in each of these groups remains uncertain.

Cantaloupe season swings fully under way in June. Most June melons come from California, where a crop

## CONSUMER'S STAKES CITED

### What is Sent up in Smoke By Tobacco Users

Press a button on a cigarette case and a single cigarette pops out; a button, a catch, and a spring do the trick. A far more impressive performance is the delivery in 1 year of more than 150 billion cigarettes, 37 million pounds of snuff, and 4 1-2 billion cigars.

More than a button, a spring, a catch, and a gadget are required to move this vast quantity of tobacco from grower to users. It takes 422 thousand farmers to produce all tobacco grown in the United States. It takes 87 thousand persons to process that part of domestically used portion of the more than 1 billion pounds of tobacco raised on 1½ million acres. Fifteen and a half thousand persons are engaged in the wholesale distribution of tobacco. In 1929 more than 33 thousand tobacco stores supplying tobacco users with tobacco dotted the streets of American cities. In addition, hundreds of thousands of drug stores, grocery stores, depots, department stores act as dispensers of these important consumer goods. In fact, almost every economic facility in the country devotes some of its time to tobacco. As much as 20 percent of all the money paid to the Federal Treasury in a year has come from excise taxes on tobacco. The tobacco industry is no pipe dream. The value of its products at the factory ranked seventh among all industries in 1930. Smoke realities today are major economic realities.

Twenty-six major types of tobacco are raised in the United States, each type the distinctive product of a particular region. Tobacco experts Virginia sun-cured tobacco is as different from burley as horses from apples. Tobacco derives its distinctive characteristics from its environment, soil, climate and method of cultivation. Dark fire-cured tobaccos, used chiefly in snuff, are grown in Virginia, Tennessee, and southern Kentucky. The Maryland variety, distinguished for its ever burn, is mixed with other tobacco for use in cigarettes. Most important cigarette tobacco is the bright-yellow leaf tobacco, known as flue-cured, grown in Virginia, Georgia, and North and South Carolina. Cream-colored burley tobacco is grown in Kentucky and nearby States. Light in color and mild in taste, it, too, is an important ingredient of many cigarettes. Cigar tobacco comes from Pennsylvania, Ohio, Connecticut, Massachusetts, Wisconsin, and Minnesota.

Producing tobacco is a back-breaking, highly technical, and expensive task. The plant is delicate and fragile, susceptible to many diseases,

## NATURAL HAMMOCK LAND TO BE UTILIZED

### St. Augustine Record Gives Interesting Facts About Florida Normal

The Negro was introduced to this country through St. Augustine, and today it is in St. Augustine that he is receiving the finest in educational advantages, through the work of Professor N. W. Collier of the Florida Normal and Industrial Institute. The program of the Institute is going hand in hand with the principles of the St. Augustine Historical Restoration, for there has been developed at the Institute a plan for a great constructive project in the development of a Tropical Garden, which promises to become famous, if the original idea can be carried out. The plan for this has been developed by Dr. H. J. Stockman, graduate landscape engineer of the University of Ghent, Belgium. The plan is picturesque and colorful, including two and a half miles of winding canals and lakes navigable for small boats and gondolas, which will be propelled by students acting as guides and serenading the visitors with old Negro songs as the boat glides through this tropical beauty. As a focal point in the system of canal, there exists a small island which according to the plan will serve as an out-of-door theatre, where choruses of more than 500 students will sing their old-time Negro spirituals.

The plan also calls for five-and-a-half miles of hard-surfaced roadway, three-and-a-half miles of walks suitable for pedestrains and wheel chairs.

One of the most colorful aspects of this project as planned will be the rehabilitation of the old Hanson slave quarters, known as one of the oldest and largest slave plantations in Florida. The present site was once a sugar plantation, owned by Colonel John M. Hanson, who came to Florida from New England to engage in the Indian Wars and who afterward became one of the largest slave owners in the state. It is possible that some of the boys and girls who study today at the Normal Institute are descendants of those slaves who once toiled as bondsmen in the sugar-cane fields.

Some of the facts connected with the place and its one-time owner are colored with romance. Colonel Hanson's brother was a staunch abolitionist and his home just outside of Boston was one of the stations of the Underground Railway in Fugitive Slave Law days, while down here in Florida the Colonel was holding the Negro as chattel. Today, the granddaughter of the abolitionist brother is a winter

# NEWS AT A GLANCE

(By Albert G. Barnett for ANP)

New Orleans—Six white men—all trappers—were given their liberty on bonds last week despite the fact they had been indicted for the murder of Levi Green, 30, and also charged with the shooting of Geo. Ford, 66-year-old Spanish War veteran. Their bonds totaled $39,000. One of the men indicted—Game Warden Sherwood Larkin—won his release on bail the day following the murder.

Detroit—His body wracked with pain from a rheumatic ailment, Alexander A. Curry believed a gypsy who visited his home, told him his pain would vanish if he gave her his valuables—totaling $815—to put beneath his pillow so he could sleep on them. He did, she put the money in a handkerchief, blessed it— places something under his pillow, departed. Next morning Sufferer Curry searched frantically over, under, alongside his bed—found his money, valuable, everything gone—but his rheumatism, which grew worse with the passing moments.

Columbus, Ohio—Last Sunday morning, after arising in the best of health to face a busy day, including presentation of his quartet at newly remodeled St. Paul A.M.E. church, Roy Smith, civic and business leader, and head of the Mortuary bearing his name, collapsed suddenly at his home, died a short time later of apoplexy.

Philadelphia—Venerable Prelate William Henry Heard, 86, Bishop of the First Episcopal District, A. M. E. Church, (New Jersey, New York, New England States and Pennsylvania), is retired to private life with honors and econiums, by the Church's Bench of Bishops, meeting at Memphis. Born in Georgia, elevated to the Bishopric 29 years ago, Bishop Heard also won distinction during President Cleveland's administration as Minister Resident and Consul General to Liberia. His successor: Bishop D. H. Sims.

Pittsburgh—Rivaling the fortitude of Columbia, S. C.'s Quarryman, H. D. Thomas, who was hit on the head by a rock falling 90 feet said "it itches"—Pittsburgh's Fred Tetter, 38, last Monday was hit by a Pittsburgh and Erie train, knocked out and rushed by sympathizing onlookers to Homestead Hospital, where a close examination disclosed no broken bones. A few minutes later Stouted-hearted Tetter walked unassisted to his home.

Cleveland, Ohio—Last Saturday afternoon as he and his small companion, Arnold Clemons, were piloting a homemade raft across the Cleveland Builders Pool—75 feet deep—co-pilot Don Knowles is suddenly horrified as he sees his companion lose his balance and plunge, screaming, into the water—Don hastens to aid him, but his little friend, panic stricken, grasps his arm, pulls him into the deep waters of the quarry - - - Skilled swimmers rush to the rescue, save Don but are unable to reach his chum. Later, citizens at a mass meeting, decide to request company officials to drain the pool, thus remove it as a menace to the children of the district.

Richmond, Va.—In an effort to bring all unorganized tobacco workers in the Southeast into the CIO union, a mammoth mass meeting, preceded by a parade of 2,500 employes and sympathizers, was held last Wednesday at City Auditorium. Union organizers addresses the big gathering. Approximately 160 tobacco workers have been on strike since June 16.

Johannesburg, South Africa—the Health Committee of the Johannesburg City Council last week presented a plan for the lowcost housing of colored families at Coronation Township—the site already set aside for this purpose. To be built in four classes, about 800 units will be available for colored occupancy under the proposed plan.

London, Eng.—From his office here in West Kensington, Marcus Garvey, president general of the UNIA (Universal Negro Improvement Ass'n.), has issued an invitation to all members and friends of the organization to attend the regional conference, August 24-31, in Toronto, Can. The public mass meeting will be held on Aug. 24.

Los Angeles—Victory last Friday crowned their five-year struggle for recognition, when Red Cap Station Porters Federal Chartered Local No. 18329, signed the first collective agreement ever made by this class of workers with the Southern Pacific Railroad Co., and regulating hours of service, rate of pay and other working conditions. Commented C. R. Johnson, union official: "Red Caps are now recognized as an integral part of the railroad's personnel."

Washington, D. C.—Secretary of Commerce, Daniel C. Roper last week accepted the resignation of Urban League Executive Secretary Eugene Kinkle Jones as special adviser on Negro Affairs announced that the new Adviser will be famed Statistician Charles E. Hall, longtime (1900-1937) expert of the U. S. Sensus Bureau. Mr. Jones' reputed salary, $5,800 yearly; New Adviser Hall's salary unannounced.

Houston—During a heated argument last Tuesday with a young Mexican over use of the word "Nigger," James Lovett, 21, was shot and killed, the fracas ending with police holding night watchman J. L. Sanders, 65, white, as the gun wielder. Sanders' explanation: The young men started the argument in front of his house, he told them to stop, was cursed for his interference then angered, he shot Lovett. Police say he went inside his house, got the gun, then returned and shot the youth.

San Antonio—Stabbed in the back in a surprise attack on the street, Martin Jackson, 26, lies at Robert Green Hospital dangerously wounded, the knife blade having penetrated his lung, while police hold his wife, Annie Laura Jackson, 26, whom he names as his assailant. Jackson also shows physicians other scars, the result, he says, of wounds inflicted by his wife during their 5 years of married life.

Columbus, Ohio—Accused of contributing to the delinquency of minors, of conducting a "crime school" for small children and other morals charges, 'Rev.' O. A. Johnson, 43, self-styled spiritualist and alleged head of a "love cult" was sentenced to a year in the workhouse and fined $1,000 last Tuesday by Judge Clayton W. Rose in Domestic Relations Court. He was convicted on the delinquency charges, the others dismissed.

## Potato Problems

To what extent, Congress asked the Federal Trade Commission, are unfair, fraudulent, or injurious methods employed in the grading, warehousing, and distributing of farm products? To answer this question the Federal Trade Commission looked at the homely, friendly potato, dug into potato statistics, sent investigators into important potato markets, and now, in its report on Agricultural Income, the Federal Trade Commission presents its answer. This question was only one of many that Congress asked the Federal Trade Commission. The potato was only one of seven farm products studied by the Federal Trade Commission. For a discussion of the Agricultural Income Investigation as a whole readers should see the **Consumers' Guide** of May 17, 1937.

Background facts that help consumers to understand the findings of the Commission's report show potatoes are the world's champion farm crop. World average potato production per year from 1920 to 1930 was approximately 7 billion bushels. For these same years the total world wheat production was approximately 5 billion bushels annually. In the United States in 1935 the total farm value of potatoes produced ranked seventh among United States crops with a total of 209 million dollars. One-half of all United States farms raise potatoes each year, but only one-sixth, approximately 600,000, raise potatoes commercially. In 1935 United States farms produced 356 million bushels of potatoes.

Champion potato State in 1935 was Maine, which produced 11 of every 100 bushels of our homegrown potatoes. Next in importance was Minnesota with 8 out of every 100; then Michigan with 7; Pennsylvania, New York, and Wisconsin with 6; and Idaho with 5.

Potatoes are a year-round food, one year's crop overlapping another in its movement to market. Beginning with early potatoes from Florida in December, potatoes stream to consumers from Texas, Louisiana, Alabama, South Carolina, Georgia, and California. The source of potato supply moves steadily north with the summer sun until late in September potatoes begin to flow from the late-potato areas, flooding markets in October. While supplies of one year's crop come marketwards from storage houses in winter months, a new year's crop starts trooping to market from southern farms. Four out of every five potatoes produced come from Northern States; early and intermediate producing States supply the fifth.

Nearly 2 1-2 bushels per person go down the red lanes each year. Cheapest ordinarily in October and November, potatoes are usually most expensive in April and May when storage supplies are slim and supplies of new potatoes are not yet abundant. Because consumers as a whole do not change their potato-buying habits much over the years, when the supply of potatoes is short they usually pay very high prices.

Farmers' fortunes swing on the size of the crop and contrarily are usually highest when crops are small. A short potato crop will often produce a larger total income for growers than an abundant one. Low prices, although they stimulate consumers to buy a few more potatoes one year, also lead to reductions in potato acreages and consequently to much higher prices for consumers a year or two following.

To correct a situation brought about by ruinously abundant potato crops, growers already familiar with the benefits of the cotton and tobacco programs pressed for a similar potato program. The Potato Act of 1935 would have taxed all those potatoes marketed in excess of normal consumption needs of the country. Potatoes equal to the normal consumptive needs of the country would have been tax free. The act was not intended to affect the noncommercial grower of potatoes. However, before the act became effective it was repealed on February 10, 1936. Since that time Government efforts on behalf of the potato grower have been confined to the purchase of surplus potatoes for relief distribution and to informal guidance in an effort to eliminate ruinous price fluctuations.

Early potato problems in the South, the Federal Trade Commission points out, begin with potato planting. Potato farmers need anywhere from $70 to $125 in cash to finance each acre of potatoes. Many farmers borrow the money for seeds, fertilizer, labor, and containers from fertilizer companies, potato dealers, and production loan associations Usually they pay high interest rates and relinquish to these financial agencies and dealers the right to market their potatoes. Loan and interest are repaid by deductions from the proceeds of the sale of the farmer s potato crop.

Five kinds of organizations supply Southern potato farmers with credit. Production Credit Associations, organized under the Farm Credit Administration, lend some of the money, farm cooperatives lend a insignificant amount, while fertilizer manufacturers, banks, and potato dealers lend the rest. Cheapest and most democratic sources of credit are the Production Credit Associations which are managed by the farmers themselves, under the supervision of the United States Government. Unfortunately, the amount of money farmers may borrow from these associations is limited. In Charleston, S. C., the maximum loan per acre is $70. When this is not enough to finance the potato crop the farmer must borrow additional money from other agencies at high interest rates

Potato financing by one fertilizer manufacturer is described by an executive of a fertilizer company. In an interoffice memorandum this executive said, "The way we conduct our business is this. Through our agents we buy and furnish the farmers with his potato seeds, furnish him with his fertilizer, and furnish him with his barrels. We allow him a certain amount of his expenses for harvesting his potato crop. The crop is turned over to us and we market it. We deduct from the proceeds all that is owed us assuming there is enough to pay and if there is anything left we keep one-fourth of it and give the farmer three-fourths. Year in and year out if you are able to finance and operate this way you will stay ahead of the game and make money."

How costly this is to some farmers is evident from the letter mentioned above, fertilizer costing the company $18 was charged to the farmer's account at $28 and $30. Seed costing the fertilizer company $2.25 was charged to the farmer at $3.50. All supplies were marked up by this company anywhere from 50 to 75 percent. On top of these charges the farmer had to pay an additional 25 percent as interest.

Only 25 percent of the potato farmers in the South are able to finance themselves, a relatively small number of farmers are financed by Production Credit Associations, the remainder depend on fertilizer manufacturers or local dealers for financial aid. Farther north the percentage of farmers able to finance themselves increases, so does the number of farmers able to secure credit from Production Credit Associations, though even in Maine 10 percent of the potato farmers are financed by dealers.

Methods of potato marketing depend upon the type of potato financing. Farmers able to finance themselves sell their potatoes either to dealers in their farm community or to chain-store buying associations. Those living near large cities also sell their potatoes directly to retailers, sometimes at farmers' markets, sometimes to itinerant truckers to resell the potatoes from their trucks to retailers. Some potatoes are sold through farm cooperatives. However, most are sold to dealers who either purchase them for their own account or for resale to large city dealers known as carlot receivers. Chain-store marketing agencies which are important factors in the potato economy are discussed later in this article.

New and intermediate potatoes which are financed by dealers and fertilizer manufacturers are sold through them to carlot receivers in large cities. Carlot receivers in turn sell to produce wholesalers and jobbers who sell to retail grocers. Late crop potatoes from the Northern States are sold by the farmers directly to dealers, and, by farm cooperatives, to chain stores and carlot receivers.

After they are purchased from the farmer the spuds are shipped to cities usually by railroad, though on the eastern seaboard some go by water. Perhaps 25 percent of all potato shipments are moved by truck.

Transportation is an important component of potato prices. It has been estimated that one-third of the wholesale price of potatoes represents the cost of transportation alone exclusive of handling charges, either at the shipping or the receiving point. From 11 to 27 percent of the retail price of potatoes represents the cost of potato transportation.

Railroad transportation costs in some cases not only represent legitimate charges; they also represent the cost of certain dishonest practices. In the Midwest the Federal Trade Commission found that many potato dealers habitually made dishonest claims against the railroad for damage in transit. The interoffice correspondence of one potato dealer revealed excessive claims for damage which sometimes did not even occur, padded labor costs, and a special technique for making fraudulent claims. In some centers dealers refused to ship potatoes by railroads which did not pay excessive damage claims readily. Railroads, to retain their business, were forced to overlook the obvious fraudulence of many of the claims made against them. Fraudulent damage claims result in high freight rates, high consumer potato prices, and in unfair competitive advantages for dishonest potato dealers against their honest competitors.

Problems beset the potato wherever it goes. In a number of cities the physical arrangement of terminal markets has given rise to racketeering, useless handling of potatoes, and an excessively high final price to the consumer. In Boston, where the railroad terminal is also a market for potatoes, potatoes get to the consumer with very little hauling around and very few additional charges, but in New York and Chicago, where there are many terminals, many inefficient practices have become traditional; potatoes are hauled this way and that, piled here and there, shipped and trans-shipped, each movement adding another charge on the consumer's potato dollar.

Glaring example of potato mishandling in New York shows in shipments by water. Potatoes are unloaded at one pier, shipped across the river to New Jersey, then brought

(CONTINUED ON PAGE 15)

## C. I. O. Sparks

(By William Pickens for A. N. P.)

I am not talking about the speech which C. I. O. has been making through its "peaceful pickets," armed with baseball bats, brick bats, pieces of iron from junked automobiles and dynamite. I am referring to the speech of a suave "big shot," all dressed up and standing on the platform, smiling inordinately and trying to "explain" that he and Jesus are birds of a feather: that both of them were trying to help "the poor, the helpless and the oppressed."—I know something about speech-making, and although the C. I. O. leader who is president of the U. A. W. A., made a good fifteen minutes speech in an hour's time, he said some things well worth remembering, and uttered a good many platitudes and rehashed much of the old bunk,—which you can remember if you want to.

But we all agree with him in the following statements:

That white and colored workers can only rise together. (He could have deduced that they may also fall together). That where Negroes work in the majority there you will find as a rule lower and more dangerous working conditions. That the opposition always calls the leaders of those they are opposed to "bad men." that the general labor movement in America cannot ignore the great body of Negro labor.

Now for some of the bunk: The speaker spent most of his time trying to show that christianity and the Labor Movement are just alike. Of course, the Christian church is one of the worst jim-crowing institutions in modern civilization—but he perhaps was not referring to any likeness in that particular.

"In no single case has a Negro worker been discriminated against by the C. I. O." said the speaker, and we stuck our tongues in our left cheek. We had no facts to disprove it, but somehow we know that such a sweeping statement is always untrue in America. Of course the C. I. O. is young, but no institution dominated by American whites for a reasonable length of time, can claim such racial unconsciousness. Besides, we had already heard an unimpeachable colored man say that in Cleveland, O., they had tried to get the C. I. O. leaders to use their influence to get Negro workers on a job dominated by a C. I. O. union, and tried in vain. That is at least negative (but very effective) discrimination against "the colored brother."

"No discrimination whatsoever!" exclaimed the speaker. We've heard that before, from the American Federation of Labor. Nice resolutions, laudable aim, but not yet a fact in the A. F. of L. We have also heard that same exclamation from American Communists, Socialists, Democrats, Republicans, and even from the employing class, and muchly from the New Deal. But we know what the situation actually is.

The speaker emphasized the "class" lines, the old fallacy of trying to prove that there is not any "race" line or race problem in America. Queer bunk: like trying to prove that fire is not fire, when any individual can test it out for himself.

"Colored and white workers sit together, converse together, work on committees together," but that's no achievement of C. I. O. They were doing that in Alabama coal and iron fields 35 years ago.

The Negro must not be swept off his feet: the poor devil is in such a "fix" in America that he grabs at any new thing as salvation, and often without precaution and restraint. Frankly, I dislike the brutality of the C. I. O. movement. Brutality is nothing for a minority people, like American Negroes to play with. If C. I. O. will use dynamite on whites whom they want to bully, they'll use something worse (maybe TNT) )on Negroes, when they get to the place where they want to bully Negroes.

There is no hope in the brutality of one section of labor against another. Cruelty, violence, lawbreaking are dangerous from whatever quarter they proceed. Even Roosevelt will find that out before it's all over.

---

Love is evidence of one's acquaintance with God, for God is love.

## Fatal Attack

Philadelphia —Tuesday morning when Dr. Maceo Morris, well known West Philadelphia physician, stopped at the home of a socially prominent Mrs. Rhetta Braswell, a widow, to escort her to Lincoln University's commencement, he received no response to the doorbell. Walking in he discovered Widow Braswell lying on her bed in a pool of blood—the victim of a hemmorhage. Physician Morris rushed her to Douglass Hospital, worked heroically to save her but she died the next morning without regaining consciousness.

## Federal Official Deplores Million Spent By Baptists

**Los Angeles,** July 15—(A. N. P.)—"Your people will spend one million dollars in cold cash in September for the National Baptist convention that is preparing to convene here," remarked last week the local federal investigator, who has charge of matters under the ruling of the interstate commerce commission. He made the above statement to Thomas Allen, the young aviator who four years ago made with the late Hermann Banning the 1st colored transcontinental flight from west to east. Continuing he said, "three fourths of that million will be spent right here in the city for lodging and other necessities and luxuries, but the quarter million will be spent in the various localities from which the visitors hail, in preparation for the trip. Of course the city will profit by it, but what will your race gain?" he asked.

Allen declared that the investigator seemed to scorn the idea of that much money being spent by a group of people merely for a religious gathering.

## Cleveland, Ohio Pastor Shot After Striking His Wife

**Cleveland,** Ohio, July 15—(A. N. P.)—The Rev. Mr. Norman E. James, 42, of 2325 East 63rd, pastor of downtown Mt. Nebo Baptist church, located on St. Clair at 23rd street, was shot and seriously wounded here Fourth of July allegedly by his pretty 30-year old wife, Mrs. Sally James, after he is reported to have struck her several times, through jealousy.

He was shot in his left hand and back with a .38 Nickle-plated Iver Johnson revolver.

According to police, Rev. and Mrs. James were celebrating at Garfield Park where a group of churches were sponsoring a picnic for the Fourth of July celebration. Rev. James became enraged when he discovered his wife in company with a strange man. He accused her of paying "too much attention' to him. A slight scene was started on the picnic grounds.

Wishing to avoid this humiliation, Mrs. James requested that they go home. They drove home in the family automobile where the argument became fervent. It was during the second dispute that the minister is said to have struck her several times.

According to the story told Sergeant Carl Rossback, she went to a bureau drawer and secured the revolver, firing twice at her husband. Friends rushed him to the family car and drove him to St. Vincent hospital. Mrs. James was arrested by Sergeant Rossback and charged with the crime.

Rev. James is a native of Memphis, Tenn., having come to Cleveland a number of years ago. Rev. James and his church were celebrating his first anniversary which has five days more before closing. There are no children.

## Board Aids Workers Pending Issuance Of Account Cards

The Bureau of Federal Old-Age Benefits today went to the aid of job-seeking workers who have lost their social security account cards and are awaiting the issuance of duplicates. Reports from many field offices, it was explained, have indicated the reluctance of some employers to put a man on the pay roll until he can produce his card.

To prevent, so far as possible, the temporary unemployment of a worker, the Bureau has prepared for distribution at all of its field offices where account numbers are being assigned, a form, which may be shown to the employer by the worker as evidence that he has applied for a new account number card.

The card, signed by the manager of the field office, states that the employee, "has filed an application for a duplicate social security account number card to replace the card previously issued to him," and adds that the duplicate card "is now in course of issue." Also printed on the card is the suggestion that the employee show the card to his employer.

Development of the Social Security Board's old-age benefits programs has resulted, it was said, in a number if minor changes in procedure designed to facilitate the assignment of social security account numbers. To all field offices, which have taken over from the Post Office Department the task of assigning account numbers, there have been sent instructions designed to make as simple as possible the procedure which workers must follow in obtaining their numbers.

One reminder was that account numbers will be issued even to those who do not know where or when they were born or their parents' names. In such cases, it was explained, the workers' application should be supplemented by evidence such as a signed photograph, an orphanage record, or other indication of identity. Additional information, it was added, should be obtained whenever possible in order to facilitate the approval of claims for benefits.

## Push Drive For Wiley College

Longview, Texas, July 15 (ANP)—A group of seven Longview citizens, headed by Henry L. Foster, vice chairman, are members of the sponsoring committee of the Wiley College Permanent Endowment Fund which is seeking to match a Rockefeller gift of $115,000, still available from the General Education Board, it was announced this week by Frank H. West, secretary of the M. E. Church board of education and B. G. Alexander of Knoxville, Tenn., who are assisting the work of organization.

M. J. Holmes, education board secretary, pointed out that Wiley College, in Marshall, Texas, is recognized as a class "A" school by the Association of Colleges and Secondary Schools of the Southern States. Dr. M. W. Dogan is the president.

## Wartrace, Bedford County

An outstanding event of the season for Wartrace Community was the family Reunion held Friday evening July 16, 1937 at the beautiful country home of Mr. and Mrs. George Streater, Sr., one and a half miles out from Wartrace on Fairfield highway. The reunion was a connection of three prominent families—Irwins, Streaters, Jones.

With guests seated on the beautiful lawn, they enjoyed the cool atmospheric breezes, and the reflection of the clear moonlight perfected the scene.

There was a full evening of pleasure for every one. A melodious orchestra serenaded throughout the evening. At the appointed hour the guests were invited into the home, received in the dining room by Mrs. Thomas Jones of Culpepper, Va., and Mrs. Leola Jones Sims of New York City who were hostesses for the evening. Served in Buffet style, there was plenty of fresh river (hot fried fish with all the dainties and drinks of the season. Those who enjoyed this occasion were:

Mr. and Mrs. Thomas Jones, Culpepper, Va.; Mrs. Leola Jones Sims, New York City, N. Y.; Mr. Edward E. Jones, New York City; Mr. L. J. Jones, New York City; Dr. and Mrs. R. L. Suggs, Shelbyville, Tenn.; Misses Mary Washington Gray, Minnie Whitaker, Shelbyville, Tennessee. From Wartrace and community: Mr. and Mrs. George Streater, Sr.; Mr. and Mrs. George Streater, Jr.; Mr. and Mrs. Edd Irwin; Mr. and Mrs. George Irwin; Mr. and Mrs. Scott and family; Mr. and Mrs. B. Layne and daughter.

## Mississippi Still Threatens To Hang White Killer

**Clarksdale,** Miss., July 22—(ANP)—William Clark Mitchell, 55 year old white World war veteran who burned a Negro father and son to death in a robbery, Tuesday lost his appeal for a new hearing on his mental condition before Circuit Court Judge J. M. Kuykendall at Coffeeville and was again sentenced to be hanged. The date is Aug. 30.

For the torch murder of Louis and Coot Bryant in Yalobusha county during 1932, Mitchell has been sentenced six times to die and has been saved five times. The state supreme court upheld his death sentence and the governor refused to intervene after the slayer was found sane in an examination by state doctors, but his life was saved through a writ of error coram nobis issued on the ground that questions of his sanity had not been properly brought before the court.

Gaddis Williams, white, state commander of Disabled Veterans of the World war, declared after the hearing Tuesday that he believed Mitchell would escape the gallows since "we do not believe him sane." His attorneys announced a new appeal to the state supreme court.

There is considerable resentment in some circles against breaking precedent and hanging a white man for the murder of colored people

# TO REVEAL HOW POLICY BARONS JUGGLE NUMBERS

## Claim New York's Big Boys Devise Scheme to Get Bigger Take of Returns

New York, July 22—(CNA)—Sensational revelations on the policy racket, including an expose of the technique by which the bankers see to it that they always win. will be made at the trial of Dixie Davis, white attorney, it was indicated this week.

Davis, who was Dutch Schultz's lawyer, was named with eleven others in indictments returned here by Prosecutor Dewey's special grand jury. Alexander Pompez, Harlem numbers barons, who fled to Mexico several months ago, is one of the eleven indicted. Masjo Joseph Ison, one of Pompez' partners, has been held since January

Policy, or the numbers game, is so played that the bankers have a heavy percentage in their favor even when it is honest. But Dewey charges that the Schultz ring had a system to make sure that if any particular number was given an unsually heavy "play" by policy addicts, it would not win.

The pay-off in recent years has been on the basis of the final figures of pari-mutuel pay-offs in specified races at specified tracks. By having agents bet on the latest of the races in question, it was possible for the numbers barons to make any number they chose come out, Dewey asserts.

## Mitchell Appointee Out At Annapolis

Annapolis, Md., (C)—George Trivers, latest appointee of Congressman Mitchell at the Annapolis Naval Academy, resigned Tuesday. The Congressman, when told the news in Washington, was furious, and said he would go immediately to Annapolis to get the facts on the dismissal. The congressman admitted he had been told Trivers made no complaint about mistreatment, but said he realized he is unfit for naval service.

## Business League Program Set

Capahosic, Va., (C)—The program of the National Negro Business League was set here at the home of Dr. R. R. Moton last Wednesday, in a conference including Dr. C. C. Spaulding, A. L. Holsey, and Dr. Moton, the chief league officers. The meeting is scheduled for Aug. 18-20 in Atlanta, and topics for discussion are:

1. Breaking Through Employment Barriers in Non-Negro Enterprise.
2. Minimum Standards in Business Practice.
3. Cooperatives.
4. Selection and Preparation for Business Careers.
5. Consumer Attitudes Toward Negro Business.
6. Programs for Local Trade Associations.

Government officials from Washington have been invited. A special program of expansion for the Housewives League will be launched.

## Southern Youths Hold Interracial Meet In Florida

Jacksonville, Fla., July 15— (By Richardson for A N P)—Several hundred white and Negro young people gathered in a local church this week and heard suggestions for closer relationships and improved amity between the two races. The gathering was the Interracial, Interdenominational Youth Conference, sponsored by the Persbyterian Church and participated in by several local denominations.

Several local church leaders of importance took active part in the work of the session. Rev. F. B. Diggs, of the Negro Presbyterian Church, was responsible for much of the preparatory work, while others of the A. M. E., Methodist and other churches contributed greatly to the meeting's success.

One of the outstanding young people's addresses scheduled for the session was a talk on "Interracial Habits" by youthful Mildred Jacobs, leader of several lay movements in the M. E. Church.

## Reliefers Strike And Get Arrested

Washington, D. C., July 15 (By Daniel Chase for ANP)—The four relief stations here had trouble on their hands during the week following Commissioner Allen's refusal to hold hearings on a proposal to appropriate $4,291,000 for the needy of the district. Workers' Alliance Organizer Dixon said that one hundred and fifty persons are "sitting in" at the four relief stations here: 1355 Florida avenue, northwest; 2520 Pennsylvania avenue, northwest; First and I streets, southwest and 1428 U street, northwest.

Thirty men and women from Philadelphia protesting W. P. A. layoffs there were ushered bodily from the Works Project headquarters, after they had insisted upon seeing Administrator Harry L. Hopkins. They refused to leave. After having been forced out by the police, several claimed to have been very roughly handled.

Police broke up minor sit-in strikes staged as a protest against WPA reductions. David Dixon, head of the local alliance ordered 20 to 25 strikers to each of the four stations. At the southwest relief station, one person was arrested and charged with disorderly conduct.

---

"That horn doesn't blow, sir," said the friendly salesman.

"Wrap it up," said Uncle Tobias, thinking of his sweet little nephew. "That's the kind of a horn I want."

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

## EROSION DECLARED

(Continued from page 1)

The saddest part of the survey is told by the 13,000 acres of cultivated land which has become so severely eroded that it has been abandoned.

The answer to this state-wide problem is the use of certain practices, depending upon the individual farms. Generally speaking, the principle involved is, hold the water and you hold the soil.

The practices needed may include the use of soil binding grasses on sloping land too steep to cultivate, along with terraces on sharp slopes; contour farming that is, running the crop rows around the hill instead of up and down the hill; terraces in cultivated fields; crop rotations involving both winter cover crops and summer legumes; and strip cropping where advisible.

Thus far we have been concerned with the problem and its magnitude. In the final analysis we should be concerned with prevention by proper use of land. Simply, this means devoting land to the production it is best adapted to.

The abandonment of 13,000 aeres of land in Faulkner county because of severe erosion is the result of a system of land exploitation which eventually effects every citizen in Arkansas, since much of the abandoned land finally becomes state land through delinquent taxes.

In short the exploiter hands back to the state the land after he has exhausted its fertility and state lands yield no taxes. Indirectly, every citizen is effected through other forms of taxation devised to bolster the declining land tax income.

Every farmer in this state should be vitally concerned with erosion, its prevention, and finally proper land use—not land abuse.

## PESTS MAY BE RESTRUCTIVE IF NEGLECTED

(CONTINUED FROM PAGE 1)

had been made, little cotton foliage was lost, and the past was controlled."

## YOUR FOOD SUPPLIES

(Continued from Page 1)

much larger than last year is expected. Heaviest marketings from this area are due after the middle of the month. Light supplies in recent weeks have been due to late maturity of melons. Monthly increases in marketings are inprospect from now until August, when shipments usually reach, their peak. The trend in prices during this period ordinarily is downward.

Tomato marketings are expected to be close to their peak this month, and prices probably will go down. Ordinarily peak movement of tomatoes occurs in June. Since vegetable crops are maturing later than usual, heaviest shipments may come in early July. Supplies this June are estimated to be slightly larger than a year ago.

Snap and lima-beans marketings in June are expected to be larger than a year ago, but cucumber supplies probably will be slightly smaller. Cucumber marketings usually are at their peak during June. Snapbean shipments are slightly below their high point of the year. Unfavorable weather conditions, which reduced production of early maturing beans and cucumbers, were manly responsible for recent high price levels. The outlook is for lover prices for both commodities.

New potatoes marketings are unusually large. Production in the states shipping this month is much larger than a year ago and the largest on record.

## CONSUMER STAKES IN SMOKE

(Continued from Page 1)

and good tobacco is the result of unceasing attention by the grower. Tobacco growing begins in the early spring with the preparation of the secd beds. Seed beds are sterilized either by burning over or with steam, and generally are fertilized. Seeds are planted early in the spring under protective covers of a kind of cheese cloth. In late spring the plants are transplanted to fields where the tobacco is encouraged to grow as rapidly as possible. During the growing period the tobacco requires constant cultivation; tops are removed to prevent the growth of seeds, "suckers" are pulled off to conserve the plant's strength. Good tobacco comes from plants bearing from 10 to 20 leaves.

Tobacco is harvested by plucking the leaves off the plant as they ripen or by cutting down the entire plant. After harvesting, the tobacco is taken to barns, where it is hung up for curing.

Three methods are used in curing tobacco. Air-curing, a method by which no artifiicial heat is used; flue curing, by which the tobacco is cured with artificial heat but without smoke; and fire-curing, which is accomplished by heat and smoke. These methods are used for different kinds of tobacco. Air-cured tobacco, for instance, first becomes a deep yellow and then turns a reddish brown. Flue-cured is not permitted to turn brown at all, while fire-curred tobacco is often turned by an intense heat to a black or dark-green color.

After curing, the tobacco generally is packed into bulks where it is stored until marketing time. At the end of this period the bulks are pulled open and the tobacco is sorted into grades. Each grade is then tied into hands, or bunches, ready for marketing.

All of a year of back-breaking manual labor goes into the growing of tobacco for the market. At the end of this time the farmer sells his crop either at auction or on his farm to tobacco buyers who visit him. The tobacco is usually bought by manufacturers' agents or by middlemen who resell the product. Six percent of the tobacco produced in the United States is marketed through farmers' cooperatives.

Each buyer for the big processing companies buys for his own purposes according to his own system of grading. Although quality standards for tobacco set by the Federal Government are available, their use is not widespread. Because of this tobacco farmers sometimes receive less than they would receive if tobacco were sold by Government grades. Sharp-eyed speculators sometimes purchase badly assorted tobacco at less than its full market price, reassort it, and resell it the following day for a quick profit.

Tobacco is processed into snuff by pulverizing; into smoking tobacco by shredding or granulating; and into plug chewing tobacco by compressing. Methods of manufacture of these types have changed little since Sir Walter Raleigh "tooke a pipe of tobacco a little before he went to the scaffolde." Since that time, however, cigarettes have become by far the most important tobacco product. About 48 percent of the 775 million pounds of tobacco processed in the United States in 1933 went into making cigarettes. Sixty percent of the manufactured value of tobacco products, totaling 909 million dollars, represented the value of cigarettes. Cigarette tobacco is aged approximately 2 years. At the end of the aging period the hogsheads in which the tobacco was stored are pulled apart. The tobacco is placed in a cage which carries the leaves through a steam bath to make them moist and pliable and then to a stemming machine which separates the leaves from the stems. From there the tobacco goes to blending tables, where many varieties of tobacco are blended together in proportions to fit smokers' tastes. Leaves then pass through a cutter which slices them to shreds and to vast drums where the tobacco is sprayed with flavoring solutions.

After a 2-day rest the tobacco resumes its trip through the factory. first through screens and magnets to remove foreign substances, then onto an endless strip of white paper where it is rolled into cigarettes, pasted, cut into cigarette sizes into a weighing machine, packed, stamped with Federal Revenue stamp, and assembled into cartons. After the factory, cigarette history is much like that of any other commodity. The goods go to wholesalers, to chain stores, to retailers, and eventually over counters to consumers.

Tobacco distribution charted would look like an hourglass. The raw material originates on a vast number of small farms, goes to a much smaller number of tobacco middlemen, and then passing through the think neck of the hourglass, through the hands of a very few processors, and out again to wholesalers, to retailers and finally to its millions of consumers.

To this tobacco hourglass the Federal Trade Commission has devoted most of its study. Technically and mechanically, tobacco presents no problem that engineers and technicians cannot overcome, but economically grave problems have arisen in the tobacco industry. These problem of distribution, how to get alone. They are part of the great problemf of distribution, how to get products from the farmer to the consumer, how to get a fair price to the farmer for his work, how to get a fair wage to the workers in industry, and how to get the products of farm and factory distributed at a reasonable cost to consumers.

Failure to solve this problem is reflected in the income of farmers and processors. Both the manufactured value of tobacco products made in this country and the income of the growers of tobacco suffered during depression years, but they suffered unequally. Manufactured value dropped from $1,246,000,000 in 1929 to $1,155,000.000 in 1931 and $909,000,000 in 1933. Compare now the scrious collapse in income of tobacco growers, starting at $282,000,000 in 1929, falling off to $130,000,000 in 1931, and reaching its bottom level of $108.000,00 in 1932—a shrinkage of 62 percent from the 1929 level.

Correcting the unbalance which depression brought to tobacco farmers' share in consumers' dollars was Agriculture's adjustment program, not reported on by the Federal Trade Commission. Already in 1933 the income of these farmers reflected the gains brought by adjustment, inaugurated that year by AAA, first through marketing agreements and later through production control. That year it was $70,000,000 greater than in the lowest of the depression years, 1932. Further gains to $225,000,000 came in 1934 and close to $237,000,000 in 1935. In addition to this income from sales, tobacco farmers who cooperated in the AAA program received benefit payments which in 1933 totaled $16,000,000; in 1934, $31,000,000; and in 1935, $13,000,000.

In 1931, when tobacco on the farm was selling at its lowest price in many years, processors advanced the price of cigarettes. Though fewer cigarettes were sold, processors made more profit per cigarette sold. Net income of the three largest tobacco manufacturers in the United States was $95,000,000 in 1929. $109,000,000 in 1930, $119,000,000 in 1931. $112,000,000 in 1932, and $52,000,000 in 1933. Net income of 14 tobacco manufacturers, likewise, increased during the early depression years, from $113,000,000 in 1929 to $132,000,000 in 1930, to $140,000,000 in 1931. The drop started in 1932 when their income was $136,000,000, then $69,000,000 in 1933. Profits in the years following 1932 were affected by AAA processing taxes. Proceeds of these taxes went to farmers and helped to increase their income directly as well as to finance the program of tobacco production adjustment. These devices—processing taxes and production adjustment program—served to correct the unbalance between growers and manufacturers of tobacco.

Throughout the depression, from 1929 through 1934, the average yearly rate of return on the investment used in tobacco processing by the 14 largest companies was 16 percent. In the least profitable year, 1933, it averaged 10 percent of the investment in the business. During this period tobacco farmers are estimated to have suffered serious loses, two large tobacco chain stores had an average net loss of 1.37 per cent on the capital invested in their business, and tobacco wholesalers and jobbers received 4.4 percent on their business investment.

In seeking out reasons why these profits occur along with competition, the Commission invetsigated the control that each economic group in the tobacco industry exercised over the whole tobacco economy.

Simple numbers tell the story. Over 400,000 farmers produce all tobacco grown in this country. Of the 1934 crop, 13 tobacco manufacturers purchased 54 percent; 3 manufacturers purchased 46 percent; and 1 purchased 22 percent. Since 40 percent of the crop is exported, it is plain that 13 tobacco manufacturers dominate the purchase for domestic use of the harvests of 400,000 farmers. On the other hand, retail and wholesale distribution is almost as widely diffused as the production of tobacco. The six largest grocery chains sold only 8 percent, and the six drug and tobacco chains sold only 5 percent, of all cigarettes sold in the United States. At the neck of the tobacco hourglass 13 manufacturers have a tight grip on production and sales of practically all tobacco sold.

Concentration is even more startling when the record of specific tobacco products is examined. In 1934, three cigarette companies manufactured 80 percent of all United States cigarettes; three smoking-tobacco companies produced 65 percent of the smoking tobacco; three chewing tobacco manufacturers produced 69 percent of the chewing tobacco; and three snuff companies produced 95 percent of the snuff produced.

Cigars, unlike other tobacco products, are produced by a great number of separate companies, but there is evidence also of an increasing concentration in cigar manufacturers. The number of cigar factories declined from 17,000 in 1914 to 5,000 in 1934, while the average production per factory increased from 419,000 to 830,000 per factory.

No evidence of collusion in the control of prices was spotted in any of the branches of the tobacco industry, except snuff, by the Federal Trade Commission. Prices of the most popular cigarettes, the Federal Trade Commission discovered, usually moved up or down together. When any one of the big three companies changed the price of its cigarettes the other companies fell in line within a few hours. The history of whosale cigarette prices in recent years tells its own story.

Chief price competition which the largest three manufacturers have faced in recent years has been from the 10-cent package of cigarettes. When, in spite of declining prices which farmers received for tobacco, processors advanced the price of cigarettes in 1931 from $6.40 to $6.855 per thousand, several other

# OF 10,000 CONVERTS CALLED FOR BAPTISM, ONLY FOUR TAKE WATER

## Mistake Was Made in Choosing July 4 as Day for Rites on Long Island Sound

Oyster Bay, New York, July 15. (ANP)—What had been announced as the biggest mass baptism in history, with 10,000 candidates for the holy rites, turned out to be an ordinary immersion of four when only that number showed up July 4 to take the plunge. The Rev. W. C. Evans, pastor of Mt. Olive Baptist church, said he guessed it had been "poor judgment" to select a big holiday for the event.

The ceremony had been planned for some time with other churches on Long Island and in New York to hold the rites jointly. But July 4 brought other distractions and many parishioners, employed as domestic servants, had to remain on duty for parties or family dinners.

A crowd of about 1,000 gathered at the church, but these were already members. When the congregation reached the shore at Roosevelt Memorial park, on Long Island Sound, there were only four to be baptized, and these were all local youngsters aged from nine to fourteen years.

# SLATER AND JEANS FUNDS MERGED TO EFFECT ECOMOMY

## Notable Bodies are Spending Millions for Negro Education

New York, July 15—(ANP)—The John F. Slater Fund and the Anna T. Jeanes Fund, two of the oldest and most important foundations devoted to Negro education, have been merged into one body. The new organization is to be known as the Southern Education Foundation and has been incorporated under the New York state laws. Arthur D. Wright who maintains offices in Washington and who for five years has been administrator of both funds, since the retirement of Dr. James Hardy Dillard, is to be president of the Southern Foundation.

The Slater Fund was established in 1882 by John F. Slater, prominent New England textile mill owner. Its original endowment was $1,000,000 and Mr. Slater directed that it be used for the benefit of Negroes in the southern states. Its activities have been mainly in widening opportunities for college and high school education in the south.

Miss Anna T. Jeanes was a Philadelphia Quaker. Her gift to the cause of Negro education was $1,000,000 also and she directed that it be devoted to the development and assistance of small rural and community schools. It was established in 1907. The famed Jeanes School teachers which have performed so remarkably all over the south were supported by this fund. White and black southerners were identified with the work, Booker T. Washington, James Hardy Dillard, George Foster Peabody and Robert R. Moton having been potent influences. W. T. B. Williams, now of Tuskegee has long been field agent for the Jeanes Fund.

President Wright estimates that the two funds have expended between $7,000,000 and $10,000,000 in the cause of Negro education, having received monies from other foundations in addition to income from investments.

The merger was made, President Wright said, in order to simplify administration activities. The new board selected from the boards of the two funds includes:

A. W. Page- vice president of American Telephone and Telegraph company; Albert Shaw, editor of Review of Reviews; Leslie W. Snow, vice president of Chase National Bank of New York; C. Everett Bacon of Spencer Trask and Company, New York; William P. Few, president of Duke University; Warren Kearny of New Orleans, and James Hard, Charlottesville Va. Colored representatives on the board are Rev. Evarard W. Daniel. Detroit churchman, and Dr. Emmett J. Scott of Washington, D. C.

# LONE OFFICER OF TEXAS CHALLENGES MOB AND THEY RUN

Athens, Tex., July 15—(ANP)—Sheriff Jess Sweeten, unarmed, dispersed a mob of 100 men Monday night who sought to take out and lynch a 16-year-old boy charged with attempting to attack a 25-year-old white woman.

The would-be lynchers swarmed into the tiny jail lobby where the lad was held and disarmed a deputy. Sweeten, aroused by the noise, came out to confront the mob.

"Boys," he said calmly to the 100 armed men, "I've taken an oath to protect my prisoners and I'm going to do it. And if you try to take this Negro, I'll have to get rough."

"We'll be back," some one of the crowd shouted.

"There's no need to come back," Sweeten replied. "You're not going to get him."

Although he expressed on apprehension, the sheriff said he might take the prisoner to Dallas. Deputy sheriffs and state highway patrolmen stood armed guard over the jail while Sweeten was making up his mind.

## Wiley Lists 11 Football Games

Marshall, Tex., (C)—Wiley college has listed eleven football games for the coming season, which opens with a night game on Sept. 25 with Jarvis at Longview. Others on the schedule are Sam Houston, home, Oct. 1; Xavier, New Orleans, Oct. 9, Prairie View, Dallas, Oct. 18; Arkansas State, Pine Bluff, Oct. 30, Southern U., Shreveport, Nov. 1; Bishop, home, Nov. 6; Langston, Langston, Okla., Nov. 13; Texas college, home, Nov. 25; Philander Smith, Little Rock, Dec. 4, and Tuskegee, homecoming, Dec. 11.

## Armstrong Floors Blatch 10 Times

New York (C)—Henry Armstrong the sensational California lightweight, floored Alf Blatch, lightweight champion of Australia, ten times at the Madison Square Garden Thursday night, and was given a technical K.O. in the third round. About 11,000 people paid $11,500 to see the fight.

## White Doctor Of Louisiana Goes To Howard University

Washington, (C)—Dr. Raymond Leslie Gregory, of the faculty of the Louisiana State School of Medicine, New Orleans, has been named head of the Department of Medicine of Howard university.

# SPECIAL ADDRESSES TO BE DELIVERED AT TEACHERS' MEET

Philadelphia—(C) —Among special addresses listed for the 34th annual meeting of the National Association of Teachers in Colored Schools, to be held here July 27-30, with headquarters at the High School for Girls, 17th and Spring Garden streets, are "The Conservation of Talent—a Discussion of Gifted Students on the High School and College Levels," by Dr. Martin Jenkins of A. and T. College, Greensboro, N. C.; "The Philosophy Underlying the Education of Negroes," by Dr. Leslie P. Hill, president of Cheyney State Teachers College; "The Negro Child at Secondary and College Levels"; by Dr. Felton G. Clark, dean of Southern University, Baton Rouge, La.; "Social Services Protecting Talented Children," by Miss Vinita V. Lewis, assistant in Child Welfare Service, Department of Labor, Washington, D. C.; "Factors Determining the Approach to Individualized Instruction", by Dr. F. D. Patterson, of Tuskegee Institute; "Social Change and the Individual," by Dr. James H. E. Bossard, professor of Sociology, University of Pennsylvania; "How Can the Handicapped Child be Helped to Live as Effectively as Possible," by Dr. F. P. Kittrell, Dean of Bennett College, Greensboro, N. C.; "Recreation and Health Program," by E. T. Atwell, National Recreational Association, New York; "Some Problems of Social School Children" by Dr. Gladys G Ido, director of Special Education, Philadelphia; "Education and cadership," by Dr. Charles H. Wesley, head of the department of history, Howard University, Washington, D. C.

# LABOR LEADER IN TALK WARNS RACE TO BE CAREFUL

## Holds Independent Unions Are Now As Good As AFL Or CIO

Detroit, Mich., July 15—(ANP)—Negro workers were counseled to be wary of entering the imbroglio between the C. I. O. and the A. F. of L. by C. W. Rice, labor leader and a delegate to the N. A. A. C. P. annual conference here last week. Where large numbers of Negro workers are employed in industries they can best protect their jobs through their own independent unions according to Mr. Rice who is president and general manager of the Texas Negro Business and Laboring Men's Association and general organizer of the International Association of Railway Employers of Houston, Texas. The widely known Texas labor leader who is also publisher of the Negro Labor News, says that the American Federation of Labor has been too anti-Negro in its policies and practices for Negroes to join that organization without securing a reasonable guarantee of changes in its policies toward race workers. The C. I. O., he states, offers the best opportunity proffered for Negro and white workers to unite for a common cause, yet the C. I. O. is too young and controversial for the Negro workers to accept it as their only salvation for the protection of workers. Such movements have been started seven times before in America and failed.

"Under the Wagner Labor Act the independent union has as much power as any other bargaining agency if it represents the majority of workers in a given plant," he said.

Mr. Rice points out the fact that Negro workers are in the majority in many industries in the South. At Houston, Texas, he says, "Negroes constitute 70 percent of the laundry workers and yet this 70 percent is signing up with the A. F. of L. notwithstanding the fact that at the beginning of the depression white laundry workers circulated petitions asking that Negroes be replaced by white workers. At present two laundries do not employ Negroes at all.

"I think the Negro labor problem warrants the serious attention of race leaders in every walk of life," he concluded, "for the decision that Negro workers make now, will determine the economic and business progress that the race will make for years to come."

# IN THE "GOOD OLD DAYS" PAPERS CARRIED ADS THAT "WERE AWFUL"

## Chattanooga "Rebel" of 1862 Had a Classified Offering a Woman for Sale or Swap

Chattanooga, Tenn., July 15 (By Katie E. Johnson for ANP)—W. F. Ellis, connected with the Standard Oil Co., now residing in Birmingham, Ala., but a former resident of Chattanooga, is the possessor of a time-yellowed copy of the Chattanooga Rebel, Aug. 9, 1862, in which appears an advertisement offering to sell a Negro woman, or to swap her for a boy.

Published, according to the Civil War sheet, "on Main st., nearly opposite the postoffice," the Rebel also carries an army order dealing with the establishment of an encampment "for the rendezvous of state troops to be established in the viciniay of Chattanooga," declaring that volunteers would be received for 12 months, and the order signed by Isham G. Harris, governor, and W. C. Whitthorne, attorney-general.

The Rebel also printed the entire personnel of the Confederate States government, headed by Jefferson Davis, the president. Gustavo A. Henry and Landon G. Hayne were the Senators representing Tennessee. The conscription law was printed as was a Proclamation by President Abraham Lincoln, dealing with "An Act to suppress insurrection, to punish treason and bellion, to seize and confiscate the property of rebels and for other purposes." The Proclamation also warned citizens against aiding, countenancing, abetting the existing rebellion. Owner Ellis says the historic paper was given him by a guard on the Mexican border several years ago.

# NATIONAL BUSINESS LEAGUE LAYS PLANS FOR AUGUST MEET

Atlanta Ga., July 8—(ANP)—Albon L. Holsey, secretary National Negro Business League, made a recent trip to Atlanta to aid in planning details for the League's annual meeting here August 18-20 The secretary conferred with J. B Blayton, president Atlanta Negro Chamber of Commerce, J. O. Thomas, resident national officer and Arnett Lindsay, general chairman, committee on arrangements.

The six major topics suggested as the nucleus of this year's convention program are as follows: "Minimum standards in business practice; Preparation for business careers; Activities of local and affiliated organizations; the Housewives' League (Consumers' attitude); Consumers' Cooperative Movement and the Intergration of Negroes into Non-Negro Business Enterprises.

## Clarence Norris Is First Of Boys Called To Face "Alabama Justice"

Decatur, Ala., July 15 (ANP)—If everything goes according to the schedule of Judge W. W. ("Speed") Callahan, all of the remaining eight Scottsboro defendants will be tried in four weeks at the rate of one each Monday and another each Thursday. Heywood Patterson, the ninth, is under a 75-year sentence, received at a trial more than a year ago.

Clarence Norris and Charlie Weems, who are scheduled to be tried this week in that order, were arraigned last Monday before Judge Callahan and both pleaded not guilty. At the same time, the jurist overruled a motion by Defense Attorney Watts to transfer the case to federal court but said he would hear a motion for a change of venue.

Callahan drew a regular jury panel of 35 and a special venire of 65, the maxium permitted under the law, to try Norris and Weems. Although Samuel Leibowitz of New York, chief defense counsel, and Asst. Atty.-General Thomas F. Lawson were not present at the arraignment, both were to appear in court this week.

The two boys were brought here in a state convict department truck from the Jefferson County jail where they have spent most of the time since being arrested in March, 1931, on charges of attacking Victoria Price and Ruby Bates aboard a freight train on which all were hoboing.

## Dedicate Richmond's Maggie L. Walker High School

Richmond, Va., July 30 (ANP)—Robert C. Weaver, advisor on Negro affairs of the U. S. Department of Interior was the principal speaker Wednesday on the program marking the dedication of the Maggie L. Walker High school here, erected through cooperation of the city of Richmond with the Public Works Administration.

## Colored Mayor

Princeville, N. C.—For the fourth time, this town of 611 residents, 15 of whom are white—last week elected 29-year-old brown-skinned Glennie M. Mathewson as mayor, made him head of the Town's commission form of government. Mayor Mathewson's cabinet: Four Commissioners—Nathaniel Ricks, Jack Lloyd, John Bullock, Ben Tyson; City Treasurer, Lonnie Mooring (3rd term); Tax Collector, W. R. Mathewson (the Mayor's brother), and Town Clerk, Wm. Bridges, Jr.; Superintendent of Transportation, Paul Mooring; Chief of Police, Walter Barnes and City Patrolman, John H. Biggs.

## Woman, 110 Years Old, Still Works

Leonardtown, Md., July 8—(ANP)—The oldest colored citizen of St. Marys county and probably the oldest in the state is Aunt Dolly Carter, of St. Indigoes, who is shown to be 110 by relief records. She attributes her good health to hard work and works every day.

BUILDING

## A Cooperative Enterprise

### A Case History of one Group of Consumers who are Trying the Cooperative Route to Bigger and Better Larders

Household buyers, not unreasonably, want for their families a wholesome, well-balanced diet at reasonable prices. Buying guides, consumers' organizations, food laws are some of the devices to help individual buyers get this kind of diet. Consumers' cooperative, still relatively unimportant numerically, represent another kind of effort which consumers, as groups, are testing as a way to stretch food dollars and make them do full duty in getting the quantity and quality of foods which families with limited incomes need.

No easy solution to such consumer problems comes the cooperative route. Organization of a cooperative is itself a difficult job, but getting the machinery of cooperative business hitched up does not in itself guarantee higher quality food at lower cost. Before this can be achieved, cooperators. like private businessmen, must learn the minutiae of making a machine work, of gaging consumer demand, of knowing sources of supply, of buying wisely and selling efficiently, of keeping accurate accounts. To justify their existence cooperators must prove that they can do these things as well as, if not better than, private business, and withal keep the management of their affairs democratic.

In Washington, D. C., some blocks south of the wide-lawned Mall, which extends from the Capitol to the Lincoln Memorial, there is a cooperative grocery store. It does not pretend to have solved all of the problems which consumers' cooperatian poses; it claims only to be an approach by one group of consumers to the solution of their food problem. The informal history of this store which follows recounts its activity, its successes, its failures, and suggests some of the problems that other consumers must meet if they attempt to start consumers' cooperatives of their own in this difficult field.

Convenient to the wholesale section, the wharves and to Washington's open-air market, the Washington cooperative grocery store is admirably situated for the purchase of foods. But if it is in an excellent buying location it is far from the residential neighborhood where most of its cooperators live. That there is very little over-the-counter trade is evident in the store itself, which looks more like a wholesame grocery than one catering to consumers. Canned goods with their colorful labels fill the neatly made wooden shelves on one side of the store. On a stand against the opposite wall bushel baskets and burlap sacks are piled with vegetables. In the center of the store another wooden stand holds sacks of bulk foods such as sugar, beans, and gelatine, a white metal scoop in each sack. Cooperative brands predominate among the canned goods. Conspicuous, too, is the fact that canned goods are stocked in large sizes than appear in the usual grocery store. Most foods seems to come in 50-ounce cans.

The manager of the store, a young college graduate, is at a desk deep in cooperative bookkeeping with a typewriter and telephone at his elbow.

Rochdale Stores today have a weekly business of between $600 and $700. Two paid full-time workers a paid part-time worker, and 10 short-time volunteer workers run the store. Prospects are good enough now so that the store contemplates employing a professional store manager, moving to larger quarters, and expanding its business to take care of the demand for a wholesale cooperative grocery distributor in Washington.

Today Rochdale Stores have a tradition and a history. Fifteen months ago it was merely a committee on buying in the Washington Consumers' Club. Six months before that the Washington Consumers' Club itself was only 10 people interested in cooperatives who met to talk about them.

Social organizations, like human beings, have their own personalities, and Rochdale Stores, Inc., is no exception. It acquired its personality by just growing. The original members of the buying committee, who eventually became the founders of Rochdale Stores, had no notion that their activities would eventually result in a cooperative grocery store. When they started to meet as a committee they did not even know what they were going to do, but from week to week, as a result of an original decision to buy cooperatively, the committee's activities have expanded and taken shape until now they are able to plan and to proceed in a predetermined direction by methods that they have tried and found workable.

First venture of the buying committee was a flyer in coal. Like many speculations, it did not turn out too well. The committee arranged with an independent coal distributor for the purchase of coal by the members of the Consumers' Club. It purchased coal for resale at $3 less than the retail price and sold the coal to its members at $2 less than the retail price. Part of the extra dollar saved was returned to club members at the end of 6 months in the form of consumer dividends. The rest went into the Club treasury. But before the end of the winter the bargain in coal proved to be slate. Consumers found that the coal was poor quality. As a result of many complaints, this arrangement had to be discontinued, and a new contract had to be obtained with another coal dealer, this time a reliable one. This second contract provided for the delivery of coal at the market price with a $1 rebate per ton to the Consumers' Club for every ton sold to its members. In this experiment $1,000 worth of coal was sold. Cooperative buying of coal is now in the hands of a special committee which not only handles these local purchases but also buys directly from a coal mine in Pennsylvania. This coal is sold to members at current retail prices. Last year it sold $4,000 worth and turned into the club treasury savings of over 20 percent.

Laundry service, too, the committee thought, could be secured for members through group buying. Here the research committee of the Consumers' Club was brought into action. Each laundry from whom the buying committee obtained a bid was investigated by the research committee, particularly to determine labor conditions in the laundry. The research committee, however, placed an insuperable obstacle in the path of the buying committee, for no laundry which would agree to give a rebate had labor conditions which a consumers' club could approve. To secure consumer dividends at the expense of sweated labor was contrary to the established principles of the Club. As a consequence no satisfactory contract with a laundry could be obtained.

Intelligent buying of food requires training, as many consumers discover to their chagrin, and as some cooperatives have learned to their regret.

Fortunately the buying committee, made up of four women, included a member with extensive experience in quantity buying. Her original interest in quality buying was provoked by an intense dislike for shopping. Buying food for her family seemed to take all of her spare time. She decided that if housekeeping were going to be bearable at all she would have to work out some way to get her food shopping done and over with as quickly as possible. This she accomplished by doing all of her food buying once a week. Soon she discovered that she was not only saving time but that she was also saving money. By making all of her purchases for the week at one time she was able to profit by good buys and to make savings by bulk buying. Further study revealed to her the the advantage of buying by quality grade. In the end she was not only saving money and time, she was also able to serve her family food that was consistently good in quality. Something she had not been able to do when she bought daily in small amounts. Buying by this time no longer bored her. As a result of her interest in buying she was soon made purchasing agent, without pay, for a nursery.

With this experienced buyer for chairman, the cooperative clubs' committee began to buy food for its members. First step in securing the full benefits of group buying was an agreement made by each committee member to put her buying on a weekly basis. Each Thursday evening committee members telephoned their weekly shopping list to the chairman, who accompanied by a different member of the committee each week, set out on Friday morning to the markets to do the joint marketing for the group.

Wholesale prices, they learned, could be obtained from a particular wholesaler even with a $10 order for food. The same kind of coffee sold in retail packages under a brand name at 26 cents a pound could be bought for 19 cents a pound in hotel packages. By buying olive oil in half-gallon or gallon cans they were able to get 4 or 5 times as much as they would have received for the same amount of money spent for oil in 2-ounce or half-pint sizes. Macaroni which cost 80 cents a pound in 2-ounce packages they bought for 40 cents a pound in bulk. Gelatine cost 40 cents a pound, in small quantities they had paid $2.40 a pound for it. Vanilla cost half as much in bulk. Soap flakes, meeting Government specifications, cost approximately one-third as much. So it was throughout their list of household needs.

All purchases, where posible, were made by quality grades. Where the committee was doubtful of the quality of a particular commodity, or where there was no grade available, they sent samples of staple household supplies off to a consumer laboratory for testing.

Chief among their problems at this time was gathering together orders large enough to obtain wholesale prices. To insure big orders, each committee member solicited her nearby neighbors to get them to join in on the plan. So successful were they that buying units centering around each of the original committee members came into existence. In time these buying units met every Thursday aftrnoon and made up their group orders. These were pooled with group orders from other neighborhoods. The chairman of the central buying committee had the master list ready for Friday morning's foray at the markets.

Orders were sizeable now. In fact, filling them was too heavy a job for two expert shoppers, so the whole committee took to Friday shopping. All of them were now trained buyers and specialists in different lines. One woman purchased poultry, eggs, and butter; another purchased staple foods; still another purchased meats. After these purchases had been made, the committee members came together agam at one of Washington's open-air markets to purchase vegetables. All purchases, with the exception of the vegetables, were delivered by the wholesalers to the homes of each of the unit chairmen. Vegetable purchases went to the homes of the unit chairmen in their own cars. A small distributing center was thus created in the home of each unit chairman.

What to charge coperating families for the food purchased at wholesale was a major problem at first. The cooperative principle is to sell all goods at the current prices charged by other retailers. Savings, under the cooperative plan, usually go back to the customers in proportion to the value of the purchases they have made. In the early days of this Washington experiment this principle was not followed. Cooperating families paid their share of the total wholesale cost. The buying committee made no charge for its services and added nothing to the price they paid to wholesalers. As an approach to the Rochdale method of doing cooperative business, certain buying units agreed to pay the wholesale prices plus 5 percent. This 5 percent mark-up was turned over to the Consumers' Club.

Not all buying units, however, pursued this plan. Others following more closely the Rochdale cooperative plan, charged themselves the same prices which chain stores charged at retail, sent the required 5 percent to the Consumers' Club, and held the remaining money in a unit treasury. With this little treasury, added to each week, such units were enabled to buy in anticipation of needs, profit by market conditions, and accumulate stocks of goods which were held in the basements of the homes of their chairmen. One unit accumulated more than $200 worth of groceries this way. Where stores were accumulated, certain afternoons were set aside when unit members could go basement shopping.

Cooperative purchase of milk was got under way, too. The committee first obtained the sanitary ratings of all local milk distributors for the previous 6 months from the District Board of Health. Selecting the top four companies, it then checked these companies' labor record. This check reduced the number of milk supplies with which the committee wished to deal to two. One of these, as it happened the smallest company, made a satisfactory contract with the Club. Under this contract, the milk company agrees to sell at current prices to Club members and to return to the Club 5 percent of its sales as a patronage refund. At the present time, about 100 families are buying milk from this supplier.

But to go back to groceries: Six months of experimentation in cooperative buying saw the original four members of the buying committee increased to seven units with four or five members in each unit. The units, in turn, had become growing concerns. Some developed their own treasuries, their own stores, their own club programs. New wrinkles were tried. A project for bnying canned goods in the summer at summer bargain prices for delivery in the fall almost came to grief, for the contract was given to an unreliable person and when fall came no delivery was made. By last-minute maneuvering, however, an order was finally placed with another wholesaler and the enterprise was saved, to the great relief of the committee and to the satisfaction of the other cooperators.

Building a business, such as this, was costly in time to the leaders. The work of the committee had grown to such an extent that one member was giving practically a whole week to its activities. Other members were giving from one to two days a week. Volume of business had grown from an original $50 to $250 a week. Membership had also changed. Some of the original committee members had found jobs and had dropped out. Others had left town. But the units were a constant source of new blood and as fast as one person dropped out, other persons joined up. Not all new members stuck. Some lost interest after a week or two, but in most cases women either dropped out immediately or became permanently enthusiastic members.

So far, the cooperative buying program of Washington's Consumers' Club was strictly a woman's activity. No men took part in the committee work. At the meetings of the Consumers' Club men members began to be critical. First of all they complained that they were excluded from the work of the committee. Then, too, they added, no cooperative ideal was being achieved by the committee's work. One man called it a "Haggler's Club." The women, defending their work, described the savings they made, pointed to the guarantees of quality they secured for their members. Most of all, they talked about the consumer education they had given to members. The men, finally were won over. Out of the Club's deliberations an agreement was reached to work together toward the establishment of a cooperative store.

Consistent cooperators, the buying committee had all along attempted to buy from cooperatives wherever possible. One of their chief sources of graded eggs and scored butter was a producers' cooperative. When the time came to place the consumer business on a firmer and more permanent basis, this producers' cooperative came to their support by placing warehouse space for a nominal rent at the committee's disposal.

Equipped with a warehouse, the committee's purchasing of foods went on much the same as usual but from this time on all food was sold at curent retail prices. The buying committee still made its weekly trip to the various wholesalers but the distribution of goods was more efficiently organized. All purchases made by the committee were delivered to the warehouse where volunteers packaged them and made up orders for delivery to the homes of the unit chairmen. Here, as before, the units made their own arrangements for final delivery to individual families. Delivery was made from the warehouse to the units by hired trucks for which the committee paid $1.10 an hour.

Still business grew. Sales soon totaled about $500 a week. To handle this business with the same care and detailed attention as before, the committee soon decided, would be impossible without the establishment of a cooperative store and the em-

# R. H. BOYD PHOTO-PRINT

Every Baptist Church, School or Religious Auxiliary Should Hang One on Their Walls and Have It at Home.

LARGE-SIZE ENGRAVING OF THE BUILDER OF THE NATIONAL BAPTIST PUBLISHING BOARD'S PLANT WILL BE SENT UPON RECEIPT OF TWENTY-FIVE CENTS IN POSTAGE—NO CHARGE FOR THE PICTURE.

Because of the large demand from the religious forces of the nation for pictures of the late R. H. Boyd, the Secretary of the National Baptist Publishing Board, who is the son of the founder, has had the lithographers to print a large quantity of these. The exact size of the photo-print is 11 inches by 14 inches. It is a splendid reproduction of this giant of Baptist leaders. The name is under his picture, and it is a side view.

The picture will be sent securely wrapped in a tube to prevent it from being crushed. When it arrives at its destination it can be framed. The Secretary of the Publishing Board declares that he is having these ready to be mailed out, so that during the month of March, 1938 every School that wishes to hold Boyd Memorial Exercises will have a large-size picture of the late Dr. Boyd on hand, and they can point him out to the present generation. They can show this picture to the thousands of boys and girls who never saw him. They can point him out to the tiny tots, who in a little while will be grown-ups.

The National Baptist Publishing Board, which was founded by this Baptist stalwart, is but one of the institutions that was built, established and headed by him during his life time.

Send all letters to

**HENRY ALLEN BOYD, Secretary**

523-2nd Avenue, North Nashville, Tenn.

ployment of full-time workers. In December 1936, the decision was made to open a cooperative store.

First essential step in the organization of a cooperative is the writing of articles of incorporation, and the determination of the financial structure. Lawyer members of the Consumers' Club served on the committee to prepare the articles of incorporation, while another committee looked for a store and made arrangements for moving. In the latter part of December the articles of incorporation were completed, the store was rented, and Rochdale Stores, Inc., was launched.

Rochdale Stores, Inc., is now an entirely separate organization from its original parent organization, the Washington Consumers' Club. It has a capital of $1,500 which was derived from the sale of shares to cooperators at $5 per share. Many members own more than one share but only one vote goes to each person. There is a board of directors consisting of eleven members which meets once a week. Shareholders meet once a year.

Management of the cooperative is in the hands of committees. Three directors' committees are: A store committee, which supervises the physical details of the store, moving, etc.; a legal committee made up of lawyer members of the cooperative; and a management committee. Shareholders' committees are: A store service committee, which provides volunteers to assist in the work of running the store; a price committee, which determines prices to be charged at the cooperative store by studying prevailing retail prices; and a research committee, whose chief task is to investigate labor conditions in the companies from which cooperative purchases its supplies.

Supplies of food which various units had collected on their own account were distributed among their unit members prior to the establishment of the warehouse. Funds in unit treasuries were distributed to members as consumer dividends. Now all major activities are centered in the store.

## COTTON YIELD DOUBLED WITH SOIL PROGRAM

Three hundred thirty pounds of lint cotton and 20 bushels of corn per acre were produced on a field that was once considered practically worthless, said Max G. Weir, assistant county agent in Clay county.

Grover James of Corning started a soil-building program of his own prior to 1936, the county agent explained. In 1933 he started a soil-building rotation on a seven acre field, that only produced about 170 pounds of lint cotton. In the spring he turned under a crop of winter wheat followed by peas, which were also turned under.

In 1934 Mr. James turned under another crop of peas. In 1935 he grew cotton on the field, and in 1936 another crop of peas was turned under. In a few years, he has doubled his cotton yield.

To halt erosion in gullies and on steep hillsides, the Soil Conservation Service plans to plant 175,000,000 trees this year.

A pair of robins built their nest on an electric sign bell of a railway in Western New York and raised their young to maturity, although the bell rang continually.

## WILD LIFE GRANTS URGED

WASHINGTON, July 6—(AP)—A proposal that the government make grants to states for conservation of wild life won approval today of the Senate committee on conservation of wild life resources. The grants would be paid out of the $3,000,000 a year collected from the existing excise taxes on sportsmen's equipment.

## BLIND AID BILL SIGNED

WASHINGTON, July 6 (AP)—President Roosevelt signed today a bill permitting blind persons to take trained guide dogs with them on Pullman and passenger coaches.

Water is the prime need for cut flowers in hot weather. Change once a day at least—twice if the day is particularly hot and windy. Do not let flowers stand in the direct sunlight.

## PAINTING, TRADED FOR DOG FOUND TO BE PRICELESS

Chicago, July 7 (AP)—Arthur Lloyd, owner of a modest antique business, learned today that the painting he accepted in trade for a small dog is an original and highly-valued portrait by the French master, Jean Baptiste Greuze.

A "gray-haired old lady in a black dress' traded him the painting for a puppy to give to a bedridden grandchild, he said.

The lady had been in his shop before—to buy some glassware. She saw one of several puppies, and asked for one. Lloyd refused. Later the lady came back with the painting.

"She told me she found it in her attic and asked me to trade a puppy for it, so I did," Lloyd said.

The picture—a bust portrait—was soiled, covered with dust, too grimy to reveal its masterful brush strokes and coloring of a genius. Barely visible were the features of a young blonde woman, wearing a filmy dress.

Lloyd cleaned off the grime and discovered on the canvas a wealth of beauty in coloring and composition. He rushed with his "find" to Dr. Maurice Goldblatt, director of the University of Notre Dame galleries.

"It is an unquestionable Greuze, in perfect condition," Goldblatt told him. "The beautiful color and design speak for themselves. It is a very, very valuable work."

## INDIANS BURNED OFF WOODS IN ORDER TO FACILITATE HUNTING

The method of hunting among the primitive Indians here was to burn the grass and weeds from the fields preparatory to cultivation, surrounding them all at one time with fire so that the deer, wild ducks and rabbits, fleeing from it fell into their hands. This sort of hunting was called hurimelas. Then they entered the forests in pursuit of bears, bison and lions, which they killed with bows and arrows. This manner of hunting was called ojeo. Whatever they secured in either way they brought to the principal cacique, who divided it among the tribe.

—St. Augustine Record

## PLANTERS TRY DIXIE TENANCY IMPROVEMENTS

### Individual Owners Outline Projects to Raise the Living Standards

CLARKSDALE, Miss —(UP) — Rehabilitation of tenant farmers, being discussed on a national scale by Congress, is being instituted on several southern plantations by individual landowners.

The planters frankly admit they are spending their own capital to raise the standards of living of the tenants because they believe it will result in greater profits from their cotton plantations.

One of the outstanding examples of these individual rehabilitation projects is that being carried out by Frederick Smith Enterprise Co., which operates the 2,500-acre Matagorda plantation and the 2,000-acre Sid Dodds plantation in this section.

The company is headed by Fred Smith, Memphis, who is chief executive of Dixie Greyhound bus lines.

The company is building 25 five-room green and white bungalows for tenants on the Matagorda plantation. The houses will have concrete foundations, double floors, fireplaces and decorated interiors. A full-time carpenter will be employed to maintain the tenant homes and other buildings on the plantation.

### Replace One-Room Shacks

These modern homes — to be equipped with running water, electric lights, bath and other modern conveniences — will be in direct contrast to the one-room shacks in which many tenant families of the South live.

Similar modern houses will be construeted by the Smith Company on the Sid Dodds plantation.

The Matagorda plantation is one of Mississippi's most famous. It was established in 1865 by Col. D. M. Russell. The plantation home now is occupied by John Bell Hood, son of the famous Confederate general, and his family.

As part of the program to modernize Matagorda, the plantation bell which has called laborers to their work for more than half a century is being displaced by a siren, operated by compressed air.

An up-to-date cost accounting system will be used at Matagorda and machinery will be used to the "greatest posible extent." Smith said.

### To Use Artesian Water.

Artesian water will be piped to all tenant houses. Vegetables, hogs and chickens will be raised on a large scale for tenant consumption. There will be a central dairy and a kiln for drying of sweet potatoes.

"It is our belief," said A. D. Moss, a partner of Smith in the plantation enterprise, "that the company will profit by raising the standards of living of tenants.

"We have gone into this enterprise in the belief that whatever helps tenants will result in the greater good for all interested in our plantation. We shall undertake many methods for improvements of sanitation and health, expending thousands of dollars for that purpose. Every facility known to modern times will be provided tenants.

"We have destroyed all the old tenant houses and strictly up-to-date and attractive homes will be built."

### Other Planters Interested.

Other planters are making similar efforts to raise the standard of living of their tenants.

Miss Mena Hogan, district home agent, conducted a survey among tenant families in 19 northeast Arkansas counties—scene of many disorders between planters and sharecroppers and tenants since formation of the Southern Tenant Farmers Union two years ago.

Miss Hogan reported she found the best tenant conditions on the smaller plantations where from 30 to 100 families were employed.

The 3,200-acre Burdette Plantation, inc., in Mississippi County Ark., Miss Hogan reported, had each of its 98 tenant families living in "neat" four-room frame houses with shingled roofs, ceilings and screens."

Fifty per cent of the Burdette tenants started as sharecroppers -- a class which owns none of its farming equipment or stock —and through the aid of the company bought stock and machinery and was graduated into the tenant class.

—Nashville Tennessean.

## CROPS USED IN AUTOS

According to a report issued by a manufacturer of automobiles, crops from more than 500,000 acres are now used in the production of 1,000,000 automobiles in that plant, in addition to hides from 30,000 head of cattle, mohair from 87,500 goats, wool from 800,000 sheep, and lumber from the equivalent of 20,500 acres of forest.

## LIVELY FARM YEAR CROP CONDITIONS

June has been favorable to growing crops in most sections of the country, it was announced. Some parts of the Midwest have been too wet for cultivating corn. The serious feed shortage has been eased by new pastures. Cotton seems to be coming along in good shape in most of the South. Winter wheat harvest is well advanced. The apple crop looks pretty good. Truck crop prices are higher. Hog prices are going to be high. Demand for farm products continues strong.

## CAR SHORTAGE HITS WATERMELON CROP

A shortage of ventilator cars has developed in the movement of the watermelon crop to markets, according to J. M. Symes, vice president of the Association of American Railroads.

Arrangements are being made to move refrigerator cars into the watermelon territory.

The watermelon movement this year is heaviest in several years. Atlantic Coast Line, Southern, Seaboard, Central of Georgia and Illinois Central are moving the crop.

## FARM INCOME

Farm income decreased from April to [illegible], instead of increasing as it usuall ydoes. The reasons were smaller marketings of hogs, cattle, cotton, and grains, together with slightly lower prices.

Total May income including Government payments, was only slightly larger than income received in May, 1936. But it was largest for May since 1930. Farmers have received more income during the first 5 months of this year than in any other year since 1930 and 21 per cent more than during the same 5 months of 1936.

Income from the sale of farm products is expected to be larger during the remainder of the year.

## ITALY MAY HAVE TO IMPORT WHEAT

It is probable that Italy will have to import between 700,000 and 800,000 tons of wheat to meet domestic reqnirements since the yield of the 1937 crop is estimated currently at between 7,200,000 and 8,000,000 tons while the acerage annual consumption approximates 8,000,000 tons, according to the Department of Commerce.

It is estimated locally that an additional 1,000,000 tons will have to be imported to meet the requirements in Ethiopia. It is expected that this wheat will be imported into Italy for milling and the resulting flour forwarded to Ethiopia, the report states.

Imports of wheat into Italy in the first four months of the current year totalled 780,000 metric tons compared with 104,598 tons in the corresponding period of 1936. The increased imports were necessitated by the short crop of wheat harvested in the country in 1936, it was stated.

Imports of wheat into Italy in the current year originated principally in Argentina, Australia, Rumania, Hungary, Bulgaria, Yugoslavia, and Czechoslovakia, according to the report.

## ADD THE JUICE OF A LEMON

**Both for flavor and Vitamin C, lemons deserve a place in the well-rounded diet, but this summer's l monade consumers will have to pay for last winter's freezing weather**

Old-time medicine men were masters of ballyhoo, but they never plugged their wares half so hard as some men over the centuries have praised the lemon. Curative powers for this humble fruit, we know now, have been grossly exaggerated. Research has proved that, but it has also established the fact that lemons have rightful claims to fame. The British Parliament in the seventeenth century ordered lemon juice as a daily ration to protect sailors on long voyages from the deadly disease of scurvy, and science has since shown that the British had the right idea.

Lemons rank with other citrus fruits—fresh currants, strawberries, and raspberries— as an excellent source of Vitamin C. It is lack of Vitamin C that results in scurvy. An abundance of Vitamin C helps to keep down dentist bills.

High citric acid content, sweetened with a very small amount of natural sugar, is mainly responsible for the lemon's characteristic tart flavor. Contributing to this typical taste are the aromatic oils in the rind. These can be pressed out and used commercially in the manufacture of lemon flavoring extract—a handy product to have in the kitchen cabinet. The rind goes to candy making.

Flavor is the quality that writes the lemon on most shopping lists. In pies and candies, in custards and cakes, in punches and ices, the juice of a lemon adds the sharp tang that m kes for big consumer appeal. As a thirst quencher, lemon is champion The Army recognized this asset when during the World War, lemon drops were rationed out when water supplies ran short.

Known among botanists as the Citrus limenia, the lemon is a member of the citrus family. That is, the large group that includes the orange lime, grapefrnit, tangerine, and kumquat. The lemon originally lived in northwest India, but in the early part of the Christian era started wandering. It settled in southern Europe and took root principally in the island of Sicily. This little isle at the toe of Italy's boot held first place in lemon production until the United States entered the race and swept into a big lead.

Today California is the lemon-growing State—with no challenger in sight. At one time Florida shipped thousands of boxes of lemons yearly, but the great freeze of 1895 killed most of the groves. Now, except for a few groves of Villafranca lemons that provide fruit for local use and some local planting of the Perrine and Meyer lemons—both of rather recent introduction—the only lemon trees in the Gulf States are grown as ornaments in dooryards. Arizona ships a few thousand boxes of lemons yearly, but she can hardly be said to offer competition to California, which has 85 percent of the lemons consumed in the United States and Canada to her credit. Italy supplies the rest.

Between them, these two regions put lemons in the diets of the world. In the peak year of 1935 California harvested approximately 10 million boxes of lemons—double her output of 10 years earlier. This bumper crop meant glutted markets, for demand lagged behind supply, and growers received only $1.47 a box for their lemons, the lowest price recorded in more than a decade. A crop of 8 million boxes in 1935 righted the lemon cart, and growers reported $2.40 as the average price received for every box. Over 99 percent of California lemons come from the southern counties of the State, where groves occupy the best citrus-growing sites—those that are most nearly frost-free. Lemons win for themselves the choicest sites by being more susceptible to injury from low temperatures than the orange or grapefruit. Northern and central California counties contribute less than 5 percent of the whole lemon harvest.

Two varieties of lemon—the Lisbon and the Eureka—comprise the commercial crop of California. The trees, pruned to stand about 15 feet high, have evergreen leaves of a deep glossy green and rather dense foliage. The fruit of both varieties, when ready for picking, is egg-shaped with a smooth rind of deep green, abundant juice, and few seeds. Although there are variations in shape, the Eureka and Lisbon lemons are enough alike so that packers make little or no distinction between them in the sorting process.

Similar though they are, the Eureka variety is gaining an edge in popularity over the Lisbon. Partly responsible for this preference is the fact that the Eureka yields are greatest in the late spring and summer when lemons are most in demand. Big Lisbon season is fall and winter. However, neither type of tree ever takes a real holiday. That is why one lemon tree can produce as many as 3,000 fruit in a year, and that is why you can see the surprising spectacle of buds, flowers and fruit growing on one tree at the same time. Thanks to these industrious habits of growth, California can ship fresh lemons to market every day in the year.

No crop receives better care than the lemon. Every tree in the best groves is of pedigreed stock, being budded from a parent which is already producing lemons of the finest quality. Oddly enough, a lemon tree begins with the planting of orange seed for rootstock. Later these seedling rootstock trees are budded with the lemon. That is, a bud from a lemon tree is inserted in a slit made in the bark of the rootstock about 2 inches above the ground. It grows into a shoot which eventually forms the top of the tree. This bud determines the kind of fruit the tree will bear, irrespective of the kind of rootstock—thus lemons grow upon an orange rootstock

Young trees leave the nursery for the grove about a year after budding. Then irrigation, cultivation, fe t'lization, pruning— all costly processes—speed the lemon to full gr wth. However, it isn't easy as that. The grower must keep an eye out for insect pests and about once a year cover the trees with canvas tents preparatory to fumigating. He must invest heavily in oil heaters to protect his trees from frost in winter. Reward for his labor comes at the end of the seventh or eighth year when the tree begins commercial bearing. From then on the life of a good tree will closely approximate the life of man.

Eggs could not be handled more gingerly than lemons in the picking and packing process. Because rough treatment means injury to the lemon rind and subsequent loss from decay, every picker wears gloves, clips, never pulls, the fruit from the tree. Lemons are picked by size, not by state of ripeness. Each picker carries a metal ring about 2 1-3 inches in diameter. This he slips over the lemon. Fruit that will not pass through the ring is of a size for picking, and goes into the basket irrespective of color—it may be dark green, silvery, or tree-ripe yellow. Smaller lemons are left for the next picking crew, who will cover the grove usually about 6 weeks later.

At the packing house sorters wash the fruit, removing culls and lemonettes—small sized lemons—and sep-

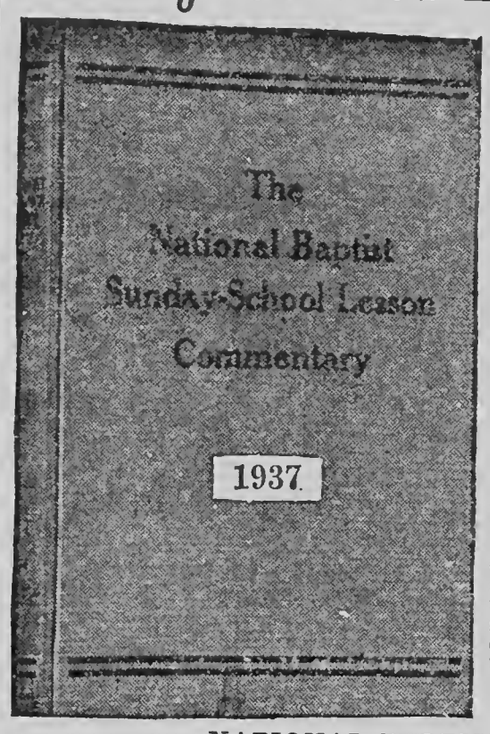
# Sunday School Lesson Commentary



**1937**

**PRICE $1 PER SINGLE COPY**

**Six Reasons Why You Should Use It:**

*First*: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

*Second*: It is purely baptistic and orthodox in every particular.

*Third*: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

*Fourth*: None of the modern theories leading to skepticism are admitted.

*Fifth*: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

*Sixth*: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

# NOTED SURGEON STIRS DELEGATES AT N.A.A.C.P. MEETING WITH PLEA FOR COLORED DOCTORS AND NURSES

## Dr. Louis T. Wright Declares Professional Men and Women of Race Deserve Chance to Fight Disease

Detroit, July 8—(ANP)— Declaring that Negro physicians and nurses must be given every professional opportunity to engage "in the common battle against disease and injury," Dr. Louis T. Wright, chief of the surgical staff at Harlem Hospital, New York City and Board Chairman of the N. A. A. C. P., was the principal speaker last Tuesday on the opening program and mass meeting of the 28th annual conference of the National Association for the Advancement of Colored People, held in the auditorium of Cass Technical High School.

The business sessions were held at Ebenezer A. M. E. Church and the conference lasted from June 29 to July 4. Among the nationally known speakers who discussed various topics bearing directly on the social, economic, political, religious and professional life of the Negro were: John C. Dancy and Howard Kester, "Industrial Problems;" Charles C. Diggs, Charles H. Houston, C. A. Hansberry and Gertrude B. Stone, "Civil Rights;" S. R. Redmond and Thurgood Marshall, "Education;" "What the N. A. A. C. P. Expects of its Youth," by National President J. E. Spingarn; "The Fight Against Disfranchisement," by Roscoe Dunjee, Charles Chandler, Homer S. Brown, Chester Gillespie, and William Pickens; and "Greetings to Youth Delegates", by Walter White, executive secretary, N. A. A. C. P.

Other featured speakers were Congressman Joseph A Gavagan, New York City, author of the federal Anti-Lynching Bill and Mrs. Mary McLeod Bethune who presided on Spingarn Medal Night Friday, at which time the Spingarn award was presented to Medalist Walter White, the presentation speech being made by Hon. Frank Murphy, Governor of Michigan. The response by Mr. White was followed by an address by Dr. James Weldon Johnson of Nashville. Mrs. Bethune was the Spingarn Medalist for 1935, Dr. Johnson for 1925. Capacity crowds were present at all of the sessions. The N. A. A. C. P. Youth Conference held jointly with the parent organization, with a dinner, mass meeting, and dance as features of Thursday's activities, was outstanding. Miss Juanita Jackson is secretary of the youth branch. An outing for all delegates and visitors was given July 3 by the Detroit guest branch, at Belvedere Park. Swimming, dancing, boating and fishing were the main attractions.

# JOHNSTOWN POLICE SAVE COLORED MEN FROM CIO STRIKERS

Johnstown, Pa., July 8—(ANP)—A racial element was injected into the CIO strike at the upper Franklin unit of the Bethlehem Steel corporation Wednesday when state police had to step in and prevent pickets and their sympathizers from attacking five non-striking workers.

As the men left the plant, the angry crowd closed in on them and helmeted state police came to their aid. A few feet away three of the quintet turned to cross a bridge over a river near the yards.

"Let's throw 'em over," some one yelled.

Again police formed a line and the trio crossed safely.

# Mound Bayou, 50 Years Old, Holds Big Celebration

Mound Bayou, Miss.—This city's Mayor Benjamin A. Green last week invited the nation to join in celebration of the 50 anniversary of the founding by the late Isaiah Montgomery, of Mound Bayou—oldest all-colored town in America—the festivities lasting from July 11 to 17, and the keynote address by Col. Roscoe Conkling Simmons. Mayor Green has served as mayor for 16 years, is widely known as a lawyer, planter and business man.

# DR. C. S. JOHNSON OF FISK PRAISES WORK OF FRIENDLY WHITES

Memphis, July 8—(ANP)—Presiding at a devotional clinic held during the recent sesqui-centennial of the A. M. E. Church at Booker T. Washington high school, Bishop S. L. Greene introduced Dr. Chas. S. Johnson of Fisk University as the keynote speaker. Dr. Johnson praised friendly white people for their attitude in promoting training of Negro youth, but declared that the Negro must learn to rely on self-help if he hoped to reach true social and economic freedom. He also asked for interracial cooperation for "the building of a better world."

# NEWPORT BOY WHO WENT TO JAMBOREE HAD HAPPY TIME

## Tenderfoot Whites Tried To Keep Him From Scouts' Conclave

Newport, R. I., July 9—Fred S. Ames, the colored Boy Scout of this city who at first was told he had better stay home and not attend the National Boy Scout Jamboree in Washington, D. C., along with the delegation of white scouts from Rhode Island, attended the Jamboree and had a great time, it was revealed here this week.

A member of the Newport branch of the N. A. A. C. P. learning that Rhode Island State Boy Scouts officials had "persuaded" the parents of the boy that he ought to stay home in order to avoid unpleasantness with southern white scouts, wrote the national office of the N. A. A. C. P. which in turn protested to the national office of the Boy Scouts of America.

An investigation was made and finally Scout Ames was notified that he might attend the Jamboree if he wished to do so. The fight to get Scout Ames his rights was hampered by a division between the Negro leaders of Newport, some of whom felt that the boy ought to stay home while others militantly supported a protest and finally won their point.

# Matthews Whips Martinex Again

St. Louis, July 8 (ANP)—Allen Matthews, local fighter who boxes either as a middleweight or a light heavy, whipped Emilio Martinez, 175 pound Denver Meximan, in 10 rounds at the auditorium Tuesday night before 3,938 spectators. It was the third time they had met and the third time Matthews has won.

The victor piled up points early in the bout, winning sevent rounds to two for Martinez with one even. The Mexican outpointed ohn Henry Lewis, light heavyweight champion, in Denver over a year ago but later lost to Louis at St. Louis.

# "Joe The Bomber" Is Latest Song

New York (ANP)—Randolph Dunbar, ANP'S London correspondent, is director of the "School of Modern Clarinet Playing" currently conducted by Henri Selmer and Co., famous makers of musical instruments. A new song ertitled, "Joe the Bomber," was composed, arranged, rehearsed and recorded for Variety records by Billy Hicks and his Sizzling Six within 24 hours after the bout with Braddock.

### DEVICE REPLACES CHIN IN PLAYING OF VIOLIN

SAN FRANCISCO. —(UP)— An invention which permits a violin to be played comfortably and without impairing its tone qualities reculted from a music critic's discovery that chin rests affect the tone of a violin.

The invention, acclaimed by leading violinists and teachers, makes possible both maximum tonal brilliance and comfort in playing, according to its inventor, Major M. Fisher, music editor of the San Francisco News and staff correspondent for Musical America.

The device is described by sound experts as "acoustically right" because it permits the violin to vibrate without interference.

The Bourden bell in the Notre Dame cathedral in Paris, one of the giant bells of Europe, weighs 13 tons. It is large enough to cover a dozen people.

—Nashville Tennessean

### VEGETABLES CHANGE RAPIDLY AFTER THEY ARE GATHERED

Some gardeners know that when vegetables are carried from the garden to the kitchen they have tenderness and flavor which sets them apart from market vegetable.

The reason for this is being developed by experiment. Vegetables are marketed with much less attention and care than is given to meats. Seemingly they do not deteriorate as rapidly as meat and so they are not kept in refrigerators or frozen to keep them fresh.

Experiments have proved however, that after they are picked rapid changes take place if they are subjected to high temperatures. In the case of sweetcorn loss of sugar is doubled with each rise of 18 degrees in temperature. The sugar begins to change to starch immediately the ear is picked, and at 86 degrees its disappearance is twice as rapid as at 68 degrees.

Market growers are beginning to discuss the possibility of freezing vegetables immediately after they are picked to preserve their flavor and tenderness. The home gardner has no such problems. He has learned that the best place to keep vegetables is in the garden until he is ready to eat them; and then they should be harvested with as little delay as possible before they are served.

If necessary the place to store them is in the refrigerator.

—Nashville Tennessean

# JULIAN BLACK SAYS SCHMELING MUST FIGHT JOE LOUIS IN CHICAGO, ILL.

## Bomber's Manager Says Windy City Will Not Boycott Bout; New York Would

Chicago, July 8 (ANP)—Max Schmeling must come to Chicago if he wants a shot at the heavyweight crown worn by Joe Louis, it was announced Wednesday by Julion Black, co-manager of the champion.

In explaining his reasons, Black said: "Chicago supported the Braddock-Louis bout and deserves o Louis Schmeling title fight. Then, the anti-German boycott is likely to break out in New York. It killed the gate for our match a year ago with the German and would hurt the gate for another. Here in Chicago the people aren't particular whether Schmeling is a German as long as they are assured of a great fight.

"We think it would be more profitable to fight Schmeling here and when a champion enters the ring to risk his crown against such a dangerous opponent, he is entitled to all the money it is possible to get."

The manager also said he didn't expect a Louis-Schmeling showdown until next spring and Louis will really invade England to fight Jack Doyle, Len Harvey or Tommy Farr in August if he can be assured of a reasonable tax assessment.

### EXHIBIT ROBOT

#### Cotton Classing Demonstration Given at Memphis

MEMPHIS, Tenn., July 6 (AP)—Mid South cotton growers and classers saw a demonstration today of a robot cotton classing instrument developed by Dr. K. L. Hertel, University of Tennessee physics professor.

Dr. Hertel calls his invention a "fibrograph" and declared that when it has been periected it will prove more accurate than the best classers in the industry, registering the length of the staple and the uniformity of fibers.

### STRETCHING THE RASPBERRIES

If you have a few more for dessert than plain, delicious raspberries will serve, you can "stretch" them by using the following quickly made dessert: mix two cups of fresh crushed raspberries with one-fourth pound of marshallows cut in small pieces and half-pint of whipping cream. Chill and serve in sherbert glasses. This will serve six to eight.

### SMILES

Young Lady (on first ocean voyage)—Could I see the Captain?

Steward—He's forward, Miss.

Young Lady—I'm not afraid. I've been out with college boys.

John—Don't you think that Phebe has something of the Venus of antiquity?

Michael—Why-er, yes, the antiquity.

Ruth—Do you know you are the first man to kiss me?

Jack—Then you must have taken a correspondence course, for you certainly don't act like a beginner.

Boogy—Do you know statisticians claim the automobile has actually cut down the deaths from old age in this country?

Woogy—How's that? Prevents over-exertion, I suppose?

Boogy—No, not that so much, but fewer people escape to reach old age.

Elsie—The boss bawled me out this morning about my lipstick.

Tessie—Gonna quit using it?

Elsie—I guess I'll have to quit using the kind that comes off.

Mrs. O'Jawish—Well, Mrs. Murphy, I'm glad to see you. How did you like your trip abroad this summer?

Mrs. Murphy—Well, I liked Paris, London and Rome, but the best part of the whole thing was the trip over. Don't miss this, whatever you do, if you ever go to Europe.

### BEAUTY HINTS

By Nina Temple

#### The Care of Nail Brushes

Nail brushes can be kept in excellent repair by observing this simple hint. Soak them in salt water once a week. This process keeps the bristles in firm first class shape. It is very annoying to have your nailbrush bristles fall down flat when you want them to go under the nails and make you look proper and fit. Just try this little formula with your brush next week.

### WISE SAYINGS

The deepest urge in human nature is the desire to be important.

Education is the ability to meet life's situations.

Any fool can criticize, condemn or complain and most fools do.

### FARM POPULATION

The number of persons living on farms at the beginning of 1937 was 80 000 less than 1 year earlier. This is the first net loss reported since 1929. Farm population was 31,729,000 on January 1, 1937, compared with 31,809,000 one year earlier and 31,801,000 in 1935, according to estimates of the Bureau of Agricultural Economics.

It is estimated that during 1936, 716,000 babies were born to farm women and 349,000 farm residents died. Therefore, if there has been no migration from or to farms during the year, the farm population would have increased by 367,000.

Mistress—But surely, Miranda, you are not going to marry again when the Lord just took Jim from you?

Miranda—Yassum, I sure am. As long as the Lawd takes 'em, so will I.

Snoop—I hear that Bjones left everything to the orphan asylum.

Slink—What did he leave?

Snoop—Two boys.

### WILT-RESISTANT TOMATO

"Good news for farmers long plagued with wilt that has killed their tomato crop," says an item in Pacific Rural Press (May 8). "A new resistant variety to be known as the Riverside tomato has been developed by the University of California in cooperation with the U. S. Department of Agriculture. It is resistant to two wilt diseases. Dr. L. W. Wesley, University of California plant breeder and M. Shapovalov, U. S. Department of Agriculture pathologist, developed the tomato at the Riverside Experiment Station. The mature green fruit has proven satisfactory for long-distance shipment and has developed good color for local markets."

### AID FOR FARM TENANTS PLANNED

Fred Smith, former Memphis mechanic who recently became head of a bus company, announced last week an experiment in modernized tenantry on 4,500 acres of Coahoma county land which he purchased.

Smith said, the Frederick Smith Enterprises Company is building 25 five-room bungalows on the old Matagorda plantation in an attempt to solve the Delta's farm tenancy problem.

These houses will have concrete foundations with double floors, fireplaces, and decorated interiors. A carpenter will be employed to keep them in repair.

It is believed that the company will profit by raising the standards of living of tenants. Plans are to make the tenants successful as well as happy.

The old houses on the plantation have been destroyed. The new ones will be equipped with running water, electric lights, builtin baths and many other modern conveniences.

Forty families ande one hundred fifty day laborers are employed the year round by the company.

### EMPLOYMENT OFFICE PLACES 175 NEGROES

The local office of the Georgia State Employment Service yesterday sent 150 Negro women and 25 Negro men to the Cherokee Products Company in Jones county for work.

The request came for workers in the canning plant. The Negroes are being transported to and from the plant daily.

W. F. Rawlings is in charge of the Negro placements for the bureau here.

—Macon Daily Telegraph

### SAYS FLORIDA HEN LAYS DOUBLE EGG SIX TIMES

Gainesville, Fla., May 22—Mrs. Emmett Cellon boasted today of a hen which has laid two eggs in one shell on her last half dozen trips to the nest, each combination weighing six ounces or twice that of the average product.

### FARMERS HARRIED BY WOODPECKERS

Valdosta, Ga., May 15—Many farmers throughout the county have elevated water tanks from which water is supplied to the residence and farmyard. And these farmers are now bringing a serious indictment against yellow hammers and woodpeckers and are gunning for those birds.

Many report that recently the birds have drilled holes in water tanks, wasting the water and greatly increasing the pumping cost. Some report as many as a dozen holes drilled in one tank.

### TOMATO PLANTS GO TO NORTHERN POINTS

The local Railway Express agency reported yesterday shipments of tomato plants through Macon have been heavy in the past few days.

A car load and a half was received yesterday on the M. D. and S. railway and transferred to through trains, George Littleton, depot manager of the agency, said. Shipments are coming mainly from the vicinity of Pembroke, Ga., and are being sent to Ohio, Illinois and Indiana.

### PLUMS AND PEACHES FLOURISH ON TREE

Sparta, Ga., May 18—William T. Whaley, of this city, local roofing contractor, who grafts and buds trees during his spare time, has a rare tree growing near his home The tree is now fruited with both plums and peaches.

He has some of the largest varieties of pecans in this section, and showed some last year which were several inches long, being known as the "Mahan."

## PROTEST RED TAPE OF GOVERNMENT IN MOVING TENANTS

### Harlemites Do Not Like Routine of New Housing Project

New York, July 16—New tenants for the Harlem River Houses, the government-built low cost honsing project just opened here are discovering that when they move in they must use one certain moving firm and no other.

In the long and complicated agreement which tenants must sign is a provision that the New York Housing Authority will attend to the moving of tenants. No money is paid the movers by tenants, all the transaction being done by the Authority. One firm of white downtown movers handles all the business. There is a routine through which all tenants must go. The furniture to be moved is inventoried and then moved to a fumigating plant by the transfer company. It remains there a full half day. It is then put in the new apartment, but the family has to allow it to remain there a full day before moving in and arranging it. This means the family must find a place to stay for a night and a day while they are being moved from their old home to the new.

Harlem moving men are up in arms over the monoply and in response to the complains the N.A.A.C.P. has sent a letter of protest to Langdon W. Post, chairman of the city housing authority, which has the Harlem River Houses on lease from the government. It is estimated that the total volume of business for moving in the 574 families will be around $15,000 and Harlem express companies cannot understand why they cannot get some of this business. Many prospective tenants also have asked to use their own moving men.

## FARMERS OF IOWA CUT "DIEING" COST WITH CO OPERATIVE

### Claim Plan Reduces Price Of Best Funeral to $172.00; Cheapest is $97.00

(Co-op League News Service) – Pella, Iowa—Iowa farmers who found that the excessive costs of burial wrecked family finances and often placed an unbearable burden on those who lived have taken matters in their own hands, organized burial cooperatives and now are conducting some of the finest burials in the state at less than half price.

"In September, 1929, a group in and around Pella met together to consider what could be done about the high cost of funeral service and caskets," Reuben Schakel, president of the Iowa State Federation of Cooperative Burial Associations declared in an article in the July issue of Consumers Cooperation. "It seemed to them that they were being taken advantage of at a time when their bargaining power was at its lowest ebb."

With 350 families signed up the first buriad co-op rented a building, employed a licensed embalmer, bought a complete line of caskets, a hearse and other necessary equipment and started service. Three years later a beautiful funeral home was purchased and today membership in the Pella co-op has increased to 869 families.

The complete cost of the most inexpensive funeral is $97. The most elaborate $172. To this may be added $65 for a metal or concrete vault if that is desired. Inspired by the success of the Pella co-op, nine other cooperative burial associations have been organized in Iowa and a State Federation created to assist in the organization of new associations.

## ROBINSON'S DEATH SEEN AS BLOW TO ANTI-LYNCH BILL

### Senators In Mood To Adjourn After Tilt Over Court 'Reform'

Washington, D. C., July 16—The death of Senator Joseph T. Robinson majority leader of the Senate has thrown Washington circles into a turmoil and may result in grave danger to the anti-lynching bill.

The Senate was being driven through a hot summer session by Senator Robinson, leader of the administration forces, in an effort to get action on the President's supreme court bill. With the death of the leader, there is talk on all sides of dropping the court bill and going home speedily.

If those opposed to the court bill are able to have their way, they will sidetrack it by recommitting it to committee and then dump overboard all controversian legislation, and drive for a quick adjournment.

Unless the friends of the anti-lynching bill act with speed, the measure will be pushed to one side in the mad scramble to wind up Senate business and adjourn.

Messages should be sent senators urging no adjournment before the anti-lynching bill is acted upon. The letters and telegrams should be in a friendly tone, but firm. Among the senators who have promised to vote against adjournment unless the anti-lynching bill is voted upon are Arthur Capper of Kansas and A. Harry Moore of New Jersey.

Most supporters of the anti-lynching bill thought Senator Robinson the greatest obstacle to its passage —and he was not friendly to it—but ironically enough, the death of the Arkansan has brought greater danger to the legislation than when he was alive. This trick of the fates comes, too, at a time when, seemingly, the way is clear for passage of the bill.

Walter White, N.A.A.C.P. secretary, here this week in the interest of the bill, was assured once more by Senators Robert F. Wagner and Frederick Van Nuys that they had received definite promises from leading southern senators that there would be no filibuster against the bill and that it ought to pass once it got to the floor.

The chief southern opponents to the bill will all make speeches against it and vote against it, but they have said they will not filibuster. Senator William E. Borah is also slated to make a speech against the bill, as was expected.

The immediate task is to impress senators with the necessity of acting upon the bill before adjournment. It can be passed, perhaps with only two days of speeches.

## NAACP SECRETARY ON CONSTITUTION BODY OF NEW YORK

### Walter White to Help Revise Supreme Law of Empire State

New York, July 16—Walter White secretary of the National Association for the Advancement of Colored People, was named last week as one of the committee of 42 prominent New Yorkers who will study the state government and collect data for the constitutional convention which will meet next April to revise the state constitution. Among other members of the committee are Windthrope W. Aldrich, banker and president of the state Chamber of Commerce; Atty. General John J. Bennett; Gerard Swope, president of General Electric; Charles Evans Hughes. Jr., president of the New York County Lawyers Assn.; Henry L. Stimson, former secretary of war; Hon. Frederick C. Crane, chief judge of the court of appeals; Morris Ernst, famous lawyer and member of the banking board; and Judge Charles Poletti of the supreme court.

## NO UNPLEASANTNESS IN MIDSHIPMAN'S RESIGNATION, SAYS

### Mitchell Satisfied His Boy Trivers Couldn't Make The Grade

Washington, D. C., July 15 (ANP) —There was no "unpleasantness" in the resignation of George J. Trivers from the naval academy at Annapolis, Congressman Arthur W. Mitchell of Illinois was told Thursday. Trivers, an appointee of only a few weeks, resigned because he found he could not do a midshipman's work, Mitchell was informed by Capt. Forde A. Todd, acting superintendent of the school.

Some months ago the congressman's first colored appointee was asked to resign and before Trivers was named still another youth was refused admittance. Mitchell, aware of the anti-Negro policy of the U. S. Navy department, has declared he will keep on appointing them and does not intend to be discouraged.

His appointees have been listed as Chicagoans, although they lived in Washington. There are understood to be rumblings of discontent in Mitchell's home district by constituents who claim that no bona fide Chicagoan has been named by him to either West Point or Annapolis, but when those chosen fail, Chicago's scholastic products get the blame.

### Seek Slayers Of Numbers Baron

Miami, Fla., July—(A. N. P.)—Police officers found that they had a real problem on their hands this week when they attempted to arrest two Negroes for alleged complicity in a killing that removed from the city's honored residents Emmanuel Casso, bolita (numbers) operator, killed Wednesday night.

Reasons for the death of Casso are vague, although two ostensible explanations have been given. One of these was robbery—the other was "Numbers feud." Residents of the section where the depredations of the crooked bolita barons are heaviest, however, were this week hinting 'failure to run on the level.'

Eddie Melchen, cop with an unsavory reputation in the Negro section, was attempting to make the arrest in the bolita baron's death when a crowd of Negroes opposed his effort. The policeman found himself in hot water until finally other officers came to the rescue.

Casso was supposed to have been carrying several hundred dollars in a paper bag at the time of his killing. Some 'unidentified Negro' is alleged to have run away with this money.

### North Carolina To Snuff Out Lives Of Seventeen Men

Raleigh, N. C., July (ANP)—If the present execution schedule is followed, the new wing of Central prison will carry the blood of 17 Negroes inside of two months beginning July 16. At the same time, only 8 white men are scheduled to die.

Executions have been delayed because of construction of a new Death Row at the state penitentiary. Renovations made executions impractical which accounts for the new record of condemned prisoners. At least three will be put to death every Friday from July 16 through Aug. 13. Of the 17 Negroes, 14 are scheduled to die for murder, two for criminal assault, and one for burglary.

### Lightening Turns Black Pig White (?)

Austin, Texas, July 15 (ANP)—A litter of pigs owned by Calvin Hughes, white dairyman, was entirely black. Then came a thunderstorm and lightning struck in the barnyard. Next morning Hughes said he found one of his pigs was snow white. He attributed the change in color of the pig's hair to fright from the lightning.

### 30,000 Colored CCC Boys To Keep Jobs

Washington, D. C., July (ANP)—With the passing by Congress of legislation authorizing continuance of the Civilian Conservation Camps for the next three years, and the signing by the President on July 3 of the $350,000,000 CCC appropriation for 1938, it was learned that the present number of approximately 30,000 colored junior and war veteran enrollees will continue. Robert Fechner was reappointed director. CCC Camp eligibles: Young men, unemployed and in need of employment. between the ages of 17 and 23; no age limit for war veterans. The practice of hiring local experience men (LEMS), will be discontinued after October, 1937. The camp steward, three cooks, and one leader in each camp will also be exempt from the age limit.

## POTATO PROBLEMS

(Continued from Page 2)

back on barges to another pier in New York City. In another case potatoes sold from freight cars are loaded on trucks, hauled 30 feet, then unloaded to be loaded into other trucks and hauled away.

Collusion between racketeers and trucking companies in New York City resulted in monopolies by which independent truckers are prevented from delivering potatoes in the city. When independent truckers did attempt to make deliveries in the city they were held up and assessed enormous prices for the privilege of entering the city. Truckers who refused to pay these prices were beaten up and had their trucks overturned. On June 10, 1937, however, New York courts sent a number of their racketeers to jail. Racketeering not only hurt consumers by increasing food costs, it also hurt farmers by barring the use of markets to them. and it enabled dishonest dealers to compete unfairly with honest dealers.

Another direct consumer abuse was discovered by the Federal Trade Commission in the use of brands and grades by dealers. An undetermined number of potatoes carry U. S. Government grades. Eighteen States have laws or regulations urging that quality grades be marked on containers. Many farm cooperatives and some private dealers package potatoes in branded sacks and containers. By identifying their brands with U. S. Government graded potatoes of high quality, cooperatives and dealers try to create consumer demand for their products and try to secure for themselves a stable market. The Federal Trade Commission discovered that these efforts are sometimes defeated by the fraudulent misbranding of their products by some wholesale dealers. In Boston some dealers bought potatoes in bulk carload lots, then packaged them in second-hand sacks carrying well-known brands and stamped with U. S. Government grade names. These potatoes were then sold as authentically graded and branded potatoes.

Some States attach grade designations to the bag of potatoes by tags. In Chicago the practice of removing these tags and attaching fraudulent grade names to the packages of potatoes had become so general that unions there had a standard price for removing the grade tag, $3 per carload. One dealer in Chicago wrote to an agent requesting him not to ship potatoes in packages with stenciled grade names, for then they could not be obliterated without leaving evidence of the obliteration. Consumers can take heart, however, for the United States Food and Drug Administration and the Bureau of Agricultural Economics recently joined forces in a determined drive to clean up the misbranding and misgrading, not only of potatoes, but of all fresh fruits and vegetables.

One billion pounds of Main potatoes were studied by the Federal Trade Commission to determine how the consumer's dollar for Maine potatoes was divided among farmers, distributors, and transport agencies. Potatoes were traced from the farms in Maine to the final retail purchaser in Boston, New York, Philadelphia, and Baltimore chain stores. The study covered the period from October 1935 to December 1936. Results showed that 46 cents out of the potato dollar went to the grower, 23 cents to the retailer, 3 cents to the wholesaler, 19 cents to railroads and other transit companies. Packing and loading and unloading agencies got 7 cents, and the remaining 2 cents went to carlot receivers, to brokers, and to storage agencies.

Idaho potatoes were traced in the same period by Federal Trade Commission experts from the Snake River Valley in Idaho almost to consumers' ovens in nine large cities—New York, Minneapolis, Philadelphia, Chicago, Kansas City, St. Louis, Dallas, New Orleans, and Detroit. Retailers, it was found, got 26 cents of the consumer's Idaho potato dollar; wholesalers' share was slightly less than 2 cents, brokers and carlot receivers took 2 cents for their services, freight and other transportation cost 27 cents, packing, loading, and unloading cost 8 cents, leaving the farmer 35 cents.

Fifty-four cents of the consumer's Eastern Shore potato dollar went to growers. The retailer received 1½ cents as his share, brokers and other carlot receivers took about 2½ cents, transportation and freight charges amounted to 14 cents, packing and loading to 10 cents, and the wholesalers 1½ cents.

Potatoes shipped from Hastings, Fla., to New York City were studied by the Federal Trade Commission. Examining these Florida potato dollars, the Federal Trade Commission found that 30 cents of each dollar went to the farmer, 13 cents to the dealer in Florida, 11 cents to the transportation company for moving the potatoes from Florida to New York, 12 cents to the potato handlers in New York City, that is, to the men who hauled the potatoes within the limits of that market, 5 cents went to the commission merchant, and 30 cents to the wholesale jobber and retailer.

Monopolies, the Federal Trade Commission found, did not exist in the farm marketing centers, though there was a high degree of control by a few dealers. In the Eastern Shore district of Maryland five dealers purchased 90 percent of the potato crop. In North Carolina three dealers purchased 60 percent of the crop; similar conditions existed in Georgia and Florida. Nationally, five companies purchased 35 percent of the crop, three of these companies purchased for chain stores, one was a private produce company, and the other, a farm cooperative. One company, representing a Nation-wide chain of grocery stores, purchased 13 percent of the potato crop. This marketing agency had a main office in New York City and 5 divisional offices in other large cities. It had 50 terminal sales offices which covered 500 markets where potatoes were sold in carload lots. In addition, its 85 field offices scattered in growing centers throughout the country were all connected by teletype. Constant communications between the various offices enabled this company to secure the lowest prices available on any particular day.

These activities tended to produce a uniform price for potatoes throughout the country, since each potato market had to meet the best price of every other potato market to get this chain s business. The chain's purchases rarely exceeded 30 or 35 percent of the produce in any one market, but because these purchases were concentrated in one company they often determined the price of potatoes. No evidence of undue control was discovered by the Federal Trade Commission.

To the accusation that chain-store purchases tend to depress prices to farmers the Federal Trade Commission says in some cases "the practice of one chain in buying at a price differential equivalent to brokerage tends to become a constant price depressant"; but to balance this, the Commission points out, chain stores also help farmers by buying up potato surpluses in glutted markets and selling them through Nation-wide sales to consumers. For, according to the Federal Trade Commission, "The proportion of the total retail sales of potatoes which are made by chain stores is so large as to require substantially all retailers to sell at competitive prices." To the critics of chain stores who charge that chain stores use potatoes as loss leaders, the Federal Trade Commission replies that its tabulations "demonstrate beyond question that as a general policy the chains sell potatoes at a substantial advance over the wholesale prices."

Monopolistic practices were found in two of the cities studied by the Federal Trade Commission—Chicago and New York. Agreements among dealers to fix prices and to parcel the business of a city among themselves were found. These associations maintained blacklists by which they cut off a dealer's supply of potatoes whenever he fell into the bad graces of the association. Such practices are illegal, and the information secured by the Federal Trade Commission was turned over to the Department of Justice for appropriate action.

To Congress' question, then, the Federal Trade Commission has made its answer. To what extent, Congress asked, are unfair, fraudulent, and injurious methods employed in the grading, warehousing, and distribution of farm products? Potatoes, the Federal Trade Commission has answered, were misgraded and misbranded in at least three cities. They were sometimes the subject of fraudulent claims for damages against railroads. They were the center of a racket in New York City, where they have been mishandled to the point of travesty. Some farmers in the South were charged, it was found, excessive prices for supplies necessary for their production and excessive interest rates to finance their production.

Not all of the 356 million bushels of potatoes grown and consumed in the United States in 1935 were subject to the abuses enumerated by the Federal Trade Commission. Most abuses were specific, occurred only in certian areas, and by no means applied to all potatoes. Abuses, when they occur, however, penalize honest dealers and shippers, farmers, and consumers.

How to eliminate these practices is something else. Misbranding and misgrading is punishable by law. Racketeering is illegal. The Farm Credit Administration exists to provide loans to farmers at reasonable interest rates. Painly many existing evils could be corrected. To this end the Federal Trade Commission has recommended the prosecution of certain racketeers and certain associations of potato dealers. a recommendation which has now been partly effected. It recommends action by the Interstate Commerce Commission on the subject of fraudulent damage claims, and it points out to consumers that they should avail themselves of Federal laws against the misbranding and misgrading of commodities. Finally, for farmers, the Federal Trade Commission recommends the additional use of farm credit through the Farm Credit Administration and an increased resort to farm cooperatives.

## Thirst Quencher No. 1

**Along with minerals and vitamins, star WATER as an essential regulator of routine body functions**

Thirst is such a positive and disagreeable sensation that we are quick to quench it. In our homes, in our schools, in our places of business, drinking water is so accessible to most of us that we seldom think of how dependent we are on it for life itself. A human being can live for a much longer time without food than he can without water. To test scientifically just what effect an insufficient intake of water has on a human being, a group of young men allowed themselves to be experimental guinea pigs. After living for a few days on food of which the water quota was very low, they developed headaches, showed signs of nervousness, loss of appetite, and were unable to concentrate on their work—all indications that their bodies were not functioning normally. When their water supply was increased, these symptoms of physical disorders disappeared.

Two-thirds of our entire body weight is water. Our brain alone is 70 to 85 percent water. Through the blood plasma, which is over 90 percent water, nutritive material is carried to every one of the trillion of cells in our body and these same cells depend upon water to carry away their waste products. It serves as the liquid in which all the chemical relations in the body take place.

Chemical formula for pure water is H2O which means that in a drop of water, for every two atoms of hydrogen there is one of oxygen. We get most of our daily quota of water in pure form, or in other beverages, but when we eat even the driest cracker we are adding to our water supply. Water is present in all foods in varying amounts. Meats and the fuel foods, high in calories, such as macaroni, sugar, and butter, which we eat to give us energy, have a lower water content than fruits and vegetables Over 90 percent of many fruits and vegetables is water. Tomatoes and oranges are good thirst quenchers because of their high water content. Tomatoes average about 94% water, oranges about 87 percent Watermelon, a favorite hot-weather dessert, is a little over 92 percent water.

Water comes cheaper, it is true, from the tap than from succulent fruits and vegetables, but tap water does not carry with it the valuable vitamins and minerals that, with water, come packaged in these foods and put them on the required list for well-balanced diets.

Besides our daily intake of water, the combustion of fuel foods which takes place in our bodies is constantly producing water—known as metabolic water. Some varieties of insects and animals need never drink water, as the metabolic water which their bodies produce from fuel foods is sufficient to meet all their needs to maintain life. Other animals can go for long periods of time without drinking water. The camel in his long treks over the desert carries his water supply in his hump, not in the form of H2O but as fact. As his body burns this fat to produce energy, water is also produced.

A human being is constantly losing water through his skin as well as through his lungs, alimentary tract, and kidneys. In strenuous exercise he may literally sweat out pounds of water. For instance, 13.75 pounds of 14 pounds of weight lost by a football player in 1 hour and 10 minutes of play was calculated to be water. Though the water balance of our bodies can be upset by excessive perspiration or can be seriously upset by illness, the impulse to satisfy natural thirst normally helps us to regulate our water supply.

Main requirement for drinking water is that it be wholesome, that is free from any disease-carrying bacteria. Wholesomeness in water is very different from purity. Even rain gathers some impurities as it falls to earth. Impurities in water are either organize substances, such as bacteria (not all bacteria are harmful to man), or inorganic substances—suspended matter like sand or clay, or dissolved matter such as calcium and magnesium compounds and gases. As a matter of fact most cities add inorganic substances to their water supply to disinfect it and to give it the characteristics we desire. Though muddy water with a fishy taste and odor may be "safe" drinking water, few of us would care to drink it. We prefer water that is clear, colorless, tasteless, and odorless.

Chlorine is the most common disinfectant used in city water supplies. Generally it takes only from 1 to 2 pounds of liquid chlorine to make a million gallons of water safe for drinking.

Many city water supplies are run through a filtration plant where the water runs through a series of beds of sand and gravel before it is piped out to the consumer. This process clarifies the water, removing the bacteria and substances that would make the water muddy.

Two cities, drawing their water from different sources and treating them by the same process, may each have a different type of water. The supply of one city may be "hard" while that of the other is "soft." The hardness and softness of water depends on the amount of dissolved minerals it contains. Soft water contains little dissolved minerals. Some of the minerals we need in our daily diet are present in water, but the amount is usually so small that we do not depend on drinking water as our mineral source. If New York consumers were going to depend on their water as a source of calcium they would have to drink 25 gallons of water to get their calcium supply for one day, while they could get the same amount in three to four glasses of milk.

For healthy people there is little restriction on the amount and time to drink water. Four to six glasses, besides the water we get in our food, is usually considered a normal amount. Experiments have proved that a reasonable amount of water with meals will stimulate the digestive juices and facilitate digestion, but it is best to drink water with the meal than just before starting to eat. If one drinks too much water before eating, the stomach will be filled with water and there will be little space or appetite for solid food.

Many people believe that ice-cold water is not good for one, that it chills the stomach and delays digestion. Experiments have shown that in 20 minutes after drinking ice water the temperature of the stomach is the same as that of the rest of the body.....the same period of time it takes for the stomach to attain the body temperature after a cup of hot coffee. There is one time, however, when we should carefully refrain from drinking ice-cold water and that is the time when when want it most—when we are overheated or have been exercising vigorously.

## ADD THE JUICE OF A LEMON

(Continued from Page 10)

arate the rest of the picking into as many lots as there are color classifications. These are stored until the lemons have lost their green color and taken on the waxy yellow of the highest grade lemons which you see in the markets. Then they are taken from storage and graded, sized and packed—all three processes demanding hand work because of the irregular shape of the lemon. Packed lemons are sold on the basis of size as well as grade—the principal sizes being 240's 270's, 300's, 360's, 420's, 442's, and 490's. These represent the number of lemons in a box, such a box usually weighing 76 pounds. You'll probably leave your order at the grocery for 300's, 360's, and 420's, as most consumers prefer these medium sizes.

Consumers who want value should look for lemons that are fine-textured and heavy for their size. These will be jucier and of better quality than lemons that are coarse-skinned and light in weight. Juice content is related to thinness or rind and, to some extent, to maturity. Deep-yellow lemons may be jucier, but they aren't so desirable as the light green yellow lemons. The latter have a high acid content, and acid is what we look for in this flavor food. Decay appears as a mold or discolored soft area at the stem end of the lemon or elsewhere. Remember that a mechanical injury to the rind makes the fruit subject to mold. Discard shriveled and hard-skinned fruits and those that are soft and spongy. In fact, you would probably not need prompting to follow this practice. In keeping lemons try putting them in a jar of cold water. They will decay slower than they will if left in their wrappers.

Big headache of their industry—the marketing problem—many of the fruit growers have turned over to the experts of the California Fruit Growers Exchange, largest cooperative marketing organization in the country. Begun as the result of marketing difficulties with which individual citrus growers could not cope, the Exchange now markets about 955 per cent of the State's lemons, has taken on such knotty problems as securing permanent water supplies for irrigation, controlling insect disease, improving methods of packing and transportation, etc. When overproduction threw citrus growers for a tremendous loss, the Exchange set to work on an advertising campaign to increase consumption. It educated the consumer in new uses for the lemon—as a tonic, an ingredient for salad dressing, a garnish for foods The Exchange has even gone into the manufacturing business. To dispose of unmerchantable grades of fruit or surplus supplies which if thrown on the market, would knock the bottom out of lemon prices it set up the Exchange Lemon Products Co. This byproducts business has assumed hung proportions with its manufacture of citric acid, citrate of lime used in the printing of calico, and citrus pectin for jelly making.

Following a plan that remains almost unchanged today, groups of local growers joined together in packing associations to provide better packing methods, regulate grades, etc. These associations, in turn banded together so that through district exchanges they could secure a higher marketing efficiency for their products than they could alone. District exchanges then consolidated in a central marketing organization the present California Fruit Growers Exchange, so that efficiency might further be increased. The policies of the Central Exchange are controlled by the growers themselves, for the local associations have representatives on the board of directors of the district exchanges, which in turn are represented on the board of the Central Exchange. The Exchange renders all its services to the local associations of which the individual growers are members. All returns for fruit go to the growers, except for handling and selling charges.

Of interest to consumers are the Exchange's activities in seeing that all fruit shipped measures up to certain grade regulations. Thus consumers are guaranteed citrus fruit of standard size and quality. Through its highly efficient sales organization, the Exchange sees that lemons find their way to every out-of-the-way hamlet in the country the year round.

Luckily, when consumers throats are dryest, lemonades are longest. For although California ships lemons every month in the year, heaviest shipments reach the markets during the summer months. This is the time when cooling drinks of lemonade and dishes of lemon ice are in order. Consumers use three times as many lemons in the May-to-August stretch as they do from November to March, but they pay more for them, too. This is because, with lemons, demand always keeps a jump ahead of supply. About the only thing that can change winter prices is an influenza epidemic. Consumers still doctor their colds with a good old-fashioned glass of hot lemonade.

Significant fact about consumer demand for lemons is its inelasticity. Consumers don't buy more lemons when prices are low, nor do they stop buying when prices climb upward. Apparently, if you want lemon pie for desert, you aren't going to be put off with chocolate or apple, even when these are cheaper. Of course, this firm stand is possible only because the cost of the lemon is a relatively small part of most lemon products. The slice of lemon in your tea isn't going to cut a big slice out of your budget.

Inelasticity in demand means that a shortage of lemons sends prices skyrocketing. A small surplus, with no new buyers, knocks the bottom out of the lemon market. That is why, imports and temperature remaining constant, too big crops spell ruin for growers. That is why the California Fruit Growers Exchange by limiting shipments of lemons, has saved many growers from ruin.

What the price of lemons will be this summer only a weather prophet can predict. For prices fluctuate widely with temperature changes. A heat wave, a mighty thirst for lemonade, and high prices go hand in hand. However, it's a pretty safe bet that consumers will pay more for a dozen lemons this summer than they did in 1936, due to last January's frost damage. Freezing weather took a heavy toll—reports indicating that production for the 1937 season will fall short of the 1936 mark by 2 million boxes. Already the consummer has left the effects of this shortage, having paid about 3 cents more a dozen for lemons during the first 3 months, of this year than he did over the same period last year Average price per dozen this year has been 32 cents.

Consumers have to thank a young army of women, children, Mexican laborers, college students and fruit growers that lemons are still within reach. It was these people who mobilized last winter to war on the frost that threatened to wipe out southern California's $100,000,000 citrus crop. When the thermometer dropped to the lowest temperature recorded in 15 years, they lighted the smudge pots in the fields and tended them day and night. So dark was the cloud of smoke that soon settled over groves and nearby villages that autos and streetcars kept their lights burning 24 hours out of the 24. Had there been delay in starting the fires the lemon crop would have been destroyed, for lemon trees are more ensitive to frost than any of the other citrus fruits. Then it would have been a long time between drinks of lemonade.

## NATURAL HAMMOCK

(Continued from Page 1)

resident of St. Augustine and is the school's loyal, and helpful friend.

Under the sheltering boughs of the grand old oaks two and three hundred years old, the original old-time log meeting house and several log cabin will be reproduced It is planned to reconstruct the original mansion of the owner of the plantation where nearby may be found the original ancient coquina well and the remains of the old sugar mill that produced syrup and sugar in the days of slavery.

## CONSUMER'S STAKES

(Continued from Page 4)

companies, taking advantage of low leaf prices, began the manufacture and sale of cigarettes at 10 cents per package. For a while the 10-cent cigarette cut deeply into the sales of the three largest tobacco companies. To meet this new competition the tobacco companies cut the price of their products first to $6 then to $5.50 in February 1933. In January 1934 prices were raised again to $6.10 per thousand. By 1936, 10-cent cigarettes were in a weak position in relative volume of sales.

No illegal monopoly was discovered in the tobacco industry by the Federal Trade Commission. However, the Commission says, "The aggregate business of the Four Companies, particularly in cigarettes, is of monopolistic proportions, but since they operate separately they do not, in a legal contemplation, constitute a monopoly.." Forcefully the Commission points out the relationship between the size of the companies and their economic position: "Since the dissolution decree of 1911, substantially the same companies have continued to dominate the tobacco industry. This fact might lead to the thought that cooperative activity among large manufactures exists to a marked degree. The information developed, however, indicates that there are several economic factors which enable the large companies to maintain their positions and which make the growth of other companies difficult. These include the heavy financing required to carry the inventories of leaf tobacco necessary for volume production, and the internal revenue taxes which must be paid by manufacturers before the merchandise is sold; the elaborate and expensive storage and manufacturing facilities necessary; and the cost of advertising and promotive work which must be done to establish brands on a volume basis—the only basis which permits efficient and economical production and distribution. It is apparent from these factors that the continued domination of the industry by relatively few large companies is not necessarily the result of collusion among them."

High profits, such as those in the tobacco industry, the Federal Trade Commission points out, would ordinarily attract competitors. Competition then would force profits down, prices would be lowered, profit margins reduced, until in the end the returns in the tobacco industry would be no greater than those in any other industry. Although the Federal Trade Commission has discovered no monopoly, it is significant that this normal competitive sequence has not happened in tobacco.

There was a time when the United States Supreme Court declared the American Tobacco Co. to be an illegal monopoly and ordered the trust dissolved. At the time of this decree in 1911 the tobacco trust controlled the entire tobacco industry except for the manufacture of cigars. It owned tinfoil factories, factories manufacturing tin and wooden containers, and the only very large tobacco store chain in the country. It advanced to capture control in a new section of the tobacco industry by first purchasing one company and then using monopoly profits from its other activities to finance a price war against competitors. Competitors were either forced to sell out or be driven into bankruptcy. By this technique the American Tobacco Co. had gained monopoly control of practically the entire tobacco industry at the time of its dissolution.

Fragments of the old empire, however, survived as dominating companies in certain trade areas and commodities. For instance, today the three largest snuff companies, offspring of the old trust, divide the United States among themselves, each one supplying a particular part of the country. The sale of cigarettes by nationally advertised brands transformed the tobacco industry from a group of dominant regional companies into a few large national competitors.

Rapidly with which cigarettes have become a major economic factor may be gathered from a few statistics. For the last 4 years cigarette consumption has increased 12 billion each year. From 1920 to 1930 cigarette consumption increased 7.5 billion cigarettes a year. Only 8.5 billion cigarettes were smoked in the United States in 1910; in 1936 consumption had increased to more than 150 billion. The use of smoking tobacco declined from 209 million pound in 1910 to 193 million pounds in 1934. The average yearly production of cigars from 1906 to 1910 was approximately 7 billion; by 1934 this had declined to 4 1-2 billion Only other tobacco product to gain from 1910 to 1934 was snuff; 31 million pounds were used in 1910, 37 million pounds in 1934.

Analysis of the prices paid for a package of cigarettes in 1934 reveals that the cost of tobacco is of minor importance in the cost of a package of cigarettes. Of the average retail price of 12.82 cents per package the farmer received 1.49 cents, the processor 2.61 cents, the Government 6 cents in the form of excise taxes and the retail and wholesale distributors 2.72 cents. These figures do not make allowances for the processing tax paid by processors or benefit payments received by farmers who cooperated in the AAA tobacco program.

The price of cigarettes has no direct relationship to the cost of the labor and tobacco that go into them. In 1931, when wages were moving downward, when tobacco prices on the farm had fallen lower than they had in years, the price of the most important brands of cigarettes was raised. Too, while the most important brands of cigarettes sold by the four largest cigarette companies retailed for the same price, no two of these tobacco companies paid the same price for its tobacco. The cost of the domestic tobacco used in the principal brands of cigarettes ranged from 20.92 cents per pound to 26.44 cents per pound in 1934.

Control of the hourglass neck of the tobacco industry by the tobacco processors perhaps permits them to dictate their own prices, but the Federal Trade Commission report makes clear the fact that the manner in which this control is used is not forbidden by existing law.

Only possibility of increased competition would come from the 10-cent cigarette. Encouragement to such competition might come, the Federal Trade Commission suggests, in changing the tax on cigarettes from one based on the number, regardless of value, to a tax on the value of cigarettes. I n this way lower taxes on a 10-cent package might force down prices of major brands.

On the other hand, the Federal Trade Commission report suggests that farmers might secure more of the consumers' dollar for themselves by organizing into tobacco marketing cooperatives and by selling their tobacco by Government grades. Government grading of tobacco is one of the best assurances farmers can have that the prices they receive will reflect the quality of their products.

Central fact of the tobacco industry, then, is the concentration of economic control. A few large concerns have their hands on the neck of the bottle, and all tobacco moving from producers to consumers must pass this way. While it is true that processors have made large profits at a time when farmers' net income after costs of production have been deducted has been little or nothing, this alone does not mean that the processors are responsible for the farmers' plight. Nothing in its study indicates to the Commission that there has been any illegal price fixing either on the farm or in the city, except perhaps in the case of snuff. By its nature the tobacco industry seems to encourage the development of large economic units, and these large units result in centralization of control and lessening of competition The Federal Trade Commission report suggests that on one side farmers might better their position by organizing cooperatives. On the other side it recommends that Congress consider a change in the tobacco tax to encourage competition.

## CHINA USES MORE OF U. S. TOBACCO

Imports of leaf tobacco into China in the first five months of the current year totalled 23,859,000 pounds compared with only 7,297,000 pounds in the corresponding period of 1936, according to the Department of Commerce.

The United States furnished 20,377,000 pounds of the imports in the five-month period; Japan, 2,170,000 pounds; and the Philippine Islands, 236,000 pounds.

Profanity is the loss of self-control.

Love enables us to hold reverence for the personality of our enemies.

To fight all bad habits and cultivate all good ones should be my greatest aim in life.

Love is the summer of the soul, the fulfilment of the higher manhood and womanhood.

# Ga. State College Blazes The Way

## LONG STAPLE COTTON TOPS THE LIST DISPLAYED

### Stalk With 446 Bolls Exhibited at State Capitol —Governor Present

Savannah, Ga., Aug 5—Cooperating with the state department of entomology which is headed up by Manning Yoeman, the agricultural department of Georgia State College, Industrial College, Georgia, blazes the way in experimentation, and research work on sea island cotton becomes a reality.

This experimental work, under the supervision of F. Marcellus Staley, director of the department, started April 15 in an attempt to revive sea island cotton industry in the Coastal Plain region.

The seed used to start the experimental work, considered the best strain of sea island cotton seed in existence, was developed by B. M. and C. H. Gaddis. Enough of the special seed was provided to plant 7.7 acres, which when matured at the harvesting time will be distributed among farmers who are interested in establishing a one variety seed in their community. The super special seed, only enough to plant 1.1 acres was planted on a plat that was situated to prevent cross-breeding and afford isolation. The object of the experiment is to produce a variety that matures early, is a heavy producer and a type that will grow under boll weevil conditions.

Indications point to the fact that the experiment at the college is going to be a brilliant success. All of the plants are heavily fruited. The State entomologist is highly pleased with the project. A stalk of cotton with 446 squares, bolls and blooms was displayed at the State Capitol, Atlanta. The stalk, about five feet high is a sample of the heavier bearing plants in the plot. There are many of them with more than 400 buds. Some exceed 500.

Governor Rivers, discussing the experiment conducted at the college on long staple cotton, said the new sea island type would mature "fully twenty days earlier than sea island cotton ever grown before."

The governor, too, was highly pleased with the project.

The college authorities hope to develop sea island cotton which could be grown outside the original sea island area along the coast. Upon the success of this experiment rest the destiny of Georgia farmers, the possibility of an early return of sea island cotton culture to a place of importance in Georgia's agriculture and millions of dollars annually derived from the crop.

## POTATOES GROW WITHOUT SOIL

Pittsburgh, Aug. 5—The day is not distant when vegetables will be grown without soil.

Doubt it? Then consult Dr. Herbert L. Spencer, president of Pennsylvania College for Women.

He has a garden—a small metal tank, just seven by three feet and in it he has growing a bushel and a half of potatoes at a cost of a meager 5 cents.

The secret? A bottle containing a mixture of 16 chemicals is placed at the bottom of the soilless garden, a wire netting is fitted over the garden top and covered with excelsior straw. That is the potato patch complete.

The potato roots have pushed down through the straw into the chemical solution and their green tops have sprouted.

Alongside his potato patch, the doctor has another tank flouting green tomatoes already on the vine and also another with gladioluses.

With this revolutionary method of gardening an acre of land can be made to yield 3,000 bushels of potatoes instead of the usual 100 to 120 bushels.

### BIGGEST CROP FORECAST HURTS FARMERS

New York, Aug. 9—Farm prices, wavering in recent weeks before the mounting evidence of greatly increased production, tumbled downward today following the government's estimate of the largest cotton crop since 1931.

Prices of cotton for future delivery fell from $1.40 to $2.20 a bale on the New York Cotton Exchange, directly reflecting the publication of the August 1 estimate of a 15,593,000 bale crop.

In Chicago, wheat futures declined 2 1-4 cents to 2 3-4 cents a bushel on the board of trade, influenced by a heavy increase in the visible domestic supply of wheat, and by beneficial rains over Argentine wheat fields.

Private estimates of the cotton crop made in recent weeks by dealers ranged all the way from 14,600,000 to more than 15,700,000, the average being 15,200,000 bales.

The market was shut down, as usual, during the reading of the government's crop estimate, which was made public in Washington. As soon as trading reopened, the prices started downward.

New Orleans, Aug. 9—An unexpectedly large crop estimate by the Department of Agriculture and a new all time high in estimated yield per acre brought out enough selling in cotton futures here today to depress prices $1.75 to $2.15 a bale.

The production figures of 15,953,000 bales was larger than the trade

## LOUISIANA FARMERS BENEFITED

### Editor of La. Weekly Tells What Is Expected

(The Louisiana Weekly)

Of the $85,000,000 appropriated by the federal government for farm aid, and which will be spent during the next three years, the Negro farmer will be among the beneficiaries, and since he plays so important a part in the land problems of the nation, special attention is being directed toward him.

Under the 1936 agricultural program, farmers of this state will receive $8,069,099.16, unpaid applications amounting to $537,935.11. Payments are made to farmers for carrying out soil-building practices and for diverting much acreage from soil depleting to soil conserving and soil erosion preventing crops. Rates of practice payments were based on costs of practices and materials and rates of diversion payments varied according to productivity of farm land..

Just what percentage of this money for last year's program will be paid to Louisiana's Negro farmers has not been ascertained, but certainly numerous land owners will be among those men receiving government checks.

With the knowledge that millions of dollars will be again made available, agricultural officials and authorities in both Louisiana and the nation's capitol have expressed a determination to see that Negro farmers receive just benefits under the program of expenditure, and have perfected plans whereby information as to how to make application for such benefits will be easily possessed by all.

Last week Southern University at Baton Rouge was the scene of one of the most significant meetings in the history of Negro journalism, as well as in Louisiana. The occasion was a meeting of Negro newspaper editors, federal soil conservation authorities, and staff members of Louisiana State University, who had been called into conference by J. W. Bateman, director of Louisiana's agricultural extension; A. L. Holsey, field officer for the federal Agricultural Adjustment Administration, and C. A. Cobb, Southern Regional Director of the Agricultural Adjustment Administration.

Present were Editors Sherman Briscoe of the Monroe Southern Broadcast; Mayme Osby Brown of the Louisiana Weekly; J. S. Jones of the Louisiana Colored Teachers' Journal; Prof. T. J. Jordan, director of the state farm agents; Miss Marjorie Arbour, acting editor of the Louisiana Leader and teacher of journalism at L. S. U.; B. B. Mackey, Regional field Officer for AAA, and Mr. Holsey.

At the conference plans were made to give to the Negro farmers of Louisiana easily understood information as to their rights under the federal farm program, telling them through the columns of the Negro newspapers what benefits may be derived from the govern-

# Farm Home Tenant Bill Will Help

## HOGS ADVANCING IN PRICES

The highest price in 11 years is being paid for pork today due to the scarcity of hogs which is due mostly to small feed grain production in the drought years 1934 and 1936. Corn belt farmers are unable to benefit from the high prices because they lack hogs to sell.

Today's hog market peak was $13.75 a hundredweight, but receipts were only half what they were a year ago. The price was more than $2.00 higher than last year and more than triple the lows reached in 1932-1936.

Livestock experts said that in addition to two drought years in which corn crops were the smallest in half a century, governmental crop and swine production measures were contributing factors in reducing the nation's hog population to 42,000,000 head on January 1, a decline of 20,000,000 head in four years. Corn is the key to possible rebuilding the nation's meat reserve. This year's crop, largest in five years, was a start and they said it would take several years. Government experts estimated hog slaughter would not reach the level that prevailed prior to 1934 before 1940 at least.

### N. F. C. F. CONVENTION, FORSYTH, GEORGIA, OCTOBER 28, 29, 30.

Upon invitation, Prof. W. M. Hubbard, Principal State Teacher Training School, Forsyth, Georgia, the eighth annual convention of the Federation will be held at his school near Forsyth, Monroe County, Ga., Governors of 21 states will be asked to officially appoint some outstanding farmer of our racial group to represent the colored farmers at this gathering. An invitation has been extended to Secretary of Agriculture, Honorable Henry A. Wallace, to deliver the main address. Prizes will be offered for the best display of all farm products, sewing, canning, and basketry. Colored farmers from various sections of Georgia have appointed special comittees to assist Prof. Hubbard in taking care of the large delegation from other states that will be present.

### CROPS USED IN AUTOMOBILES

According to a report issued by a manufacturer of automobiles, crops from more than 500,000 acres are now used in the production of 1,000,000 automobiles in that plant, in addition to hides from 30,000 head of cattle, mohair from 87,500 goats, wool from 800,000 sheep and lumber from the equivalent of 20,500 acres forest.

## ABOUT 3,000,000 WILL BE AIDED IN NEW LEGISLATION

### Approximately Ten Million Dollars May Be Loaned for 1938-1939

Last week President Roosevelt signed the bill authorizing the Agriculture Department to embark on a long-time program to turn nearly 3,000,000 tenant farmers into land owning farmers. The bill allows $10,000,000 this year for loans to tenants to purchase farms, $25,000,000 in the 1939 fiscal year and $50,000,000 annually thereafter. It also authorizes 10,000 this year and $20,000,000 in 1939 and 1940 to purchase and retire from cultivation land unsuited for crops. The first to receive assistance will be tenants in the southern and midwestern states, since the program will be begun in states with the greatest population and highest percentage of farm tenancy County committees and farmers familiar with local conditions will select the individuals to be helped and land to be purchased. About 280,000,000 acres of land has been given away during the past 100 years. Today much of this land is being operated by tenants. The Government is now planning to buy up from 4,000,000 to 5,000,000 acres per year and return much of it to forests, recreation areas, and game reserves and settle the tenants on better land.

The Farm Home,Tenancy Bill states the corporation shall have a capital stock of $10,000,000 subscribed for by the President on behalf of the United States of America, payment for which shall with the approval of the Secretary of Agriculture be subject to call in whole or in part by the Board of Directors of the Corporation. The corporation shall have power to enter into contracts, make loans, and to acquire by purchase, eminent domain, gift, or otherwise, any real or personal property or any interest therein, and to improve, develop, maintain, and sell any such property or interest therein. Such property may be acquired subject to any reservation, outstanding estates, interests, assessments, or other encumbrances which the Board determines will not interfere with the utilization of such property for the purpose of this title. In the acquisition of any real property, the provisions of section 355 of the Revised Statues, as amended, shall not apply, but the Corporation may avail itself of the services of the Attorney General for advice regarding the state of titles and for the prosecution of condemnation proceedings in its name. The practice and procedure governing such proceedings by the United

# A Native American

**Sweet Corn, perennial legacy from Indian days, comes most abundantly to market in July and August. Here are some pointers on how to pick and prepare this top-flight energy food.**

Arrowheads and tomahawks, pipes of peace and pottery—legacies of our American Indians—may be relegated to the showcases of museums, but some things inherited from the Red Man we have found too good not to adopt for our own. One of these is corn on the cob.

Now the custom of eating corn on the cob is so well entrenched in American life that it has assumed the status of a national summer sport. Come June or July we inevitably tuck our napkins under our chins preparatory to dispatching with gusto a steaming dish of sweet-corn ears, nothing daunted by the fact that most Europeans regard corn as a food fit only for barbarians. Moreover, we go the Indian one better in adding butter and salt to bring out the full flavor of the plump corn kernels.

Life itself depended upon corn culture at one time. Indian maize—now known as corn—could be stored during winter months. Thus it proved a certain source of food when game was scare and berries a memory.

For this gift the Inidans gave thanks to the gods in their Corn Dances held just before the maize hardened into seed. These festivals—celebrated as a sort of Indian Thanksgiving Day—were the big yearly event for many tribes. In the Great Lakes region corn dances still take place, with scattered tribes from the surrounding territory gathering for this gala reunion. The Indians of the Southwest stage elaborate harvest festivals every fall, the celebration always ending with a feast in which the eating of boiled corn serves as the crowning ceremony.

Actually but a small part of the Indians' corn supply went to fresh eating corn. More went into storage bins, was dried and ground for maize flour. So it is now. Our waving cornfields, stretching mile after mile through the Middle West, weren't planted to corn so that we might have tender ears for roasting in the husk or boiling on the cob. They are largely given over to field corn to provide grain and animal fodder. Field corn, it is true, can be eaten by man, but it lacks the sweet flavor that characterizes the sweet corn (a quite distinct type) as a table delicacy.

Sweet corn concerns us most at this season for it is only from June to October—depending upon the area—that we can satisfy our appetite for fresh corn on the cob. All year round, however, we can get sweet corn in some form, for great quantities of it go into commercial canning. A newcomer to the commercial world, frozen corn, has swung into high favor with consumers in the last few years.

How much sweet corn is grown no one knows. Look over the home gardens in almost any State in the northern two-thirds of the United States, and you are sure to see the stalks of sweet corn towering above the other vegetables. Truck gardeners plant it throughout the North for local consumption—making successive plantings of one early variety or several different varieties so that their corn supply will last until the first frosts of autumn.

Because sweet corn is too perishable to travel long distances, there are no records of carlot shipments. Production figures for canned sweet corn—and the greater part of sweet corn goes into cans—are recorded. The 1934 sweet-corn crop for manufacture was about 500,000 short tons—128,000 tons less than the average from 1928 to 1932. Drought ravages accounted for this low figure. However, in the succeeding year production leaped ahead to a high of 860,000 tons, then dropped to 605,000 short tons in 1936. Acreage marched steadily forward from 200,000 acres in 1933 to 400,000 in 1935—more acres than had been planted to sweet corn in the pre-drought years. In 1936 it stood at 370,000 acres. Farm value in one year doubled to reach an $8,000,000 high score for 1935, then fell off 25 percent in 1936.

Biggest sweet-corn States competing in commercial production are Illinois, Iowa, Maryland, Minnesota, Ohio, New York, Indiana and Maine. Wisconsin, Michigan, Delaware, Tennessee, and Pennsylvania take second rank, with other States trailing the field.

Northern growers have an edge on southern planters since high temperature leads corn to pass its prime quickly. Naturally, canning industries locate in the cooler sections where corn is in topnotch condition as many as 5 or 6 days, as against 2 days in southern sections. Moreover, northern corn owes part of its reputation to the varieties that flourish in these sections.

Three varieties of sweet corn were mentioned in the "Gardener's Textbook" published in 1854. An article appearing in 1884 described 35 sweet-corn types. So numerous are the varieties at the present time that we have lost count. Best known varieties, both yellow and white, may be classified according to the time of season they mature.

Golden Bantam, widely grown in the northern sections, is one of the earlier varieties of sweet corn. Its waxy, golden-orange grains are set in eight straight rows along ears that are about 5 inches in length. It has a delicious flavor unlike the mealy taste of some of the corns.

Crosby, with its stalks climbing about a foot higher than Golden Bantam—that is to 5 or 5 1-2 feet—is a good mid-season variety. The 10 or 12 rows to an ear carry small white kernels.

Stowell Evergreen, medium to late in season, has been so well thought of that growers have chosen it for breeding experiments. The stalk shoots up to 7 or 8 feet. Ears are large, bearing as many as 20 rows. Kernels are evenly placed and are white and long in appearance. A little sugary in taste, Stowell Evergreen remains good a long time.

Late maturing is Country Gentleman, often called Shoe Peg Corn. The white sweet grains are deep set in such irregular formations that no rows are apparent on the husked ears.

Good flavor has thrown these varieties into the spotlight for eating fresh on the cob, although other varieties such as Golden Early Market and Whipple Early Yellow deserve mention. The tendency is to give preference to yellow corns.

Style of pack and method of handling have influenced choice for canning purposes. For instance, yellow varieties suitable for wholegrain packs are popular these days. But in the main it is climatic and economic conditions which have swung certain types into first place. Growers are always on the lookout for a variety that will give the greatest tonnage per acre, since they are paid by the canner on this basis. Canners want to get the highest yield of canned corn per ton of raw stock. Climate permitting, therefore, the variety chosen will be late maturing and deep grained. This accounts for the perennial popularity of Stowell Evergreen and Country Gentleman in the canning business.

Growers, seedsmen and canners have given much attention to the business of developing good sweet-corn varieties. This is easily understood when we realize that because of the way it reproduces, corn seldom breeds true except for the simplest characteristics. The individual corn plant does not usually pollinate its own seed. Every corn plant is both male and female. The staminate or male part is the proudly waving, pollen-filled tassel at the top of the stalk; the egg is at the base of the silk which leads through the husk to the corn kernels. Since wind carries the pollen, each kernel on an ear may be pollinated from a different parent plant.

That is why, to develop dependable strains of corn, growers have taken the matter out of Nature's hands. They carefully select a fine plant for breeding purposes, then tie paper bags over both tassels and ears. Later they sprinkle the pollen that has collected in the topmost bag on the ear of that same plant. This process, repeated for five or six corn generations on successive selections, results in an inbred corn that produces much the same kernels year after year. To merge the good qualities of several strains, growers have planted rows of the two parent strains side by side, detasseling the plants that are to serve as the females.

Golden Cross Bantam is such a hybrid, having the best qualities of both parents. Because of its hybrid character, its progeny will be of diverse nature—in no way resembling Golden Cross Bantam. For that reason Golden Cross Bantam corn cannot be grown from the seed saved from Golden Cross Bantam plants, but must be produced anew each time by crossing two corns—Purdue 39 and Purdue 51. In spite of higher prices asked for such seed, the uniformity, productivity, and quality put hybrids in demand.

Corn is most delicious eaten right after picking, whether it is boiled, steamed, or roasted. One rule states: "The best corn for eating is harvested in less than thirty minutes from the time the butter is placed upon the kernels." But unfortunately most consumers cannot pop the ears from the garden into the cooking pot. For them, a few buying hints are in order:

Corn found in market is of two types—either sweet or field corn. The latter is usually an early maturing variety of field corn. In the South, particularly, where sweet corn falls easy prey to earworms, farmers grow the tender varieties of field corn for human consumption. It may be as tender as sweet corn but lacks the sweet taste that has a big consumer appeal. You can recognize sweet corn at a glance by the dark green husks with odd ribbon-like ends which hang free and give an unkempt appearance. The field corn lacks these streamers. However, many retail grocers trim the husks from the end of the ear, so that this distinguishing mark may be lost. Ears of sweet corn are usually smaller than those of field corn.

In prime condition an ear of corn has a tuft of silk trailing out of the tip. These strands should be brown and crisp where they leave the husk but close to the ear should be pale green in color, succulent, and slightly elastic. Husks should be fresh green and tightly wrapped. The pithy stem, where the ear was broken away, should be green also. Dry or straw-colored husks indicate age or damage. Then kernels will be tough, discolored, and flavorless.

Once you have picked out your green, sweet-smelling ears, strip back the husks of one ear. Bright, plump kernels, just firm enough to offer resistance to pressure, should fill the cob. If pricked, they should exude a milky juice. Since kernels dry out quickly, leave the husks around the ear as protection until the last minute before cooking.

Remember, a slender ear of corn may have just as much kernel as a large, coarse ear. Don't discard an ear if worm injury is present at the very tip. Cut off this part, but watch out for worm injury running along the side as this spoils the whole ear.

High quality in sweet corn and high sugar content are inevitable companions. During the ripening process, the kernels run through four stages, called the premilk, the milk, early dough, and dough. It is in the milk stage when kernels are plump that flavor is best. Then is the time when ears are harvested before the sugar changes to starch, as it does with approaching maturity. However, the ripening process continues even after the ear is in the market basket. High temperature hastens the transformation of sugar to starch. That is why a hot day will leave your corn ears starchy and tough. If you have space in your ice box, that is the best place to keep corn.

Given the finest ears in the market, the cook can ruin the flavor by neglecting the few commandments of corn cookery. Bring the salted water to a boil before dropping in the corn ears. Once the ears are in the kettle keep the water at a simmering temperature (185 degrees F.) to prevent toughening. Though we often speak of boiled corn the phrase is really a misnomer. Ten or fifteen minutes is quite long enough, though very tender ears are ready for serving in half that time. Such corn is ready for eating as soon as the milk has set.

Corn is a top-flight energy food, whether boiled or roasted. If you are going to play several sets of tennis, or chop the winter wood supply, corn is one of the dishes for you because of its carbohydrate content. Corn is rich in sugar, still richer in starch, and we have already noted how the starch content grows with maturity. Corn has some protein, a little fat, a lot of water, a goodly quanity of Vitamin B, and some Vitamin C. Yellow corn that has a yellow endosperm also contains Vitamin A.

Corn canning is one of our large-scale industries. In fact, sweet corn ranks among the three most important canned vegetables in the United States. In 1935, about 21,500,000 cases of corn left the packing plants. Even the factory wastes—the husks, shanks, silks, and cobs—run into big money, for these valuable byproducts sell as manure and silage. Canner and farmer fortunes rise and fall together. In the East the canner usually contracts with individual growers for corn, but in the West often he grows his own corn. Biggest corn-canning section is in the Midwest.

Maine began the business of corn canning. Here Isaac Winslow, a sailor, who had learned in France methods of preserving foods, began his experiments. From his first trials, which consisted in boiling corn on his kitchen range, the modern corn-canning plant developed—a huge establishment equipped with automatic machinery that will do all the work of canning so that no human hand need touch the corn from the time the ear feeds into the cutter until the can is sealed.

Canned corn stands upon the grocery shelves packed in two styles—the whole-grain style or the cream style. In the latter, the grain is cut through and the contents scraped out, leaving part of the skin attached to the cob.

Direct help to the housewife are the quality standards set up by the Department of Agriculture for grades of canned corn—U. S. grade A (fancy), U. S. grade B (extra standard or choice), U. S. grade C (standard), and Off-grade (substandard). These grades apply to both styles of canned corn, the wholegrain and the cream style, and are based on such qualities as color, absence of defects, consistency, cut of corn, maturity and flavor—with maturity scoring highest and flavor next in the total award. For Regulatory Announcements 138 U. S. Standards for Grades of Canned Corn—Wholegrain Style, and 139 U. S. Standards, for grades of Canned Corn—Cream Style, apply to the Bureau of Agricultural Economics, United States Department of Agriculture, Washington, D. C.

Canned corn must be sealed in containers that are sound and clean. Labels must comply with requirements of the Federal Food and Drugs Act. Should the space between the top of the product and the lid be excessive, a legend will warn "Below U. S. Standard—Slack Fill." If too much brine has been added, an extra admonition will tell the consumer, "Contains Excess Added Liquid."

## SMALL FARMS IN THE SOUTH

Of the 6,812,350 farm operators in the United States as recorded by the 1935 agricultural census, 2,547,952 or 37.5 per cent were located in the 11 Southern States. The average southern farm, however, was only 74 acres, while in the other states it was 203 acres.

## GA. STATE COLLEGE, SAVANNAH, MAKES RECORD

### 446 Squares, Bolls and Blooms on Cotton Stalk

State officials Thursday pointed to a cotton stalk on display in the State Capitol bearing 446 squares, bolls and blooms and predicted a steady revival of the Sea Island cotton industry in Georgia.

State Entomologist Manning S. Yeomans said the stalk, grown on a state experimental plot near Savannah, was indicative of a new type of Sea Island cotton being developed by experiments in Chatham and McIntosh Counties.

Sixteen million dollars will be spent for construction of the 1939 Golden Gate International Exposition.

# JANITOR, AWARDED PH.D. DEGREE GETS POST AS WILBERFORCE PROFESSOR

Pittsburgh, Aug. 12 (ANP)—Dr. Edward Lee Harris hopes he has seen his last pail, mop, and scrubbing brush in an official capacity. This fall he will become head of the chemistry department at Wilberforce university.

The trail from janitor to professor was six years long. He has janitored at the University of Pittsburgh for that period as he struggled to complete requirements for his doctor of philosophy degree in chemistry. He worked full time on his job to support his wife, also a college graduate and their two children.

Dr. Harris was dusting a classroom when he received word of his appointment. "I am very happy," he said, "over the chance to do the sort of work I have studied for all these years."

## Congress Limits Freight Trains: Ducks Lynching

Washington, D. C., Aug. 5 (ANP)—The U. S. Senate last Tuesday held a twilight session to pass on Senator McCarran's Bill which seeks to limit freight trains to 70 cars, on the ground it will tend to preserve both life and property. The body approved the Bill, but there was no record vote, and the measure now goes to the House. Opponents declared that enactment of the bill would cost the railroads about $150,000,000 a year, and that the cost will be passed on to the public.

Earlier in the session, the Senate refused to consider the Wagner-Van Nuys anti-lynching bill as an amendment to the train length bill. On Senator McCarran's motion, it voted 41 to 34 to table the anti-lynching bill.

# ATLANTA MAYOR TO WELCOME BUSINESS LEAGUE TO CITY

Atlanta, Ga., Aug. 12 (ANP)—Mayor W. B. Hartsfield of Atlanta has accepted the invitation extended by the Negro Chamber of Commerce to deliver an address of welcome during the Business League Convention, August 18, 19, 20.

Mayor Hartsfield will speak on Wednesday evening, August 18, on the same program with Dr. R. R. Moton, president of the league, when he will bring his special message.

# WAGE INCREASES GIVEN ILLINOIS LAUNDRY WORKERS

Chicago, Aug. 12—(ANP)— The first mandatory order under the 1933 Illinois minimum-wage law for women and children, requiring laundries to pay from $9.20 to $11.20 a week, became effective last Monday. Under the order, issued by Labor Director Martin P. Durkin, $11.20 must be paid for the basis 40-hour week in Chicago and four nearby counties.

A $10 scale was set in laundries employing women and minors in the central and northern sections of the state, and a rate of $9.20 for the southern counties. Minimum-wage scales for women will soon become effective in beauty parlors and in macaroni and spaghetti and noodle factories, it was reported. Garment and candy-making industries may also come under the ruling.

# BILL ROBINSON TO EDUCATE ONE OF SCOTTSBORO BOYS

## Roy Wright Will Go To New Jersey Vocational School

Brooklyn, N. Y., Aug. 12 (ANP)—At a mass meeting Monday night, 3,000 Negroes warmly welcomed Attorney Samuel Leibowitz, and the four Scottsboro boys he brought here. The meeting was held under the auspices of the National Afro-Protective League of which Rev. Thomas S. Harten, pastor of the Holy Trinity Baptist church, is president.

Mr. Leibowitz reviewed the history of the case to the present day, and pledged himself to continue the fight until all the defendants are acquitted. Among the prominent citizens present were: Judge Edward Wynne of the Municipal Court, Joseph DeAndrea, Municipal and City Court Magistrate; George W. Wibecan, leader of the Democratic Negro forces here, and Comptroller Frank J. Taylor.

Bill Robinson, stage and screen star, will send Roy Wright to a vocational school at Bordentown, N. J., for three years. It was also announced that the N. A. A. C. P. will defray the expenses for another boy at a similar school, and two business men here have pledged employment for the remainder. The boys at present reside at 443 Franklin Ave., the home of Rev. Harten.

# CASH AWARDS FOR STATE FAIR TO BE TOTAL OF $31,000

## Great Exposition Will be Held Here September 20-25

Providing cash awards amounting to upward of $31,000.00 the Premium List of the Tennessee State Fair at Nashville is being mailed out free on request. The 1937 dates are Sept. 20 to 25 and a glance at the booklet which is just off the press will disclose that the 32nd Annual exposition promises to be the best balanced event in the history of this institution. No department pertaining to agriculture, live stock, poultry or education has been overlooked and the amusement features appear to be second to none. The Night Horse Show is again a feature with $5,095.00 in premiums. Then comes jacks, jennets, mules and draft horses drawing $3,600.00 Harness racing on five afternoons calls for another $3,600.00. Beef cattle get $3,000.00; Dairy Cattle $2,620.00; Swine $1,266.00; Sheep $1,048.00; poultry $912.00; agriculture $1,204.25; horticulture $835.50; dairy products $306.50; home and educational department $1,797.50; Four H. Club and Future Farmers $4,500.00 and Woman's Work and home demonstration $1,826.00. All of this will be paid out in actual cash and anyone interested in competing for this money should write for a premium list. Address Phil C. Travis, Supt. of Publicity, Tennessee State Fair, Nashville, Tenn.

Free acts will be given twice daily in front of the grand stand with 3,000 free seats and will include circus acts directed by Ernie Young. Daily programs will be carried out in the woman's building as well as the electrical building and local radio stations will feature daily broadcasts. The Royal American Shows will again grace the midway and band concerts will be heard morning, afternoon and night. When the Tennessee State Fair opens on Monday morning, Sept. 20 the gates never close until midnight on Saturday, Sept. 25, thus giving six days of continuous performance. On the closing day there will be automobile racing staging a grand finish with a 25 miles race having AAA sanction on a dustless track.

## Say Discrimination Rules On Ship Line To West Indies

New York, Aug. (ANP)—British ship companies whose boats carry passengers between the U. S. and the West Indies islands discriminate against Negroes, it was charged last week at a conference of British West Indians at the Renaissance casino.

Reginald Pierrepont, an official of the organization, said the British government is antagonistic, and urged that test cases be carried to the courts. Groups represented at the meeting included the West Indian Federation of America, United Aid for Persons of African Descent, Council on West Indian Affairs, and Jamaica Progressive league.

## Government Chiefs To Make Speeches At Business League

Atlanta, Ga., Aug. 12 (ANP)—The official program for the 35th annual convention of the National Negro Business League has been completed. "We have had a higher percentage of acceptances for places on the program than ever before in the history of the league," said Albon L. Holsey, league secretary.

The various departments of our government which have Negro officials will be fully explained during one session. Among the Negro officials who have accepted are: Dr. Robert C. Weaver, U. S. Department of Interior, Washington, D. C.; Mr. H. A. Hunt, Farm Credit Administration, Washington, D. C.; Mr. L. A. Oxley, U. S. Department of Labor, Washington, D. C.; Mr. Charles E. Hall, Bureau of the Census, Washington, D. C.; Mr. Joseph H. B. Evans, Resettlement Administration, Washington, D. C.; Mr. Thomas N. # NO NEED TO COPY WHITE COLLEGES, SAYS PATTERSON

## Tuskegee President Wants Schools to "Debunk Radicalism"

**Philadelphia,** Aug. 12—(ANP) "White American colleges are not meeting the needs of their students, so why should we copy them?" stated Dr. F. D. Patterson, president of Tuskegee institute, in his speech to the general session of the National Association of Teachers of Colored Children Thursday night.

"The task of the educators is to 'debunk' pseudo radicalism and to preserve individuality as opposed to crass individualism that seeks no good but its own." According to the speaker, segregation is an old story to the Negro, and must not be allowed to prevent his contributing the best within him to the race. Teachers should prepare students to face the world as it is, not as they should like it to be.

Dr. John P. Turner, who presided over the assembly, took the occasion to rebuke a member of the press who had been taking umbrage to his stand as a member of the Philadelphia Board of Education on the merged eligible teachers list.

## Plans Made To Interest Members In Bigger Program Of Political And Economic Activities

Ft. Worth, Texas, Aug. 12 (ANP)—Mrs. R. R. Moton, former president of the Alabama Association of Colored Women and wife of Dr. R. R. Moton, president-emeritus of Tuskegee Institute, this week informed the women of the nation that as the new president of the National Association of Colored Women, she will carry high the banner of American womanhood, and assisted by the State Presidents and the membership at large, set immediately in motion those plans and programs aimed primarily to integrate women still further into the social, political, educational and economic life of the nation.

Three of the main objectives of the new president and her official staff: to raise the Endowment Fund during the next two years; to provide uniform activity for all states, one of the key notes of the convention; and to make the State Presidents the directing key women of the State Work.

**Girls Active at Big Parley**

During the big confab, Mrs. Luch Harth Smith, director of supervisors, directed the convention of the National Association of Colored Girls in an adjoining building to that in which the National Association of Colored Women held their meeting. During both conventions, Texas hospitality was keenly appreciated by all delegates who spoke in highest praise of the treatment accorded them.

Mrs. R. R. Moton comes to the presidency of the National Association of Colored Women with rich experience gained in Tuskegee as director of women's work, as the president of Women's Clubs of Tuskegee, as president of the Alabama association of Colored Women's Clubs, and as a member of the Interracial Commission South.

Mrs. Moton accepted the platform of the National Association of Colored Women and pledged loyalty to the traditional purposes, that of standardizing the Negro homes and making better conditions for Negro Women in Industry.

**Endowment Fund Needed**

Aside from a small balance needed for headquarters, the National Association of Colored Women are determined to put workers in the field to add zest and efficiency to the work of the departments while unifying. The State Presidents will lead their units in this drive for $50,000. The 1939 convention is set as the time to close the drive and put active workers in the field.

At the third biennial convention of the National Association of Colored Girls, there were 50 girls present representing 16 states. Miss Josephine Johnson of Berkley, Calif., presiding at the meeting. Topics claiming their attention were: Is Education of today Meeting our Present Day Needs? Fallacy of a Double Standard of Morals; Vocational Opportunity for Negro Girls; and Future Club Work among Negro girls.

Honorary N.A.C.W. presidents in attendance were Mrs. McLeod Bethune, director of NYA among Negroes; Miss Mallie Q. Brown, Mrs. Elizabeth Carter Brooks and Mrs. Sallie W. Stewart. With these also were Mrs. Elizabeth L. Davis, who has never missed a meeting of the National; Mrs. J. C. Napier, honorary member of the Frederick Douglass and Historical Association; Mrs. Addie W. Dickerson, president National Council of Women of the Darker Races; Miss Jane Hunter of Phillis Wheatley fame; Mrs. A. B. Dement of Texas; Mrs. Lethia Flemming of Cleveland; Mrs. Arsania Williams of St. Louis; Mrs. Annie E. Malone of Poro fame; Mrs. R. A. Ransom of Ft. Worth; Mrs. C. H. Christian of Austin, Texas; Mrs. Bertha Johnson and Mrs. Emma Miller of Mississippi; and Mrs. Mayme Josenberger of Arkansas.

Dr. Mary F. Waring, retiring president, was appointed on Mrs. Astor's committee for the World's fair to be held at New York. Dr. Warring was also elected honorary president of the body.

**Boston Chosen as Convention City**

Mrs. Gladys R. Holmes, president of Massachusetts, presented the invitation to hold the next biennial convention in Boston. It was in Boston during the summer of 1895 that the beloved Josephine St. Pierre Ruffin called the first National Convention of Negro Women in America together for the purpose of discussing themselves. After 42 years of growth and progress, the National Association of Colored Women will return to Boston for rededication and inspiration.

Delegates from 42 states thronged into Ft. Worth, Texas to rededicate themselves to the work of the National Association of Colored Women. Illinois and Texas led the number with 54 delegates. Officers elected for the biennial term were as follows: Mrs. R. R. Moton, Virginia, president, Miss Arsania Williams, Mo., vice president at large; Mrs. A. B. Dement, Texas, chairman executive board; Mrs. Katherine Helm, Kansas, secretary to the executive board; Mrs. Mayme Josenberger, Ark., first recording secretary; Mrs. Nannie Mae Williams, Ill., second recording secretary; Mrs. Ida Henderson, Ga., third recording secretary; Mrs. Ella Stewart, Ohio, treasurer; Mrs. Wanza Bagnall Webb., Va., auditor; Mrs. Lizzie Fouse, Ky., statistician; Mrs. Maud J. Brockway, Okla., parliamentarian. Members of the Administrative Board: Mrs. Lethia Fleming, Ohio, Mrs. S. Joe Brown, Ia., Mrs. Christina Smith, Mich., Miss Anne Gillum, Ark., Dr. Mary F. Waring, Ill., and Mrs. Sallie W. Stewart, Ind., executive secretary.

## May Lose Out In Re-Registration

Charlotte, N. C., Aug. (ANP)—Fears that the 3,500 Negro registered voters might be greatly reduced in numbers were expressed this week following announcements by the county commissioners that either a purge or a re-registration would be called.

Although the population of this county is one third Negro, it has taken many years to bring their voting strength to 3,500 of the total of 50,000. A purge or a re-registration is expected to chop down this figure greatly, and it may be many more years before that total is again reached.

# WIFE OF CLEVELAND "MAYOR OF HARLEM" DIES IN HOSPITAL

Cleveland, Ohio, Aug. 12 (ANP)—Mrs. Willie Bell Owens, wife of Jimmy Owens, "mayor of Harlem," passed away Tuesday at Lakeside Hospital. Last rites were held Saturday at Mt. Sinai Baptist church, the pastor Rev. W. D. Hill officiating. A native of Canton, Miss., Mrs. Owens had lived in Cleveland for 20 years. She was active in church, fraternal, and social circles. She married Mr. Owens 12 years ago.

Three of the scores of buildings to be constructed on Treasure Island will not be razed when the 1939 Golden Gate International Exposition is ended. They are the two giant hangars and the airport terminal building, for the site of the Exposition will revert to an air field at the conclusion of the Pageant of the Pacific.

**THE MODERN FARMER**

**Official organ of the National Federation of Colored Farmers, Inc.**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per yer, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

## SQUASH ON THE MENU

**Summer Brings Its Special Types to Add Flavor and Variety to Moderately-priced Diets.**

Whenever a Puerto Rican girl wants to turn down a suitor, she calls him a calabaza—a squash. That the squash should be chosen as a term of opprobrium seems unjust, for this humble vegetable has much to recommend it. Like the pumpkin, which it closely resembles in many ways—in fact, many so-called squashes botanically are pumpkins—squash is a nutritious food. It can appear at the dinner table in a number of guises; in soups, muffins, pies, or as a vegetable. If properly stored, certain types of squash and pumpkin can be counted on for a fresh vegetable supply from midsummer to winter.

Pumpkins and squashes—both members of the genus **cucurbita**—are among the food plants that are natives of America. Indians grew them long before the white man put foot on these shores. In fact, the name **squash** is adapted from an Indian word meaning "eaten green" Now these crops have reached the status of big business. Commercial production of squash in the United States covers some 10,000 acres; crop value reaches over the million dollar mark. Massachusetts, California, New York, and Michigan usually lead the field in production. Pumpkin acreage for commercial production is around 4,000 acres; crop value, some $175,000. Champion States are California, Iowa, New York, and New Jersey.

Squashes come in two types, the summer and the winter, differing in character and habits of growth. The summer or bush squashes take less space in growing than their winter relatives which sprawl over the fields. Between them the two types cover a wide range of flavor, some being sweet and nutty, some mild, others strong in flavor like the pumpkin.

Excellent at this time of year and well into early autumn are the Bush Scallops and Crooknecks, two kinds of summer squash found in most markets.

Bush Scallops, or Pattypans, travel under still another name made in the South——Cymling. The word Pattypan accurately pictures this popular summer squash with its disk shape and scalloped edge. Earliest maturing of the squashes, the Pattypans come in white- or yellow-skinned strains. Preference points to the white, which has a smooth palegreen skin and milky, firm flesh. Pattypans may vary from button to pie-tin size.

Long, curved necks and more or less rough rinds characterize the Crooknecks. Favorite among these is Yellow Summer Crookneck, its yellow warted skin covering tender cream-colored flesh. Paradoxically, one Crookneck variety is the Straightneck, friend of the packer because its shape lends itself admirably to shipping.

Vegetable marrows, less known here than in England and Italy, are tender and mild flavored. They are usually shaped somewhat like a cucumber. Look about for the dark-green Cocozelle or light-green Zuchini with its gray mottlings, if you crave variety of squash fare. Both are grown for early markets in limited areas.

Pick your summer squashes for freshness and heaviness for their size. Remember that, unlike the winter varieties, summer squashes should be eaten while young, that is, while the skin is tender enough so that a fingernail indents it. This will mean that seeds are tender, too—an important consideration, since summer squashes frequently are eaten without discarding rind or seeds. The whole fruit is cut in pieces, then steamed and mashed with butter, or, perhaps, fried. If you are looking for a good pie filling, pass up the summer squashes in favor of the winter varieties. For food value, too, the winter varieties are the better bet with their slightly larger amounts of protein, starches, and sugar. Yellow varieties are rich in Vitamin A and are a fair source of iron and phosphorus.

Big consumer appeal lies in the dry and mealy winter squashes—the Boston Marrow (not to be confused with the vegetable marrows), the Hubbards, the Delicious. Most of the winter types have dark-green or orange-colored rinds, so thick that it sometimes takes an axe to split them. Hardness of skin proves an asset in a winter squash, however, for upon this quality depends storage ability.

Hubbard is a winter squash standby, fine in quality, flavor, and storage qualities. Credit for its origin goes to James Gregory, a seedsman of Marblehead, Mass., who had the first variety called to his notice by an old washerwoman name Mrs. Hubbard. Now there are numerous Hubbard squash strains, most of them bearing fruit of an irregular oval shape with heavy, warty skins. In color the Hubbards run through a good part of the rainbow with their yellow, orange, green and blue rinds.

Green Hubbard, best liked of any winter squash, is about 13 to 14 pounds in weight, round and warted. The thick dark-green skin is often streaked with grayish white. During storage this rind turns a dusky brown. Break the protecting coat and you find a bright-yellow flesh that is fine-grained and rich—reason enough to be grateful to Mrs. Hubbard.

Topping the Hubbards in flavor is the Delicious, another hard-shelled winter squash. This one has a smooth green skin and fruit pointed at the blossom end.

Squashes may weigh as much as 100 or 120 pounds. These are too coarse for eating but make good stock feed. Such monsters as the Genuine Mammoth regularly carry off prizes for size at county fairs.

Have a care in choosing your winter squashes, particularly if you intend to cache some of them against the winter months when prices are higher. Winter sorts won't keep unless they are well matured and thick-skinned. Soft-rind winter squashes have flesh that is thin, watery, and insipid when cooked. Avoid decay on winter squash. This appears as a water-soaked area often covered with a brown mold-like growth..

With winter squashes, seeds are scooped out before the rich, golden slices of squash are slipped into the oven for baking. Whatever the method of cookery, scrape the shell clean in eating, for the sweetest flesh lies next to the rind.

Not until crisp autumn days does the pumpkin really come into its own, notwithstanding the fact that pumpkin pie comes to table the year round. Pumkins somehow seem a more typically American vegetable than squashes, probably because they are inevitable accompaniments of our Hallowe'en and Thanksgiving Day dinners. Count on most of the pumpkins—the Small Sugar, the Winter Luxury, the Large Cheese, and Cushaws—for pie-making, however, since they are too mealy for table vegetables.

Table Queen is a small pumpkin boasting fine baking qualities. Its convenient size has caught consumers' fancy. Cut in half, it makes two individual portions. The shell is hard, dark green and slightly ridged. In storage it turns the tawny orange-yellow color we usually associate with pumpkins.

Like the large squashes, the mammoth pumpkins such as the Mammoth King step up at the county fair to receive blue ribbons for size. This variety has been known to yield 100 tons to the acre.

Large tonnage in both squashes and pumpkins goes into commercial canning, the resulting product being much alike in both cases. Varieties used for canning must be heavy yielders, with flesh of a good color and medium texture.

Planting of squashes and pumpkins takes place after danger of injury from low temperature is past, for both plants are sensitive to frost. Pumpkins require heat, too. However, the pumpkin is one of the few vegetables that thrive under partial shade. It can grow in the shadow of some tall-growing plant, such as corn, thus furnishing additional farm income from each acre so planted.

Winter varieties of squashes and pumpkins should be gathered and stored before autumn frosts nip them. If you have a good warm attic or cellar, you'll probably want to lay away some of these fruits. Good results come from first curing the pumpkins and squashes in a hot-well-ventilated room. Put them near the stove for about 10 days, then move them to a dry place with a temperature between 50 degrees and 60 degrees F. Higher temperature would result in shrinkage and this would impair quality. No matter how ideal storage conditions are, though, quality and palatability decrease with length of storage. Remember to keep surfaces dry during the storage time, or mold may gather on the squashes. Don't pile the fruit upon each other, bnt place them in a single layer. Shelves in a well-ventilated room or near the furnace in the basement make excellent storage places, ii you are lucky enough to have these. Thus stored, a supply of squashes should be on on hand through Christmas, or under favorable conditions the squashes will last the year round.

## THE DAILY DIGEST SAYS: AGRICULTURAL LEGISLATION

The Senate yesterday sent to the White House the bill authorizing an $85,000,000 outlay in three years to help tenants become farm owners. It then joined the House in appropriating $1,000,000 to combat a grasshopper plague in Western States, and permitted Senator Pope, Idaho, to introduce his proposed "agricultural adjustment act of 1937."

## SUGAR FORMS IN LEAVES

Sugar cane leaves can form cane sugar when they are detached from the stalk and kept in the dark, supplied with the two simpler sugars, glucose and fructose, or with either one of them alone. Experiments developing these points, performed by Dr. Constance E. Hartt, research plant physiologist for the Hawaiian Sugar Planters Association, give further support to the theory that conversion of simple into complex sugars can take place in leaves.

## RECORD COTTON CONSUMPTION

The Census Bureau reported yesterday that the domestic cotton industry had established an all-time high record for consumption, although this season has a month to run. In the eleven months, August through June, according to the bureau 7,361,737 bales of cotton were consumed by domestic mills. The previous peak was 7,189,585 bales, for the twelve months of the 1926-27 season.

## MEET THE SOY BEAN

Having gone oriental to the extent of trading in soy bean futures at prices which rate that haughty legume high above wheat and corn. the Chicago Board of Trade in time may disarrange with its competent commercial hand certain far eastern dreams of empire.

Enthusiastic members of the American Soy Bean Association and pundits of the Farm Chemurgic Council have visions of the transference of supremacy in soy bean production from its ancient seat in Manchukuo to the fat lands of the Mississippi valley. But with soy beans selling in the Chicago market around $1.70 a bushel it does not appear that the wide-hatted oriental bean grower is in any immediate danger of being starved out.

Existing prices naturally are comforting to Illinois growers of soy beans, who devote 2,000,000 acres or more to the profitable crop. The market quotations reflect the strong demand in this country and Europe for the globe-trotting legume, out of which industrial chemists make more than fifty products, ranging from varnish to baby food, from automobile trim to sugar cookies, from candy to nerve tonic. As a renovator of soils, as stock feed and as a cash crop the immigrant bean spreads joy over the Illinois countryside, where is grown 29 per cent of the 40,000,000 bushels produced annually in the United States. Iowa ranks second with 15 per cent.

Mark this beautiful legend: As a student in Iowa State College the present secretary of agriculture lived experimentally for six weeks on a diet of soy beans and corn meal at a total weekly outlay of 15 cents. Behold him now and imagine, if you can, what an entire nation fed on soy beans might accomplish! For that Manchukuan marvel contains as much protein as meat, eggs or milk and also other nourishing ingredients. A recent scientifically prepared menu included soy bean loaf, green soy beans buttered with soy bean oleomargarine, soy bean bread, soy bean rolls, soy bean sprouts with soy bean mayonnaise sauce, soy bean chili, soy bean Worchestershire sauce, soy bean ice cream and soy bean cookies. What more could a well-fed secretary of agriculture ask?

Any mannerly American who respects genius and ancient lineage when next he meets a soy bean will take off his hat to it.

## FARM HOME TENANT BILL NOW A LAW.

The United States Senate has passed the Farm Home Tenant Bill which authorizes an appropriation of 50 million dollars to help tenant farmers acquire farms and retire submarginal lands from cultivation.

Preference will be given applicants who are sharecroppers, tenants and day farm laborers with families or those who recently were farmers.

The Corporation will not approve application for benefits of this Act if it finds the income of the applicant derived from property owned by him is sufficient to support his family and pay the expenses of operating such property and the fixed charges on his indebtedness in connection with such property. County committees will be set up to receive applications of persons desiring to acquire farms in the county under the provisions of this Act.

Loans will be made for periods up to forty years and the rate of interest will not be over 3 per cent.

Negro farmers who have not been able to acquire a farm in the past will now have the opportunity to own the soil they till, under the Farm Home Tenant Act.

# SOUTHERN JUDGE TELLS CONFERENCE THERE'S NO JUSTICE IN DIXIE COURTS

Blue Ridge, N. C., Aug. 12 (ANP) —There is "a lack of justice toward Negroes in some parts of the South," declared Judge Orville A. Park of Macon, Ga. ,in an address Tuesday before a conference on education and race relation. There is a difference of opinion as to whether the Negro receives justice at the hands of the law, he added.

Judge Park also asserted he believes the "average Negro prefers a white jury to one having Negro men on it," because the type of Negro who would be chosen for jury service would have less patience with crime than the average white juror.

# PHYSICIANS FROM 13 STATES STUDY IN CHICAGO, ILL.

## Many From South Take Post-Grad Course at Provident Hospital

**Chicago,** Ill., Aug. 12—(By Leon Lewis for ANP) From more than one-fourth of the states of the United States, M. D.'s enrolled at the Provident Hospital and Training School to do post-graduate study and observation this summer. Lectures, demonstrations, and clinical processes, supervised by noted persons of the medical profession, aroused a renewed interest in the attending doctors, and they took it upon themselves to perpetuate an organization to the effect of bringing into the post-graduate classes each year hundreds of other doctors from all over the country.

So thorough, detailed, and applicable were many points outlined during this summer's session, that a vowed necessity was seen in extending this technical training to many others of their profession.

Officers of the Provident Hospital Post-Graduate Association were elected as follows: Drs. H. Sherman Manuel, Columbus, O., president; J. R. Dyett, West Palm Beach, Fla., secretary; M. C. Mitchell, Macon, Ga., treasurer; Albert Heard, Evansville, Ind.; George H. Starke, Sanford, Fla., and C. Austin Whittier, San Antonio, Tex., members of the Executive Committee. Others doing post-graduate study and participating in the organization are: Drs. J. Henry Austin, N. J.; W. C Baucum, N. C.; E. F. Cox, Ky.; J. M. Dasher, Ga.; J. H. Fields, Chicago; J. B. Gilbert, Ga.; L. L. Hall, N. C.; I. S. Hankins, Fla.; J. A. Jackson, S. C.; W. R. Moore, Ga.; L. C. Starke, Fla.; L. D. Thomas, Tenn.; S. C. Thompson, Okla.; and A. Z. Tucker, Ky.

### Hope to Reduce Death Rate

Their courses extended beyond the technical processes of medicine and its application to humanity, and included statistics, comparatively showing various nationality death rates, susceptibility to various diseases, environmental effects on health conditions, malnutrition and the application of proper food values to improve health and build up physical fitness, and a general study of all outlying and associated conditions that help to keep the Negro death rate above that of other nationality groups.

Much time and discussion was given to the need and benefits of proper and adequate hospitalization and a program to this effect was proposed. Further impetus will be given to this program at the national meet next month (August).

In an interview, Dr. C. Austin Whittier, one of the leading doctors of the Ten-Gallon Hat State, advanced a timely contention in that improvement and perfection of obstetrical practice among Negro doctors was evidenced by the small percentages of deaths at birth, but to boast of this is unbalanced when one can see and realize the many environmental effects existing to impair healths, and impede natural physical development. He continued that it is the concern of the doctor, that he be actively interested in those things that affect and hamper health, whether or no they can be applied directly to medical practice. Among these he included housing conditions, proper foods, and dieting and adequate hospitalization liberally extended to those of the lower economic levels.

Purged with an inearnest desire to instill these interests into doctors and inhabitants of every community in the United States, this score of M. D.'s have appointed each, himself, a committee to that effect, and they are confident that with the proper effort, a national concerted interest will be aroused from which will result a decrease in the death rate of Negroes and improvement in living conditions and environmental effects on health.

Dr. Manuel of Columbus, O., furnished a timely closing statement that "Negro doctors must realize the importance of post-graduate study keeping abreast with modern medical research and apply these findings within the scope of their practice. In doing this, he broadens his field of development and becomes the real exponent of his sworn oath to the causes of humanity and the well being of his race."

Dr. Manuel of Columbus, O. furnished a timely closing statement that "Negro doctors must realize the importnace of post-graduate study keeping abreast with modern medical research and apply these findings within the scope of their practice. In doing this, he broadens his field of development and becomes the real exponent of his sworn oath to the causes of humanity and the well being of his race."

# SENATE COMMITTEE VOTES TO RETAIN WPA POSITIONS

Washington, D. C., Aug. 12—(ANP)—The Senate Labor Committee last Wednesday recommended that no WPA worker be dropped from the relief rolls until he had found employment in private industry at prevailing wages. The resolution directed that WPA workers securing temporary private employment should be furloughed from WPA rolls but not discharged. The committee also approved the resolution of Senator Swellenback (Dem., Washington), declaring it to be the policy of Congress that in administration of the relief act, "there shall be provided work opportunities for all unemployed workers who cannot find employment in private industry."

## Sheriff Foils Mob In North Carolina

Statesville, N. C., Aug. 12 (ANP) —Last Monday night when a mob of 125 men, in autos, arrived at county jail, surrounded it and demanded that Sheriff John Moore, turn over colored prisoner Preach Caldwell, they muttered imprecations and dire threats upon learning the prisoner had been smuggled to another jail for safe keeping. A delegation of three mobsters went through the jail, convinced the rest that Caldwell was not there, after which they disbanded.

## Youth Pleads Guilty In Extortion Plot

Wynee, Ark., Aug. 12 (ANP)—Curtis Stegall, 18, charged with writing an extortion note to Jim Sullivan Smith Chapel farmer pleaded guilty at the preliminary hearing, held Monday before Justice C. H. Childress, and was held over to the grand jury.

Stegall lives a short distance from Sullivan's home, it developed and tried to obtain $56.00 from Sullivan under a threat of death. Stegall left a note, police said, directing Sullivan to leave the money in one-dollar bills at a designated spot. When Stegall came for the money, he was arrested.

# JUNIOR LEAGUE HAS NATIONAL MEETING IN "WINDY CITY"

## Chicago Women Seek to Improve Lot of Younger Generation

**Chicago,** Aug.—(ANP) The first annual confab of the National Junior League, Ins., was held Friday at Poro College with 25 delegates and 57 non-delegate members representing the four branches present. Mrs. William E. King, founder and organizer of the league, acted as chairman of the convention.

The National Junior League is an organization of high school graduates, college students, and college graduates whose purpose as stated in its foreword is "to foster interest among their membership in the social, economic, educational, cultural, and civic conditions of their communities, and making efficient their volunteer work."

The purpose to establish a branch in every state in the union. The sponsors are Mrs. Maude Roberts George, chairman of the board of managers; Miss Helen Blake, executive secretary; Mrs. Faith Jefferson-Jones, chairman social service department; Miss Ruth Tolmaire, co-chairman. Atty. Barbara W. Goodall, chairman civics department; Miss Josephine Inniss, chairman music department; Mrs. Lovelyn Evans and Mrs. Kathryn Irvin, publicity department; Mrs. Consuella Young Megahy, chairman journalism department; Miss Vivian Harsh, library; Dr. Ruth Howard and Dr. Lillian S. Dove, health and sanitation.

National officers elected were Miss Janie Lee Smith, president; Miss Ruth Marie Thompson, first vice; Miss Vivian E. Alves, second vice; Mrs. Denella Brown Smith, secretary· Mrs. Lucille Scott, treasurer.

# SUMMER SCHOOL AT LANGSTON CLOSES; 81 GET DEGREES

**Langston,** Okla., Aug. 12—(By T. A. Douglas for ANP) Eighty-one graduates of Langston university received degrees at the summer school convention July 28, the largest class in the history of the school. The majority of this number were teachers employed in the state schools, and according to the registrar's report, there were some 1,200 students matriculated at the university and extension branches which was also the largest enrollment of the school. Noticeable progress has been made along all lines.

The state superintendent of public instruction, A. L. Crable, and 18 members of the official staff recently visited the university and paid special tribute to president Sanford and faculty for the fine type of work being done. The various speakers frequently referred to Dr. Sanford as an able administrator and leader and a great benefactor of friendliness between the two races. The State Department pledged to support and give all aid possible to the institution.

A sizeable increase in appropriation has been granted the school by the state legislature from the next school term. With some eight or nine white institutions in the state, Langston ranks third in appropriation. It is the only Negro institution of higher learning in Oklahoma.

# LYNCHING THREAT MADE TO MANAGER OF CHICK WEBB

## Houston, Texas Cop Riled Over White Man Serving With Colored Orchestra

**Houston,** Aug. 12—(By John H. Thompson for ANP) In an interview here Monday night, when Chick Webb and his orchestra played before a crowd of 2,400 white and colored dancers, Frank Herz, white, Charlottesville, N. C., road manager for Webb, charged a Houston cop with a threat to lynch him.

Stopped by the cop on a minor traffic violation, Herz stated the officer noted his New York license and asked him what he was doing so far from home. He then told the cop that he was manager for Chick Webb. Herz alleged that the officer then bluntly declared that he "ought to be lynched for traveling with that bunch of 'niggers'." He was given a ticket and on going to pay it told the judge of the treatment at the hands of the cop. The judge apologized for the officer and offered to remit the fine, but his offer was refused.

Another member of the orchestra complained of unusual treatment while here. Bardu Ali, baton wielder, drives a $3,000 automobile; he drove it from his lodging place to the hall where he was to play. Noting a parking lot next door, he drove in. He was refsued permission to park by a white employe, who, incidentally gets $12 per week. He claimed the man said "Niggers are not allowed to park here unless they are driving for a white man."

The police department here has been under fire of various agencies for some time. Charges of inefficiency, lack of intelligence, and other charges have been filed. Recommendations for the establishment of a police school have been ignored by city officials.

# NATIONAL TEACHERS ASSOCIATION PICKS STAFF OF OFFICERS

## Alfonso Henigburg of Alabama Elected New President of Body

Philadelphia, Aug. 12 (ANP)—The National Association of Teachers of Colored Children elected unanimously the following officers for the ensuing year:

Alfonso Henigburg, Ala., Pres., I. T. Gillian, Ark., vice Pres.; H. H. Long, Wash., Treas.; H. C. Trenholm, Ala.; F. M. Wood, Md.; J. W. Scott, Ohio, Executive Committee: C. S. Long, Fla.; Clarence R. Whyte, Pa.; J. L. Jones, La.; W. E. Anderson, Okla.

Mrs. Willa Carter Burch, outgoing president, was elected to succeed Dr. G. C. Wilkinson, whose term expired in July, to the board of trustees. The officers were installed by Dr. John W. Davis, president of West Virginia College at the Friday morning delegate assembly.

Next year's convention will be held at Tuskegee Institute, July 26-29.

## Mississippian Is First Farmer In With Cotton Bale

**Hazelhurst,** Miss., Aug. 19—(A. N. P.)—Ellzey Shannon, prominent colored farmer of Ballow, Copiah county, last week brought in the first bale of cotton, the product being of medium long staple and weighing 510 pounds. Farmer Shannon was also the first to bring in a bale last season, says he'll finish picking by Oct. 1. Asked for the secret of his success in cotton raising he said he uses only a small amount of fertilizer, but plants early on bottom lands, works his crop intensively. Most all the gins in the county are now running full time.

# HUNTINGDON MAN APPEALS SENTENCE OF LOWER COURT

## Bill Jack Bledsoe Gets Aid of NAACP to Get Case to High Tribunal

Huntingdon, Tennessee, August 6. —The appeal of Bill Jack Bledsoe, tenant farmer, from his conviction on a charge of murder will be aided by the National Association for the Advancement of Colored People, it was learned here today. A check to cover part of the expenses of the appeal to the Tennessee supreme court was received from the New York office and another check is being sent by the Memphis branch of the N. A. A. C. P.

Bledsoe, despite evidence showing that he killed a white man in self defense, was charged with first degree murder and was sentenced to twenty years imprisonment on July 26.

The story of the case is that Bledsoe killed George Stanford, white, the riding boss and general agent of the R. C. Denny farm located about six miles from Milan, Tenn.

The shooting followed an argument over grass seed. Bledsoe, who was born on the Denny farm, had planted the grass seed but had been told subsequently to move off by the riding boss and the latter is said to have promised to pay Bledsoe for the seed, but failed to do so.

After the argument in a bank in Milan, Stanford sent word to Bledsoe to remove his tools from the Denny farm, whereupon Bledsoe and his uncle, Curtis Bledsoe, and two other relatives took two wagons to the Denny farm to remove their tools.

After the two wagons entered on the farm and approached a small stream, Stanford was seen standing on its bank. The first wagon passed Stanford, and as the wagon in which Bill Jack and Curtis Bledsoe were riding approached, Stanford fired two shots without warning. Bill Jack returned the fire, and Stanford fell mortally wounded. Bledsoe fired seven shots. and Stanford fired four.

Four attorneys are defending Bledsoe whose family is well-known and respected in this area of Tennessee. The lawyers are: P. L. Harden, colored, from Jackson, Tenn.; J. Ross McKinney, chief counsel; Jimmie Lee Taylor and Buck Crider, all of this city.

Chief Counsel McKinney was so diligent in seeking to protect the rights of his client that the District Attorney, L. L. Harrell, used a race prejudice argument before the jury stating that if McKinney believed in equal rights for Negroes "he should black his face and become a Negro."

P. L. Harden was the first counsel hired in the case, being employed by Lonnie Bledsoe, Bill Jack's uncle. When it was learned that Harden, a Negro attorney, had been employed, some of the whites here threatened him with death if he should dare to appear at the court house. But Harden ignored the threats and appeared with Buck Crider as an associate. McKinney and Taylor were employed by Bill Jack Bledsoe.

The case has its background in the old sharecropper and farm tenancy system. The Denny plantation consists of more than 1,000 acres. Bledsoe was born on the farm and his father was taken there when a small boy. The riding boss of these large plantations is usually a deputy sheriff and frequently rides the plantation with a pistol on his hip.

The white and colored lawyers acting for Bledsoe have stated they will carry on the fight for his freedom to the highest courts, being confident of a reversal.

# NATIONAL NEGRO BUSINESS LEAGUE CLOSES CONVENTION

## Annual Meeting Held In Atlanta Points Way For Jobs And Trade Increase

## N. N. B. L. Elects Spaulding To Succeed Moton As President; R. E. Clay of Nashville on Executive Committee

**Atlanta,** Aug. 26—(A. N. P.)—The discussion groups at the National Negro Business League which met here this week enabled a brilliant array of speakers to bring to the audiences factual and informing material which pointed the answer to the general convention theme: "Meeting New Economic Conditions." John Rice, of Houston, the Endowment Secretary for the Texas Odd Fellows opened the discussion, "Minimum Standards In Business Practice." He was followed by Dallas C. Brown, business administration school head of West Virginia Institute; Edward Simmons, wholesale and retail fish dealer of Charleston, South Carolina, and Fred Allen, laundry proprietor of Detroit. Better preparation, more attention to credits, profits, records and merchandising plans were among the points stressed by the speakers.

### Housewives Active

Mrs. Fannie B. Peck, president of the Detroit and the National Housewives Leagues opened the discussion of "Consumer Attitudes Regarding Negro Operated Business.' Mrs. Peck stated that from her experience, the business men among Negroes are not sufficiently active in cultivating the proper attitude of the Negro housewife toward their businesses. Mrs. Ferol V. Smoot of New York, secretary, Nat l Negro Housewives League conceded that the Negro housewife "has not yet reached a full realization" of the fact that support of Negro business enterprises is essential to racial prosperity. Continuing discussion of consumer attitudes, Miss Stazzie Hudson, home demonstration agent, Mansfield, Louisiana discnssed the buying habits of Negro farm women and urged Negro business men to give more attention to catering to this group whose purchasing power is gradually increasing.

### Study Cooperatives

J. B. Blayton, of Atlanta, organizer of a Negro farmers marketing cooperative opened the discussion on "Cooperatives." He was followed by B. B. Barnwell, Negro County agent from Frogmore, South Carolina, who told of the organization of a successful Negro farmers cooperative marketing group which shipped twenty-two carloads of tomatoes this year with a gross profit of $19 000. Three members of this association were also present. P. H. Stone, Negro state extension agent for Georgia with headquarters in Savannah, told of the growth and development of several Negro cooperatives in South Georgia. Stuart L. Whiting Economics Professor at Hampton Institute, closed the discussion with a strong appeal for the development of oc-operatives among Negroes.

### Jackson On Job

"Breaking Through Employment Barriers in Non-Negro Enterprise." proved to be one of the most interesting among the discussion groups. J. A. Jackson, special representative of the Standard Oil Company opened with a hard-fisted appeal for attacking these barriers on the basis of Negro purchasing power rather than on a purely sensational appeal. A. L. Foster, Chicago Urban League secretary, followed with a presentation of the successful efforts in Chicago to break down the barriers. Mr. Foster, gave supported evidence that white patrons will not cease patronizing a store because Negro clerks are added, and that Negroes are just as efficient, capable and honest as white clerks.

The discussion on Friday morning: "Selection of and Preparation for Business Careers" opened up the whole question of the type of training offered by our schools. Arnett G. Lindsay, able promotion secretary for the Atlanta Negro Chamber of Commerce opened the discussion with the statement that Negro schools offer the same courses of study in Business Administration that are offered in white schools, "the contents of which are not related to Negro business."

Robert R. Moton, Jr., advocated "trial and error" as the basis for the proper education of young men who wish to follow business careers.

### Educator Says Show Us What To Teach

Felton Clark, dean of Southern University, in continuing the discussion of preparation for business careers threw a challenge to the business men to "help those of us who are in the field of education to isolate those basic qualities necessary for successful business careers so that accordingly we may arrange our course of study." Miles Hackney, master farmer from Union Point, Georgia, emphasized that knowledge of farming and willingness to work are necessary for success in that field. He also told of increased opportunities for success by reason of the government's program of soil conservation and other measures to improve conditions in the rural south.

### The Evening Sessions

Dr. R. R. Moton, president, and Mr. C. C. Spaulding, Chairman of the Executive Committee, were speakers at the Wednesday evening session at Bethel A. M. E. church. In the course of his "few remarks," Dr. Moton referred to the recent depression as passing "through the valley and the shadow of death." "This convention," he said, "and the fine showing of successful men and women assembled is evidence that the Negro along with other citizens in our country, is turning his face with renewed hope in the direction of success in business."

Mrs. Mary M. Bethune, Mrs. R. R. Moton, recently elected president of the National Association of Colored Club Women; R. E. Clay, N. Y. A. representative in Tennessee; E. A. Miller, Assistant Director, Agricultural Adjustment Administration, and President F. D. Patterson of Tuskegee Institute, were speakers at the Thursday evening session at Wheat Street Baptist church. "No large opportunity will be provided," said Dr. Patterson, "in the upper brackets of employment for our young people unless we provide them."

"Six Hundred and Fifty Thousand Negro farmers here in the South," said E. A. Miller, "are vitally concerned with the programs that are being carried out to restore agricultural prosperity."

## Spaulding Elected Head of Business League

**Atlanta,** Ga., Aug. 26—(A. N. P.)—C. C. Spaulding, President of the North Carolina Mutual Insurance Company, was elected president of the National Negro Business League. Dr. R. R. Moton, retiring president, was made President-Emeritus. The complete roster of officers for the year 1937-1938 is as follows:

Robert Russa Moton, Capahosic, Va., President Emeritus; C. C Spaulding, Durham, N. C., President; J. B. Blayton, Atlanta, Ga.; First Viee President; Fred R. Moore, New York City, Second Vice President; Don A. Davis, Hampton Va., Chairman of the Executive Committee; Regional Vice Presidents, Dr. J. E. Walker, Memphis, Tenn., W. S. Hornsby, Augusta, Ga., Joseph P. Geddes, New Orleans, La., and Rev. W. H. Peck, Detroit, Mich.; A. L. Lewis, Jacksonville, Fla., Treasurer; A. L. Holsey Tuskegee, Ala., Secretary; L. E. Wilson, Hampton, Va., Auditor; T. J. Ferguson, Atlanta, Ga., Registrar; J. R. E. Lee, Jr., Tallahassee, Fla., Assistant Registrar; Dallis C. Brown, Institute, W. Va., Assistant Registrar; Jesse O. Thomas, Atlanta, Ga., Transportation Director; Claude A. Barnett. Chicago, Publicity Director; Bishop W. A. Fountain, Atlanta, Ga., Chaplain and A. T. Walden, Atlanta, Ga., Legal Advisor.

Executive Committee: J. S. Williams, Shreveport, La., Charles Shaw, Houston, Texas; Mrs. W. E. Peck, Detroit, Mich., N. W. Collier, St. Augustin, Fla., R. W. Harris, Durham, N. C., Eugene P. Booze, Mound Bayou, Miss., W. H. Crocker, Suffolk, Va., C. F. Richardson, Houston, Texas; P. B. Young, Norfolk, Va., E. M. Martin, Atlanta, Ga., J. A. Jackson, New York City, Wm. M. Cooper, Hampton, Va., James P. Davis, Little Rock, Ark., Robert E. Clay, Nashville, Tenn., Walter S. Scott, Savannah, Ga., and G. D. Rodgers, Tampa, Fla.

Steering Committee: Dr. F. D. Patterson, Tuskegee Institute, Ala., George W. Cox, Durham, N. C., J. B. Blayton, Atlanta, Ga., Mrs. F. V. Smoot, New York City; Arnett J. Lindsay, Atlanta, Ga., B. G. Olive, Memphis, Tenn., and Edward Simmons, Charleston, S. C.

## Asks For Negro On Tenancy Board

**Atlanta,** Ga., Aug.—(A. N. P.)—The National Negro Business League, during its convention here, sent telegrams to President Roosevelt and Secretary Wallace asking that a Negro be placed on the Board which will administer the Farm Tenancy Bill recently passed by Congress and which provides $85,000,000.00 during the next three years to help tenant farmers to become land owners. The telegram was as follows:

The National Negro Business League, founded thirty-seven years ago by the late Booker T. Washington to encourage the economic advancement of the Negro, today passed a resolution to respectfully petition you and the Secretary of Agriculture to appoint a Negro to membership on the Board which will administer the Farm Tenant Bill.

Negro farmers represent a third of the farm population in the South and seventy percent of the Negro farmers are in the tenant and share-cropper class.

In order to insure greater participation in the benefits of this bill by Negroes, it is further requested that in local communities where there is a large Negro population Negroes be appointed on local committees of administration.

Signed: R. R. Moton, Pres.
C. C. Spaulding, Chm.
Executive Committee.

## New Program

**Atlanta,** Ga., Aug. 26—(A. N. P.)—The 1937-1938 activities program of the National Negro Business League will be conducted under a new administrative set-up. This was determined in the closing session of one of the most constructive conventions in the League's history.

The new set-up limits the tenure of the presidency to two years and provides membership on the executive committee based upon popular selection of one representative in each state by the local affiliated groups in the state. Other national trade organizations will also have representation on the committee. Four regional vice-president were elected to coordinate the activities in their respective territories.

## Officials Speak

**Atlanta,** Ga., Aug. 26—(A. N. P.)—"The Federal Government is becoming conscious of the social needs of its ordinary citizens," said Robert C. Weaver, Advisor on Negro Affairs, U. S. Department of the Interior, in opening the discussion period allotted to Negro Government representatives. "It is realizing," continued Dr. Weaver, "that if the mass of Americans are to enjoy economic security government must offer them protection against the vicissitudes of our economic system."

"The past two years," said L. A. Oxley, of the United States Department of Labor, "will stand out as a most significant period in the history of the United States." Mr. Oxley was discussing the whole field of Federal legislation as it relates itself to the great mass of American citizens irrespective of race.

That Negroes suffered on tremendous setback in business during the depression was explained by Charles E. Hall, statistician and Advisor on Negro Affairs for the U. S. Department of Commerce. "In 1935," said Mr. Hall, "there were 23,490 retail stores in the United States operated by Negro proprietors, or 2,211 fewer than in 1929, *** and the total value of sales decreased from $101,146,000.00 to $48,987,000.00 or 51.6%."

Joseph H. B. Evans and Thomas N. Roberts were present to give an outline of the progress of the Resettlement Administration as it relates to Negro life. Edgar G. Brown gave a vivid description of how the CCC camps are endeavoring to help thousands of young men to understand the importance of cleanliness, orderliness and punctuality. James P. Davis, of the Agricultural Adjustment Administration and H. A. Hunt, of the Farm Credit Administration, and Alfred E. Smith of the Works Progress Administration outlined the operative procedure in their respective departments. "The Government," said Mr. Hunt, "will give the Negro farmer what his 'hands call for'," in considering the applications of Negro farmers for loans from the Government, thru the Farm Credit Administration.

## Report Progress

**Atlanta,** Ga., Aug. 26—(A. N. P.)—Never in the history of the League have there been more interesting and progressive reports from local Negro organizations. Among those reporting were L. C. Blount, for the Booker T. Washington Trade Association in Detroit; G. S. Marchman, of the Negro Chamber of Commerce of Chicago; Dr. T. F. Barnes, Negro Chamber of Commerce, Jackson, Miss., A. Maceo Smith, Negro Chamber of Commerce, Dallas, Texas; Roderick B. Harris, local organization, Athens, Ga., Dr. J. E. Walker of Memphis, Tenn., and Chas. A. Shaw, Negro Chamber of Commerce, Houston, Texas. The Executive Committee announced that the reports from these local trade groups will be compiled into a single booklet for distribution to other local organizations throughout the country.

On the printed program at the end there was a number entitled, "The Last Word," by Dr. Moton. It was a touching moment, when he rose to speak, and all were aware that the Atlanta session marked the termination of Dr. Moton's active official relationship with the League, a responsibility which he has carried for nearly twenty years. "This has been a most constructive session," said Dr. Moton, "and the spirit manifested during these three days indicates that our League will go forward to greater heights in service to humanity. As President-Emeritus of the League I shall continue to give my full support to the organization and to my good friend Mr. C. C. Spaulding whom you have so wisely selected as your president for the next year."
